advertisement in Philadelphia (1792). In 1793 he went to New York to play in the orchestra of the Old American Company, becoming one of its principal composers and arrangers. He returned to Philadelphia (1811–14) where he published *Pelissier's Columbian Melodies* (1811–12), consisting of 12 volumes of songs, dances and instrumental pieces arranged for the piano, many of which were written for New York and Philadelphia theatres. The manuscript score and parts of his incidental music to William Dunlap's play, *Voice of Nature*, demonstrate details of early theatre orchestration. He was a prolific composer who displayed 'variety of thought and readiness of invention, with the full knowledge of the power of the orchestra' (Parker). Pelissier, perhaps the first significant French composer active in the USA, introduced there the practice of having an independent accompaniment part in his songs with a separate staff for the voice, and frequently placed the melody in the accompaniment while the voice held a note. His *Ariadne* was one of the earliest and most influential melodramas in the country. Although Eitner has attributed the *Amusements variés avec accompagnement de musette* to Pelissier, the authorship is doubtful.

WORKS

Collection: *Pelissier's Columbian Melodies*, i–xii (Philadelphia, 1811–12) [PCM]; ed. K. Kroeger, RRAM, xiii-xiv (1984)

STAGE

Edwin and Angelina, or the Banditti (op, 3, E.H. Smith, after O. Goldsmith), New York, 19 Dec 1796, 2 songs in PCM, I, vi

Ariadne Abandoned by Theseus in the Isle of Naxos (melodrama), New York, 1797

Sterne's Maria, or The Vintage (op, 2, W. Dunlap), New York, 14 Jan 1799, 3 songs in PCM, xi

The Fourth of July, or Temple of American Independence (spoken pantomime), New York, 4 July 1799, lost

A Tale of Mystery (melodrama, 3, T. Holcroft), New York, 16 March 1803, collab. J. Hewitt, 2 dances in PCM, I

Voice of Nature (incid music, Dunlap), New York, 1803, *US-NYp*

Valentine and Orson (melodrama), New York, 1805, song in PCM, xii

The Lady of the Lake (melodrama), Philadelphia, 1 Jan 1812, songs in PCM, iii, iv

The Bridal Ring (melodrama), Philadelphia, 10 Feb 1812, ov., dances, 2 marches in PCM, iii–vii

The Wandering Melodist, 2 songs, Philadelphia, 1810, *Cn*, *CA*; 16 works, selections arr. (1v, pf)/pf solo, PCM, i–xii; others, some performed Philadelphia, lost

OTHER WORKS

Vocal: Ode on the Passions, spkr, pf, PCM, v; songs, mostly lost

Inst: Sym., G, *c*1780, *CH-BEsu*; A Grand Ov., arr. pf, PCM, i; March, variations, 1812, arr. pf, PCM, x; March to Canada, pf (Philadelphia, 1813)

ANNE DHU McLUCAS

Pelitti. Italian family of instrument makers. Luigi Pelitti (*b* 1736, *d* after 1780) founded a workshop in Varese in the mid-18th century, and his sons Paolo Aquilino (*b* 1765, *d* after 1800) and Giovanni (*b* 1775, *d* after 1818) continued it. It initially made harpsichords and church organs but soon turned to brass instruments. Both keyboard and brass instruments by Paolo Aquilino possibly survive: a natural horn signed 'P. Pelitti' and dated 1795 (Museo degli Strumenti musicali, Rome), and a square piano signed 'Pater Aquilinus, Varisiensis' (Castello Sforzesco, Milan). Three of Giovanni's children also made brass instruments: Paolo (1802–44), who founded the family's workshop in Milan, Giuseppe (1811–65) and Carlo (1818–64). When Paolo moved to Genoa in 1828, setting up a new workshop there, Giuseppe took over the Milan firm, soon entrusting management of the workshop to the young Carlo. Giovanni's daughter Maria Theresa was the mother of the Milanese wind instrument maker Alessandro Maldura (*b* 1830).

Giuseppe Pelitti led the firm to notable success. Among his many inventions were the euphonium-like *bombardino* (1835), its name still used in Italy for such instruments; the *pelittone* (1845), a contrabass tuba in C of lasting success; the *genis* (1847), a flugelhorn in E♭; and several *duplex* or double instruments, also called *gemelli*, whose invention was later claimed by Adolphe Sax. In 1860 Giuseppe's son Giuseppe Clemente (1837–1905) established his own firm in Milan, making woodwinds and brass instruments marked 'Clemente Pelitti' (e.g. a clarinet in Nuremberg, MIR 460). On his father's death the two firms were merged under the younger Giuseppe's leadership. He too devised numerous instruments, among them the *trombone basso Verdi* (1881) – a contrabass trombone – which provided the low brass in Italian orchestras until the adoption of the tuba in the 1920s. After Giuseppe's death his widow Antonietta Corso (*b* 1834; *d* 1912) directed the firm until her death in 1912; it was sold to the Milanese firm Bottali in 1915. Further details of the firm's history are given in R. Meucci: 'The Pelitti Firm' (*HBSJ*, vi, 1994, pp.304–33).

RENATO MEUCCI

Pellaert, Auguste de. *See* PEELLAERT, AUGUSTE DE.

Pelleg [Pollak], **Frank** (*b* Prague, 24 Sept 1910; *d* Haifa, 20 Dec 1968). Israeli harpsichordist, pianist, composer and educationist of Czech birth. He made his public début as a pianist at the age of 12. He studied first at the Prague Academy of Music and later at Prague University (1929–31). In 1936, at the invitation of Bronisław Huberman, he settled in Israel. After gaining a distinction in the 1939 Geneva International Competition he became sought after as a performer; following an engagement at the 1947 Prague Festival he made lengthy annual tours abroad, appearing under, among other conductors, Klemperer, Paray, Dorati, Celibidache, Solti, Fricsay and Bertini. In 1939 Pelleg was among the founders of the Institute for Jewish Music Research, and in 1949 he became director of the music department of the Ministry of Education and Culture in the new state of Israel. In 1951 he moved to Haifa, where he was among the founders of the Haifa SO and its music director until his death; he was also music director of the Municipal Theatre from its establishment in 1961. The 1954 ISCM Festival took place in Haifa through his initiative. He instigated premières of music by Dallapiccola, Petrassi and Gerhard, and took part in

the first performances of Israeli music including Tal's Concerto for harpsichord and electronic music, Natra's Variations for piano and orchestra and Partos's *Agada.* Though Pelleg's repertory ranged widely, he specialized in Bach and other Baroque music (he recorded a good deal) and was noted for his insistence that the harpsichord should be treated as a modern instrument and its tonal possibilities fully exploited, even in 18th-century music. His lectures in Israel and abroad, full of vitality and humour, were highly popular; he also composed and wrote books on music appreciation, and in sum made an outstanding contribution to the development of music in Israel. His pupils included the pianists Alexis Weissenberg, Israela Margalit and Yahli Wagman. After his death a prize for musicological research and a harpsichord prize were set up in his memory.

WILLIAM Y. ELIAS

Pellegrin, Claude Mathieu (*b* Aix-en-Provence, 25 Oct 1682; *d* Aix-en-Provence, 10 Oct 1763). French composer. The son of a pharmacist in Aix, he joined the cathedral choir school of St Sauveur on 5 November 1696 (while Cabassol was *maître de chapelle*). He became Poitevin's pupil, probably when the latter again became *maître de chapelle* on 5 May 1698. Pellegrin was appointed organist of Aix Cathedral but was dismissed in May 1705 because he had written secular music. He was restored to his position on 2 May 1706 and was described as 'serviteur du Chapitre'. On 20 June in that year he was appointed *maître de chapelle* in succession to Poitevin. He was ordained priest on 3 November 1717 and appointed 'bénéficier' on 29 June 1719. On 15 January 1724 he was granted a year's leave of absence: five days later he was admitted to the Ste Chapelle in Paris as a *chapelain ordinaire.* In March 1730 the Aix chapter instituted proceedings against him before the Grand Council, and on 4 May 1731 Pellegrin resumed his duties at Aix Cathedral, fulfilling his obligations there until May 1748. He continued to compose, enjoying successes as far afield as Lyons, and supervised the early musical studies of E.J. Floquet and others.

The secular pieces that lost him his post in 1705 are no longer extant. His surviving sacred works are in the music collection of the former school of St Sauveur (in *F-AIXm*), often in several versions showing considerable and complex differences, something quite usual in the practice of the time. Some marches and fanfares – probably an introduction to the *Te Deum* – survive (in *B-Bc*).

The indications in the separate parts show that Pellegrin had large forces of singers and instrumentalists available, ranging from 42 musicians in *De profundis* to 50 for the *Benedictus* in A. Instrumental colour is a feature of his style; the bassoon or bassoons often replace the serpent, while flutes, oboes, trumpets and sometimes even the flageolet, fife, *tambours militaires* and kettledrums (in the *Te Deum*) enhance the colours of the string instruments and allow the composer to produce original combinations. He even used rattles to imitate musketry.

Unlike many composers of the Provençal school (for instance Jean Audiffren), Pellegrin wrote for the traditional five-part French chorus, and devised some unusual combinations. In particular, he used treble voices in unison on their own (in the *Benedictus*, *Te Deum* and *Venite*) and played on variations of voices in a figural manner. The orchestra is usually in three real parts (*dessus de violon*, *hautes-contre de violon* and bass instruments), but there are some passages in four or five parts (in the Requiem), and in those cases the desks were divided to achieve the requisite effect.

Pellegrin took little interest in the contrapuntal complexities found at the same period in the composers of the Ile de France, but his directions bear witness to his care for detail in the interpretation of his works and the resulting sound: he indicates nuances in the Requiem ('doux', 'moins doux', 'fort'), while directions such as 'ardy', 'gracieux un peu gay', 'brusqué', 'un peu hardiment' indicate the tempo and effect he wanted. His works, widely performed in France in the 18th century, are evidence of the vitality of the Provençal school. A *Dissertation sur la musique française et italienne* (in *F-Pn*) can also be attributed to him.

MARCEL FRÉMIOT/MARC SIGNORILE

Pellegrin, Abbé **Simon-Joseph** [La Roque; La Serre; Pellegrin-Barbier; Chevalier Pellegrin] (*b* Marseilles, 1663; *d* Paris, 5 Sept 1745). French librettist, poet and playwright. Son of a magistrate, he entered a Servite monastery and later became a naval chaplain. He arrived in Paris in 1703 to consolidate a literary career already begun with his *Cantiques spirituels* (1701) and other sacred verse. In 1704 he gained some notoriety by submitting two poems for an Académie Française literary prize, both of which won. Thanks to the support of Mme de Maintenon, he was allowed to leave the Servites and join the Cluniac order, which freed him from monastic obligations but provided no financial support. He subsequently eked out a living by producing religious verse to be sung to popular melodies (this comprising in all an estimated 500,000 lines) and numerous plays, of which the best known is the tragedy *Pélopée* (read at Versailles in 1710; revised and staged in 1733). By 1705 he had turned to opera. According to the *Mercure de France*, C.-H. Gervais's setting of his libretto *Renaud* was rehearsed in that year but not performed; Desmarets's opera of the same name (1722) probably reuses this poem. Pellegrin went on to collaborate with composers of the stature of A.C. Destouches, Montéclair and Rameau. *Jephté* (1732), the earliest French libretto based on a biblical subject and the first to win him real acclaim, brought him into conflict with the church. He had earlier sought to avoid such opprobrium by adopting pseudonyms (which makes identification of some of his work problematic), to no avail: he was eventually debarred from saying Mass.

Though almost universally reviled in literary circles, Pellegrin was one of the most talented librettists of his generation. His tendency to rework themes that had already been treated in spoken tragedies (including his own) led him to give less prominence to the amorous entanglements prevalent in the *tragédie en musique*; as in the first version of his play *Pélopée*, incest provides a motivating force in *Théonoé* and *Hippolyte et Aricie*, innocence betrayed in *Jephté*. These last two librettos in particular demonstrate a considerable flair for dramatic construction, psychologically convincing characters and colourful divertissements, and include some felicitous if uneven verse. His preface to *Hippolyte*, a work deriving material from Euripides, Seneca, and Racine's *Phèdre*, shows the care with which he sought to improve on aspects of Racine's masterpiece, and his concern for dramatic verisimilitude and the proper treatment of the supernatural.

WRITINGS

(*only those relating to music*)

THEATRICAL WORKS

(*each work is followed by its composer and year of performance; published in Paris and performed at the Opéra unless otherwise stated*)

Tragédies en musique, each with prol and 5 acts: *Renaud, ou La suite d'Armide*, C.-H. Gervais, rehearsed 1705; Desmarets, 1722; *Médée et Jason* [as La Roque], J.-F. Salomon, 1713; *Télémaque et Calypso*, Destouches, 1714; *Théonoé* [as La Rocque], Salomon, 1715; *Polydor* [as La Serre; attrib. Pellegrin in Girdlestone (1972)], Stuck, 1720; *Télégone*, Lacoste, 1725; *Orion* [with J. de Lafont], Lacoste, 1728; *Jephté*, Monteclair, 1732; *Hippolyte et Aricie* [as Chevalier Pellegrin, his brother], Rameau, 1733; *Antigone*, *Arianne*, 1722, unperformed; *Loth*, n.d., unperformed

Opéras-ballets, each with prol and 3 entrées: *Les fêtes de l'été* [with Mlle M.-A. Barbier], Montéclair, 1716; *Les plaisirs de la campagne* [with Barbier], Bertin de la Doué, 1719; *Les caractères de l'Amour* (labelled 'ballet héroïque'; later 4th entrée by Bonneval), Collin de Blamont, 1736 (concert performance, Tuileries), 1738; ?addns to Montdorge, *Les fêtes d'Hébé*, Rameau, 1739

Other operas: *Le jugement de Paris* [with Barbier] (pastorale héroïque, prol, 3), Bertin de la Doué, 1718; *La princesse d'Elide* (ballet héroïque, prol, 3), A. de Villeneuve, 1728; *Alphée et Aréthuse* (new prol for Campra's *Aréthuse*), Montéclair, 1752

Opéras comiques with vaudevilles: *Arlequin à la guinguette* (3), 1711, Foire St Laurent; *Le pied de nez* (3), 1718, Foire St Laurent; *La fiancée du roi Garbe* (prol, 3), 1719, Foire St Laurent; *Arlequin, rival de Bacchus* (3), 1727, Comédie-Italienne

Plays with music (Comédie-Française): *Le nouveau monde* (comédie, prol, 3), J.-B.M. Quinault, 1722; *Le divorce de l'amour et de la raison* (comédie), Quinault, 1723; *Le Pastor-Fido* (pastorale héroïque), Collin de Blamont (according to Fétis), 1726

Divertissements *Les présents des dieux* (idylle héroique including 3 *entrées*), Collin de Blamont, Versailles, 1725; *Le Parnasse* (pastiche), Collin de Blamont, Lully, Campra, Destouches, Mouret, 1729

SACRED TEXTS

(*all published in Paris*)

Cantiques spirituels . . . accompagnés d'hymnes . . . sur des airs d'opéra, vaudevilles choisis, et sur les chants de l'église (1701)

Histoire de l'Ancien et du Nouveau Testament . . . mis en musique sur des airs de vaudeville (1702, 2/1713)

Noëls nouveaux . . . et chansons spirituels . . . sur des chants anciens, 7 vols. (1702–28, 2/1729)

Airs notés des cantiques . . . noëls nouveaux et chansons spirituelles (1705, 2/1728)

Les psaumes de David et les cantiques de l'Ancien et du Nouveau Testament, sur les plus beaux motifs de MM. Lambert, Lully et Campra (1705)

Nouveaux recueils de noëls (1715, 1722, 1725)

Les proverbes et paraboles de Salomon, mis en musique sur des airs et des vaudevilles (1725)

Noëls nouveaux (1725–35)

Concert spirituel . . . sur une version du psaume 'Dominus regnavit; exultet terra' (1727), music by Villeneuve

L'Imitation de Jésus-Christ, mise en cantiques spirituels sur les plus beaux airs des meilleurs auteurs (1727)

GRAHAM SADLER

Pellegrini, Domenico (*b* Bologna, early 17th century; *d* after 1682). Italian guitarist and composer. He was a member of the Accademia dei Filomusi, a performer in the Concerto Palatino (both in Bologna) and one of several guitarists whose works were published by Giacomo Monti. His *Armoniosi concerti* contains guitar pieces combining the *battute* and *pizzicato* styles, in the manner of Foscarini, Corbetta and Granata; many of them are dedicated to fellow members of the Accademia.

Pellegrini's style is conservative by mid-17th century standards, with almost no use of *campanelas* passages or the upper octaves of the bass strings; some of the pieces do not even include strummed chords, like Foscarini's early lute-style pieces. The preface contains important pedagogical information on arpeggiation, dynamics, slurs and ornaments. Three of the five surviving copies also contain an engraved frontispiece of the composer, clearly showing long fingernails on his right hand. The pieces include a *battaglia francese*, using motifs from French lute tablature, and a series of *passacaglias* 'per tutte le lettere, e per diversi altri tuoni cromatici', which modulate through all 24 major and minor keys before returning to the original tonality.

WORKS

2 secular cants.: Amor tiranno (Bologna, 1649; words only), Vuol l'ultima risoluzione della sua donna, 1v, bc, 1662, *I-MOe*

Armoniosi concerti sopra la chitarra spagnuola (Bologna, 1650/*R*), 8 ed. in Hudson

Several pieces, in Libros de diferentes cifras de guitarra escogidas de los mejores autores, Madrid, 1709, anon., *E-Mn*

Sacred cant.: Dicite mortales, 1v, bc, *GB-Lbl*

GARY R. BOYE

Pellegrini [Pellegrino], **Ferdinando** (*b* ?Naples, *c*1715; *d* ?Paris, *c*1766). Italian composer, harpsichordist and organist. His career took him to Rome, Lyons, Paris and probably London (*c*1763–5). In Paris (1762) he served La Pouplinière, whose brother-in-law the Abbé de Mondran described Pellegrini as a 'true demon at the keyboard'. A series of works, largely for harpsichord, was issued from about 1753 to 1770 in Paris and London. The keyboard style is somewhat shallow, making much use of conventional *galant* string and keyboard mannerisms. The sonatas with violin are noteworthy in that most follow Giardini's model, maintaining a concertante equality between violin and harpsichord parts. Torrefranca claimed that several movements from opp.2 and 10 were actually by Galuppi, Rutini and Platti. The latter opus, however, was published as 'opera X et ultima', indicating Pellegrini's death before publication. The music may have been left incomplete, causing the Paris publisher (Bureau d'Abonnement de Musique) to flesh out the full six sonatas, promised to subscribers the previous year, by borrowing.

WORKS

op.	
1	6 trietti, 2 vn, bc (Paris and Lyons, *c*1753)
1	6 sonates, hpd, avec une lettre sur les pièces de clavecin en rondeau (Paris, *c*1754; as op.2, London, 1765)

RONALD R. KIDD

Pellegrini, Giulio. Singer, husband of Clementine Moralt (*see* MORALT family, (5)).

Pellegrini, Valeriano (*b* Verona, ?*c*1663; *d* Rome, 18 Jan 1746). Italian soprano castrato and composer. He sang in the Chiesa Nuova and the Cappella Sistina choir in Rome, at Cardinal Ottoboni's private concerts and in Bononcini's *La fede publica* in Vienna (1699). From 1705 to 1716 he was in the service of the Elector Palatine at Düsseldorf, where he created the difficult role of Gheroldo (requiring a range of *c′* to *b″*) in Steffani's *Tassilone* (1709) and was knighted. During this period he also appeared at Venice (as Nero in Handel's *Agrippina*, 26 December 1709) and London. Pellegrini served the elector in other capacities; he acquired for him a large collection of medals at Verona in 1708, but in 1715 the painter Sebastiano Ricci shamelessly fobbed him off with a bogus Correggio. Pellegrini made his London début on 9 April 1712 at a concert in the Old Spring Garden, but did not appear on the stage until the following November. Handel composed for him Mirtillo in *Il pastor fido*, the title role in *Teseo* and probably Lepidus in *Silla*. He seems to have been a technically proficient rather than a glamorous singer. By 1728 he had lost his voice and become a priest. In his last years in Rome he was dependent on charity. There is a soprano cantata by him in *D-Dl* (*EitnerQ*). A caricature of Pellegrini by Pierleone Ghezzi survives (*I-Rvat* Cod. Ottob. Lat.3116 c.162).

WINTON DEAN, JOHN ROSSELLI

Pellegrini, Vincenzo (*b* Pesaro, *c*1562; *d* Milan, 23 Aug 1630). Italian composer. He studied at the seminary in Pesaro, and from 1594 was a canon in the city's cathedral. It has been suggested that he was also *maestro di cappella* and organist of the cathedral, but while the first theory might be confirmed by two payments to a 'ms Vincenzo m.ro di capella' in 1582, there is no documentation to support the second. His 1599 collection of *Canzoni* is dedicated to Livia della Rovere, wife of the Duke of Urbino, in whose service Pellegrini worked before moving to Milan (see Radiciotti, 1891). On 23 April 1603 he travelled to Rome with the delegation representing the Pesaro curia. In the same year he was elected vicar-capitular, holding the post until 25 February 1604. During his time in Pesaro he had a number of pupils, including Galeazzo Sabbatini, later organist of the cathedral. On the recommendation of Cardinal Federico Borromeo, Pellegrini was appointed *maestro di cappella* of Milan Cathedral on 19 October 1611. On 3 February 1612 he asked the Pesaro chapter for three months' leave to visit Milan, but he settled permanently in the city, while maintaining the title of canon of the Pesaro curia. His connections with the Rovere family continued: autograph letters to the duke's secretary, Abbot Giulio Brunetti, survive; the motets of the *Sacri concentus* (1619) are dedicated to Francesco Maria II della Rovere; and Pellegrini was present at the wedding celebrations between Federico Ubaldo della Rovere and Claudia de' Medici in May 1621.

Pellegrini took up his post at Milan Cathedral on 26 February 1612; with a quarterly stipend of 375 lire, the same as his predecessor G.C. Gabussi. However, under his direction the quality of the choir suffered and Pellegrini was held responsible. Some of the singers were dismissed and in 1625 Pellegrini was under the threat of being replaced (the correspondence relating to this process involved Monteverdi). Pellegrini held on to his post, and in November 1628 asked for an increase in his stipend to enable him to publish some of his works for use in religious services. On 17 June 1630 he made his will, leaving a third of his music to a *maestro di cappella* in Milan, another third to Pesaro Cathedral, and the final third to the convent of S Agostino, Pesaro. Some of his money was left to Pesaro Cathedral so that a chapel could be built and a patronage established, the obligation being

that three masses be said weekly, and the feast of S Vincenzo be celebrated. There is no further reference to him in the cathedral records after 2 August 1630, and it is probable that he died of the plague.

Pellegrini's sacred music, described as austere and conservative, has often been linked to late 16th-century style, respecting the dictates of the Council of Trent. While the bulk of his sacred music is in the *a cappella* style, in his more modern compositions, such as the solo motets, the use of ornaments, rhythm and dissonances for expressive purposes, suggest the influence of the new *stile rappresentativo*. Pellegrini's most successful works are his instrumental canzonas. They reveal a lively imagination, clarity and serenity. Most follow a tripartite scheme with sections in duple then triple then duple time with a different theme. Themes return superimposed or juxtaposed with entries following quickly on one another, in a sort of concluding stretto that is particularly effective. Often the initial idea, fragmented, transformed and elaborated, is the source of the entire piece: this characteristic makes him a unique figure in the context of music in Milan.

WORKS

published in Venice, unless otherwise stated

Canzoni de intavolatura d'organo fatte alle francese, libro primo (1599); ed. in CEKM, xxxv (1972); facs. (Bologna, 1976)
Missae octo, 4–5vv (1603)
Missarum liber primus (1604)
Magnificat decem (1613)
Sacri concentus, 1–6vv, org (1619)
5 motets (1615[13]); 4 other works, 3–4vv (1617[2])
8 lucernar, 5vv, 5 hymns, 4vv, 19 posthymns, 5, 8vv, 5 ants, 4–5vv, symphonia, 4 insts, in Pontificalia ambrosiana ecclesiae ad vesperas musicali concentui accomodata (Milan, 1619[3])
10 lucernar, 5vv, 4 hymns, 4vv, 29 posthymns, 5, 8–9vv, 3 ants, 4–5vv, in Pontificalia ambrosiana ecclesiae ad vesperas musicali concentui accomodata (Milan, 1619[4])
3 works (Milan, 1623[3]); 2 works (Milan, 1626[5])

Mass, 6vv, bc, *D-MÜs*; requiem, 5vv, *MÜs*; 8 masses, 4–5vv, *I-Md*; mass, 4vv, *Ad*; mass, 5vv, *Rc* [may be the same as the mass printed in 1603]
2 Mag, 5–6vv, bc, *D-MÜs*
2 ants; 7 intonazioni per il Miserere; 2 ints, 5–6vv; lit all'ambrosiana: *I-Ma*
50 motets, 3–6vv, bc, *D-MÜs* [17 also in Sacri concentus (1619)]
2 Pater noster, 5, 9vv; Versetto asperges me: *I-Md*
1 work in L. Zacconi, Canoni musicali proprii e di diversi autori, *PESo*

Pellegrino, Ferdinando. *See* PELLEGRINI, FERDINANDO.

Pellegrino, Il. Nickname of DELLA VALLE, PIETRO.

Pellegrino, Ron(ald Anthony) (*b* Kenosha, WI, 11 May 1940). American composer and performer. After early training as a clarinettist, he studied theory, composition and philosophy at Lawrence University (BM 1962) and later studied with Kolisch, Leibowitz and Crane at the University of Wisconsin (MM 1965, PhD 1968). He began working in electronic music in 1967 and in 1969 published *An Electronic Music Studio Manual*, which became the standard text on the Moog synthesizer. He directed the electronic music studios at Ohio State University (1968–70) and the Oberlin Conservatory (1970–73) and was associate professor at Texas Tech University, Lubbock (1978–81). He established the Leading Edge music series (a forum for contemporary music performance and scholarship) and published his book, *The Electronic Arts of Sound and Light* (1983). Pellegrino's works reflect his interest in psychoacoustics and psycho-optics, creating works whose sonic and visual aspects are either integrated through, or derived from, common electronic sources. He founded two electronic music performance ensembles, the Real Electric Symphony (R*ES) and the Sonoma Electro-Acoustic Music Society (SEAMS), and has developed a theory of music based on the structure and behavior of waves and vibrations, which he calls 'cymatic music'. He has written articles on various topics including synthesizers and laser composition.

STEPHEN RUPPENTHAL/DAVID PATTERSON

Pellegrino di Zanetto (Micheli). Italian violin maker, son of ZANETTO DA MONTICHIARO.

Pellesier, Victor. *See* PELISSIER, VICTOR.

Pelletier, (Louis) Wilfrid (*b* Montreal, 20 June 1896; *d* New York, 9 April 1982). Canadian conductor and music educationist. After studying with François Héraly (1904–14) and subsequently working with Alexis Contant and Alfred Laliberté, in 1915 Pelletier won the Prix d'Europe and moved to Paris with his first wife, Berthe Jeannotte. There he studied with Isidore Philipp (piano), Marcel Samuel-Rousseau (harmony), Charles Bellaigue (opera repertory) and Charles-Marie Widor (composition). After moving to New York in 1917 he was engaged, on the recommendation of Monteux, as a répétiteur at the Metropolitan Opera. In 1921 he was made assistant conductor. In 1928 he became director of the company's French repertory, and in 1932 conductor of the Sunday Night Opera Concerts. He served as house conductor until 1950, during which time he initiated the Metropolitan Auditions of the Air (1936), regularly conducted the New York PO's children's concerts and was guest conductor, under Toscanini, of the NBC SO.

In April 1935 he gave his first concert as founding conductor of the reorganized Montreal SO, and in November instigated a series of children's concerts. In June 1936 he led the inaugural programme of the Montreal Festival. In 1940 he left the Montreal SO and in 1942, together with Claude Champagne, persuaded the provincial government to establish the Conservatoire de Musique de Québec à Montréal. Pelletier was director until 1961, and made it the pre-eminent musical institution in French Canada. From 1951 to 1966 he was artistic director of the Quebec SO, and from 1961 to 1970 music director in the Ministry of Cultural Affairs of the Quebec government. His honours included CMG (1946), Chevalier of the Légion d'Honneur (1947) and Companion of the Order of Canada (1968). In 1966 the largest concert hall at the new Place des Arts in Montreal was named Salle Wilfrid-Pelletier. Pelletier married the American singer Queena (Tillotson) Mario in 1925, and the soprano Rose Bampton in 1937.

Pellicani, Giovanni Battista Sanuti. *See* SANUTI PELLICANI, GIOVANNI BATTISTA.

Pelliccia, Arrigo (*b* Viareggio, 20/21 Feb 1912; *d* Rome, 20 July 1987). Italian violinist and viola player. He studied first with his father, then at the conservatory in Bologna and later took postgraduate courses with Arrigo Serato at the Accademia di S Cecilia and with Carl Flesch in Berlin. Inaugurating a brilliant concert career in 1931, he specialized, as a soloist, in contemporary music. After World War II he divided his time between leading the orchestra of the Pomeriggi Musicali at Milan, playing the viola with the Santoliquido-Pelliccia-Amfiteatrov Trio, the Rome Quartet and the Boccherini Quintet, and the violin as a soloist with the Virtuosi di Roma, and performing as a soloist on both the violin and the viola, making many appearances abroad. He recorded Mozart's duos for violin and viola with Grumiaux, to great acclaim. From 1939 to 1959 he taught at the Naples Conservatory, and then at the Rome Conservatory. (J. Creighton: *Discopaedia of the Violin*, Toronto, 1974, 2/1994)

PIERO RATTALINO/R

Pellio [Pelio, Pello], **Giovanni** (*fl* 1578–97). Flemish composer, active in Italy. He was a priest. He was in the service of Don Serafino Fontana in Venice at least between 1578 and 1584, and his *Primo libro delle canzoni spirituali a cinque voci* (Venice, 1578, incomplete) is dedicated to Fontana by Giovanni Bassiano, who probably supervised the printing of the work. Pellio described himself as 'Fiamengo' in the dedication of his *Primo libro delle canzoni spirituali a sei voci* (Venice, 1584). A second book for six voices appeared in 1597. He contributed one madrigal to G.B. Moscaglia's *Secondo libro de madrigali a quattro voci con alcuni di diversi eccellenti musici di Roma* (RISM 1585[29]).

PIER PAOLO SCATTOLIN

Pelliser, Victor. *See* PELISSIER, VICTOR.

Pellisson [Pellissonus] (*fl* 1399). French composer, possibly identifiable with BOSQUET.

Peloponnesios, Petros. *See* PETROS PELOPONNESIOS.

Peloubet, (Louis Michel François) Chabrier (de) (*b* Philadelphia, 22 Feb 1806; *d* Bloomfield, NJ, 30 Oct 1885). American maker of woodwind instruments and reed organs. His father, Louis Alexander de Peloubet, was a French royalist who fled during the Revolution to Germany, where he learnt to make flutes, fifes and clarinets. In October 1803 he emigrated to New York, where he married in 1805; he advertised in the *Albany Argus* as 'musical instrument maker' from 26 November 1810 to 28 May 1811. Chabrier Peloubet, who undoubtedly learnt the woodwind maker's trade from his father, was in business in New York from 1829 until 1836, when he transferred his family to Bloomfield, New Jersey. His first factory was in 'Pierson's Mill', 3 Myrtle Court; in 1842 he moved to 86 Orange Street. After these premises were destroyed by fire in 1869, he built two new factory buildings on Orange Street.

In 1849 the Peloubet firm began production of melodeons (the first in the USA) and reed organs; advertisements for them appeared in newspapers in Newark, New Jersey, during the 1850s and 60s and instruments were sold by H. Warren and Chickering in New York, and through J.C. Bates in Boston. The firm grew appreciably during the 1850s. Peloubet's son Jarvis (1833–1902) joined him in the family business and in 1860 they produced 90 melodeons to the value of $8000, most of them apparently small instruments for home use.

Although Peloubet manufactured melodeons and reed organs for 31 years, only three of these survive: two in the museum of the Bloomfield Historical Society and one in a private collection. The Bloomfield instruments display evidence of careful workmanship and good intonation and tone. Four of Peloubet's clarinets and 20 flutes survive. The latter range in complexity from the boxwood, one-key instrument in E♭ with brass and ivory fittings (Library of Congress, Washington DC, Dayton C. Miller collection no.79) to the eight-key cocuswood instrument in C with silver fittings and an ivory head (Miller no.1556).

It is difficult to date Peloubet's flutes and clarinets. None of the clarinets is dated; of the flutes, 12 have Peloubet's numbers, which may be serial, but none is dated. All are stamped (usually on the foot-joint) 'C. Peloubet New York (City)', and all but five say 'Factory Bloomfield NJ'.

CHARLES H. KAUFMAN

Pelplin Keyboard Tablatures (*PL-PE* 304–8, 308a). *See* SOURCES OF KEYBOARD MUSIC TO 1660, §2(iii).

Peña, Paco (*b* Córdoba, 1 June 1942). Spanish guitarist. At the age of six he heard Ramón Montoya playing in Córdoba football stadium. Peña made his first professional appearance aged 12. In his early 20s, he decided to pursue his career abroad, making his London début in 1963. He settled in Britain in 1966. Since then, his reputation as a refined interpreter of traditional flamenco-guitar forms has remained unequalled. He has made many recordings, including a 'flamenco mass' composed for the 1988 Wrocław Festival. He founded the Paco Peña

Flamenco Centre in Córdoba in 1981, and was made professor of flamenco at Rotterdam University in 1985.

JAMES WOODALL

Pena Costa, Joaquín (*b* Barcelona, 1 March 1873; *d* Barcelona, 25 June 1944). Spanish musicologist and music critic. He qualified in law at Barcelona University, but began his career writing criticism for various Barcelona newspapers. Although he never gave up criticism, his greatest work was as a musicologist and music organizer. He was strongly influenced by Pedrell and centred his efforts on making Wagner's music known: to this end he founded the Asociación Wagneriana (1901), translated Wagner's operas and writings and wrote several studies of his music. Later he extended his field to other composers and to other forms, including lieder. In 1940 he started to translate Riemann's *Musik Lexikon* into Spanish, but was persuaded by Higini Anglès to change the project into the writing of a new dictionary that would better answer the needs of the Spanish public. After his death it was continued by Anglès and published as the *Diccionario de la música Labor* (Barcelona, 1954). (*LaborD* [incl. introduction])

JOSÉ LÓPEZ-CALO

Peñalosa [Penyalosa], **Francisco de** (*b* Talavera de la Reina, *c*1470; *d* Seville, 1 April 1528). Spanish composer. More works by him survive than by any of his Spanish contemporaries, even though it is also clear that quite a considerable number of his compositions have been lost. Six complete masses, six *Magnificat* settings, five hymns, three Lamentation settings, over 20 motets and 11 songs are attributed to him in Iberian or New World sources; surprisingly, it appears that none of his music has been preserved elsewhere.

Relatively little is known about his life before his appointment to the Aragonese royal chapel on 11 May 1498; the document recording his appointment gives only his place of birth. He served there until the death of King Ferdinand in 1516, his salary having been increased in May 1501 to 30,000 maravedís, the maximum paid to a singer-chaplain in that household. Although Cristóbal de Villalón described him as *maestro de capilla* (*Ingeniosa comparación entre lo antigua y lo presente*, Valladolid, 1539), he is not referred to elsewhere under this title. He was, however, 'maestro de música' (music teacher) to the king's grandson, Ferdinand, who was brought up and educated in Burgos; Peñalosa held this position from 1511. In December 1505 he had been presented, at royal request, to a canonry at Seville Cathedral, but the position was contested and it was several years before the case was decided in his favour. He visited Seville from time to time while continuing to serve at court, but he took up residence there following the king's death. In the autumn of 1517 he received an invitation to go to Rome, and he served as a member of the papal choir until the death of Leo X (December 1521). Even the high esteem of the pope was insufficient to convince the chapter of Seville Cathedral to allow Peñalosa to receive the income from the canonry *in absentia*, and in the summer of 1518 he renounced it for the position of Archdeacon of Carmona. After the pope's death he returned to Seville, resumed his canonry and in March 1525 was granted the rights to the post of treasurer. He died in Seville on 1 April 1528 and was buried in the cathedral.

Villalón's homage to 'the celebrated Francisco de Peñalosa ... whose skill in composing and singing surpassed even that of music's inventor, Apollo' reflects the composer's fame in his own country, and he was also renowned in Rome, primarily, it would appear, as a singer. No works are attributed to him in manuscripts associated with the Cappella Sistina or in other Italian sources, but it is clear that he was composing motets for King Ferdinand's chapel before he travelled to Rome. The late 16th-century inventories preserved at Tarazona Cathedral list a number of works that are now lost, including a book of his masses. In addition, an inventory of the library of the Duke of Calabria lists a further 'libro de Peñalosa' which is probably no longer extant. The works that do survive reveal a composer of great skill, whose musical idiom is rooted in the lingua franca of the Franco-Flemish school. Peñalosa would have met composers such as Pierre de La Rue and Alexander Agricola during their visits to Spain in the early 16th century, and it is probably not by chance that both Peñalosa and La Rue composed masses based on Urrede's well-known canción *Nunca fue pena mayor*. Indeed, it has been suggested that these masses were composed for the wedding in 1497 of Philip the Fair and Juana, second daughter of Ferdinand and Isabella, although this was a year before Peñalosa entered the king's service. It is not yet possible to date any of the other masses, but it is likely that his *Missa 'L'homme armé'* and perhaps the *Missa 'Por la mar'* (which cites the *L'homme armé* melody in the Sanctus) were composed for specific occasions.

All Peñalosa's masses are for four voices and are built round a cantus firmus in the tenor; in general the cantus firmus also pervades the entire texture through imitation. Almost all his borrowed melodies are secular, and most are of French origin; even in his *Missa 'Ave Maria peregrina'*, the one mass based on plainchant, he cites Hayne van Ghizeghem's *De tous biens plaine* in the final Agnus Dei. The *Missa 'El ojo'*, the meaning of whose title remains unclear, is the simplest and most concise of his mass settings, with the melody confined, apparently unadorned and mostly in long note values, to the tenor. It may be the earliest of his masses: all the others that survive display a much greater integration of the borrowed melody and a more experimental approach to structure. The latter is achieved through contrasts of texture and scoring (duos and trios are sometimes used in contrast to the full texture, which is at times expanded to five or six voices), metre (ternary and binary) and declamation (contrapuntal sections alternating with passages of homophony). Canonic writing is characteristic of Peñalosa's masses, particularly in the final Agnus Dei: the most outstanding example is found in the *Missa 'Ave Maria'*, where the *Salve regina* melody is sung in canon simultaneously with the tenor of Hayne's chanson in retrograde. Such technical feats are worthy of any of his Franco-Flemish contemporaries.

His *Magnificat* and Lamentation settings, hymns and some of the motets are based on plainchant, and are generally imitative in texture. Of the motets, his setting of *Ave regina celorum* is closest to the cantus-firmus style of his masses. Although some of his motets have specific liturgical functions, the majority set non-liturgical texts and are often penitential in tone – the predominant themes are the Passion and redemption – and may well have served in devotional contexts. With no predetermined plainchant melody, these motets are freely composed, their structure being articulated by contrasts of texture

and scoring. In particular, the rhetorical use of sections of homophony to highlight key words or phrases, very often set in a quasi-recitational manner, conveys the textual message to the listener in an enhanced and compelling manner.

If Peñalosa's motets are highly original and experimental, his songs are more conventional, with the notable exception of *Por las sierras de Madrid*: this is a compositional tour de force that combines several melodies simultaneously, including four refrains underlined, in the bass, by the phrase 'Loquebantur variis linguis magnalia Dei' ('they spoke in different tongues of the wonderful works of God'). The incomplete *Tú que vienes de camino* is also unusual: in the table of contents of the Cancionero Musical de Palacio it is listed as an *ensalada*, but it is impossible to tell from the surviving material whether it conforms to the structure of the *ensalada* as it developed later in the 16th century. Most of Peñalosa's songs were added to the Cancionero after its original compilation in about 1500; all are villancicos and all set verse that develops the conventional courtly love themes. The musical style follows that cultivated by Juan del Encina in the 1490s, but generally with an increased use of imitation. A single *romance*, *Los braços traygo*, is attributed to Peñalosa in another source (*E-Bbc* 454).

Peñalosa's versatility and skill as a composer undoubtedly mark him out as the leading composer of his generation. Through his connections with Seville Cathedral he may well have directly influenced Morales; he certainly made a major contribution to the flowering of polyphony in the Iberian peninsula during the 16th century.

TESS KNIGHTON

Peñalosa, Juan de (*b c*1515; *d* ?Toledo, 1579). Spanish organist of Jewish descent. He served as assistant to the blind Francisco Sacedo, who was principal organist of Toledo Cathedral from 22 January 1541 until his death shortly before 7 August 1547. Peñalosa, who had by then become a priest in the Toledo diocese, was elected his successor on 31 December 1549. From 30 June 1552 he had to divide his stipend with another organist Francisco López. Peñalosa applied 11 years later for the post of organist of Palencia Cathedral, which had become vacant on the death of Francisco de Soto in summer 1563. On 5 January 1564 the Palencia chapter dismissed him, since

he seemed to be attempting to seek double employment with the Toledo and Palencia chapters. Apparently he remained at Toledo until 1579. No relationship to Francisco de Peñalosa has yet been discovered, nor do any of his compositions survive.

ROBERT STEVENSON

Peña y Goñi, Antonio (*b* San Sebastián, 2 Nov 1846; *d* Madrid, 13 Nov 1896). Spanish music critic and composer. His early musical training was with José Juan Santesteban, organist and *maestro de capilla* at San Sebastián. He spent his youth in France, as a student at Paris and Bordeaux, and later studied harmony at the Madrid Conservatory. He composed numerous works for the piano, a symphonic poem, *Vasconia*, and fantasy, *Pan y Toros*, for orchestra, and a 'patriotic Basque song' *¡Viva Hernani!* for solo voice, chorus and orchestra (Madrid, Teatro Real, 21 Dec 1875), which enjoyed great success. But he is best known as a critic; he began on *El imparcial* and then, with Manuel de la Revilla, founded the periodical *La crítica*. He also contributed to the *Revista contemporánea*, *El globo*, *El tiempo*, *La Europa*, *La Ilustración española y americana*, *La Correspondencia musical* and *La epoca*. He was named professor of music history and criticism at the Escuela Nacional de Música y Declamación in Madrid in 1879 and in 1892 was elected to the Real Academia de S Fernando, an honour he had declined in 1873 through excessive modesty.

Peña y Goñi was an opponent of Italianism and a supporter of Wagner, whose work he helped make known in Spain. He enthusiastically defended the zarzuela, and his chief work, *La ópera española y la música dramática*, is of the greatest importance in tracing its origins and documenting its history. He was the founder of modern music criticism in Spain.

GUY BOURLIGUEUX

Penberthy, James (*b* Melbourne, 3 May 1917; *d* 29 March 1999). Australian composer. He received his early musical tuition from his father. After active naval service during World War II he studied at the Melbourne University Conservatorium, graduating in composition in 1950. He undertook further study from 1950 to 1952 in London, Manchester, Paris and Florence. From 1953 to 1973 he lived in Perth, dividing his time mainly between composition and journalism. From 1947 to 1950 he was musical director of the National Opera and Ballet in Melbourne: later he was instrumental in the foundation, in Perth, of the Western Australian Ballet (1953) and Opera (1967) companies. He taught at the NSW Conservatorium and the Northern Rivers College of Advanced Education from 1974 to 1982. His interest in music-theatre has been reflected in the composition of many operas and ballets, the most notable success perhaps being the opera *Dalgerie* based on an Australian aboriginal subject. His musical style, essentially Romantic and, like Antill, Douglas and Sculthorpe, consciously nationalist, has drawn largely upon early 20th-century sources; from 1965 to 1975, however, he also occasionally explored serial, aleatory and computer methods.

WORKS

(selective list)

11 operas incl. Ophelia of the Nine Mile Beach (comic op, 1, Penberthy), 1955, Hobart, Theatre Royal, July 1965; The Earth Mother (tragic op, 3, D.R. Stuart, Penberthy), 1957–8, unperf.; Dalgerie (tragic op, 1, M. Durack, after her novel: *Keep Him My Country*), Perth, Somerville Auditorium, 22 Jan 1959); Stations (space op, 3, Harwood), 1975, unperf.; Henry Lawson (3, Penberthy, after stories and poems by H. Lawson), 1988–9, unperf.
27 ballets incl. Beach Inspector and the Mermaid (Penberthy), Perth, 1958; Kooree and the Mists, Perth, 1960; Fire at Ross's Farm (after Lawson), Perth, 1961
9 syms. incl. no.6 'The Earth Mother', 1962; 2 film scores; 4 pf concs.; concs. for vn, va, vc, fl, ob, cl, bn, hn, sax, tpt; other music for orch/str orch; band pieces
Many choral works incl. Cant. on Hiroshima Panels (J.J. Jones), S, T, Bar, chorus, orch, 1959; Commentaries on Living (G. Harwood), nar, chorus, orch, 1972; Southland (Harwood, Penberthy), Bar, 2 SATB, orch, 1991; song cycles, other vocal music
Chbr music incl. 3 str qts; kbd works incl. sets of preludes and studies, pf; 2 org pieces

DAVID SYMONS

Pencerdd. One of two bardic classes distinguished in medieval Welsh legal theory. *See* BARD, §2, and WALES, §II, 1.

Pencerdd Gwalia. *See* THOMAS, JOHN.

Pencerdd Gwynedd. *See* ROBERTS, JOHN HENRY.

Penckel, Bartłomiej. *See* PĘKIEL, BARTŁOMIEJ.

Penco, Rosina (*b* Naples, April 1823; *d* Porretta, nr Bologna, 2 Nov 1894). Italian soprano. After an unrecorded début she sang in Dresden and Berlin in 1850, and Constantinople in 1850–51, chiefly the lyric coloratura parts of Rossini, Bellini and Donizetti, and was renowned for her trill. Before Verdi wrote Leonora in *Il trovatore* for her (1853, Rome) he heard that she had 'many virtues' though 'imperfect'; she was also described as 'very pretty' and 'a devil' to her fellow singers. Verdi prized her combination of agility with passionate dramatic temperament; he later suggested her for *La traviata* and for the heavier part of Amelia in *Un ballo in maschera* (which she eventually sang in 1861 at Covent Garden and the Théâtre Italien, Paris). He complained in 1858 that she had retreated into the bel canto style 'of thirty years ago' – her range included Norma, Elvira in *I puritani* and Paolina in Donizetti's *Poliuto* – instead of moving forward into 'the style of thirty years hence'. She sang frequently in Madrid (to 1857), London (1859–62), Paris (most years from 1855 to 1872) and St Petersburg (to 1874).

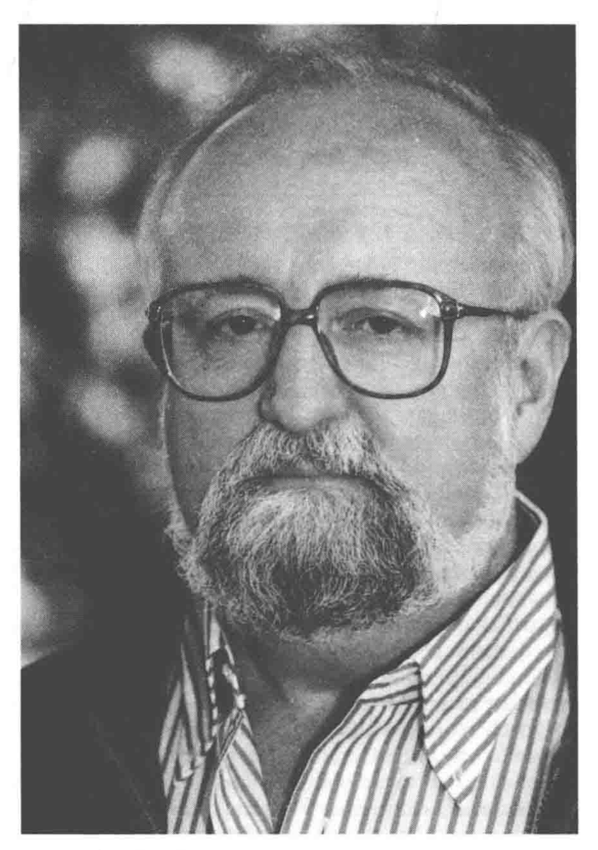
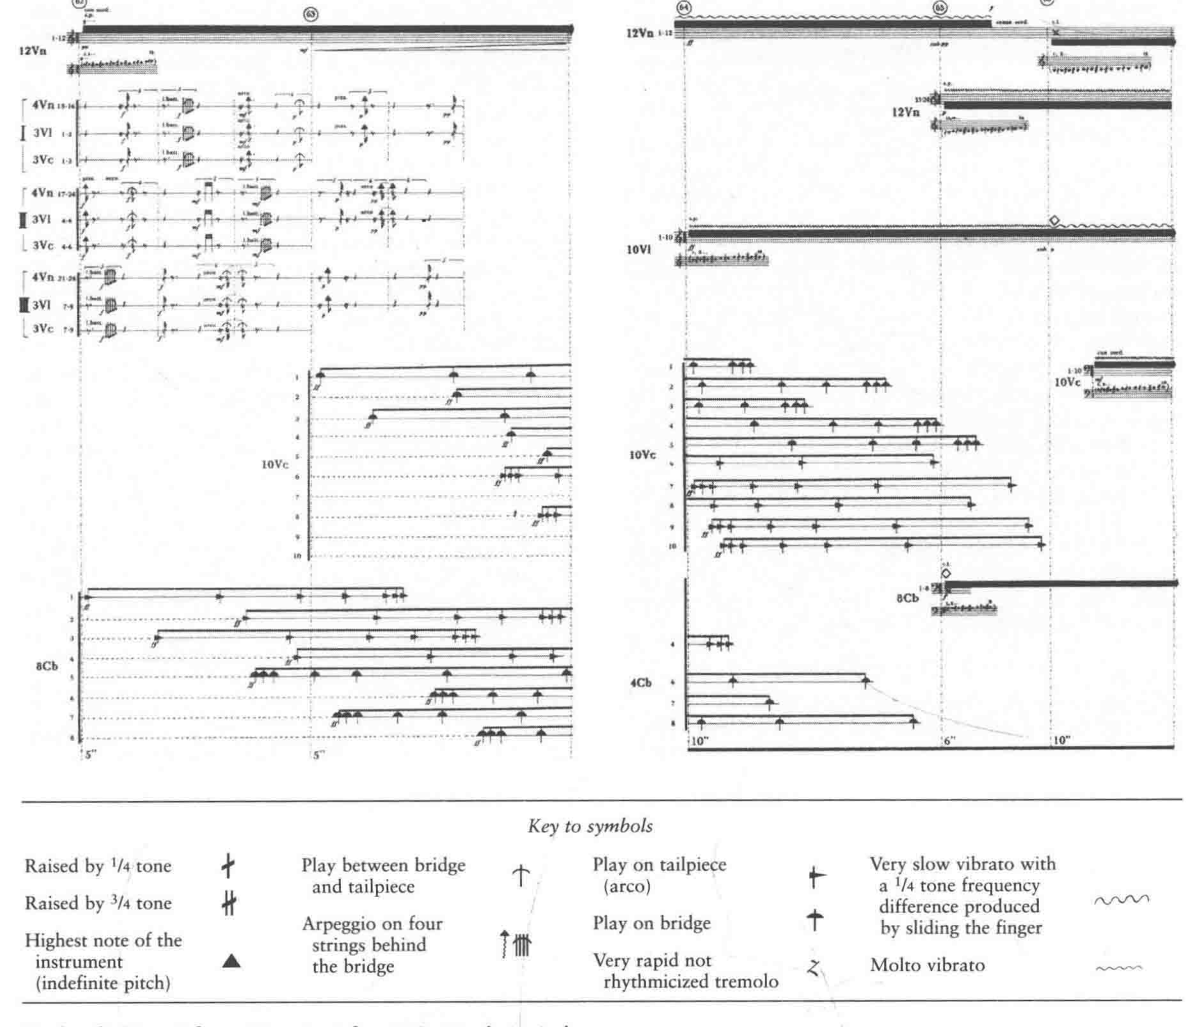
JOHN ROSSELLI



Penderecki, Krzysztof (*b* Dębica, 23 Nov 1933). Polish composer and conductor. He first came to prominence as an explorer of novel string textures and for many years his name was popularly synonymous with avant-garde Polish music. His subsequent allusions to 18th- and 19th-century idioms and genres, in his choral and operatic works as well as in his purely instrumental pieces, has produced a substantial body of work which challenges many assumptions about the nature and purpose of contemporary music.

1. LIFE. Penderecki studied composition privately with Franciszek Skołyszewski and then (1954–8) with Malawski and Wiechowicz at the State Higher School of Music (now the Academy) in Kraków. On graduating, he joined the staff of the school as a teacher of composition. His first major success came in 1959 when *Strofy* ('Strophes'), *Emanacje* ('Emanations') and *Psalmy Dawida* ('Psalms of David') were awarded the top three prizes at a competition organized by the Union of Polish Composers. Subsequently he came to the attention of two influential figures who were to prove crucial in bringing his music to audiences outside Poland: the publisher Hermann Moeck (who had heard *Strophes* at the 1959 Warsaw Autumn Festival) and Heinrich Strobel, director of the music division at SWF. In his capacity as director of the Donaueschingen Music Days, Strobel commissioned several of Penderecki's works, the first being *Anaklasis*, composed in 1959–60. In a short period Penderecki earned a reputation as one of the most innovative composers of his generation, especially for his experiments in notation, the perception of time, and extended instrumental techniques. He received an award at UNESCO (1961, for *Tren*, 'Threnody') and the Westphalia and Italia Prizes (1966 and 1967 respectively, for the *St Luke Passion*), the Sibelius Gold Medal (1967) and the Polish State Prize, first class (1968); and later the Herder, Honegger and Grawemeyer awards, the latter for Symphony no.4.



From 1966 Penderecki accepted many composition residencies abroad, including appointments at the Volkwäng Hochschule für Musik, Essen (1966–8), in Berlin under the aegis of the Deutscher Akademischer Austauschdienst (1968–70), and at Yale University (1973–8). In 1972 he was appointed rector of the Kraków Academy, a post he held for 15 years, during which time martial law was imposed in Poland. There have been festivals of his music both in Kraków and, periodically since 1980, at his restored manor house in nearby Lusławice, where he has cultivated a fine garden, including a labyrinth and arboretum.

Penderecki's career as a conductor began in earnest in 1972, when he recorded seven of his own works for EMI. He has since conducted mainly in the USA and throughout Europe, becoming associated with the music of Shostakovich as well as his own works. From 1987 to 1990 he was artistic director of the Kraków PO, and in 1988 he became principal guest conductor with the NDR SO, Hamburg.

Penderecki has received honorary doctorates from several European and American institutions and is an honorary member of many learned academies. In 1990 he was made a Chevalier de Saint Georges and in addition received the Grosses Verdienstkreuz der Bundesrepublik Deutschland. Other honours include the Österreichisches

Krzysztof Penderecki in 1993

Penderecki: 'Tren. Ofiarom Hiroszimy', figures 62–66 inclusive (pub.

Ehrenzeichen für Wissenschaft un Kunst (1992) and the Monacan Ordre du Mérite Culturel (1993).

2. Music up to 1974. Penderecki's juvenilia show characteristically vigorous rhythmic and lyrical melodic traits, in the vein of enriched neo-classicism prevalent in Poland in the postwar decade. The prizewinning works of 1958–9, however, advance rapidly from a mix of Stravinskian and Webernian choralism (*Psalms of David*) to Boulezian gestures (*Strophes*). Penderecki never fully engaged with orthodox serial techniques, preferring to absorb certain permutational procedures and to explore textural writing and effects which were to lead to the full-blown sonorisms of subsequent scores. *Emanations*, with its two string orchestras tuned a semitone apart, thus paved the way for *Anaklasis*, *Fonogrammi* and *Tren* ['Threnody'], works which use novel graphic notation and what was to become a characteristically broad-brush approach to musical materials and their development. Scored mostly for strings, these later works create a highly Expressionistic soundworld by means of quarter-tone clusters, wedges and group glissandos; a range of vibratos, tremolos and percussive effects, and by exploiting the flexibility of time–space notation. Alongside comparable pieces by Xenakis and Ligeti, *Threnody* remains a classic avant-garde statement of the period, not least because it represented directness of expression at a time of advanced post-serial complexity. Originally entitled *8′ 37″*, the work was subsequently given an emotive title which was symptomatic of Penderecki's burgeoning fascination with historical events and storylines, especially those of a traumatic nature.

Graphic notation and extended instrumental techniques featured in many Polish orchestral works of the 1960s. However, unlike most of his contemporaries, Penderecki proved an instinctive dramatist; this quality is apparent from earlier choral pieces as well as his magnum opus of the 1960s, the *St Luke Passion*, the work which brought him genuine popular acclaim. Like Benjamin Britten's *War Requiem*, composed in 1961, the Passion touched on a contemporary spirit of reconciliation, which was all the more remarkable for it being composed in communist Poland and first performed in the Federal German Republic (in Münster Cathedral). It was also the cause of disquiet among the more purist avant-garde critics for its eclecticism, which may now be seen as a portent of the polystylism which soon surfaced elsewhere. But Penderecki had already rocked the boat with the concluding

major triads in the *Stabat mater* (incorporated in the *Passion*) and *Polymorphia*, and in this gritty reworking of the Baroque genre he confidently incorporated chant, recitative and chorales. The choral writing, as adventurous as his instrumental textures, sometimes emulates electronic sounds, and the serial pitch organization (two 12-note rows are used) includes the B–A–C–H motif as a bridge to the more traditional elements in the score. It retains a clear narrative structure, and contains cyclic devices and set pieces, of which the 'Stabat mater' is the most substantial. The raw and austere expression of the *Passion* conveys an apocalyptic vision held in check, to be unleashed in more visceral form in later works.

A penchant for themes on the human condition lies behind many of the choral commissions. *Dies irae* commemorates the dead of Auschwitz, while *Kosmogonia* was written for the 25th anniversary of the United Nations. And yet by integrating vocal lines into the instrumental textures or by translating texts into Latin, as in *Dies irae*, or assembling them in a number of languages, as in *Kosmogonia*, he frequently places the listener at a remove. There is, however, a less sombre combination of reflection and ecstasy in *Utrenia*, the sequel to the *St Luke Passion* and his most symphonic choral work of the 1960s and 70s. Its assimilation of Eastern Orthodox rites is especially vivid, and the open exuberance of the 'Resurrection' is uncommon in Penderecki's work of the period. While retaining many serial practices of the 1960s, his musical language now integrates diatonic triads and emphasizes certain interval classes, most notably the minor 3rd. The *Magnificat* (1974), with its triple fugue (in 'Quia respexit'), polyrhythmic textures and extreme juxtapositions, may be regarded as the summation of his early oratorio style.

3. MUSIC AFTER 1975. Like a number of his contemporaries and compatriots, Penderecki relaxed his compositional language in the mid-1970s to give lyrical melody the central role in both his vocal and instrumental music. Turning-points were the orchestral *Przebudzenie Jakuba* ('The Awakening of Jacob'), scored additionally for 12 ocarinas, and, more particularly, the First Violin Concerto, written for Isaac Stern. While retaining some earlier methods, the concerto marks out future territory in its discursive, narrative structure and in its focus on two intervals, the semitone and tritone. The semitone has been the unmistakable cornerstone of Penderecki's vocabulary throughout his career, and unresolved chains of semitones, commonly separated by a tritone, have been the most conspicuous aspect of his melodic style since the mid-1970s. This *idée fixe* was crucial to Penderecki's development of his own brand of neo-romanticism. He had, to many observers, however, created a neo-Brucknerian idiom that seemed even more retrogressive than the eclecticism of the *St Luke Passion*. In truth, this later style owes less to late 19th- and early 20th-century German traditions than is commonly supposed; rather it recalls the motivic and symphonic procedures of Liszt and Paderewski and in its dark expressivity echoes the work of his compatriot, Mieczysław Karłowicz. Where Penderecki differs is in his modernistic fixation on deliberately restricted technical means: intervallic repetition, doggedly persistent rhythms, sombre orchestral colours and a tendency to deploy his ideas rhetorically.

In contrast to the voyeurism of his first opera, *The Devils of Loudun* (1969), where the profane is dominant, Penderecki's second stage work is styled a *sacra rappresentazione*. While both works are opera–oratorio hybrids, *Paradise Lost* (1975–8) draws on a variety of early genres, such as Renaissance Florentine entertainments, with their extravagant scenic tableaux and dances. Given its Christian message of innocence, degradation and purification, with Adam and Eve as unwitting victims, it is curious that Penderecki created only superficial differences between the musical material assigned respectively to God and Satan. His intervallic *idée fixe*, containing the medieval 'diabolus in musica', is appropriate for fallen angels, but it also in effect depicts heaven, giving Milton's account a fatalistic gloss and sapping any vestiges of dramatic momentum. That said, there are impressive set pieces, notably towards the end of Act 2, where visions of death, pestilence, war and flood are contained within a favoured formal device, the passacaglia.

Penderecki's third and fourth operas, *Die schwarze Maske* and *Ubu Rex*, allowed him to indulge his musical and dramatic neuroses. The former is his finest *danse macabre*, a hysterical Grand Guignol whose absurdity is matched by music of manic intensity and drive (as in much of his work, there is an almost cinematic quality to the emotional directness of the music). The central female role, Benigna, dominates the second half of the opera in music of unusual melodic breadth, lessening its overwhelming gloom. The use of pastiche and quotation, apparent in both *Paradise Lost* and *Die schwarze Maske*, comes into its own in *Ubu Rex*. Penderecki's adaptation of Jarry's grotesque, scatological tale is replete with affable references to operatic styles as varied as Rossini, Musorgsky and Shostakovich. Not attaining the innovative synthesis of either Stravinsky or Weill, *Ubu Rex* remains something of an aberration in Penderecki's output, but one whose melodic and harmonic language is refreshingly light-spirited.

More central to Penderecki's output after 1975 are the oratorios, among them the *Polish Requiem*, *Seven Gates of Jerusalem* and *Credo*, all large-scale works. Whereas the Polishness of *Die schwarze Maske* and *Ubu Rex* lies in their storylines, the *Te Deum* and *Requiem* rely on musical quotation: the hymn *Boże coś Polskę* ('God, who hast protected Poland') is the centrepiece of the former work, while a second Old Polish hymn, *Święty Boże* ('Holy God'), occurs in the 'Recordare' of the *Requiem*. To the outside observer, such iconography may seem excessively sentimental, but in the context of events in Poland during the years 1979–81 it was timely and appropriate: Cardinal Wojtyła of Kraków, to whom the *Te Deum* is dedicated, had been elected to the papacy in October 1978; the trade union Solidarity was established in 1980; and in December 1981 martial law was imposed on the country by the then communist authorities. Penderecki's music came to represent much of the struggle between church and state (although, unlike Lutosławski and Górecki, he maintained some links with the Polish political establishment during the harsh years after 1981), hence the commission by Solidarity to compose a piece for the unveiling of the Gdańsk memorial to those killed in anti-government riots at the shipyard in 1970. The *Lacrimosa*, scored for soprano and chorus, was later to become part of the *Polish Requiem*.

This quasi-political, patriotic role seems to have spurred Penderecki to develop his neo-romantic language to a point where conventions from the Renaissance and the

18th and 19th centuries are openly acknowledged. Diminished and dominant harmonies, cadential formulae and melodic phrases (most noticeably those beginning with a rising minor 6th), are now part of his vocabulary. Elsewhere, in the *Requiem*, where many of the sections are dedicated to individuals or mass martyrs in Polish history, Penderecki also employs choral and instrumental textures derived from his own music of the 1960s, achieving a hitherto unmatched stylistic and technical synthesis. Terror-driven it may be, like much of his music, but it does touch common ground with many audiences, especially within a political-religious context.

Later choral works, especially the *Credo*, show an increasingly softer, 19th-century harmonic bias. Some, again, incorporate Polish hymns (e.g. in the 'Crucifixus' of the *Credo*), and the influence of Bach is much more obvious than before. When deprived of a religious text or commemorative occasion, as in the chamber and orchestral music, Penderecki's compositional rationale can seem vulnerable to accusations of indulgent rhapsodizing. Nevertheless, works like the String Trio and Clarinet Quartet are permeated by a relaxed, conversational tone.

Orchestral monumentalism remains however, and in many cases relies on extended sonata forms to provide cohesion, showing a preference for multi-sectioned, single-movement works, e.g. the second, fourth and fifth symphonies, whose structures are articulated primarily by alternating fast and slow material. Among the most persuasive of the concertante works are the Second Cello Concerto (written for Rostropovitch) and the Second Violin Concerto. The former, like the *Requiem*, brings bite to his neo-romantic idiom by assimilating textural elements from his music of the 1960s, although the overall gestural language remains resolutely 19th-century. The latter concerto is essentially an expanded sonata allegro, with many refined sonorities. Its subtitle, 'Metamorphoses', is indicative of the cyclical elements and procedures which have formed the basis of Penderecki's music for over two decades.

The Third Symphony, unusually, has five distinct movements, with a passacaglia reminiscent of that in the *Magnificat*. For all its reliance on Mahler, it is the sustained central adagio, completed in 1995, after the fourth and fifth symphonies, which makes the strongest case for Penderecki's new communicable language. In 1998 he wrote in a foreword to a catalogue of his sketches that he felt he was getting close to the essence of music. By implication, these views are somewhat dismissive of his music of the 1960s, arguably his most distinctive contribution to 20th-century culture. Penderecki is a composer who has consistently engaged with the issues of the outside world, sometimes with piety, often with apparent anger and never without passion. Nevertheless, his stylistic shifts have often raised more questions than answers.

WORKS

DRAMATIC

Najdzielniejszy z rycerzy [The Most Valiant of Knights] (children's op, 3, Penderecki, after E. Szelburg-Zarembina), 1965, collab. M. Stachowski; Poznan, Teatr Lalki i Aktora 'Marcinek', 15 March 1965
The Devils of Loudun (op, 3, Penderecki, after A. Huxley), 1968, Hamburg, Staatsoper, 20 June 1969
Paradise Lost (sacra rappresentazione, 2, C. Fry, after J. Milton), 1975–8, Chicago, Lyric Opera, 29 Nov 1978
Die schwarze Maske (op, 1, H. Kupfer and Penderecki, after G. Hauptmann), 1984–6, Salzburger Festspiele, 15 Aug 1986
Ubu rex (op, 2, Penderecki and J. Jarocki, after A. Jarry), 1990–91, Munich, Bayerische Staatsoper, 6 July 1991

Incid music, incl. music for puppet theatre, 1957–67
Film scores, incl. Rękopis znaleziony w Saragossie [The Saragossa Manuscript] (dir. W. Has), 1963

VOCAL

Psalmy Dawida (trans. J. Kochanowski), chorus, perc, cel, hp, 2 pf, 4 db, 1958
Strofy [Strophes] (Menander, Sophocles, Isaiah, Jeremiah, Omar Khayyám), S, reciter, 10 insts, 1959
Wymiary czasu i ciszy [Dimensions of Time and Silence], 40vv, perc, str, 1959–60
Stabat mater, 3 choruses, 1962
Passio et mors domini nostri Jesu Christi secundum Lucam, S, Bar, reciter, children's chorus, 3 choruses, orch, 1963–6
Cantata in honorem Almae Matris Universitatis Iagellonicae sescentos abhinc annos fundatae, 2 choruses, dbn, brass, perc, pf, org, 1964
Pieśń żałobna ku czci B. Rutkowskiego [Funeral Song in memory of Rutkowski], chorus, 1964
Dies irae [Bible, Aeschylus and others), S, T, B, chorus, orch, 1967
Utrenia (Jutrznia) (Old Slavonic, New Testament), S, Mez, T, B, B profundo, 2 choruses, orch
Złożenie Chrystusa do grobu [The Entombment of Christ], 1969–70
Kosmogonia (Old Testament, Sophocles and others), S, T, B, chorus, orch, 1970
Zmartwychwstanie Pańskie [The Lord's Resurrection], 1970–71
Canticum canticorum Salomonis, 16vv, orch, 1970–73
Ecloga VIII (Virgil), 6 male vv, 1972
Magnificat, B, 7 male vv, boys' chorus, 2 choruses, orch, 1974
Te Deum, S, Mez, T, B, chorus, orch, 1979–80
Lacrimosa, S, chorus, 1980
Polskie requiem, S, A, T, B, chorus, orch, 1980–84, rev. 1993
Agnus Dei, chorus, 1981, arr. str, 1984
Pieśń Cherubinów [Song of Cherubim] (Old Slavonic), SSAATTBB, 1986
Veni creator, SSAATTBB, 1987
Benedicamus Domino, TTTBB, 1992
Benedictus, SATB, 1993
Agnus Dei, S, A, T, B, chorus, orch, 1995 [movt 10 of Requiem der Versöhnung, collab. Berio, Cerha, Dittrich and others]
7 Gates of Jerusalem (Pss, Old Testament), 2S, A, T, B, reciter, 3 choruses, orch, 1996
Hymne an den heiligen Daniel, SATB, wind insts, 1997
Hymne an den heiligen Adalbert, SATB, orch, 1997
Credo, S, 2 Mez, T, B, children's chorus, chorus, orch, 1998

ADRIAN THOMAS

Penet, Hilaire [Hylaire] (*b* diocese of Poitiers, ?1501). French composer. A document of 1515 places him 'in his 15th year of age or thereabouts'. He appears in a rollbook of the papal court from May 1514 as one of three choirboys – all apparently sent to Rome by Louis XII of France the previous year – in the charge of Carpentras. He became a regular member of the papal chapel by 1516 and joined Leo X's private musicians in 1519. The following year he left Rome on a paid leave of absence from which he seems not to have returned. Manuscripts and printed collections invariably refer to Penet by his full name, no doubt to distinguish him from the older composer who is identified simply as 'HILAIRE'.

Penet's motet *Descendit angelus Domini* circulated widely and served as a model for masses by Palestrina and Costanzo Porta. Its lucid polyphony, moulded with a judicious balance of full textures and voice pairing, makes its popularity readily understandable. Clarity and smooth

craftsmanship also mark Penet's chansons – all settings of popular melodies – and his other sacred works.

JOSHUA RIFKIN/R

Penherski, Zbigniew (*b* Warsaw, 26 Jan 1935). Polish composer. He studied composition with Stefan Poradowski in Poznań (1955–6) and with Szeligowski at the Warsaw Academy (1956–9). He has received a number of Polish composition prizes, and in 1969 was awarded a Dutch government scholarship.

Though he developed in the 1960s many of the compositional and notational techniques then prevalent in Polish music, he has maintained a certain distance from their associated expressiveness. In much of his music there is a deft economy of means and an emotional reticence (even when dealing with subject matter as visceral and lurid as that contained in his opera *Zmierzch Peryna*, 'The Twilight of Peryn') which serves to objectify the musical experience. Much of this comes from his adherence to counterpoint, numerical patterning and closed musical forms. His music may be delicate as well as intense, as in *Musica humana* (1963), a tribute to his father, who was shot dead in 1939. Many of his later works possess a meditative quality owing to their harmonic continuums and driving percussion, though *Sygnały II* ('Signals II') is more openly expressive.

WORKS
(*selective list*)

Op: Dziewczęta zza muru [Girls from Behind the Wall] (1, L.E. Stefański), 1961, withdrawn; Mały książę [The Little Prince] (1, Penherski, after A. de Saint-Exupéry], 1962, withdrawn; Sąd nad Samsonem [The Judgement of Samson] (radio op, J. Prutkowski and Penherski), 1968, Warsaw, 23 Sep 1969; Zmierzch Peryna [The Twilight of Peryn] (3, K. Meissner after J.I. Kraszewski), 1971–2, Poznań, 6 Oct 1974; Edgar, syn Wałpora [Edgar, Son of Walpor] (3, Penherski, after S.I. Witkiewicz), 1982; Wyspa róż [Rose Island] (Meissner, after S. Mrożek), 1989

ADRIAN THOMAS

Penigk [Pönick, Poenicke], **Johann Peter** (bap. Untermassfeld, nr Meiningen, 6 July 1666; *d* after 1719). German organ builder. Together with Johann Gottlieb Döltzsche, Johann Ernst Hähnel, David Haussdörffer and Christoph Thielemann, Penigk belongs to a significant group of central German organ builders of the 18th century of whom a careful historical assessment has yet to be made. He was working in Hof around 1691. On 20 December 1700 he obtained the citizenship of Zwickau, where he married in 1701 and later purchased his father-in-law's house. The construction of the Glauchau organ (St Georg, 1701–3; burnt in 1712) was negotiated by the Kantor, Johann Christian Friedel, and by the organist, Johann Gottlob Meischner, also noted as a lawyer and composer. In 1714 Penigk tested the new Gruber organ in Schwarzenbach. He built at least ten organs in Saxony, Thuringia and Bavaria with characterful dispositions. The organ at Kürbitz (1720) possessed a colourful specification; its very beautiful façade survives.

Penillion. A Welsh form of improvised song with harp accompaniment, also known as 'canu penillion'. *See* WALES, §II, 3(i).

Penn, William (Albert) (*b* Long Branch, NJ, 11 Jan 1943). American composer. He studied with Pousseur and Kagel at SUNY, Buffalo (BFA 1964, MA 1967), and received the PhD from Michigan State University, East Lansing (1971). At the Eastman School, where he was a faculty member from 1971 to 1978, he pursued further studies in composition with Wayne Barlow. He was staff composer for the New York Shakespeare Festival (1974–6) and from 1975 was associated with the Folger Shakespeare Theatre and Sounds Reasonable Records in Washington DC. He went on to serve as visiting professor at various institutions including the universities of Texas, Connecticut, Arizona and South Carolina. He has received awards from ASCAP and the NEA (1974–6), and has been nominated for a Grammy Award. His output covers a wide range of genres including jazz and mixed media. Penn's intensely dramatic music draws on a general poetic inspiration to which melody, harmony, texture and

instrumentation all correspond. His style connects lyric, theatrical, experimental and popular musical ideas. He has also explored experimental sound sources. His compositional interests include music for the theatre, film, television and radio.

WORKS

Dramatic: At Last Olympus! (musical), 1969; The Boy who Cried 'Wolf' is Dead (musical), 1971; The Pied Piper of Hamelin (musical), 1971; The Canticle (musical), 1972; Confessions of a Serial Killer (film score), 1987; incid music, mixed media works

DAVID COPE

Penna, Lorenzo (*b* Bologna, 1613; *d* Bologna, 31 Oct 1693). Italian composer and theorist. There have in the past been doubts about Penna's date of birth, but it is confirmed by secondary sources. Nothing is known of his life before he entered the Carmelite monastery of S Martino in Bologna on 18 March 1630. After a year's novitiate he took vows, and until 1642 devoted himself almost exclusively to the religious life in S Martino, where he was a master of novices from 1639. He was probably permitted to pursue his musical studies in Bologna or elsewhere from 1642 to 1656. In 1656 he took up the post of *maestro di cappella* at S Ilario, Casale Monferrato. He must have begun theological studies at Ferrara University about 1660, since he was awarded his doctorate of theology on 23 June 1665. Some two years later he became *maestro di cappella* at the cathedral of S Cassiano at Imola, whose chapter archives reveal that he served a probationary year before being confirmed in the appointment. He resigned in 1669, by which time he was a member of the Accademia dei Risoluti and the Accademia dei Filaschisi in Bologna.

After leaving Imola Penna entered the Carmelite monastery at Mantua, where he remained until 1672, possibly performing duties of a musical nature. In 1672 and 1673 he was *maestro di cappella* at the church of the Carmine at Parma. He then probably returned to Bologna, where in 1676 he became a member of the Accademia Filarmonica. The events of his remaining years can again only be conjectured. Since most of his published works appeared in Bologna from 1677 onwards it may be assumed that he remained there until his death, the date of which can again be deduced only from secondary sources, of which the *Liber religiosorum mortuorum* of S Martino is the most reliable.

Penna's musical output consists almost entirely of church music in a style that is basically that of Palestrina as modified by his successors. The single exception is the volume of *Correnti francesi*, which in texture is similar to contemporary chamber sonatas. His *Primi albori musicali*, a theoretical work of some importance, was used very widely; its three volumes deal respectively with the rudiments of music, counterpoint and continuo playing.

WORKS

Messe e salmi concertati, 5vv, 2 vn ad lib, bc, op.1 (Milan, 1656)

JOSEF-HORST LEDERER

Pennard (*fl c*1400). English composer. His only known work is a four-part setting of the Credo, ascribed to him in the Old Hall Manuscript (ed. in CMM, xlvi, 1969–73; no.89) and recurring anonymously elsewhere. The tenor (*Te iure laudant*, a Trinity antiphon) is disposed in 20 loosely isorhythmic sections. The text alternates between the upper parts for each section, the residual melismatic portions themselves forming a roughly isorhythmic pattern. A solus tenor part is provided. Bukofzer suggested a pairing with the first Gloria in *GB-Lbl* Add.40011B, and put forward Pennard as its possible composer. It is based on another Trinity antiphon, *Tibi laus*, and the alternating melismas of the top part create a similar isorhythmic pattern, though the tenor isorhythm is unlike the Credo, having a second statement in diminution. (M.F. Bukofzer: *Studies in Medieval and Renaissance Musik*, New York, 1950, p.107)

For bibliography *see* OLD HALL MANUSCRIPT.

MARGARET BENT

Pennario, Leonard (*b* Buffalo, NY, 9 July 1924). American pianist. His earliest teachers included the pianists Isabelle Vengerova and Olga Steeb, and the composer Ernst Toch. At the age of 12 he made his début, playing Grieg's Concerto with the Dallas SO. His New York début came seven years later, in Liszt's E♭ Concerto with the New York PO under Rodzinski in Carnegie Hall. In 1952 he gave his first European performances, including his London début, and then toured extensively, winning praise for the power and brilliance of his playing. As a chamber musician he has worked and recorded with Heifetz and Piatigorsky, among others. He gave the first performance of Miklós Rózsa's Piano Concerto (1966), composed for him, with the Los Angeles PO under Mehta. In the 1970s he expanded his repertory to include popular works, notably music by Gottschalk and Gershwin.

GEORGE GELLES/BETH E. LEVY

Pennauer, Anton (*b c*1784; *d* Vienna, 20 Oct 1837). Austrian music publisher. His father Kaspar, a musician, advertised his services as a copyist in the *Wiener Zeitung* between 1786 and 1799. In 1821 Anton Pennauer made an application ('as a music teacher') to open a music shop which was at first refused several times; on 20 February he was granted permission to open 'a music shop in a suburban community', but nevertheless began his activities as a music publisher in the Viennese suburb of Leopoldstadt on 20 May 1822. A long struggle with the authorities resulted finally, on 1 March 1825, in permission for an art and music shop, which Pennauer opened in the city on 5 July 1825. The publishing house was already in difficulty at the end of 1830; in 1834 it was declared bankrupt and its stock was transferred to Anton Diabelli. Pennauer died completely impoverished. As a publisher he was extremely ambitious: he brought out works by Georg Hellmesberger (i), Henri Herz, Franz and Ignaz Lachner, Mayseder, Randhartinger and Voříšek, as well as 17 compositions by Schubert, including important piano works and lieder. His publications were notable for their excellent graphical production.

Penne, Antoine de (*b* nr Valenciennes, end of 16th century; *d* after 1616). Flemish composer. He began his career as a boy singer at Cambrai Cathedral, later rising to the position of *maître de chapelle* there. Only sacred works by him remain, and in these he is said to have been influenced by Eustache du Caurroy. Penne could certainly have known Du Caurroy, as the latter was a prizewinner in 1576 and 1583 in the composition contests held during the Cecilian festival at Évreux. Most of his few known works, written for two and three choruses, are incomplete; only parts for the first chorus remain. All Penne's surviving works are in the Médiathèque Municipale at Cambrai. One manuscript (*F-CA* 15) contains the first (four-part) chorus of a 12-part mass dated 1612 and the first four-part chorus of another; two other manuscripts contain the first (five-part) chorus of a Credo dated 1615 (*F-CA* 16) and a six-part motet, *Anima*, dated 1615 (*F-CA* 7939). Coussemaker attributed to Penne two further masses, one for two voices and one for four; these are now lost.

LAVERN J. WAGNER

Pennequin, Jean (*fl* Arras, *c*1577–85). French composer. In 1577, when his five-voice chanson *Dieu vous gard messagers fidelles du printemps* (published in his 1583 volume) won the silver lyre prize in the St Cecilia competition at Evreux, 'Jehan Pennequin' was described as 'maître des enfants de choeur' at Arras Cathedral. Six years later the title-page of his *Chansons nouveiles à quatre et cincq parties et une à huict* (Douai, 1583) referred to him as canon in the same church. The collection contains 31 settings of texts of a serious, moral, philosophical and religious character. A six-voice motet by Pennequin, *Quem vidistis, pastores*, published at Nuremberg (RISM 1585¹), illustrates his command of the imitative genre.

FRANK DOBBINS

Pennetier, Jean-Claude (*b* Châtellerault, 16 May 1942). French pianist. He studied at the Paris Conservatoire, where he received *premiers prix* in piano (in the class of Lucette Descaves), chamber music and analysis. He won second prize in the 1961 Marguerite Long-Jacques Thibaud Competition, first prize in the 1965 Montreal Competition and second prize in the 1968 Geneva Competition. He is an active champion of new French music and has given the first performances of works by Philippe Hersant, Michel Merlet and Maurice Ohana; he has also performed with leading contemporary music ensembles, including Domaine Musical and Ars Nova. Among his recordings are sensitive, poised accounts of Schumann's Fantasy op.17 and several of Schubert's sonatas, as well as music for piano and strings by Chausson, Brahms and Schubert (with Régis and Bruno Pasquier and Roland Pidoux). Pennetier taught chamber music at the Paris Conservatoire from 1985 to 1992, in which year he was appointed to the piano faculty at the Conservatoire National de Région de Paris.

CHARLES TIMBRELL

Pennisi, Francesco (*b* Acireale, 11 Feb 1934). Italian composer. He was born into a cultured Sicilian family, whose independent resources permitted him to develop his singular gifts in both the visual arts and music without the constraints imposed by a search for early recognition. In 1953 he moved to Rome, to study within the university faculty of arts (1954–5), and to pursue private composition lessons with Robert W. Mann (1954–9). Thereafter he taught himself, maintaining an oblique but canny view over the wilder reaches of the avant garde. In 1960 he became one of the founder-members (along with Evangelisti, Clementi and others) of the Roman new music association Nuova Consonanza. Another major source of new discoveries was the annual Palermo International New Music Week, founded in 1960, the third edition of which included the first public performance of his music (*L'anima e i prestigi* of 1962).

For much of the 1960s, Pennisi lived out – if more as an ironic onlooker than as an intensely committed practitioner – the compositional dilemmas of the day. In particular, he found himself uncomfortably fascinated by the interplay between compositional determinism and chance, and by the question of how to sustain productivity when the avant garde's most exciting aesthetic achievements seemed to have come and gone. While not following Evangelisti into a studied silence, he registered the 'posthumous' nature that seemed to afflict new music at the time by such titles as *Fossile* (1966) and *Mould* (1968) – a minimal play with the crumbs left after the feast (an image from Leonardo da Vinci that Pennisi used to preface another work of 1968, *Choralis cum figuris*). One mode

of rescue from such self-imposed frugality was offered by his other major talent – penmanship. His first piece of musical theatre, *Silvia simplex (Ornitoscopia)* (1971–2), offered a profusely illustrated lecture on birds, alive with colour and intricate detail, while soprano and chamber ensemble provided a calculatedly modest background.

In retrospect, Pennisi cheerfully acknowledged that he was evading, however stylishly, the problem of composition. His way out of the *impasse* was one shared by several contemporaries (notably Donatoni): that of reaffirming the pleasure of musical play. His characteristically elegant chamber works of the mid-1970s, a number of them gathered together to form the cycle *Carteggio*, show a crisp concision, and a delight in ornament much seized on – somewhat to the composer's dismay – in discussions of his music. In effect, he is more interested in a form of melodic elaboration in which it is impossible to determine what is 'ornament', and what 'ground'. *Carteggio* also confirmed Pennisi's enduring delight in plucked, evanescent sound, as manifested by his frequent use of the harpsichord, and later guitar and harp.

But more crucially, this relish for the delicacies of timbre came to the fore in the series of works for orchestra with or without soloist, that were a distinctive component of Pennisi's output from the late 1970s on. His exploration of unexpected instrumental affinities, and of the endless variety of chamber groupings that could momentarily emerge, was often set in perspective by an unmoving, intricate magma from the orchestral tutti (an implicit homage, this last, to the work of his friend and fellow Sicilian, Clementi). Those works that set one or more soloists against the orchestra characteristically feature solo instruments – flute and harp are favoured choices – the fragility of which might seem to risk engulfment by their more massive sound environment, but which survive undaunted.

Pennisi's idiosyncratic musical theatre found further outlet in his *Descrizone dell'Isola Fernandea* (1982), based on a contemporary account of one of the stranger episodes in Sicilian history. In 1831 a volcanic island emerged in a much-used shipping lane off the southern coast of Sicily. While powers and principalities debated ownership of this 'new territory', eventually named after the King of the Two Sicilies in a pre-emptive strike, the island disobligingly resubmerged. On stage, the Neapolitan bureaucrat Signor Marzolla reads his account. Signor Wright, an English explorer who had contributed some pleasing sketches to the original publication, instead sings an aria of amazement, while the tutor to the royal household seizes the chance to draw out a symbol of worldly vanity. A fortune-teller reads the cards, and the 'allegory of the island' evokes wider and more phantastic interpretations of the singular event. Needless to say, it is not Signor Wright's sketches that form the backdrop, but those, splendidly evocative, by Pennisi himself.

In the decade that followed, Pennisi's instrumental output continued unabated – testimony to the resiliently inventive energy unleashed by resolving the 'dark night' of the late 1960s and 70s. But he also permitted himself a more exuberant and lyrical use of the voice, notably in his radio opera *Aci il fiume* (1986) and in a number of subsequent works such as the cantata *O lux beatissima* (1994). His inventive forays into musical theatre expanded to admit collaboration. Where previously he had put together words, music and design in a creative equipoise, in *L'esequie della luna* (1991) the dramaturgical structure was provided by Roberto Andò, working from a brief prose work by the Sicilian poet Lucio Piccolo, and the stage was articulated by the scenic sculptures of Enzo Cucchi. Perhaps it was this freedom from multiple responsibility that allowed Pennisi to produce his richest theatrical score yet. All proliferates from the startling conceit of the moon falling from the sky. Around it, amidst popular mourning and official indifference, there starts up a nocturnal echo-chamber in which the intricate, multi-layered history of Sicilian culture resists time's invitation to lie quiet.

WORKS

DRAMATIC

Sylvia simplex [Ornitoscopia] (Pennisi), 1971–2, Venice Festival, 10 Sept 1972

Descrizione dell'Isola Ferdinandea (1, chbr op, Pennisi), 1982, Rome, Olimpico, 19 Oct 1983

Aci il fiume (radio op, Ovid, de Góngora), 1986

L'esequie della luna (music theatre, R. Ando, after L. Piccolo), 1991, Gibellina, Case di Lorenzo, 23 July 1991

Tristan (E. Pound), 1995, Venice, Goldoni, 1995

ORCHESTRAL

Alternazione, 1960–61; La lune offensée, 1971–2; Fantasia, vc, orch, 1977; Andante sostenutu, 1977; Gläserner Tag, 1978; La partenza di Tisias, va, orch, 1979; Memorie e varianti, 1980; Arioso mobile, fl, orch, 1981; Per Agamennone, 1983; L'arrivo dell'unicorno, hp, orch, 1984–5; Postilla per Aldo Clementi, hp, orch, 1985; Eclisse a Fleri, a fl, + b fl, orch, 1985; Duetto e orizzonte, fl, gui, orch, 1987 [from music theatre work L'esequie della luna, 1991]; Intonazione per foresta ariostea, tpt, orch, 1989; Angelica in bosco, hp, orch, 1990; Una cartolina da Selim (omaggio a Mozart), 1991; Scena, fl, orch, 1997

VOCAL

Vocal-orch: A Cant. on Melancholy (R. Burton), S, orch, 1967; La vigne di Samaria (Bible: *Prophets*), chorus, orch, 1974; Era la notte (T. Tasso), S, hpd, orch, 1982; O lux beatissima, cant., S, S, chbr orch, 1994

DAVID OSMOND-SMITH

Pennsylvania, University of. University in Philadelphia. It appointed its first professor of music in 1875; its music department awards graduate and postgraduate music degrees. *See* PHILADELPHIA, §6.

Pennywhistle [tin whistle] (Fr. *flageolet, flûteau d'un sou, flûte en fers blanc*; Ger. *Blechflöte*; Sp. *flauta metálica*; Flem. *blikken fluit, fluitje van een cent*). A popular form of DUCT FLUTE. It was invented by Robert Clarke (1816–82), a farm labourer who lived in Coney Weston, Suffolk. He was a talented performer on a small wooden six-holed duct flute, possibly a FLAGEOLET. He copied this instrument with help from the local blacksmith using the newly available tinplate. After a dispute with the farmer over his wages, he started to make tin whistles for sale in 1843; he later moved to Manchester, walking there with his materials in a barrow. He started manufacture in a hut but when he became successful he purchased a larger property in nearby New Moston. Shortly thereafter he was exporting all over the world, particularly to Ireland where his tin whistles became the most popular and easily available instrument for traditional music.

Clarke's first tin whistle was called the 'Meg' ('meg' being the Lancashire name for a halfpenny, the price for which he sold them). The Meg had six finger-holes in front and a wooden block crimped into the mouthpiece. Later he produced, by the same method, a larger instrument in the key of C, which became universally known as the Pennywhistle. The origin of the name is uncertain. Clarke's price was threepence a dozen wholesale. It is said that they were so called because street musicians played them for pennies. Clarke tin whistles were made in other keys but these were only available until just after the turn of the century. The business remained in the family until 1986, when it was purchased by Jim Weedon. He later produced a pennywhistle in the key of D, together with a new version named the 'Sweetone', which has a plastic mouthpiece.

See also TIN WHISTLE.

NORMAN DANNATT

Penorcon. The name given by Praetorius (2/1619) to a nine-course bass ORPHARION tuned *G′–A′–C–D–G–c–e–a–d′*. His illustration (*see* BANDORA, fig.2) confirms his description:

> The Penorcon is an instrument of almost the same kind, only its body is a little broader than that of the Bandora, and its neck or fingerboard is quite wide, so that nine courses of strings can pass over it. In length it is somewhat less than the Bandora and greater than an Orpharion.

Praetorius is the only source for the name 'penorcon', but there is some incomplete music 'for 3 Orph' and 'for iii Wiers' [i.e three viols] in the Cambridge consort books (*GB-Cu* Dd.3.18 f.55–6 [orpharion parts], Dd.5.20 f.10v and Dd.5.21 f.11 [viol parts]) that seem to require a bass orpharion, possibly a Penorcon, pitched *B♭′–C–F–B♭–d–g–c′*.

IAN HARWOOD/LYLE NORDSTROM

Penson, Robertson & Co. [Penson & Robertson; later Alexander Robertson & Co.]. Scottish music publishers, founded in Edinburgh about 1807 by William Penson and Alexander Robertson. Penson (*b c*1776; *d* Edinburgh, after 1828) was a music teacher in Edinburgh in 1809, and from 1810 to 1816 leader of the orchestra at the Theatre Royal; in 1819 he became the first secretary of the Professional Society of Musicians. Robertson (*d* Edinburgh, 22 Sept 1819) was a music engraver at the

Luckenbooths, Edinburgh, in 1800 and a music teacher in Libberton's Wynd in 1808.

By 1811 Penson, Robertson & Co., having started in business as music sellers, had a publishing house in Princes Street. From 1818 they also ran a music academy at Robertson's house. After Robertson's death the firm was reorganized. Penson left it to concentrate on private teaching, which he continued until his death or retirement in 1829. In 1822 Robertson's two sons, Alexander and John, took over the business, which became Alexander Robertson & Co. In 1837 John Steuart Grubb (1811–67) acquired the firm.

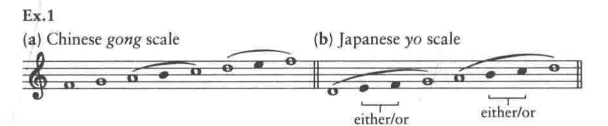
Among quantities of ephemeral sheet music (much of which they themselves arranged), the firm published William Marshall's outstanding *Scottish Airs* in 1822 and his posthumous second collection in 1845; jointly with ROBERT PURDIE, they reissued the publications of Nathaniel GOW after the latter's bankruptcy in 1827. (*KidsonBMP*, 190–93)

H.G. FARMER/DAVID JOHNSON

Pentagramma (It.). Five-line STAFF.

Pentangle, the. British folk fusion band. BERT JANSCH and JOHN RENBOURNE, two of Britain's leading acoustic guitarists with established solo careers, led the band, which also included singer Jacqui McShee, bass player Danny Thompson and drummer Terry Cox. *Pentangle* (Transatlantic, 1968), their first album, was a light, sophisticated blend of folk, blues, classical and jazz musics. It was followed later the same year by the double-album *Sweet Child* (Transatlantic) and then by a subtle folk crossover album, *Basket of Light* (Transatlantic, 1969), which remained in the British top 10 chart for four weeks. Its success was helped by the track 'Light Flight', a technically complicated song with a time signature that switched from 5/8 and 7/8 to 6/4, used as the theme music to a BBC television drama series.

The Pentangle took folk-blues and traditional songs out of the folk club scene and on to the international concert circuit but were criticized for being easy-on-the-ear. They attempted to enliven their style in 1970 by introducing electric guitars on the *Cruel Sister* album (Transatlantic), while *Solomon's Seal* (Rep., 1972) featured fuzz guitar on the folk club standard 'Sally Free and Easy'. They had, however, lost their momentum and split up soon after its release. The band re-formed briefly in the early 1980s, and McShee was re-united with Jansch in 1989 for the Pentangle album *So Early in the Spring* (Plane), although they were the only members of the original band involved.



ROBIN DENSELOW

Pentatonic. A term applied to a scale, or, by implication, a musical style or system that is characterized by the use of five pitches or pitch-classes. The term is used more strictly to describe the so-called ANHEMITONIC pentatonic collection, which is typified by the set C–D–E–G–A; of the five modes arising from the collection, the major (i.e. with tonic C) is generally regarded as 'the (common) pentatonic scale', although the Aeolian mode is also important.

The strict sense of the term Pentatonic is justified, given the rarity of hemitonic pentatonic scales (e.g. the Japanese *in* or the Korean *kyemyŏnjo*) and the aptness of the term 'pentachord' to describe conjunct diatonic collections (for instance, Beethoven's 'Ode to Joy' theme). It was in this sense, moreover, that Carl Engel coined the term in 1864, and as far back as Burney writers referred to 'gapped' or 'incomplete' scales of this sort. (Scrupulous musicologists have rightly cautioned against these adjectives, but the scales do indeed afford the cultivated Western ear interpretative ambiguities between pentatonic and heptatonic hearings). One may further refine the notion of the pentatonic by recognizing the distinctiveness of the scale's minor third 'steps'; hence the motif G–A–C is more characteristically pentatonic than C–D–E, even though both belong to the same pentatonic scale.

Once described variously as the 'Chinese scale' or the 'Scotch scale', the pentatonic scale has impressed commentators since at least the mid-19th century for its astonishing ubiquity. A significant feature of such diverse musical traditions as those of the British Isles, West Africa and Amerindian America (among countless others), pentatonicism may well be a musical universal (Chailley, pp.111–28; Nettl, p.42), and many have taken for granted its historical primitivism (Helmholtz, p.257; Suchoff, 1976, p.371; Trån). The ethnocentric problems involved in generalizing about scales, however, remind us that defending such grand claims would require the most careful methodology, as pentatonic usage varies widely from one tradition to another. For instance, the Chinese system – for which the very propriety of the term 'pentatonic' has been questioned (Shen, p.3) – is based on a universe of 12 perfect 5ths, featuring a pentatonic 'core' plus two 'exchange tones' (*bianyin*), embellishments that in both theory and practice fill in the minor 3rds (ex.1*a*);

Ex.1

whereas the Japanese *gagaku* tradition, while ostensibly founded on this same system, differs in its use of the exchange tones, which assume the nature of METABOLE rather than passing notes (ex.1*b*). The *sléndro* tuning of Javanese gamelans is pentatonic, though in this case the intervals are more nearly equidistant.

Ex.2 Weber: *Turandot*, end of theme

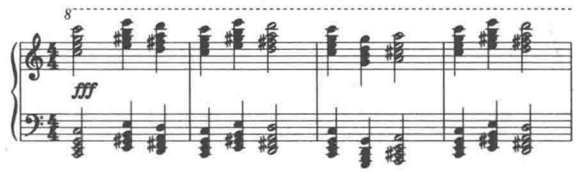
Still, such modal and tuning issues notwithstanding, the universalist hypothesis seems compelling, and although the question of primordial scales is far from resolved, a general consensus does exist concerning at least the importance of the pentatonic in the history of music. Whether it is explained in terms of mono- or polygenesis, this 'king' of scales (Trån) warrants further research.

Ex.3 Chopin: *Krakowiak* op.14

The rise of diatonic tonality seems to have temporarily extinguished pentatonicism from music (other than folk

and traditional musics) in the West. The Romantics, however, in their quest for originality, undertook notable (if isolated) experiments using pentatonic materials in the 19th century. These innovations can be understood ideologically in two ways: as part of a rejection of the conventional musical language, with a new emphasis on sonorous colour; and as an embodiment of the Romantic fascination with the 'Oriental' (exoticism), with folk art (primitivism, nationalism) and with medieval Christianity archaism (exx.2, 3 and 4 respectively). Carl Maria von

Ex.4 Liszt: Kyrie from *Missa Choralis*, theme



Weber, apparently the first of the 19th-century pentatonicists, used an 'Air chinois', copied note for note from Rousseau's *Dictionnaire de musique*, as the theme for his incidental music to Schiller's *Turandot* (see ex.2). Chopin's famous Etude in G♭ owes something of its peculiar pentatonic sound to a technical issue – the right hand playing on black keys – but the earlier *Krakowiak*, op.14 (see ex.3), confirms his familiarity with the scale. Liszt employed pentatonicism to a striking degree, especially in his solo piano and sacred music (see ex.4). Other composers who used the pentatonic scale include Mendelssohn, Berlioz, Wagner, 'the Five', Mahler, Dvořák, Puccini, and above all the Impressionists. Though modest in comparison with later practice, 19th-century pentatonicism represents both a subtle change in melodic sensibility away from common-practice diatonicism and also a reaction against what must have seemed the cloying tendencies of chromaticism.

In the 20th century, thanks in large part to Debussy and Bartók (exx.5, 6), the pentatonic scale earned its

Ex.5 Debussy: *Nuages*

Ex.6 Bartók: *Bluebeard's Castle*, Bluebeard's glory

place among the materials of Western art-music and, consequently, became somewhat less 'marked' despite its enduring association with various folk and traditional musics. For Debussy and Ravel, the scale's inherent tonal ambiguities were surely as attractive as its exotic implications. Debussy's direct acquaintance with the pentatonic – through exposure to the gamelan at the 1889 Paris Exhibition – represents a significant change from Weber's armchair anthropology earlier in the century. A further step was taken by Bartók and Kodály, who, in search of their Hungarian musical roots, amassed thousands of vernacular melodies, a portion of which were pentatonic. As composer, Bartók spoke of 'the tyrannical rule of the major and minor keys' and described his own pentatonicism as 'the most suitable antidote for the hyperchromatism of Wagner and his followers'. This decidedly un-Schoenbergian 'antidote' proved useful to other composers as well, including Stravinsky (ex.7), Hindemith

Ex.7 Stravinsky: *The Rite of Spring*, 'Spring Rounds'

and Vaughan Williams. The partitioning of the chromatic aggregate into 'white-' and 'black-note' sets accounts for some less overt pentatonic usage, for instance, in Villa Lobos and Ligeti.

Certain genres of American popular music exhibit pentatonic elements, especially those genres most directly related to African American traditions: from the spiritual (ex.8) to jazz, Motown and rock.

Theorists, generating the pentatonic scale from a cycle of perfect 5ths, have observed a host of scalar properties that may be acoustically or psychologically desirable. For instance, the set enjoys unique multiplicity of interval classes (<032140>) and so-called 'optimum consonance' (Huron). It is both 'well-formed' (Carey) and 'coherent' (Agmon), and exhibits the 'f to f♯ property' (Zweifel), all assurances of scalar and modulatory integrity. The extent to which these features account for the apparent universality of pentatonicism, however, remains speculative.

JEREMY DAY-O'CONNELL

Pentecontachordon. A name given by lexicographers to the Sambuca lincea, an enharmonic harpsichord or ARCICEMBALO, invented by FABIO COLONNA, and described by him in 1618.

Pentecostal and Renewal church music. The music and worship of (1) that group of Christian sects whose defining characteristic is the belief that the occurrence on the day of Pentecost recounted in the second chapter of the *Acts of the Apostles* not only signalled the birth of the Church but described an experience available to believers in all ages, namely, baptism in the Holy Spirit; and (2) those churches, either belonging to or outside the mainstream denominations, that were touched by the Charismatic Renewal movement of the latter half of the 20th century. Associated with these traditions is a distinctive repertory of songs and choruses expressing, often in a vivid and personal manner, individual and collective experience of the Christian faith.

1. The Pentecostal tradition. 2. The Charismatic tradition.

1. THE PENTECOSTAL TRADITION. The Pentecostal Movement in America, strongly influenced by Methodism and the Holiness Movement (out of which it grew), is considered to have emerged at the turn of the 19th and 20th centuries, with outpourings of the Holy Spirit manifested in North Carolina (1896), Kansas (1901) and California (1906). At the beginning all leaders preached the Wesleyan doctrine of sanctification as a 'second work of grace', and the 'third blessing' as baptism in the Holy Spirit, with speaking in tongues as evidence. So strong was the teaching on baptism in the Holy Spirit that at a very early stage at least six hymnals with the title *Pentecostal Hymns* were used within the movement. From its meagre beginnings Pentecostalism has grown into a global force within Christendom, crossing denominational barriers in a way that few other movements have managed. Missionary activity on the part of several of the long-established Pentecostal Churches, international crusades by leading evangelists such as Oral Roberts, religious broadcasting and the proliferation of Christian television networks have all contributed to its worldwide spread. Today, there are three broad groups of Pentecostal believers: (1) classical Pentecostals, belonging to Churches whose origins date back to the beginning of the 20th century, for example, the Assemblies of God, the Church of God (Cleveland, TN), the Pentecostal Holiness Church, and the International Church of the Foursquare Gospel; (2) neo-Pentecostals, who accept baptism in the Holy Spirit but choose to stay within the mainstream denominations; and (3) charismatics, whose affiliation and doctrinal beliefs lie outside the classical Pentecostal or main denominational frameworks, but whose faith is centred on the distinctively Pentecostal blessings and phenomena, namely, baptism in the Holy Spirit with the spiritual gifts, such as divine healing, of *1 Corinthians* xii.8–10. In 1992 it was estimated that about a quarter of all Christians belonged to Pentecostal or charismatic denominations.

Music, often highly spiritual and improvisatory, has always been a significant feature of Pentecostal worship. The Movement's immediate musical roots lay in the traditional congregational songs common to many other denominations, particularly the hymns of Isaac Watts and Charles Wesley. But even more widespread and characteristic were the Holiness Movement songs, which focussed on purity of heart, eradication of sin and a deeper walk with God (e.g. *The Cleansing Wave*), camp-meeting songs, concerned with man's earthly trials, conversion to the Christian life, and the experience of joy on the path to heaven (e.g. *Our Lord's Return to Earth*), and gospel songs, which were songs of personal testimony and heartfelt belief in Jesus Christ, especially during times of trial (e.g. *Blessed Assurance*). The more distant origins of Pentecostal music, however, may be found in biblical traditions of music and worship. In the Old Testament music clearly had both a 'functional' and a 'spiritual' aspect: in everday life it was used, for example, in social contexts, as a martial accompaniment to physical work, for didactic purposes, and as an element in liturgy; but sacred song could also be a vehicle for expressing the deeper dimensions of human thought and experience. The functional aspect is of primary importance to Pentecostals, for whom music must be easily accessible, capable of reflecting the 'everyday life' of the believer and allowing the worshipping community to convey its needs to God (as, for example, in Reuben Morgan's *Your Unfailing Love*: 'When my burden keeps me doubting, when my memories take the place of you, Jesus come'). But it is also necessary for sacred music to reinforce theological belief and impart spiritual truths, thus helping people to grow closer to their Creator (as in songs concerned with healing, the second coming of Christ, spiritual baptism and the workings of the Holy Spirit). The use of various musical instruments, the importance of singing psalms and scriptural songs, and the rebirth, within the Charismatic Movement, of dance in worship, may be directly attributed to Old Testament example (see Alford, 688).

2. THE CHARISMATIC TRADITION. During the early decades of the 20th century, as the Pentecostal Movement

developed, a freer, more demonstrative kind of worship evolved whose influence would eventually leave no branch of the Western Church untouched. In the 1950s and 1960s a 'neo-Pentecostal' style of worship began to appear, particularly in the USA and Great Britain, among small groups of Christians belonging to the mainstream denominations. At first these 'charismatic fellowships' would mainly gather in homes or in smaller rooms of churches for prayer-meeting type services. But as the Charismatic Renewal movement gathered worldwide momentum, it was only a matter of time before its characteristic style of worship, known as 'Praise and Worship', whose hallmark was an intensely personal form of group singing called 'praise singing', began to be be incorporated into the normal services of individual churches. Many Christians of hitherto traditional persuasion – Methodists, Presbyterians, Baptists, Mennonites, Anglicans/Episcopalians, Lutherans, Roman Catholics – came to realize that their worship, though outwardly proper and beautiful, seemed inwardly void and unimaginative, lacking freshness and life-giving spirituality. By contrast, Charismatic Renewal brought a fresh 'wind of the Spirit', imparting a new vitality and meaning by restoring an emphasis on dynamic worship, in both a personal and corporate way. Worship could be an experience of joy and celebration, often manifested in enthusiastic, winsome singing, the raising of hands, exclamations of verbal praise, and, at times, spontaneous spiritual dance. The study of scripture (aided by new versions of the Bible) also plays a vital part in this type of worship, and in many churches there has been a renewed interest in the Eucharist, but praise and praise singing remain central.

Although a casual observer might easily interpret congregational praise singing as primarily emotional, its authenticity is supported by biblical practice. Some theologians see the 20th-century Charismatic Renewal movement as the spiritual restoration of Davidic worship around the Ark of the Covenant, especially through praise singing. A number of elements in Praise and Worship are based on Old Testament models and represent a liberating trend by allowing expression of the whole body and person. The joyous intensity and robust, exuberant style of praise singing is a response to Psalm lxvi.1–2, 'Make a joyful noise unto God all ye lands: sing forth the honour of his name: make his praise glorious', as well as other exhortations such as 'cry aloud' (Psalm lv.17) and 'shout for joy' (Psalm v.11); even 'laughter' is not excluded (Psalm cxxvi.2) from worship. Such singing is often accompanied by bowing and kneeling (Psalm xcv.6: 'Come, let us worship and bow down; let us kneel before the Lord our maker'), clapping of hands and shouting (Psalm xlvii.1: 'O clap your hands all peoples; shout to God with a voice of triumph'), lifting up of hands (Psalm cxxxiv.2: 'Lift up your hands in the sanctuary, and bless the Lord'), and – perhaps the most surprising of all – dancing (Psalm cl.4: 'Praise him with the timbrel and dance'; and 2 *Samuel* vi.14: 'David danced before the Lord with all his might').

The charismatic service allows for a type of freedom and spontaneity whereby pastor and 'worship leader', who form a dual team, do not feel the need to be in complete control of the progress of the meeting. It is assumed that unexpected changes of direction will occur, as motivated by the Holy Spirit, although this does not mean that an eclectic, free-for-all pattern emerges but rather that a type of 'guided spontaneity' prevails in which events in the service are anticipated but not prescribed or predicted. The worship leader – a kind of master of ceremonies responsible for guiding the direction of the service – chooses and leads the songs, leads prayer, quotes scripture and provides commentary. The ability of the congregation to 'flow with the Spirit' as directed through the worship leader is essential. A common freedom and excitement of praise is often shared by worship leader and congregation alike, resulting in improvised and creative worship that emanates from the very hearts of the participants, who may express themselves in prayer, testimonies, word of knowledge, prophecy, and expressions of praise in singing, shouting and dancing.

The key to praise singing lies in the participation of the congregation, for praise music is not primarily to be listened to but rather to be sung (choir items and organ playing, therefore, are usually of lesser importance). The music generally consists of short, often repetitive choruses and other scripture songs, whose antecedents may be found in the Pentecostal camp-meeting and gospel songs (see §1 above). The voice of the worship leader, amplified by an efficient sound system, is of primary importance in leading the singing, although gestures (not necessarily the conventional directing patterns) are often used to indicate the beginning and ending of phrases. The singing is usually reinforced by a back-up group of 'praise singers' (or an individual co-singer) and instrumentalists, but rather than functioning as a choir the singers encourage participation through their visual exuberance and their leadership in physical movements.

The musical characteristics of praise singing are very much bound up with popular music styles and performing practice, for example, the use of pop-derived harmonies, rhythms and instrumentation (drums, piano, synthesizers, guitars and, in large churches, wind instruments). Some of the most prominent charismatic churches engage arrangers and copyists on a weekly basis to provide new instrumental charts for praise singing. The result is a type of 'sacra-pop' that has become the dominant musical style in such worship. The development of electronic technology has been an important factor in the growth of the genre, for sound reinforcement systems and electronic and amplified instruments permit an enormous array of sounds and dynamic levels not previously available. Nevertheless, a wide range of practice exists, and in many churches the style of singing remains simple, with minimal use of instruments and electronic support.

The kind of praise singing described above has somewhat displaced traditional congregational song and the use of the hymnal, not least because holding a hymnbook inhibits the worshippers from raising or clapping their hands. The most widespread practice is to sing from memory, with some use of the overhead projector to provide the words. However, 'liturgical' churches of charismatic persuasion tend to blend their use of memorized choruses and scripture songs with use of the hymnal and the servicebook. In the early stages, Praise and Worship music was mostly passed on by oral tradition, for example, the chorus 'Seek ye first' (1972) and the simple repetitive 'Alleluia' (1972). Other typical and universally known charismatic songs, many of them in a direct, folklike idiom, include 'This is the day' (1967), 'I exalt Thee' (1976), 'I will enter his gates with thanks-

giving' (1976), 'Praise the name of Jesus' (1976), 'Give thanks' (1978), 'I love you Lord' (1978) and 'We bring the sacrifice of praise' (1984). What is considered to be the first published collection of Praise and Worship music, *Scripture in Song* by David and Dale Garratt, appeared in New Zealand in 1968. Today most collections are published in the USA, by companies such as Maranatha Music, Vineyard Music and Integrity Music, including, respectively, *Maranatha! Music, Praise, Hymns and Choruses* (1987, 4/1997), *Songs of the Vineyard* (1980s–) and *Hosanna Music Songbooks* (1987–). Another significant source, devoted primarily to Praise and Worship music but in hymnal format, is *Songs and Praise for Worship* (1992). Praise and Worship choruses also appear side by side with more traditional hymns in various denominational hymnals, for example, *The United Methodist Hymnal* (1989), *The [Southern] Baptist Hymnal* (1991) and the Church of the Nazarene's *Sing to the Lord* (1993), and also in such non-denominational books as *The Hymnal* (1986) and *Celebration Hymnal* (1997). Further resources include *Hillsongs Australia* (1993, originating in Australia but produced in the USA by Integrity Music) and *Renew: Songs and Hymns for Blended Worship* (1995).

The Praise and Worship phenomenon, with its central activity of praise singing, is regarded by some commentators as a peripheral movement. But this is to fail to recognize its extraordinary growth and impact during the 20th century. Praise singing is not bound by denominational barriers but rather fosters a natural ecumenicity: persons of all ages, from varying theological, ethnic and cultural traditions, can share in it together, bringing with them the distinctiveness of their backgrounds. It would not be unreasonable to predict that the new spirit of praise singing will exert an increasing influence on Christian worship during the 21st century.

J. RANDALL GUTHRIE

Pentland, Barbara (Lally) (*b* Winnipeg, 2 Jan 1912; *d* Vancouver, 5 Feb 2000). Canadian composer. She began composing at the age of nine, shortly after her first piano lessons, persisting in her pursuit of music despite poor health and parental opposition. Winnipeg provided a flourishing, if limited, musical environment in the 1920s, and it was the piano sonata writing of Beethoven that Pentland emulated during this period. While attending a private boarding school in Montreal (1927–9) she studied the piano and theory with an English organist, Frederick H. Blair, who encouraged her to continue music studies. She proceeded to Paris in 1929 and became a composition pupil of Cécile Gauthiez. Gauthiez's teaching was in the Franckian tradition, and the characteristic thick textures and chromatic harmonies remained in Pentland's music until the late 1930s, as is evident in the Five Piano Preludes (1938), the Rhapsody for piano (1939) and the Piano Quartet (1939).

After returning to Winnipeg in 1930, Pentland continued her studies with Gauthiez by correspondence for 18 months. During the next six years she composed a great deal, winning several local competitions; at the same time she studied the piano and organ and frequently performed her piano music in public. She then won a fellowship in composition to the Juilliard School, where she studied with Frederick Jacobi (1936–8) and Bernard Wagenaar (1938–9). Exposure to new music in New York had a decisive effect: she was particularly impressed by the work of Paul Hindemith, which provided a model for her increasing interest in counterpoint. She returned again to Winnipeg in 1939 and was appointed to the music advisory committee and an examiner in theory at the University of Manitoba. In the summers of 1941 and 1942 she studied at Tanglewood with Aaron Copland, whose influence, which encouraged her to a more lucid style, is shown most strikingly in the similarity between her Piano Variations (1942) and Copland's own (1930). Also contributing to the leaner textures of her music was a neo-classical tendency, a primary feature from the early 1940s to the late 1950s.

Persuaded that her works would have more chance of performance in a larger centre, Pentland moved to Toronto in 1942, and in the following year she was appointed to teach theory and composition at the conservatory. During the 1940s she gained a reputation as a headstrong member of the avant garde. Her developing contrapuntal leanings are seen in the Sonata Fantasy (1947), in which the opening few bars present the material for the entire work. This direction was stimulated by her first significant exposure to serial music, in the summers of 1947 and 1948 at the MacDowell Colony, where Dika Newlin introduced her to many of Arnold Schoenberg's compositions; the Wind Octet (1948) was her first consciously serial work. In 1949 she joined the music department of the University of British Columbia, Vancouver, where she taught until 1963, when she resigned to give her attention to composition.

The main influence on Pentland's mature style was the music of Anton Webern, which impressed her during a European visit in 1955. She attended the Darmstadt summer courses and the ISCM Festival, and in the following year returned to hear her Second Quartet played at the ISCM Festival in Stockholm. The *Symphony for Ten Parts* (1957), in its compactness and clarity, displays Webern's influence: three tightly-knit movements are built from melodic and rhythmic shapes established in the short introduction. A new interest in timbre, also Webernian, is expressed in such instrumental combinations as that of xylophone with double bass, as well as in the alternation of dry, percussive sections with passages of greater lyricism.

Pentland's later works are economical, the textures swept clean of the scales and arpeggios of her music of the 1940s. 12-note serialism, used freely, is a means of control. A distinctive feature is the touch of humour in the syncopated rhythms, light melodies or brisk staccatos. Retrograde is also a frequently encountered technique: a work or section often concludes with a reversal of the initial serial statement, sometimes providing material for a coda or recapitulation.

In the late 1960s Pentland began to use aleatory techniques and quarter-tones. There are short aleatory passages in the *Trio con alea* (1966), the Third String Quartet (1969), *News* (1970) and *Mutations* (1972), permitting the performer freedom in rhythmically varying, repeating and articulating given pitches; the last aleatory section in a work may function as a cadenza. The use of quarter-tones is principally decorative and confined to string parts, though there are some in the vocal line of *News*. Also during this period Pentland wrote numerous short piano pieces for children, strictly miniatures of her mature style. She maintained an active career until the early 1990s, when ill health curtailed her ability to compose. She was made a Member of the Order of Canada in 1989.

WORKS
(*selective list*)

Stage: Beauty and the Beast (ballet-pantomime), 2 pf, 1940; The Lake (chbr op, 1, D. Livesay), SATB, small orch, 1952

Orch and vocal orch: Lament, 1939; Arioso and Rondo, 1941; Holiday Suite, 1941; Conc., vn, small orch, 1942, arr. vn, pf, 1945; Colony Music, pf, str, 1945; Sym. no.1, 1945–8; Variations on a Boccherini Tune, 1948; Conc., org, str, 1949; Sym. no.2, 1950; Ave atque vale, 1951; Ricercar, str, 1955; Conc., pf, str orch, 1956; Sym. for 10 Parts (Sym. no.3), 1957; Sym. no.4, 1959; Strata, 1964; Cinéscene, chbr orch, 1968; News, Mez, orch, tape, 1970; Variations concertantes, pf, orch, 1970, also arr. 2 pf; Five-Plus (Simple Pieces for Str), 1971; Res musica, str orch, 1975

Vocal: Ruins: Ypres, 1917 (G.H. Clarke), 1v, pf, 1932; Ballad of Trees and the Master (S. Lanier), chorus, 1937; Dirge for a Violet (D.C. Scott), chorus, 1939; Song Cycle (A. Marriott), 1v, pf, 1942–5; At Early Dawn (Hsiang Hao), T, fl, pf, 1945; Epigrams and Epitaphs, rounds, chorus 2–4vv, 1952; Salutation of the Dawn (Sanskrit text), SATB, 1954; What is Man? (Apocrypha: *Ecclesiasticus* xviii), SATB, 1954; 3 Sung Songs (Chin. text, trans. C.M. Candlin), SATB, 1964, also arr. medium v, pf, 1964; Sung Songs nos.4–5 (J'Sin Ch'I-Chi, trans. Candlin), Mez, pf, 1971; Disasters of the Sun (D. Livesay), Mez, inst ens, tape, 1976; Ice Age (Livesay), S, pf, 1986

SHEILA EASTMAN LOOSLEY/ROBIN ELLIOTT (work-list, bibliography with GAYNOR G. JONES)

Penzel, Christian Friedrich (*b* Oelsnitz, 25 Nov 1737; *d* Merseburg, 14 March 1801). German Kantor and composer. He studied music first under the Oelsnitz Kantor J.G. Nacke, and then at the Thomasschule, Leipzig (1749–56). Penzel studied law at Leipzig from 1756 until 1761. After an unsuccessful attempt in 1762 to obtain his father's position as sexton at Oelsnitz, in 1765 he succeeded A.F. Graun as Kantor at Merseburg.

Penzel is chiefly remembered for his numerous copies of Bach's works, some of which are important sources for modern editors. These copies (from sources at the Thomasschule and in the possession of W.F. Bach) comprise mainly cantatas, but also instrumental music. His manuscript collection was inherited by his nephew

Johann Gottlob Schuster who sold most of it to Franz Hauser in 1833 (now in *D-Bsb*), while the remainder was acquired by the Leipzig publisher C.F. Peters (now in *LEm*). Of his own compositions all that survive are four four-part arias (Leipzig, 1780) and the motet, *Wenn Christus seine Kirche schützt* (Leipzig, 1777), modelled on the chorale chorus 'Und wenn die Welt voll Teufel wär' from Bach's cantata *Ein feste Burg*.

RICHARD JONES/PETER WOLLNY

Peperara, Laura. *See* PEVERARA, LAURA.

Pepi, Jorge (*b* Cordoba, Argentina, 28 March 1962). Argentine pianist and composer. He studied music in Argentina until 1980 when an Argentine government bursary enabled him to pursue his studies in Europe. He gained a diploma as a pupil of Edith Fischer and also attended the Académie Menuhin at Gstaad. He studied composition with Eric Gaudibert at Geneva. He began writing music for the Théâtre de l'Ephémère in Lausanne in 1985. In 1991 his *Metamorfosis I* for piano was awarded a prize by Edition musicale suisse and it was also chosen to represent Argentina at the International Composers Forum. His chamber opera *La caccia al tesoro* ('The Treasure Hunt') was awarded a prize by the Société Suisse des Auteurs in 1993 and performed at the Geneva Archipel and Wien Modern festivals in 1995. *Extravagario* won first prize at the Gerona international competition and *Amalgama* the Gilson prize in 1995.

Thanks to his extrovert temperament, Jorge Pepi has an acute sense of theatricality in his music. In recent years he has turned increasingly towards forms of pure music. Each work being the continuation of its predecessor (as in the *Metamorfosis* series), his output gives the impression of a long quest, a kind of 'treasure hunt' in itself.

JEAN-PIERRE AMANN

Pépin, (Jean-Josephat) Clermont (*b* St Georges-de-Beauce, PQ, 15 May 1926). Canadian composer, pianist and teacher. As a boy he studied the piano and harmony with Georgette Dionne. In 1937 he was awarded a composition prize from the Canadian Performing Rights Society (later the Composers, Authors and Publishers Association of Canada) and went to Montreal to study harmony and counterpoint with Claude Champagne and the piano with Arthur Letondal. In 1941 he received a scholarship from the Curtis Institute in Philadelphia, where he studied composition with Rosario Scalero and the piano with Jeanne Behrend. Upon his graduation in 1944, he returned to Montreal and spent two years at the conservatoire studying with Jean Dansereau (piano), Champagne (composition) and Barzin (conducting). Three further CAPAC awards enabled him to continue his studies at the Toronto Conservatory with Arnold Walter (composition) and Lubka Kolessa (piano).

In 1949 Pépin won the Prix d'Europe, a yearly scholarship granted by the Académie de Musique de Québec that enabled him to make a six-year sojourn in Paris, where he studied the piano with Yves Nat and Lazare Lévy, and composition with Jolivet and Honegger. In analysis courses with Messiaen he became acquainted with the music of Berg and Schoenberg as well as with Messiaen's *Turangalîla-symphonie*. These discoveries deeply modified his own style, which up to this time had relied heavily on Franck and Rachmaninoff. In his symphonic poems *Guernica* (1952) and *Le rite du soleil noir* (1955) he made partial use of serialism, extending this technique in works such as the String Quartet no.2 (1955–6), the Symphony no.2 (1957), *Hyperboles* (1960) and *Nombres* (1962). These are marked by a keen sense of rhythm and an attention to textural contrast.

From 1955 to 1964 and again from 1977 to 1987 Pépin held the post of professor at the Montreal Conservatoire. In 1960 he became director of studies. On a 1964 Canada Council grant he was able to visit 35 conservatories and schools of music in major European cities and become acquainted with their teaching methods, courses and administrative structures. Soon after his return he was appointed director of the Montreal Conservatoire, a position he held from 1967 to 1973. From 1969 to 1972 he was also national president of the Jeunesses Musicales du Canada. He served as the president of CAPAC from 1981 to 1983.

As an educator he addressed the complex problem which he refers to as the 'decolonization of the ear'. Consolidating his concern, in 1965 he co-founded, with musical colleagues, sociologists and artists, the Centre d'Etudes Prospectives du Québec. Modelled on a similar institute in Paris which he visited a few months earlier, the centre studied the technical, economic, social and cultural causes of modern evolution. An initial study, devoted to the effects of noise pollution, appeared in 1970.

It is perhaps through his association with scientists that Pépin has been able to view his music in relation to significant physical phenomena in the universe. Each of the *Monades* (1964–86) (taking their name from Leibnitz) focusses on a 'single active and indivisible substance'. *Quasars* (1967) was inspired by the discovery of quasars in 1963 and *La messe sur le monde* (1975, rev. 1990) reveals Pépin's profound admiration for Theilhard de Chardin and his quest for spirituality through scientific research.

Pépin was awarded the 'Prix de musique Calixa-Lavallée' in 1970 and was made officer of the Order of Canada in 1981. In 1984 he received a Master's degree in Public Administration. The following year he established the 'Clermont-Pépin' prize to encourage young artists

from his native region (Beauce). His book *Le décideur et la prospective* (Editions Clermont-Pépin) appeared in 1987.

DORITH R. COOPER/MARIE-THÉRÈSE LEFEBVRE

Pepper, Art(hur Edward jr) (*b* Gardena, CA, 1 Sept 1925; *d* Panorama City, CA, 15 June 1982). American jazz alto and tenor saxophonist. In 1943 he played in the big bands of Benny Carter and Stan Kenton. After serving in the US Army he toured with Kenton as the band's outstanding soloist (1946–51) and also performed freelance in Los Angeles. Thereafter his career was hampered by a series of prison terms for drug abuse, though he attempted several times to resume playing and issued several acclaimed recordings for the Contemporary label between 1957 and 1960, including *Intensity* (1960). In 1964 he adopted the tenor saxophone and began to play free jazz, then in 1968 returned to mainstream jazz by joining Buddy Rich's band; serious ailments forced his departure in the following year, however. From 1977 until his sudden death he gave a series of sensational bop performances in Japan and New York. He was the subject of a documentary, *Art Pepper: Notes from a Jazz Survivor* (1982).

Pepper was a leading figure in West Coast jazz, a movement with which he was associated not only because of his choice of location and musical colleagues but also because of his light, clear, precise sound on the alto saxophone. However, he was a stronger, more fiery improviser than his fellow West Coast musicians, as is amply demonstrated by his recordings in 1957 and 1960 with Miles Davis's rhythm section. In the mid-1960s, under the overwhelming influence of John Coltrane, he took up the tenor saxophone, on which his playing stressed intense and expressive noise elements. Eventually, having returned to the alto instrument, he combined the two approaches in performances such as *Cherokee* (on the album *Saturday Night at the Village Vanguard*, 1977, Cont.), in which traditional bop lines erupt at explosive moments into squeals, growls and flurries of notes.

BARRY KERNFELD

Pepper, J(ames) W(elsh) (*b* Philadelphia, 1853; *d* Philadelphia, 28 July 1919). American music publisher and band instrument maker. He worked as an engraver in his father's printing business, gave music lessons and in 1876 founded a publishing house at 9th and Filbert streets in Philadelphia. From copper plates and a manually operated press he issued instrumental tutors, quicksteps and from 1877 to 1912 a monthly periodical entitled *J.W. Pepper's Musical Times and Band Journal* (later the *Musical Times*). Around 1887 he acquired a structure at 8th and Locust streets which came to be known as the J.W. Pepper Building, accommodating a large salesroom, an instrument factory and a printing plant, equipped with steam-powered presses to produce sheet music on a large scale. During the next four decades the firm published nearly 200 new titles a year; except for a small group of sacred songs issued by Pepper Publishing Co. in 1901–4, these were all orchestral and band works intended for civic, commercial and school ensembles. Many compositions and arrangements appeared in journals – *Quickstep*, *Brass and Reed Band*, *Ballroom*, *Theatre and Dance* and *Opera House*. The *J.W. Pepper Piano Music Magazine* was begun in 1900, and a separate 20th-century series was also established. Among the composers whose works were published by Pepper were Sousa, Pryor, Grafulla, Southwell, William Paris Chambers, Nick Brown, Thomas H. Rollinson, William Henry Dana and Fred Luscomb. Publication of new works ceased in 1924.

Pepper sold more than 70,000 brass instruments and a similar number of drums, woodwind and string instruments. His instruments were moderately priced and, like his sheet music, intended for a mass audience. Controversy concerning the invention of the SOUSAPHONE culminated in a claim by C.G. Conn to have invented it in 1898, although Pepper had introduced a prototype as early as 1893. The manufacture of Pepper instruments continued until J.W. Pepper & Son was formed in 1910, after which most instruments sold by the firm were imported. On Pepper's death the direction of J.W. Pepper & Son was assumed by Howard E. Pepper (1882–1930), in turn succeeded by his widow, Maude E. Pepper. The firm was sold in 1942 and moved to Valley Forge, Pennsylvania, in 1973. Guided by Harold K. Burtch and his son Dean C. Burtch, who became president on his father's death in 1963, the firm grew by the mid-1980s to be the largest retailer of sheet music for instrumental ensembles in the USA.

LLOYD P. FARRAR

Pepping, Ernst (*b* Duisburg, 12 Sept 1901; *d* Berlin, 1 Feb 1981). German composer. On leaving school he went, in 1922, to study at the Berlin Hochschule für Musik, where his composition teacher was Gmeindl. His early music was immediately well received: he was awarded the Mendelssohn Prize in 1926, and works of his were performed at the 1927 Donaueschingen Festival and the 1928 Baden-Baden Festival. After a temporary job as an arranger of film scores, he worked as a freelance musician in Mülheim from 1930, and in 1934 he moved to a post at the Kirchenmusikschule in Berlin-Spandau, where he remained for the rest of his career. In addition, he taught at the Berlin Hochschule für Musik from 1953 to 1968. Pepping was a member of the Berlin Academy of Arts and of the Munich Academy of Fine Arts. His numerous awards included the Berlin Kunstpreis für Musik (1948), the Lübeck Buxtehude Prize (1951), the Düsseldorf Robert Schumann Prize (1956), prizes given by the Bremen Philharmonic Society (1962) and the Bavarian Academy of Fine Arts (1964), and an honorary doctorate of the Free University of Berlin.

Pepping's earliest instrumental compositions show his search for new means of expression within an essentially constructivist and strict contrapuntal style. The continuing influence of 16th- and 17th-century music is already evident, particularly in the use of cantus firmus technique, a tendency to linearity, Baroque concerto forms and a broadening of tonality on the basis of the church modes. The theoretical foundation for these features is expounded in Pepping's books, *Stilwende der Musik* and *Der polyphone Satz*. After turning his back on the experiments of his first pieces, he concentrated on choral music, where he employed two distinct manners: one rigorously polyphonic and the other freer and more readily influenced by the text. In his later choral works (from about 1948) these two approaches were increasingly intermingled, enabling Pepping to construct effective large-scale forms. The contents of his *Spandauer Chorbuch* are particularly representative of these austere works intended principally for use in the Protestant Church. In his *a cappella* pieces, such as the *Missa 'Dona nobis pacem'* and the *Passionsbericht des Matthäus*, Pepping's 'essential gift in the sphere of polyphony' (see Poos, p.51) is combined with a madrigal style rich in imagery; whereas such works as the *Te Deum* transcend their liturgical purpose with magnificent passages for brass reminiscent of Hindemith. Pepping's secular vocal music includes a number of choruses which make great demands on the singers, and four song cycles comprising together around 70 songs which were all written during the period 1945–6. These songs, which Moser described as 'lovingly chiselled', unite simple melodic lines with motivic development in the piano.

As with the choral music, most of Pepping's organ pieces are for church use, and their construction is largely governed by cantus firmi. On the other hand, his piano music has a gay insouciance and often employs Classical or Baroque forms. Of the three symphonies, the first bears the mark of Haydn, while the second encompasses severe polyphony and lyrical expansiveness, closing with a passacaglia. This neo-Baroque tendency, found at all periods in Pepping's work, is indicative of the constancy of his musical evolution. While he has maintained links with the major currents in German Protestant church music, his archaism represents a highly personal return to the past.

WORKS

SACRED VOCAL

unacc. chorus unless otherwise stated

Choralsuite, small chorus, large chorus, 1928; Kanonische Suite in 3 Chorälen, male chorus 3vv, 1928; Deutsche Choralmesse, 6vv, 1928; Hymnen, 4vv, 1929; Kleine Messe, 3vv, 1929; Choralbuch, 30 pieces, 4–6vv, 1931; Ps xc, 6vv, 1934; Spandauer Chorbuch, 20 vols., 2–6vv, 1934–8, rev. G. Grote, 4 vols., 1962; Uns ist ein Kind geboren, 4vv, 1936; 6 kleine Motetten, 4vv, 1937; Ein jegliches hat seine Zeit, 4vv, 1937; 3 Evangelien-Motetten, 1937–8; Deutsche Messe 'Kyrie Gott Vater in Ewigkeit', 4–6vv, 1938

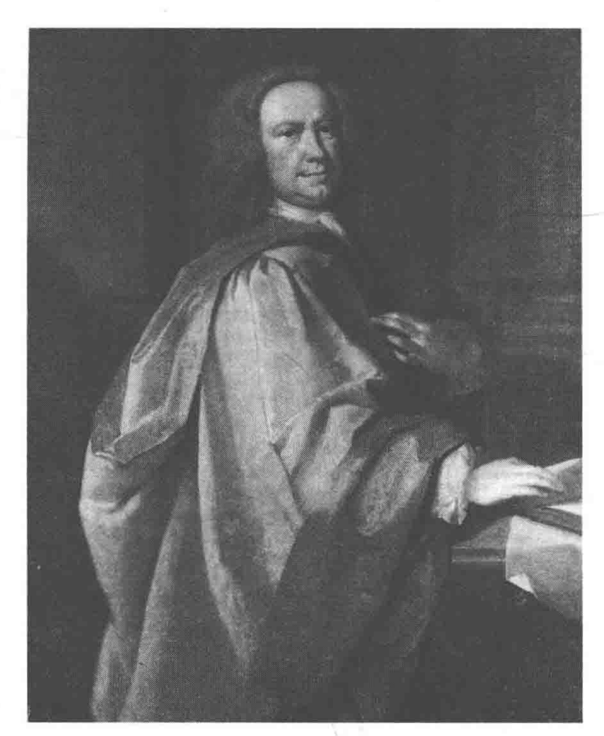
KLAUS KIRCHBERG



Pepusch, Johann Christoph (*b* Berlin, 1667; *d* London, 20 July 1752). German composer and theorist. He was the son of a Protestant minister and studied music theory under one Klingenberg (probably not the son of the Stettin organist Friedrich Gottlieb Klingenberg as Hawkins stated, but perhaps an elder relation), and practice under Grosse, a Saxon organist. From the age of 14 he was employed at the Prussian court, where he remained until about the end of the 17th century. According to Hawkins he resolved to leave Germany after witnessing the execution without trial of a Prussian officer accused of insubordination 'and put himself under the protection of a government founded on better principles'. After travelling through Holland, some time after September 1697 he settled in London, where he remained for the rest of his life; from 1707 he lived at Hooker's (later Boswell) Court near Lincoln's Inn Fields. He is known to have frequented the concerts of Thomas Britton at Clerkenwell, and it was probably there that he became acquainted with the poet and dramatist John Hughes, with whom he later collaborated in a number of works. His first permanent employment in London was as a viola player, and later harpsichordist at Drury Lane Theatre in 1704. His only stage work from this period was the pasticcio *Thomyris, Queen of Scythia*, but he was well known as a composer of instrumental music, much of it published in both Amsterdam and London, and as a performer in and organizer of public and private concerts.

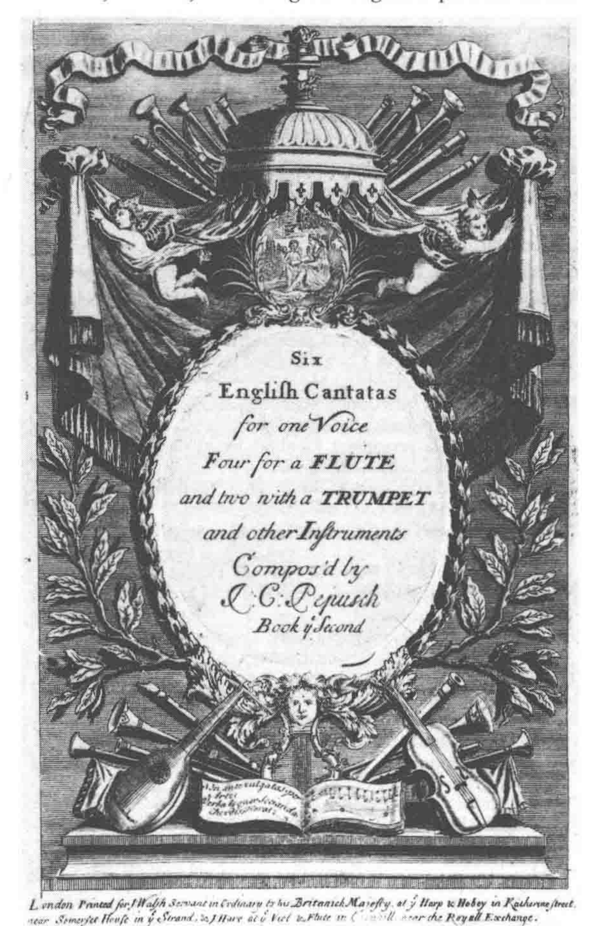
In January 1708 he joined the opera company operating from Vanburgh's Queen's Theatre in the Haymarket. There he served as violinist, harpsichordist, and agent for the soprano Margherita de l'Epine. The German traveller Zacharias Conrad von Uffenbach described a concert he attended in June 1710 at which l'Epine sang, accompanied by members of the opera house band directed by Pepusch from the harpsichord. Pepusch and l'Epine were married some time between 1718 (the traditional date, but now impossible to establish) and 1723; their only son, who died in July 1739 after showing considerable talent and promise, was baptized on 9 January 1724.

In July 1713 Pepusch, along with William Croft, was awarded the degree of DMus at Oxford; the music he submitted for this occasion, including the ode *Hail, queen of islands! Hail, illustrious fair*, has not survived. In 1714 Pepusch moved to Drury Lane as musical director and over the next two seasons contributed four essays in the genre of the English masque: *Venus and Adonis*, *Myrtillo and Laura*, *Apollo and Daphne* and *The Death of Dido*. These were intended as independent afterpieces, with plots that are completely self-contained, interpolate no real element of comedy, and have a tragic dénouement. In autumn 1716 he transferred to Lincoln's Inn Fields, where he served as musical director for much of the next 15 years but he composed little of importance for the stage.

Sometime after this date Pepusch became involved with the musical establishment of James Brydges, Earl of Carnarvon, and he was replaced by John Ernest Galliard as musical director at Lincoln's Inn Fields for the 1717–18 season. His presence at Cannons, Brydges's estate near Edgware in Middlesex, can be documented from as early as December 1717, and he and George Frideric Handel were both there in April 1718. Although he was again active at Lincoln's Inn Fields for the 1718–19 season, Pepusch seems to have been appointed musical director at Cannons in mid-1719 with a salary of £25 per quarter, perhaps as a consequence of Brydges' reorganization of his household on his elevation to the title of first Duke of Chandos in April of that year. Pepusch was responsible for providing music for the duke's chapel and chamber on a regular basis until mid-1721, presumably dividing his time between Cannons and his London house. After this date the duke cut back his musical establishment in response to financial losses, but Pepusch continued to provide occasional musicians from London until 1725, when organized musical activity at Cannons seems to have ceased.

Pepusch provided two new works for the 1723–4 season at Lincoln's Inn Fields, *The Union of the Three Sister Arts* and a revision of Betterton's *The Prophetess, or The History of Dioclesian*, and presumably conducted the band for the famous series of pantomimes between 1723 and 1730 featuring the theatre owner John Rich as Harlequin and music by Galliard. He was almost certainly in charge for the opening night of John Gay's famous satire *The Beggar's Opera* on 29 January 1728, for which he probably composed the overture and may have arranged the airs (although the printed bass lines do not reflect his elegance and technical skill). A sequel, *Polly*, was published in 1729, but censorship prevented its performance on stage until after Pepusch's death. Pepusch

1. Johann Christoph Pepusch: portrait by Thomas Hudson, c1735 (National Portrait Gallery, London, on deposit Beningbrough Hall)



probably retired from the theatre at the end of the 1732–3 season and subsequently concentrated primarily on his antiquarian interests.

In 1735, when he moved to Fetter Lane, Pepusch reorganized the Academy of Ancient Music (of which he had been a founder-member in 1726) as a seminary for the musical instruction of young boys. In December 1737 he was made organist of the Charterhouse, and in 1745 (the year before his wife died) he was elected a Fellow of the Royal Society, to whom he delivered a paper 'Of the Various Genera and Species of Music Among the Ancients'. Throughout his career he was much sought after as a teacher, his pupils including Boyce, Benjamin Cooke, J.H. Roman, John Travers, George Berg, James Nares and Ephraim Kellner. After his death Travers and Kellner shared with the Academy of Ancient Music their master's extensive and important library of books and music, among which was the collection of virginal music now known as the Fitzwilliam Virginal Book.

Largely as a result of Burney's estimate of him, posterity has tended to look upon Pepusch as an academic pedant who opposed Handel's cause in England. He was certainly the most learned musical antiquarian of his day, but to regard him only in this way is to ignore the lively theatre music and the elegant English cantatas, which are mostly carefully composed, but by no means dry. And though the success of *The Beggar's Opera* contributed to Handel's difficulties in promoting Italian opera for the Royal Academy, there is no indication of any personal or professional enmity between the two men. Even after 1728 Pepusch subscribed to publications of Handel's operas, and he also arranged performances of his music by the Academy of Ancient Music.

The unprecedented popularity of *The Beggar's Opera*, for which Pepusch may have supplied only the basses and an overture that uses one of the opera's popular tunes, has tended to overshadow his own music. His earliest surviving works are mostly instrumental and include well over 100 violin sonatas and several recorder and flute sonatas. These are mostly modelled on the four-movement plan of Corelli, whose sonatas and concertos Pepusch later edited for publication in London. Particularly interesting are the manuscript sets of sonatas composed for various English violinists, each containing 16 works in as many different keys, thus anticipating (and going beyond) the similar arrangement of Bach's two- and three-part Inventions. (Pepusch included B major in addition to the keys that Bach used.)

Most, if not all, of Pepusch's church music was written for the Duke of Chandos. It consists mainly of verse anthems in which soloists and chorus alternate, often with quite elaborate instrumental accompaniment. The *Magnificat* is similarly composed, though on a larger scale, and may well have been written to celebrate the opening of the chapel at Cannons in August 1720. Some anthems exist in versions for male voices and continuo, which may reflect the economies forced upon the duke in the 1720s, or possibly performances at the Academy of Ancient Music after the boys of St Paul's and the Chapel Royal had been withdrawn in 1731. Some of Pepusch's most attractive vocal writing is found in the secular cantatas, written, according to Hughes's preface to the

2. Title-page of Pepusch's 'Six English Cantatas', bk 2 (London: Walsh & Hare, 1720)

first printed collection, 'as an Experiment of introducing a sort of Composition which had never been naturaliz'd in our Language'. Pepusch's cantatas are italianate in their structure of two arias separated (and usually preceded) by recitative and in the almost invariable use of the da capo form, but the music itself often tends towards the kind of English tunefulness that kept his most famous cantata, *Alexis*, popular for over a century. *Alexis* is for voice and continuo only, but most of the other cantatas include an obbligato instrument, which Pepusch combined in skilful counterpoints with the voice and bass. Many cantatas were sung as interludes in the theatre, but some at least were designed for more intimate performance. Four out of the six cantatas in the second printed volume (dedicated to the Duke of Chandos) include a part for solo recorder (fig.2) and were probably performed at Cannons.

Pepusch's writing in his masques is intentionally italianate, with da capo arias, secco recitatives and typical Italian instrumentation using strings and woodwind; there is hardly any use of chorus or dances. These masques, in particular the longest and most successful, *Venus and Adonis*, are virtually operatic presentations in miniature.

Pepusch seems to have retired from composition after about 1729 and devoted himself mainly to the study and performance of ancient music. His most important theoretical work, *A Treatise on Harmony*, was published anonymously in 1730, possibly at the instigation of his pupil, Viscount Paisley, and revised the following year. It represents a last-ditch attempt to restore solmization as a basis for the instruction of harmonic theory.

Pepusch's brother Heinrich Gottfried (*d* 1750), an oboist employed by the Elector of Brandenburg, visited London in 1704; no compositions by him are known.

WORKS

thematic catalogue in Cook (1982)

DRAMATIC

all performed in London; all printed works published in London

Thomyris, Queen of Scythia (pasticcio, P.A. Motteux), Drury Lane, 1 April 1707; recits ? arr. Pepusch; songs (*c*1719)

Venus and Adonis (masque, C. Cibber, after Ovid: *Metamorphoses*), Drury Lane, 12 March 1715; score and parts *GB-Lcm*, songs (1716)

Myrtillo and Laura (pastoral masque, Cibber), Drury Lane, 5 Nov 1715; score *Lam*, frags. *Bu*, *Cfm*, *Ob*

Apollo and Daphne (masque, J. Hughes), Drury Lane, 12 Jan 1716; score *Lcm*, frags. *Lam*, *Ob*, *US-Wc*

The Death of Dido (masque, B. Booth, after Virgil: *Aeneid*), Drury Lane, 17 April 1716; *GB-Lam*

The Prophetess, or The History of Dioclesian (op with spoken dialogue, T. Betterton and J. Dryden, after J. Fletcher and P. Massinger), Lincoln's Inn Fields, 28 Nov 1724, music lost

Alexis and Dorinda (afterpiece), Lincoln's Inn Fields, 15 April 1725, music lost, ?by Pepusch

The Beggar's Opera (ballad op, J. Gay), Lincoln's Inn Fields, 29 Jan 1728; ? airs arr. Pepusch, ? ov. by Pepusch (1728/*R*)

The Wedding (ballad op, E. Hawker), Lincoln's Inn Fields, 6 May 1729; ov. by Pepusch (1729)

Polly (ballad opera, 3, Gay), Little Theatre, Haymarket, 19 June 1777; ? by Pepusch (1729); 1777 score arr. S. Arnold, *US-CAh*

Songs and other music for various stage works in *GB-Lam*, *Och* and pubd singly and in 18th-century anthologies

Doubtful: music in Marsaniello, or A Fisherman Prince, Lincoln's Inn Fields, 29 March 1729; prelude, songs *Lam* [revival of T. D'Urfey: *The History of the Rise and Fall of Marsaniello*]

ODES

Ye gen'rous arts and muses join [Britannia and Augusta] (J. Hughes), in honour of the Duke of Devonshire, 1707, 2 S, 2 rec, 2 ob, 2 vn, va, bn, bc, *B-Bc*, *GB-Lbl*

Hail, queen of islands! Hail, illustrious fair [Peace, Apollo and Britain], for Peace of Utrecht, 1713, music lost, text in *Gu*

MALCOLM BOYD/GRAYDON BEEKS (with D.F. COOK)

Pepys, Samuel (*b* 23 Feb 1633; *d* London, 26 May 1703). English naval administrator, diarist (1660–69) and gentleman-amateur composer and performer on the viol, theorbo, flageolet, recorder and guitar. He had a good ear, sang at sight, received singing lessons and practised the *trillo* (a vocal ornament that John Playford's *Introduction* of 1654 had made available in England); and in 1662 he attempted composition under John Birchensha's instruction. He usually employed friends to provide or help him with accompaniments to the vocal parts that he wrote (e.g. *Beauty retire* and *It is decreed*); there is no evidence that he could write in tablature himself. He tried to study musical theory in 1667–8 from Morley's *Plaine and Easie Introduction* (1597), Playford's *Introduction* and other works, learnt the gamut and bought a spinet. He came to possess Kircher's *Musurgia*, Mersenne's *Harmonie universelle*, Birchensha's *Templum musicum* and Descartes' *Compendium* (in the original and in Lord Brouncker's translation of 1653). Ten years after the diary period he employed a domestic musician, Cesare Morelli, to set songs and write out, with guitar tablature, a collection of his favourite pieces. A few of his songs survive (*GB-Cmc*).

Pepys's diary affords a detailed knowledge of Restoration domestic music, including the level of amateur musical ability and the taste for declamatory song. He favoured Henry Lawes's recitatives, composed his own recitative vocal part for a soliloquy by Ben Jonson and had Morelli set 'To be or not to be' (a speech Pepys learnt by heart in 1664) as a recitative. His friendship with an actress, Mrs Knepp, brought him into contact with Nicholas Lanier, a copy of whose *Hero and Leander* (*c*1628) he might have obtained during winter 1665–6 and which Morelli transcribed between 1679 and 1681. Pepys appreciated the nature of recitative. In 1667, hearing Giovanni Battista Draghi sing part of an Italian opera he had composed, he commented (12 February):

My great wonder is how this man doth do to keep in memory so perfectly the music of the whole Act, both for the voice and for the instrument too ... But in Recitativo the sense much helps him, for there is but one proper way of discoursing and giving the accent.

And hearing groups of Italian singers later that year, he remarked (16 February) 'In singing, the words are to be considered and how they are fitted with notes, and then the common accent of the country is to be known', and on 7 April, 'The better the words are set, the more they take in of the ordinary tone of the country whose language the song speaks'. Unconsciously following arguments appropriate to the Florentine Camerata, he disliked partsongs and wished the words to be always intelligible in performance; yet he enjoyed tuneful Italian songs with words of diluted meaning, such as *La cruda, la bella* and *S'io muoio*.

While the diary shows that there was a certain amount of circulation of songs and instrumental music in manuscript, especially by professional teachers, one may reasonably assume that for the most part Pepys got his songs from printed sources, that the majority of the songs mentioned in his diary can be related to available publications and that the latter can be identified. In addition to books mentioned above, he possessed and used the three volumes of Henry Lawes's *Ayres and Dialogues* (1653, 1655, 1658), at least five of John Playford's vocal and instrumental publications, Richard Dering's *Cantica sacra* (1662), William King's *Poems of Mr Cowley and Others* (1668) and Pietro Reggio's *Songs* (1680).

Pequeno, Mercedes (de Moura) Reis (*b* Rio de Janeiro, 8 Feb 1921). Brazilian music librarian and musicologist. She graduated from the National School of Music of the University of Brazil (now the Federal University of Rio de Janeiro) in 1973, and then pursued library science studies in the Administrative Department of Public Service, graduating in 1943. In 1951 she was appointed chief of the music division of the National Library in Rio de Janeiro, founding and organizing the music and sound recording collection and archives. She retired from that position in 1990, having built up the most comprehensive public music library in Brazil. From the 1960s to the 1990s she organized numerous exhibits (18 of them with printed catalogues that she compiled) on the life and works of European and Brazilian composers. She has participated in numerous national and international conferences of music research and music libraries and belonged to several international editorial boards. She first collaborated in the early 1940s on the *Revista brasileira de música*, then co-authored *Bibliografia musical brasileira (1820–1950)* with Luiz Heitor Corrêa de Azevedo and Cleofe Person de Mattos (Rio de Janeiro, 1952), and published *A música militar no Brasil no século XIX* (Rio de Janeiro, 1952). In 1994 she became a member of the Brazilian Academy of Music, for which she has coordinated the computerized Brazilian Music Bibliography project.

GERARD BÉHAGUE

Per, Il. *See* RUGERI.

Perabo, (Johann) Ernst (*b* Wiesbaden, 14 Nov 1845; *d* Boston, 29 Oct 1920). German-American pianist, teacher and composer. He began piano lessons with his father at the age of five, and was able to play all of Bach's '48' from memory by the age of 12. His family moved to New York in 1852, but he went back to Germany to complete his musical education. Between 1858 and 1865 he studied with Johann Andersen in Eimsbüttel, near Hamburg, then attended the Leipzig Conservatory, where his teachers included Moscheles, Alfred Richter, Moritz Hauptmann and Reinecke. He returned to the USA in 1865, and gave a number of concerts in the West before settling in Boston, where he made his first appearance with the Harvard Musical Association on 19 April 1866. He became well known as a pianist and as a composer and arranger of piano music. He gave a notable series of concerts where he performed the complete solo piano works of Schubert. Perabo was also renowned as a teacher: among his many pupils was Amy Beach. His works for the piano include *Moment musical* op.1, Scherzo op.2, Prelude op.3, Waltz op.4, Three Studies op.9, Pensées op.11, *Circumstance, or Fate of a Human Life* op.13 (after Tennyson) and Prelude, Romance and Toccatina op.19. His arrangements include ten transcriptions from Sullivan's *Iolanthe* op.14, concert fantasies on themes from Beethoven's *Fidelio* opp.16 and 17, and transcriptions of Schubert's 'Unfinished' and Anton Rubinstein's 'Ocean' Symphony.

JOSEPH REZITS

Perabovi [Parabovi, Perabuoni], **Filippo** [Francesco] **Maria** (*b* Bologna; *fl* 1577–1601). Italian composer and singer. He is recorded as a salaried musician at the Gonzaga court in Mantua in 1577 and 1578, and is later noted as a substitute *maestro di canto*, replacing Giulio Guarnieri, for two and a half months at the beginning of 1580 in the ducal chapel of S Barbara there. According to Bertolotti he was paid as a singer at the court in 1582, but by 1584 was *maestro di cappella* at Carpi. He evidently spent much of his early career at Mantua: in his only known work, *Il primo libro de madrigali a cinque et a sei* (Venice, 1588), the dedication to the new Duke of Mantua, Vincenzo Gonzaga, speaks of his wish to continue 'nella servitù ch'io haveva molti anni sono col Sereniss. Sig. suo Padre'. He was *maestro della musica* of the Confraternità dell'Annunziata in Viadana when his book was published, but he returned to Mantua and is recorded as a singer there at S Barbara between December 1592 and August 1601. The book includes two madrigal cycles each of seven stanzas and concludes with a setting of Guarini's *Tirsi morir volea*.

IAIN FENLON

Peragallo, Mario (*b* Rome, 25 March 1910; *d* Rome, 23 Nov 1996). Italian composer. He studied composition with Vincenzo di Donato and Casella. Between 1950 and 1954 he was artistic director of the Accademia Filarmonica Romana, and he was involved in the Società Italiana di Musica Contemporanea for many years (secretary, 1950–56; president, 1956–60 and 1963–85).

From the beginning of his career Peragallo was attracted to opera, at first following a lyrical, realistic manner halfway between Zandonai and late Puccini; the librettist Forzano also played a large part in shaping both *Ginevra degli Almieri* and *Lo stendardo di San Giorgio*. His postwar works did not abandon expansive lyricism, but the dramatic aspect became progressively more modern (e.g. *La collina*, with its seven solo episodes, with choral and orchestral introductions), as did the musical language; 12-note techniques were first used in *La gita in campagna*. His instrumental music of the period reveals similar characteristics (e.g. the Violin Concerto and *In memoriam*), and subsequently Peragallo moved cautiously in the direction of an avant-garde idiom (e.g. *Forme sovrapposte*), also experimenting with the interaction between traditional instruments and new sources of sound: *Vibrazioni* uses the 'tiptofono', a percussion ensemble of his own invention, while *Emircal* is for voices, orchestra and tape.

WORKS
(*selective list*)

Ops: Ginevra degli Almieri (melodrama, 3, G. Forzano), Rome, Opera, 12 Feb 1937; Lo stendardo di San Giorgio (melodrama, 3, Forzano), Genoa, Carlo Felice, 9 March 1941; La collina (madrigale scenico, after E.L Masters: *Spoon River*), Venice, Fenice, 27 Sept 1947; La gita in campagna (1, A. Moravia after *Andare verso il popolo*), Milan, Scala, 25 March 1954; La parrucca dell'imperatore (rondò scenico, G. Maselli), Spoleto, Festival, 12 June 1959

VIRGILIO BERNARDONI

Perahia, Murray (*b* New York, 19 April 1947). American pianist. He began piano lessons at an early age with Jeanette Haien and later graduated from Mannes College in conducting and composition while continuing his piano studies with Artur Balsam. Before embarking on a solo career, he completed an unusually full musical formation by spending summers at Marlboro, Vermont, where he was encouraged by Rudolf Serkin and collaborated in chamber music with such outstanding musicians as Casals and members of the Budapest Quartet; he also studied at this time with the veteran pianist Mieczsław Horszowski. In March 1972 he made his début with the New York PO

Murray Perahia

and later that year won first prize at the Leeds International Piano Competition. That led the following year to his first London recital, at the Queen Elizabeth Hall, and his first concert at the Aldeburgh Festival, where he became a regular visitor, often accompanying Peter Pears; from 1981 to 1989 he was one of the artistic directors of the festival.

Perahia's sensibility and the naturalness and lyrical impulse of his phrasing, together with the finish of his playing, were always recognized as exceptional. After his first prize at the Leeds competition it was predictable that he would become a distinguished pianist, but the direction and extent of his development as a solo player might not have been foreseen. He acknowledges that he owes much to the advice, inspiration and friendship of Vladimir Horowitz. During the 1980s and 90s his playing acquired a more sharply defined declamation and the command of a larger scale than hitherto, and one sensed within the frame of each performance a bolder rhetoric and more space for the music to breathe. Earlier, he was not usually thought of as a virtuoso or a 'big' player; by 2000 (although this is not his most frequented territory) he could be as thrilling as anyone in the *Rhapsodie espagnole* of Liszt.

Perahia is a consummate Bach player who has recorded the six English Suites, and he has also made a successful case for re-establishing the Handel suites and many of the Scarlatti sonatas as rewarding repertory for pianists. In the late 1970s he began to record all the Mozart concertos with the English Chamber Orchestra, directing them from the piano, and achieved a set of consistent excellence which has not been surpassed as a version on modern instruments. His discography also includes fine recordings of Mendelssohn (a composer he has consistently championed), together with Beethoven sonatas and all the concertos (with the Concertgebouw Orchestra conducted by Haitink). More recently, his recordings of Schumann's *Kreisleriana* and Piano Concerto and Chopin's Ballades and two concertos have been acclaimed; his Chopin discography is substantial and has been particularly admired. His repertory in the 20th century has hardly extended beyond Bartók, although it has included Tippett's First Sonata; but to everything he touches, whether as concerto soloist, solo recitalist, chamber musician or accompanist – or indeed conductor – he has brought distinction and a musical ease that has seemed effortless. It is given to few artists to develop as Perahia has done and to be able to renew so vividly our experience of a wide range of great music, while appearing to impose themselves on it so lightly.

STEPHEN PLAISTOW

Peralta, Angela (*b* Puebla, 6 July 1845; *d* Mazatlán, 30 Aug 1883). Mexican soprano. When she sang a cavatina from Donizetti's *Belisario* for Henriette Sontag during the latter's visit to Mexico, Sontag prophesied an international future for her. At the age of 15 she made her début at the Gran Teatro Nacional, singing in *Il trovatore*. She made her Milan début at the age of 17 in *Lucia di Lammermoor* and followed it with an equally successful Turin début in *La sonnambula*. Hailed everywhere in Europe as 'the Mexican nightingale', she toured the Continent during 1862–5 and sang as far afield as Egypt. Because of her European successes, which she repeated in a series of later tours, she was on her return to Mexico in 1866 guaranteed 20% of the receipts of every opera in which she was to sing; but she preferred to organize her own company. She travelled over the whole of Mexico, singing in *Lucia* 166 times, *La sonnambula* 122 times, and *La traviata*, *Dinorah*, *I puritani*, *Norma* and others a lesser number of times.

Peralta organized the Mexican première of Verdi's Requiem, which was given on 12 October 1877, 'in memory of three noble liberators, Juárez, Lincoln and Thiers'. She sang in the productions of Melesio Morales's *Ildegonda* and *Gino Corsini* and in Aniceto Ortega's Aztec opera, *Guatimotzin* (13 September 1871). An album of 19 of her original piano pieces was published (Mexico City, 1875). She died of yellow fever in the Pacific port of Mazatlán, at the age of 38, while on tour with her own company.

ROBERT STEVENSON

Peralta Escudero, Bernardo de (*b* Falces, Navarra; *d* Burgos, 4 Nov 1617). Spanish composer. In 1605 he was *maestro de capilla* at Alfaro and in 1607 he applied for a similar post at El Burgo de Osma; he was rejected and afterwards became *maestro de capilla* at Santo Domingo de la Calzada Cathedral. In 1609 he was summoned to Burgos where he became *maestro de capilla*, a post he held until his death; he was also made a canon but without the right to vote. He was evidently held in high esteem by his contemporaries since on 9 December 1611 he was elected to replace Francisco de Silos as *maestro de capilla* of Zaragoza Cathedral, and on 3 May 1616 he was invited to serve the royal chapel at Madrid in the same capacity; he declined both appointments, declaring of the latter, characteristically, that he would 'prefer the galleys to Madrid'.

Peralta's works are up-to-date polychoral compositions of the lively, bustling type preferred by Philip III. His *Magnificat primi toni* for three choirs (judged 'bom' by João IV of Portugal; one copy reached Puebla in Mexico) is freely composed; he exploited the vocal groups fully in dynamic, textural and spatial contrasts, and set expressively individual words such as 'esurientes'. He was one of the first Spanish composers to attempt this sort of word-painting.

WORKS

Missa pro defunctis, 8vv; Magnificat primi toni, 12vv (3 choirs); 6 villancicos, 4, 6, 8, 12vv; romance, 3vv, *E-Mn*, *V*, *Zs*, Puebla Cathedral, Mexico; Magnificat, ed. S. Barwick: *Sacred Vocal Polyphony in Early Colonial Mexico* (diss., Harvard U., 1949)

ROBERT STEVENSON

Peranda [Perandi, Perande], **Marco Gioseppe** (*b* Rome or Macerata, *c*1625; *d* Dresden, 12 Jan 1675). Italian composer and singer. He may have been a pupil of Carissimi in Rome, as was Christoph Bernhard, who took him to Dresden between 1651 and 1656. He was first employed as an alto singer in the chapel of Johann Georg II, heir to the electorate; in 1656 this chapel was combined with the court chapel, in which he continued to sing. By 1661 he was vice-Kapellmeister, and in 1663 he succeeded Vincenzo Albrici as Kapellmeister. From the death of Schütz in 1672 until his own death he was first Hofkapellmeister. Though the electoral court continued to be Lutheran until 1697, Peranda remained a Catholic. Court journals show that he visited Italy in 1667.

Peranda's importance as a composer undoubtedly lies primarily in the field of the sacred concerto. His many such works, together with his other sacred music and his stage and instrumental works, as well as similar works by Albrici, were far more representative of the repertory of the Dresden court in the period from about 1660 to 1680 than the music of Schütz, which was seldom performed in the court chapel after 1656. There are indeed very few features common to the older German school represented by Schütz and the newer Italian school, whose chief members were Bontempi, Albrici and Peranda. The attack on the new theatrical church music in the funeral oration for Schütz by the chief court preacher Geier was mainly directed against Peranda as a papist and as the exponent of a style described as 'broken'. The most notable characteristics of this style are the free combination of tutti concertato- and solo arioso-style passages with solo aria strophes. Peranda sets these sections off from one another by using changes in meter, and by contrasting few and many voices, vocal and instrumental sections, syllabic and linear writing, and block harmony and brilliant decorative writing. His works are indebted to the Roman motet style of Graziani and others, but also exhibit the influence of contemporary German sacred music, particularly in the use of instruments. Together with Albrici he contributed to the early history of the so-called 'concerto-aria cantata' in Dresden. Like some other composers Peranda set new devotional Latin texts more often than biblical and liturgical ones. Only in his handling of German words – for example in *Herr, wenn ich nur dich habe, Verleih uns Frieden* and the recently identified *St Mark Passion* (once attributed to Schütz) – did he approach the style of comparable works by Schütz, such as the second set of *Symphoniae sacrae* and the Passions. He often used consciously beautiful sounds for purely musical ends and not simply to illustrate the words. He appears to have laid the foundations of the 18th-century motet style (Bach's apart) in central Germany, and he exerted considerable influence on his central and north German contemporaries.

WOLFRAM STEUDE (with MARY E. FRANDSEN)

Perandreu, José (*fl* ?mid-17th century). Spanish composer. From the occurrence of his works in *E-E* Plut.56 67-ñ along with pieces by José Ximénez and Pablo Bruna, and the stylistic affinities between them, it seems likely that he was active in the middle of the 17th century. He is represented by nine pieces – four settings of the Spanish *Pange lingua* and five works of the tiento type. The *Pange lingua* pieces apparently form a group, each containing the cantus firmus in a different voice; the accompanying parts form interesting and at times rhythmically complex

counterpoint. The tientos (one ed. H. Anglés, *Antología de organistas españoles del siglo XVII*, i, Barcelona, 1965) all adopt the Spanish tradition of divided keyboard (*medio registro*) with either one or two solo parts given to the right hand in continuously spun-out figuration that develops from successive points of imitation. Though they have fared badly with music historians because of their excessive length and monotony, they do reveal a certain melodic lilt, a variety of rhythmically interesting figuration and ingenious transformations of the initial motifs.

Peraza. Spanish family of instrumentalists and organists. Many of them were namesakes whose exact relationship is unclear.

(1) **Jerónimo de Peraza (de Sotomayor) (i)** (*b* ?Seville, *c*1550; *d* Toledo, 26 June 1617). He was the son of Juan Peraza, the most famous shawm player of his day, who was employed at Salamanca, Valencia, Seville and Toledo. Jerónimo's teacher was probably Pedro de Villada (*d* 15 Oct 1572), organist at Seville Cathedral; Peraza succeeded him on 1 September 1573. Installation of a new large organ, begun in 1567 by the Flemish 'Mestre Jox', had recently been completed. On 8 April 1575 Peraza was asked to draw up in cooperation with the builder two books describing the stops, one to be placed in the cathedral archive. Two months later he had not complied and, moreover, was absent without leave. Despite the chapter's efforts to please him by appointing his brother Juan as instrumentalist at a high salary, he continued to give trouble. The chapter considered that Jerónimo had deceived them when he accepted from Toledo a better offer which included a chaplaincy. He was elected organist at Toledo on 27 November 1579 and installed on 21 March 1580; he served that cathedral for 36 years. On at least one occasion the Seville Cathedral authorities tried to tempt him back, but Toledo responded on 8 March 1602 by raising his salary still further and by allowing him even more liberal leaves of absence to attend to his business interests.

Francisco Correa de Arauxo, in *Facultad orgánica* (Alcalá de Henares, 1626), mentioned Peraza as the first at Seville to have intabulated verses in the 8th tone ending on D instead of the usual G. The Jerónimo de Peraza appointed suborganist at Seville on 19 October 1594 was a namesake, possibly (3) Jerónimo Peraza (ii). A monothematic tiento of excellent quality in the 8th tone, notable for its use of accidentals, survives, as an addition to a copy of *Facultad orgánica* (in *P-La*), and is described there as 'Obra de Peraza'.

(2) **Francisco de Peraza (i)** (*b* Salamanca, 1564; *d* Seville, 23 June 1598). Youngest brother of (1) Jerónimo de Peraza (i) and an exceptionally precocious player. He spent his childhood at Seville and Toledo, where his father was principal shawm player in the cathedral establishments. At the competition held on 16 May 1584 at Seville to decide on a successor to Diego del Castillo, Peraza so impressed Cardinal Rodrigo de Castro, Archbishop of Seville, that he asked the cathedral chapter to award him the organist's prebend, at an annual salary of 200 ducats. Francisco Pacheco described the occasion in *Libro de descripcion* (Seville, 1599): 'Finding that Guerrero [the *maestro de capilla*] was confronting the competitors with some of the hardest tests of skill known to musicians, but that scarcely had he announced a task before Francisco Peraza had accomplished it to perfection, even adding his solution of variants to the problem, the cardinal was overwhelmed with admiration of such skill found only in the rarest prodigies'. Within two years Peraza's salary had been increased substantially; on 6 June he was awarded another 1000 reales annually, which gave him a stipend closely in line with Guerrero's. The *maestro de capilla* generously 'embraced him and exclaimed that he had an angel in every finger'. Philippe Rogier, *maestro de capilla* to Philip II, also held him in high esteem. Because he was widely in demand, Peraza often overstayed his leaves. The chapter dismissed him on 27 June 1590 for a long and unauthorized absence, but reinstated him later that year.

He was the only Spanish organist of the time whose portrait has survived. The many compositions – keyboard works, villancicos, *chanzonetas*, motets and *sainetes* (theatre music) – mentioned by Pacheco, his first biographer, are no longer extant. The identity of the Pedraza or Peraza who composed a single surviving organ piece superscribed 'Medio registro alto, Tono I' (divided keyboard, 1st mode), printed from a 17th-century Escorial manuscript in L. Villalba Muñoz's *Antología de organistas clásicos* (Madrid, 1914, rev. 2/1971 by S. Rubio), has been disputed. The many sequential passages in the right hand give the work a Baroque flavour, placing Francisco de Peraza ahead of his time if it is truly his.

(3) **Jerónimo de Peraza (ii)** (*b* Toledo, 1574; *d* Palencia, 21 July 1604). Nephew of (1) Jerónimo de Peraza (i). On 20 December 1594 he defeated Sebastián Martínez Verdugo in a competition for the post of organist of Palencia Cathedral, left vacant by Pedro de Pradillo. He was ordained in 1600. On 14 July he played in Valladolid for the entry of King Philip III, and on 26 June 1603 played for the king's visit to Palencia. He remained as organist at Palencia until his death from tertian fever, a form of malaria.

(4) **Francisco de Peraza (ii)** (*b* Seville, 1595/6; *d* ?Madrid, after 1635). Son of (2) Francisco de Peraza (i). His uncle (1) Jerónimo de Peraza (i), organist of Toledo Cathedral, brought Francisco up to be his successor. At a public trial of skill on 6 and 7 March 1618 Peraza was considered superior to Francisco Correa de Arauxo, his only competitor for the Toledo post, and was confirmed on 30 June 1618. During the following years he fell into disfavour with the Toledo chapter. He returned twice after long absences without leave (22 May 1619 and 1 April 1621); after fleeing for a third time from his creditors in Toledo he tendered his resignation, which was accepted on 9 September 1621.

The Cuenca Cathedral chapter engaged him for two years beginning 12 October 1624, with an excessive annual salary, and on 29 July 1626 voted him a canon's salary provided that he took orders; however, he failed to keep the agreement and on 9 October was dismissed for unauthorized absence. After this he was organist of the Convento Real de la Encarnación in Madrid. From 7 June

1628 to 17 August 1629 he was organist and prebendary of Segovia Cathedral. In 1636 the future João IV of Portugal gave him 400 silver réis for a book of tientos brought by him to the ducal residence at Vila Viçosa.

ROBERT STEVENSON

Perches Enríquez, José (*b* Chihuahua, 1882; *d* Los Angeles, 1939). Mexican pianist and composer. His first teachers were his father, José Perches Porras, a pianist, organist and conductor, and his mother, Antonia Enríquez y Terrazas, a concert pianist. A child prodigy, by the age of 10 he had already given many recitals. At 16 he made a triumphal appearance at the casino in Chihuahua, which won him a scholarship from the governor for studies at the National Conservatory in Mexico City, where he studied with Julio Ituarte. After graduation he began to teach and give concerts throughout Mexico as well as Central and South America. He was a professor of piano at the National Conservatory from 1906 to 1931. In 1934, for reasons of health, he moved to Los Angeles, where he later died. He composed a large quantity of salon music for piano, and his *Secreto eterno* (*Danza orientale*) achieved international popularity, along with *Alicia* (*Vals*) and *Toño* (*Danza*). All these works were published by A. Wagner y Levien.

WALTER AARON CLARK

Perchival, Charles Theodore. *See* PACHELBEL family, (3).

Percussion (Fr. *instruments à percussion*; Ger. *Perkussion*, *Schlagzeug*; It. *percussione*). A term used to describe instruments, in particular Western orchestral and band instruments, that are played by shaking, or by striking either a membrane (e.g. drums and tambourines; *see* MEMBRANOPHONE) or a plate or bar of wood, metal or other hard material (e.g. cymbals, triangles, xylophone; *see* IDIOPHONE). They can also be divided into instruments that produce a sound of definite pitch (e.g. kettledrums, celesta) and those that do not (e.g. snare drum, gong). The term is also used to designate the section of the Western orchestra containing these instruments (Fr. *batterie*; Ger. *Schlagzeug*; It. *batteria*); the percussionist may also be called upon to produce a variety of sound effects.

The rise of percussion within the orchestra is primarily a development of the 20th century (but *see also* JANISSARY MUSIC). An interest in orchestral colour and texture led composers such as Debussy (*La mer*, 1903–5) and Richard Strauss (*Don Quixote*, 1896–7 and *Eine Alpensinfonie*, 1911–15) to expand the percussion section; Satie in *Parade* (1913) made use of a variety of sound effects, including sirens, starting pistols, bouteillophone and typewriter. Such composers as Stravinsky, Bartók and Varèse gave the element of rhythm, and percussion instruments, a new importance within the orchestra and chamber ensemble. The rise of Latin American dance bands in the 1930s brought with it a new group of percussion instruments, of Afro-Cuban origin; these instruments and others of non-European cultures, such as the Asian and other non-Western instruments studied and used by Henry Cowell, made their way into the orchestra. Composers who have used percussion with special originality and effectiveness include Messiaen, Britten and Stockhausen. In jazz, dance bands, rock and pop music the percussion is most commonly handled by a single player using a DRUM KIT.

The development of music in the 20th century has brought about a situation where any strange sound or sound effect not produced by conventional orchestral instruments ends up in the percussion section. The single percussionist in Ligeti's *Aventures* (1962) and *Nouvelle aventures* (1962–5) requires the following:

> a rack with carpet and carpet beater; an open wooden box with four rubber bands (the box to act as a resonating chamber when the rubber bands are plucked); sandpaper taped to the floor (to be scraped by the player's feet); paper bags (to pop); newspaper, brown grease-proof paper and tissue paper (to tear); toy frog (to squeak); balloons (to squeak); cloth (to tear); book (to flick pages); tin foil (to rustle); empty suitcase (to hit); metal dustbin and tray of crockery (crockery to be thrown into dustbin); tin can and hammer; sandpaper blocks; bass drum, snare drum, xylophone, glockenspiel, suspended cymbal and güiro.

Many other late 20th-century works have unusual requirements, some calling for instruments invented by the composer. In Richard Rodney Bennett's Waltz from *Murder on the Orient Express* (film score, 1973) a steam effect is created with a cylinder of carbon dioxide. Birtwistle's *The Mask of Orpheus* (1973–84) calls for a 'Noh Harp', the effect being achieved by suspending five metal bars over a timpani, the player striking the bars and moving the timpani pedal to create an eerie sound. Henze's *Voices* (1973) requires three thunder sheets, a starting pistol, wine glasses, a jew's harp, three penny whistles and a referee's whistle. In George Benjamin's *At First Light* (1982) a ping pong ball is dropped into a glass (a suitable glass should maximize the number of times the ball bounces); the player also tears newspaper. Benedict Mason's *!* (1992) calls for a waterphone (invented by Dick Waters; water is activated in a special vessel by striking or bowing rods welded to the rim), a *binzasara* (a

Japanese rattle consisting of wooden slabs strung together), a gourd in water, a rainmaker (rain machine), an *udu* pot (an Igbo instrument, a vessel played by striking one of the openings with the hand, a beater or against the body), theatre lighting, a cuckoo (whistle), hosepipe whistles, devil chaser (bamboo stick), trihorn (three-bulb car horn), *Schwirrbogen* (a bow mounted on a stick with elastic stretched across the bow, which emits a whining sound when whirled around the player's head) and patum pipes (a length of plastic tubing containing beads). Unusual instruments and sound effects have appeared in all types of music, and virtually anything may be expected of the percussionist in the late 20th century.

The Javanese gamelan may have provided a model for the Western percussion ensemble, a group of performers playing a wide variety of percussion and sound-effects instruments. One of the earliest public performances by such an ensemble took place in 1933; the work was Varèse's *Ionisation* (1931), for 13 performers playing 39 instruments, including some borrowed from Latin American music and jazz. Other early works for percussion ensemble included Cowell's *Ostinato pianissimo* (1934), which uses Latin American instruments, Western percussion and Asian instruments such as gongs and Indian 'rice bowls' (*jalatarang̃*), and John Cage's *First Construction in Metal* (1939), which calls for five differently pitched thunder sheets, four brake drums, four gongs resting on pads and a water gong. Lou Harrison and Carlos Chávez also made significant contributions to the medium. In such works, which employ many instruments apart from those developed within the concepts of Western harmony and melody, the elements of colour, texture and rhythm are developed to a high degree of complexity. Since the 1950s many composers have written for the percussion ensemble, which by the end of the century had become a part of many university music programmes. The ensembles Nexus, Les Percussions de Strasbourg and Ensemble Bash have commissioned many new works. Solo percussionists have included Evelyn Glennie, James Wood and Keiko Abe; all have also composed for the medium. Wood's *Stoichiea* (1988) calls for more that 600 instruments, played by 16 percussionists. The percussionist and scholar James Blades has, through his writings, helped to define a history and scholarship for percussion instruments. *See* INSTRUMENTS, CLASSIFICATION OF; see also entries on individual instruments.

JAMES HOLLAND, JANET K. PAGE

Percussions de Strasbourg, Les. French percussion ensemble. It was formed in 1961 by six young percussionists, all of whom were members of Strasbourg symphony orchestras. Although the repertory for such a group was virtually non-existent at the time, the ensemble was sponsored by Pierre Boulez, who was fascinated by the possibilities it offered. Other composers were immediately attracted to the idea of writing for the ensemble, and in 1965 it gave a concert devoted entirely to percussion. Although the players have changed over the years, the group remains true to the original concept of presenting percussion instruments – Western, Oriental and African – in the language of contemporary avant-garde music. Over 170 compositions have been dedicated to the group (including Xenakis's *Persephassa* (1969) and *Pleïades* (1978)); and the players are constantly adding new instruments and sonorities to the hundreds already in use. Messiaen called the ensemble 'pioneers in the evolution of percussion in contemporary music', and wrote for it the percussion parts in *Sept haïkaï* (1962), *Couleurs de la cité céleste* (1963) and *Et exspecto resurrectionem mortuorum* (1964). Les Percussions de Strasbourg have also been very active in education, with 'Percustra', an introduction to music through body, voice and percussion instruments. They tour regularly throughout the world and have made numerous recordings.

JAMES HOLLAND

Perdeholtz, Lucas. *See* BERGHOLZ, LUCAS.

Perdendosi (It.: 'losing itself', 'dying away'; reflexive gerund of *perdere*, 'to lose'). A term equivalent to *diminuendo* and *descrescendo* but implying the ultimate arrival at complete silence. A famous example appears just before the end of Beethoven's Violin Concerto.

□

Perdigo (*b* Lespéron, Ardèche; *fl* 1195–1220). Troubadour. Several conflicting versions of his *vida* exist, all presenting highly contestable facts; it seems likely, however, that he was born the son of a poor fisherman in a small village called Lespéron in the bishopric of Gévaudon (Ardèche). According to one source, he retired to the monastery of Silvabela; this has not been identified but it may be the monastery at Silvacana (Aix), founded by Raimon I of Baux in 1144. According to the *vida* all his songs were written during this period. His surviving work includes eight love-songs (three with melodies, all in *I-Ma* R.71 sup.: *Los mals d'amor ai eu be totz apres*, PC 370.9; *Tot l'an mi ten amors d'aital faisso*, PC 370.13; *Trop ai estat mon Bon Esper no vi*, PC 370.14), a religious verse, a *cobla* and a sirventes. He was also a partner in three partimens with Dalfi d'Alverne, Gaucelm Faidit, and Raimbaut de Vaqeiras with Ademar de Poitiers. His style seems to have been highly influential particularly on Italian poets, many of whom translated and imitated his works. The wide distribution of his poems among the sources also attests his popularity. The construction of his melodies is quite unsophisticated: they are all fairly elaborate in style and through-composed to the extent of lacking even melodic rhymes between the individual phrases.

IAN R. PARKER

Perdomo Escobar, José Ignacio (*b* Bogotá, 5 June 1917; *d* 1980). Colombian musicologist. Concurrently with law, he studied music theory, composition and music history

at the Bogotá National Conservatory under Guillermo Uribe Holguín and Antonio María Valencia. After working as a cataloguer at the National Library, he was appointed secretary of the National Conservatory (1935–40). He then became a priest, and was later a canon at Bogotá Cathedral. Besides law he worked mainly in Colombian music history, particularly the colonial period, and Colombian folklore. His *Historia de la música en Colombia* (Bogotá, 1938, 5/1980) was the first to appear and is still useful, as is his *El Archivo musical de la Catedral de Bogotá* (Bogotá, 1976); his valuable instrument collection is now housed at the Biblioteca Luis Angel Arango, Bogotà.

GERARD BÉHAGUE

Peregrine tone. *See* TONUS PEREGRINUS.

Peregrino di Zanetto (Micheli). Italian violin maker, son of ZANETTO DA MONTICHIARO.

Pereira, Domingos Nunes (*d* nr Lisbon, 29 March 1729). Portuguese composer. He was a priest, who after serving as *mestre de capela* of the Casa da Misericórdia, Lisbon, held a similar position at Lisbon Cathedral from about 1690 until 1719. His works, which were all sacred, are apparently all lost. They included eight-part responsories for Holy Week and the Office of the Dead, vesper psalms (including *Laudate pueri Dominum* and *Confitebor*, both for eight voices), Lessons for the Dead and a four-part *Laudate Dominum, omnes gentes*, as well as vilhancicos for four to eight voices. (D. Barbosa Machado: *Bibliotheca lusitana*, i, Lisbon, 1741/*R*, pp.713–14; music entries ed. R.V. Nery as *A música no ciclo da Bibliotheca lusitana*, Lisbon, 1984, 64, 189–90)

ROBERT STEVENSON

Pereira, Marcos Soares (*b* Caminha, *c*1595; *d* Lisbon, 7 Jan 1655). Portuguese composer, elder brother of João Soares Rebelo. He was a priest. He succeeded Roberto Tornar as *mestre de capela* at Vila Viçosa about 1629, and when the Duke of Bragança became King João IV in 1640 he accompanied him to Lisbon, where he was royal choirmaster until his death. All his music is lost, but the royal library included the following sacred works by him: for triple choir (12 voices) a mass, five vesper psalms, two motets and a *Te Deum*; for double choir (eight voices) two vesper and two compline psalms, a responsory for 8 December, an invitatory and lessons for the Office of the Dead, and calendas for 24 June, 12 August and 4 October. There were also ten vilhancicos, one for 12 voices, the others for smaller groups.

ROBERT STEVENSON

Pereira, Tomás [Sancho] (*b* São Martinho do Vale, Barcelos, 1 Nov 1645; *d* Beijing, 24 Dec 1708). Portuguese organist, theorist and organ builder. He was a Jesuit missionary; his 36-year stay in China produced far-reaching cultural exchange. His accomplishment in music, mathematics and diplomacy led to his being invited to Beijing by Emperor Kangxi. He astounded the emperor with a demonstration of musical notation, repeating Chinese melodies flawlessly after one hearing. Kangxi's subsequent creation of an academy to study ancient Chinese music culminated in the four-volume *Lulu Zhengyi* ('A True Doctrine of Music'). A fifth volume, on Western music theory, was begun by Pereira and completed by Teodorico Pedrini, his successor as court musician; the whole was published in Beijing in 1713.

Pereira built several organs in Beijing for the Catholic church and for the emperor, including one which played Chinese songs mechanically. He also wrote Chinese hymns, his only known compositions. At Kangxi's behest Pereira was instrumental in negotiating the 1689 Treaty of Nerchinsk between Russia and China, the first such treaty between Asia and Europe.

Perelmuth, Jacob Pincus. *See* PEERCE, JAN.

Perényi, Miklós (*b* Budapest, 5 Jan 1948). Hungarian cellist. He began his studies at the age of five with Miklós Zsámboki and Ede Banda at the Franz Liszt Academy in Budapest, and gave his first concert when he was nine. He was a pupil of Mainardi at the Accademia di S Cecilia, Rome, where he obtained his diploma in 1962, and with Casals in Zermatt, Puerto Rico and Marlboro between 1965 and 1972. In 1974 he was appointed a professor at the Franz Liszt Academy. Perényi has performed throughout Europe and the USA, and has appeared frequently, often in partnership with András Schiff, at the Mondsee International Chamber Music Festival. In 1990 he took part in the première of Kurtág's Double Concerto. His recordings include concertos by Haydn, Dvořák, Hindemith, Ligeti and Lutosławski, and many chamber works. Renowned for his noble, lyrical line and warmth of tone, he plays a Gagliano cello dated 1730.

PÉTER P. VÁRNAI/R

Perera, Ronald (Christopher) (*b* Boston, 25 Dec 1941). American composer. He studied with Leon Kirchner at Harvard (BA 1963, MA 1967), then with Gottfried Michael Koenig at the Studio voor Elektronische Muziek, University of Utrecht (1968). An extended study of electronic and computer music culminated in his *The Development and Practice of Electronic Music* (Englewood Cliffs, 1975), a major text which he edited with Jon Appleton. He has been a MacDowell Colony Fellow four times (1974, 1978, 1981, 1988) and in 1976 and 1988 received fellowship awards from the NEA. The Paderewski Fund (1972), the Goethe Institute (1974) and the Massachusetts Arts Council (1983) have commissioned works from him. From 1968 to 1970 he taught at Syracuse University and, in 1970, at Dartmouth College; in 1971 he joined the faculty of Smith College, Northampton, Massachusetts, where he was appointed to the Elsie Irwin Sweeney Chair in music. In *Alternate Routes* (1971), a score for the Dartmouth Dance Company, Perera conceived of all sounds as having kinetic properties: either wild runs and spins or delicate, subtle departures from complete stillness. In contrast to this physical orientation, his settings of three poems by Günter Grass (1974) use quotations of jazz, march music and a Johann Strauss waltz to evoke the nostalgic or even bizarre inner experiences of the personae. Many of Perera's works are available from Opus One, Albany, and CRI Records.

WORKS

DAVID COPE

Peretola, Decimo Corinella da. *See* MEI, GIROLAMO.

Pereira da Costa, António. *See* COSTA (i), (10).

Pereyra-Lizaso, Nydia (*b* Rocha, 12 May 1916). Uruguayan composer. She began her musical studies at the Conservatorio Teresiano in Rocha with Dolores Bell and Carmen Barrera; later she moved to Montevideo for advanced studies with Wilhelm Kolischer (piano), Tomás Mujica (counterpoint and fugue) and Enrique Casal-Chapí (composition). Her *Cuatro miniaturas* for violin and viola won a chamber music award at the GEDOK competition in Mannheim in 1966 (with Ernst Krenek, Werner Egk and Nadia Boulanger as the jurors); she also won several times (1959, 1964, 1966, 1967, 1978) the Casa de Teatro stage music award with incidental music for plays performed by the Comedia Nacional de Montevideo. Her chamber and vocal music reveals styles varying from contrapuntal techniques to a medieval troubadour-like character as well as 20th-century influences, mainly Hindemith. She has also written pedagogical works for children. She taught for many years at the Kolischer conservatory and at the Instituto de Enseñanza Musical.

SUSANA SALGADO

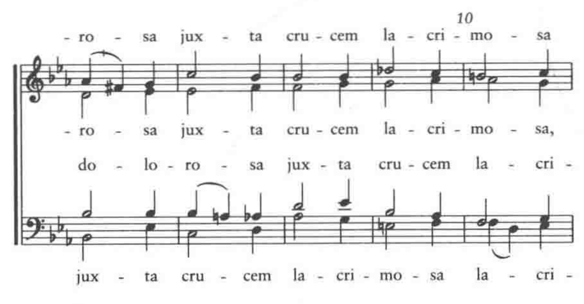
Perez, David [Davide] (*b* Naples, 1711; *d* Lisbon, 30 Oct 1778). Italian composer. He was the son of Giovanni Perez and Rosalina Serrari, both Neapolitans (the surname Perez, of Spanish origin, was fairly common in the former Kingdom of the Two Sicilies). At the age of 11 he became a student at the Conservatorio di S Maria di Loreto in Naples, where he remained until 1733, studying counterpoint with Francesco Mancini, singing and keyboard playing with Giovanni Veneziano, and the violin with Francesco Barbella. On completion of his studies, Perez immediately entered the service of the Sicilian Prince of Aragona, Diego Naselli. His first known pieces, the Latin cantatas *Ilium palladio astu subducto expugnatum* and *Palladium*, performed in Palermo's Collegio della Società di Gesù for the laurelling festivities, date from 1734. For the next few years he was active in Palermo and Naples, his patron having become chamberlain to King Carlo I. His first opera, *La nemica amante*, was composed for the king's birthday in 1735 and performed in the gardens of the Neapolitan royal palace and later in the Teatro S

Perez's 'Alessandro nell'Indie', Act 1 scene xi, Opera do Tejo, Lisbon, 31 March 1755; engraving by Michel Le Bouteux after design by Giovanni Carlo Galli-Bibiena

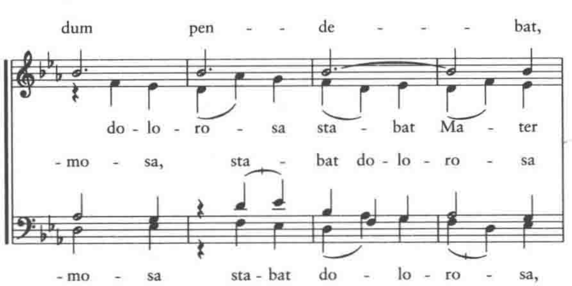
Bartolomeo. In the libretto's dedication the impresario of the theatre, Angelo Carasale, referred to Perez and Pergolesi as 'dei buoni virtuosi di questa città'. In 1738 he was appointed *vicemaestro di cappella* of Palermo's Cappella Palatina, the church dedicated to S Pietro in the royal palace, and became *maestro* the following year, succeeding Pietro Puzzuolo.

In the early 1740s Perez firmly established himself as a mature master. The opera he composed for the Teatro Alibert, Rome, for the carnival of 1740 was not performed due to the sudden death of Pope Clement XII, but on his return to Naples he staged an *opera buffa* (*I travestimenti amorosi*) and a serenata (*L'amor pittore*) at court, and an *opera seria* (*Il Siroe*) at the Teatro S Carlo, the latter performed by Caffarelli and Manzuoli. Opera was not an easy enterprise in Palermo and, until 1744, most of Perez's compositions as *maestro di cappella* there were serenatas and church music. He also composed church music for Naples, and two operas for the carnival of 1744 in Genoa. After March 1748 he was granted leave of absence and never returned to Palermo, although he continued to receive half his Palermo salary until his death. He proceeded to stage his operas in rapid succession in Naples, Rome, Florence, Venice, Milan, Turin and Vienna. In February 1749 he competed with Niccolò Jommelli in a public examination for the position of *maestro di cappella* at the Vatican. Cardinals Albani and Passionei helped grant Jommelli the appointment, although Perez was popular with the musicians (Girolamo Chiti, *maestro di cappella* of S Giovanni in Laterano, commented that Perez 'composes, sings and plays as an angel' and 'is very much superior to Jommelli in groundwork, singing and playing. He is, however, an imaginary hypochondriac').

In 1752 the King of Portugal invited Perez to become *mestre de capela* and music master to the royal princesses, a position he occupied until his death. The substantial annual stipend, coupled with the excellent musical and theatrical resources of the Portuguese court, undoubtedly influenced his decision to remain in Lisbon. The ambition of the new king was to depart from his father's music policy, which favoured church music, and give Italian opera a central position at court. Sumptuous scenic treatment was the rule, and Perez's operas were mounted by such famous designers as Berardi, Dorneau, Bouteux and Galli-Bibiena (see illustration). Equally important were the great singers who appeared at the Portuguese court, including Raaf, Elisi, Manzuoli, Gizziello and Caffarelli.



The nature of Perez's output changed in the aftermath of the Lisbon earthquake of 1 November 1755. The court withdrew from the theatres, and no operas were produced for seven years (and thereafter only in a less spectacular fashion). In the last 23 years of his life, Perez wrote only a few new operas; however, he wrote a huge amount of church music, covering almost all the rituals and practices of the two main musical chapels of Lisbon, the royal chapel and the Seminário da Patriarcal. Because he never



left Portugal, his international acclaim slowly declined. Nevertheless, Gerber noted that by 1766 Perez's compositions were known and in demand in Germany and that in 1790 he was 'one of the most celebrated and beloved composers among the Italian masters . . . one of the latest composers who maintained the rigour of counterpoint'. In 1774 Perez became by acclamation a member of the Academy of Ancient Music in London, where the only full-scale piece printed in his lifetime, the *Mattutino de' morti*, was published by Bremner. His music, particularly that for the church, was widely copied in Italy. During the last four years of his life he suffered from a chronic disease, eventually losing his sight, but continuing to compose. In 1778 Maria I (one of his pupils) made him a Knight of the Order of Christ; and when he died she ordered his funeral to be conducted with pomp at court expense.

Perez composed more than 45 dramatic works between 1733 and 1777, about half of which were operas written between 1744 and 1755, the period during which he concentrated almost exclusively on the genre. Excerpts from *Arminio*, *La Didone abbandonata*, *Ezio*, *Il Farnace*, *Solimano* and *Vologeso* were published in London by John Walsh, and many works exist in manuscript. In the *opere serie* written before 1752 he was often bound by the forms of Metastasian opera. *Il Siroe*, *Andromaca* and *Alessandro nell'Indie* (1744 version) are prime examples: 20 or more full da capo arias (more than half accompanied by strings alone) are consistently used, with between one and four accompanied recitatives, usually a single duet, a perfunctory three-movement sinfonia and a simple choral finale for the principals. The arias are usually written in the Baroque concerto idiom, with extravagant word-painting in the orchestra and extensive vocal bravura passages. Adhering to Metastasio's prescription of character definition as the sum of a pattern of dramatic reversals, each aria usually depicts a single affect, with few exceptions. These latter include *Artaserse* and *Alessandro*, which each contain a scene complex of related arias and accompanied recitatives.

Ex.1 *Stabat Mater*, 1774, beginning (organ part not shown)

With *Il Demofoonte* in 1752, as Perez began his lengthy residence in Lisbon, the monumental idiom declined and a sentimental style gained increasing prominence, with a resultant clarity of texture, greater symmetry of phrase, frequent rhythmic motifs and an emphasis on the pathetic. Formal modifications include the frequent absence of ritornellos, truncated da capo arias, between five and nine accompanied recitatives and several small ensembles. Perez's operas of the 1750s frequently display an orchestral mastery superior to that of the contemporary Italian opera school, incorporating features that appeared in his church music of the 1740s. The strings are in three to five parts, the wind are often used for solo passages, and there is less doubling of the vocal part and an increase in concertante passages. Among the better examples of this later manner are *Olimpiade*, *Il Demofoonte*, *L'Ipermestra* and *Alessandro nell'Indie* (1755 version). Several works written after 1757 reflect French influence. *Creusa in Delfo*, for example, contains extensive finales, prominent chorus and ballet scenes, and accompanied recitative for two to five characters.

Demetrio (1766 version) represents a transitional aesthetic, in which Perez combined a modified Baroque dramaturgy with a more up-to-date musical style: he eliminated 14 Metastasio aria texts, used eight accompanied recitatives and two duets for moments of personal reflection, and gave the da capo aria more musical and dramatic coherence. *Solimano* (1757) is his acknowledged masterpiece. It contains 14 *dal segno* arias, one cavatina and six accompanied recitatives, the scope and procedures of which are exceptional; several times the individual numbers are integrated into large-scale scene complexes. The flexibility of form, dramatic contrasts and musical vitality of the work are due in large part to the juxtaposition of *buffo* and *seria* idioms and to an interchange of compositional technique between aria and accompanied recitative. Kretzschmar (1919) claimed that *Solimano* 'belongs under the heading of masterworks . . . richness of invention and of feeling, originality of means and of form, everything is therein, which makes an art great' and 'if all opera composers of the Neapolitan school had been of his stamp, there would have been no need of a Gluck'.

Perez's two long periods of employment offered ample opportunities to write for the church. In the early part of his career he is reported by Florimo to have 'enriched with his compositions' Palermo's Cappella Palatina, but there are also many pieces that were written for Naples. In Lisbon, his deep religiosity and that of his pupil, the Princess Maria, combined with the musical policy of the court, led him to concentrate on church music for the last 23 years of his life. His first mass is dated February 1736. In most of his early works he made good use of orchestral and choral resources, taking great care over their treat-

ment. The Mass in E♭ (1740), for example, is scored for two choirs (the final 'Cum Sancto Spiritu' is a ten-voice fugue), full strings divided, in some sections, into two orchestras, and woodwind (no clarinets), horns and trumpets in pairs. The orchestral writing includes muted strings, 'seconda corda' passages for the violins, an abundance of crescendos and diminuendos, and solo parts for the woodwind and the viola. He treated solo vocal passages like operatic arias; most fugues or fugato sections have symmetrical thematic entries, and the pieces in the *stile antico* are conservative in harmony and notation.

The later church music written at Lisbon is quite different from the earlier works. The orchestral writing is as detailed, but instruments such as recorders and lutes are no longer employed. There are fewer separate sections for solo voices, and in most pieces one or more soloists emerge from the choir for short passages, thus creating numerous distinct vocal textures. A striking difference is that the counterpoint, although remaining strict, is more eloquent and sentimental, and rarely are the modern and archaic styles distinctly juxtaposed. The beginning of the 1772 *Stabat mater* (ex.1) serves as an example of his later style, in which the musical presentation of the words acquires pietist overtones. The sections alternate freely between polyphonic and chordal writing, and the harmony is elaborate, with much use of chromaticism. On the whole the style is strongly in favour of variety over coherence, and therefore thematic recurrence is not a regular feature.

18th-century critics often ranked Perez with Hasse and Jommelli; Burney found 'an original spirit and elegance in all his production'. 19th-and 20th-century commentary, based for the most part on a few earlier operas, has generally downgraded this judgment. A more complete examination of his works affirms the stature his contemporaries assigned to him. While he was essentially a transitional figure in 18th-century opera, he was nevertheless one of the great composers of *opera seria*, and as a church composer, he wrote some of the finest Roman Catholic music of the 18th century.

MAURICIO DOTTORI, PAUL J. JACKSON

Pérez (Roldán), Juan (bap. Calahorra, 26 Dec 1604; *d* ?Zaragoza, after 1672). Spanish composer. López-Calo identifies him with the Juan Pérez, nephew of the chaplain and musician Pedro Pereda, who became a choirboy at Calahorra Cathedral in 1617 and left for Sigüenza in December that year. In 1634 he was in Toledo seeking to become *cantor* (tenor) at the cathedral. In 1636 he was working as *maestro de capilla* and canon at the collegiate church of Berlanga, but in November he moved to Toledo Cathedral as *claustrero* and choirmaster, obtaining the tenor's prebend in June 1638. In 1639 he was offered the post of *maestro de capilla* at Calahorra. By December 1641 he was at Málaga Cathedral, hoping to become *maestro de capilla* there; however, the competition was not officially called until March 1642. He won the post, but had left by 30 October 1645, possibly owing to disagreements with musicians of the chapel. From at least 15 March 1648, the day his mother died, he was *maestro de capilla* at the Madrid Convent of the Incarnation. A letter to King João IV of Portugal, dated 22 June 1654, tells of Pérez Roldán's fame and at the same time describes him as lazy and prone to attributing others' work to himself. In February 1655 he received an invitation to return to his old post in Málaga, which he rejected because his travel costs had not been paid in advance. In 1661 he was presbyter and the king's chaplain, as well as *maestro de capilla* at the Convento de la Encarnación; he still held all these posts in 1664, when he was a judge in the competition for the mastership of Segovia Cathedral. By 18 June 1667 he was no longer working at the Madrid convent, and on 22 July he was appointed *maestro de capilla* of Segovia Cathedral; however, by 26 October 1670 he had disappeared, taking everything with him, including his scores, and breaking all his commitments. In 1671 he took up the post of *maestro de capilla* at León Cathedral, but was pensioned in October. His debts were forgiven and he was granted 300 ducats for his retirement in exchange for turning certain musical scores over to the church. However, in December 1671 he became *maestro de capilla* at the cathedral of Nuestra Señora del Pilar, Zaragoza, and at once had to take charge of the music for Christmas and Epiphany. Immediately after these festivities, on 9 January 1672, the chapter decided that, due to Pérez Roldán's age, the care of the children should pass to the organist, Joseph Muniesa, who must not have been much younger. The last news of Pérez Roldán is in a letter, dated 13 February 1672, from Joaquín Falqués, the king's chaplain and musician of the royal chapel, addressed to him in Madrid. Also, Andrés Lorente listed him among the good modern masters in *El porqué de la música* (Alcalá de Henares, 1672; p.560). In November 1673 there was a new *maestro de capilla* at El Pilar. Most of Pérez Roldán's works are preserved in the cathedrals of Zaragoza, which, considering his reluctance to give his compositions to any church, would suggest that he died in that city. In August 1673 one of his works (a *Misa de la Batalla*) was handed over by a *cantor* of Segovia Cathedral, Pedro de la Puebla, to settle a debt he had contracted with the chapter.

During his life Pérez Roldán was considered a great composer, and a century later Iriarte, in his poem *La música*, placed him among the great Spanish composers. He comes across as having had a solid training in counterpoint, as demonstrated by both his old-style compositions and his villancicos, which are elaborate and of great melodic and harmonic interest. His use of dissonance and modulation confers upon his works a clearly recognizable personal style. His madrigal *Ah del sol* is one of the few known 18th-century Spanish works for instrumental ensemble. The music for *Tetis y Peleo* can almost certainly be attributed to him. It was composed to celebrate the Peace of the Pyrennees and the marriage of María Teresa, daughter of Phillip IV, to Louis XIV. Pérez Roldán re-used fragments from *Tetis* to create villancicos to the Resurrection and to the Virgin, with new text by Vicente Sánchez, incumbent of El Pilar and habitual collaborator with its *maestros de capilla*.

WORKS

SACRED VOCAL

14 masses, *E-E*(2), *Lc*(2), *SE*(9), *Zac*(1): 5 for 4vv; 3 for 8vv, acc.; 2 for 4vv, org; 1 for 8vv, org, other acc.; 1 for 10vv, hp, 2 other insts; 1 for 12vv; 1 for 12vv, acc.
2 Requiem settings: 1 for 4vv, *Ac*; 1 for 8vv, acc., *Zac*
4 Offices of the Dead: Liberame Domine, 8vv, hp, acc., Parce mihi Domine, 8vv, b, hp, Regem cui omnia vivunt, 8vv, org, other acc., all *E*; Taedet animam meam, 12vv, hp, *SE*
2 ants, 4vv, *SE*: Asperges me, Vidi aquam
4 Mag settings: 3 for 10–12vv, acc., *SE*; 1 for 12vv, hp, 2 org, other acc., *E*
2 lits: 1 for 6vv, acc., *SE*; 1 for 8vv, hp, org, *E*
1 hymn: Ave maris stella, 8vv, org, other acc., *SE*
4 Lamentations, *SE*: 2 Cogitavit Dominus, 10vv, acc., 2 Misericordiae Domini, 9vv, 2 bajoncillos, bn, other acc.
4 motets: Crux fidelis, 8vv, hp, org, *Zac*; Dulcissima Maria, 5vv, *Zac*; Introduxit me rex, 12vv, *E*; Sepulto Domino, 4vv, ed. in Lira sacro-hispana, ser.1, i (Madrid, 1869)
12 pss: Beatus vir, 8vv, 2 insts, *J*; Cum invocarem, 8vv, acc., *SE*; Cum invocarem, 12vv, hp, 2 org, other acc., *E*; Dixit Dominus, 8vv, hp, *SE*; Dixit Dominus, 8vv, hp, org, other acc., *E*; Laetatus sum, 10vv, b, hp, *SE*; Laetatus sum, 12vv, vn, other acc., *SE*;. Lauda Jerusalem, 5vv, acc., *E*; Laudate Dominum, 6vv, hp, *Zac*; Miserere, 8vv, acc., *SE*; Miserere, 8vv, org, other acc., *E*; Qui habitat, 8vv, hp, 2 org, other acc., *E*
1 reservation: Tantum ergo, 8vv, org, other acc., *Zac*
52 villancicos, 2–12vv, mostly with acc., 17 dated 1658–72, mainly in *Zac* (4 inc.), others in *D-Mbs*, *E-Bc*, *E*, *SE*

SECULAR VOCAL

Music for Tetis y Peleo (comedy, J. de Bolea), Zaragoza, Casa de Comedias, Feb 1672, *E-Zac*
No recates favores (tono humano), 4vv, acc., *E*

INSTRUMENTAL

Ah del sol (madrigal), 4 insts, acc., 1672, *E-Zac*
Untitled piece, 12 pts, hp, *Zac* (inc.), may be for voices, but no text survives

LOST WORKS

2 masses, 1 for 12vv, 1 dated 1692; pss, 2 choirs; 2 sets of Complines, 8vv, 2 hp, org; motets, 6–8vv; Salve, 8vv; hymns, 8vv: *E-MO* according to *LaborD*
Bk of masses, *Mp*, according to Alvarez Pérez
Motete a la Asunción, 8vv, listed in 18th-century MS inventory of works by composers at El Pilar, *Zac*
Motete a la Ascensión, 7vv, listed in a MS inventory of *c*1715, *Zac*
Crux fidelis, 8vv, hp, org; ps, 6vv: *Bc* according to *LaborD*
Que llegan ya ciudadanos (Christmas villancico), 1v, 4 choirs, Ay traydor a la niña no tires (villancico for the Conception), 1v, 6vv, listed in *JoãoIL*
Villancicos in score, formerly in *Pac*, *SE*, *V*

LUIS ANTONIO GONZÁLEZ MARÍN

Perez de Alba, Alonso. *See* ALBA, ALONSO DE.

Pérez de Albéniz, Mateo. *See* ALBÉNIZ, MATEO PÉREZ DE.

Pérez de la Parra, Ginés (*b* Orihuela, Alicante, bap. 7 Oct 1548; *d* Orihuela, 15 Nov 1600). Spanish composer. His name is sometimes given erroneously as Juan Ginés Pérez. On 15 October 1562, just after his 14th birthday, he was chosen to direct the music in the collegiate church (from 1564 the cathedral) at Orihuela. From 23 February 1581 he was choirmaster of Valencia Cathedral, where one of his pupils was Juan Bautista Comes. After frequent unauthorized absences he left early in 1595 at the chapter's request and settled again at Orihuela, where from May 1595 he was a canon of the cathedral, although he did not act as choirmaster. On 14 November 1600 he made his will, which was executed on 25 November by his brother Juan. He was highly regarded by his contemporaries. His collected works, 'ready for the press', were to be found at Orihuela Cathedral in 1636 but had disappeared by 1727. Some 50 works by him do, however, survive elsewhere in 20th-century copies (some incomplete). They show that he had a preference for homophonic textures, which are seen at their best in glowing chordal passages that resemble Victoria. There is much expressive chromatic alteration, and in the motets in Catalan composed for the sacred drama *El misterio de Elche*, unrelated chords, such as E and B♭ major, boldly appear in quick succession.

WORKS

Sacred vocal: Benedictus, 4vv; Magnificat, 5vv; 6 vesper psalms, 4vv; Advent responsory, 3vv; 3 motets, 5vv; Latin hymn, 5vv, ed. in Hispania schola musica sacra, v (Barcelona, 1896/*R*)
Catalan motets, 3, 4vv, ed. J. Pomares Perlasia, *La 'Festa' o misterio de Elche*
Other sacred vocal: music for the Office of the Dead; vesper psalms; canticles; other liturgical compositions; motets: *E-MA*, *SEG*, *VAc*, *VAcp*, *Zac*

ROBERT STEVENSON

Pérez Gutiérrez, Mariano (*b* Pisón de Castrejón, Palencia, 11 Sept 1932; *d* Madrid, 9 Feb 1994). Spanish musicologist, choral conductor and music pedagogue. He studied music during his theological training at the Seminario Conciliar, Palencia (1948–55), and after winning a scholarship in 1956 he attended the Real Conservatorio Superior de Música in Madrid. In 1967 he obtained a degree in canonical law from the Universidad Pontificia de Comillas, Cantabria, and he served as choral director at the cathedral in Santiago de Compostela, 1964–9. He joined the faculty of the Conservatorio Superior de Música, Seville, in 1969, and was professor of aesthetics and music history (1969–74), then assistant director (1974–8) and director (1978–85). He earned the title *magister chori* in 1983 from the Gregorian Institute at the Catholic University of Paris, and in 1984 took the doctorate in philosophy at the University of Seville. He also studied privately with Chailley in Paris. From 1985 until his death he was professor at the Real Conservatorio de la Música in Madrid. He also served as president of the ISME, Spain, vice-president of the Sociedad Española de Musicología (1984–7) and founder (1988) and editor of the journal *Música y Educación*. In addition to his activities as a scholar, teacher and conductor, he also composed more than 70 works, including masses and works for orchestra, some of which were published.

ISRAEL J. KATZ

Pérez Martínez, Vicente (*b* Cifuentes, nr Madrid; *d* Madrid, 2 Jan 1800). Spanish liturgist and singer. He may have been the Vicente Andrés Pérez from Cifuentes (*b* 4 Feb 1746) who was admitted as a choirboy to the *seises* of Toledo Cathedral in 1756. In 1770 he entered the royal chapel in Madrid as a tenor and remained there until his death. During his career, he was especially noted for his excellence as a singer, teacher and interpreter of plainsong, and for his activity in chapel affairs. He collected and annotated many documents concerning the chapel (now in *E-Mn*) along with autographed theoretical works from his library. His major work is the *Prontuario del cantollano gregoriano ... según práctica de la muy santa primada iglesia de Toledo*, a three-volume anthology of plainsong submitted to the Imprenta Real in 1786 but not published until 1799–1800 after years of delays and a personal appeal to the prime minister Godoy. An enlarged second edition appeared in 1828–9, edited by A. Hernández. It is the most extensive plainsong collection printed in Spain, containing nearly 1000 pages of music. Based on the practices of Toledo, carefully prepared and collated with numerous manuscripts, it is an invaluable source of the chants used in Spain over several centuries, including those for vespers, compline and the proper and ordinary of the mass.

ALMONTE HOWELL

Pérez Maseda, Eduardo (*b* Madrid, 12 Aug 1953). Spanish composer. He studied music at the Madrid Conservatory (1969–81) and took a degree in sociology at the University of Madrid (1972–7). He has worked as a consultant in the department of musical activities for the municipality of Madrid. He won prizes for . . . *Y ved cómo la Creación se ensancha ante nuestros ojos* (1981), the Cello Concerto (1981) and the Sonata I (1983, for piano). His Sonata II (1985, for violin) won the New York Musician's Accord prize and received its first performance in that city. His *Me recuerdas tanto y nada* was chosen for the 1989 ISCM Festival in Amsterdam. He has given many courses and seminars on music, sociology and aesthetics, and has published two books and several essays and articles.

His most important orchestral work is *La cruz, el ciprés y la estrella* (1989). Immediately afterwards he began composing his first opera, on St John of the Cross. Entitled *Luz de oscura llama* (1991), it was given its first performance in Madrid and was an outstanding success.

WORKS
(selective list)

Op: Luz de oscura llama (prologue, 3, C. Janés), 1989–91, Madrid, Sala Olimpia, 1991
Vocal: . . . Y ved cómo la Creación se ensancha ante nuestros ojos (Virgil, H.D. Thoreau, Blanco White, F. López Serrano), chorus, children's chorus, 2 fl, 2 tpt, trbn, 4 perc, 1981; Me recuerdas tanto y nada (Música nocturna), S, fl, perc, gui, vn, vc, 1987; Swan (El peso de la sombra) (J. Villiers de l'Isle-Adam), nar, Ct, perc, pf, vc, tape, 1989; La cruz, el ciprés y la estrella (St John of the Cross, Lao-Tse, F. de la Torre and others), spkr, S, Bar, chorus, orch, 1989
Orch: Conc., vc, chbr orch, 1981; La cruz, el ciprés y la estrella, suite, 1991 [based on choral work]; Retorno a la luz, 1993

JOSÉ LUIS TEMES

Pérez Prado, (Dámaso) [Prado, Pérez] (*b* Matanzas, 11 Dec 1916; *d* Mexico City, 14 Sept 1989). Cuban pianist, bandleader, composer and arranger. After a formal musical training in Matanzas he moved to Havana in the early 1940s, where he played the piano and arranged for the orchestra of Paulina Alvarez (1942) and the well-known Orquesta Casino de la Playa (1943–6). His growing incorporation of big band jazz influences was not well received, and he left Cuba in 1947, settling in Mexico City the following year. Establishing a mambo big band, he made several recordings through the next decade, including his famous *Mambo No.5* and *Qué rico el mambo*. While often criticized for falsely claiming to have invented the mambo, his popularization of this genre in mainstream North America is undisputable, and his recordings of *Cherry Pink and Apple Blossom White* (1955) and *Patricia* (1958) made it to the top of the US charts for several weeks.

Remembered more for his goatee and vocal exclamations than for his musical talents, the self-titled 'Mambo King' was a brilliant pianist and an accomplished arranger. His appeal for non-Latino audiences lay in his use of dramatic horn lines and simple, less rhythmically complex arrangements than those of authentic Cuban bands. Among the most commercially successful of all Latin musicians, he was also popular in South and Central America through his appearances in dozens of Mexican film musicals. In addition to his dance hits, he wrote more ambitious, serious works for mambo orchestra, such as *Voodoo Suite* (1954), *Mosaico Cubano* (1956) and *La*

suite de las Américas (1958–9), and also arranged classical favourites by Rachmaninoff and Grieg in mambo style.

LISE WAXER

Pérez Puentes, José Angel (*b* Havana, 20 Sept 1951). Cuban composer and guitarist. He studied guitar with Isaac Nicola and Jesús Ortega, later taking lessons with Brouwer, Ichiro Suzuki and Antonio Lauro, and studying composition with Bernaola. Since 1976 he has toured nationally and internationally as a concert guitarist. An award winner in various national composition competitions, he won the national composition prize (1979) in the symphonic, popular and children's categories and was commissioned to write the compulsory test piece (1985) for the International Guitar Competition in Puerto Rico. In the 1980s he formed a duo with Teresa Madiedo and founded the Ensemble de Guitarras de La Habana. Since 1992 he has lived in Ecuador, where he has given recitals, conducted the Banda Municipal de Quito and taught the guitar and composition.

Perez Puentes's compositions make ample use of contemporary techniques such as improvisational devices, polychords and polystylistic writing. However, in recent years he has turned towards neo-romanticism, quoting from the works of the great classical composers, jazz and traditional Cuban music. Most notable among his works are three instructive children's concertos, the guitar pieces that exploit the technical and expressive possibilities of the instrument, the *Divertimento para varios y algunos* for two guitars, based on traditional peasant themes, in which the guitarists also act as percussionists, and the *Variaciones sin tema* for wind quintet. These are variations on variations, using a range of musical language to create a neo-romantic mood.

ALBERTO ALÉN

Perezzani, Paolo (*b* Suzzara, 7 Sept 1955). Italian composer. He graduated in philosophy at Bologna University and studied composition with Sciarrino, teaching under him at Città di Castello from 1985 to 1988. He was appointed in 1989 to teach harmony and counterpoint at the Mantua Conservatory, and between 1994 and 2000 was artistic director of the Reggio nell'Emilia 'Di Nuovo' Festival. Since *Diario* at the Venice Opera Prima in 1982, his works have been performed regularly at major international contemporary musical events. In 1992 he won the Vienna International Competition with his orchestral *Primavera dell'anima*.

Perezzani regards composition as essentially a speculation upon the nature of sound. His technique owes much to the refined experimentation with timbres which Sciarrino has pursued, sometimes at the borders of silence. He is concerned less with internal relationships than with trying to formulate the most subtle of sonorities – from the harmonic and timbral richness of instrumental gesture to the imaginary world of a dying woman's final rambling thoughts in *Donna dei dolori*.

GIORDANO FERRARI

Perfall, Karl Freiherr **von** (*b* Munich, 29 Jan 1824; *d* Munich, 14 Jan 1907). German administrator and composer. After studying law, he was briefly a civil servant before becoming a pupil of Moritz Hauptmann in Leipzig (1848–9). Moving back to Munich, he directed the Liedertafel from 1850 and founded and conducted the Oratorienverein in 1854; he was appointed court intendant by Ludwig II in 1864, provisional intendant of the Nationaltheater in 1867, intendant in 1869 and general intendant in 1872. An energetic and practical administrator, he greatly improved the theatre itself (renovating the building in 1869 and installing electric lighting as early as 1882) and the scope and standard of the performances. He took up Wagner's cause with what seems to have been genuine and independent enthusiasm, and in the face of dictatorial hostility from the composer, who even tried to enforce his suspension upon the king. *Die Meistersinger* (1868), *Das Rheingold* (1869) and *Die Walküre* (1870) were all first performed during his intendancy, and over 700 Wagner performances were given in 25 years. In 1878 he proposed to the king that the Munich Opera, having benefited so greatly from Wagner's music, should pay the composer a 10% royalty until the discharge of the deficit that had accumulated after the Bayreuth Festival of 1876; this was a crucial step in saving Bayreuth. Wagner and his early champions give a prejudiced view of Perfall, but Bülow found him both artistically and administratively very competent. The Munich Opera Festival, which began in the summer of 1875, was founded by him. He retired in 1893 and published two books on theatre history. His own operas, *Sakuntala* (1853), *Das Konterfei* (1863), *Raimondin* (1881; revised as *Melusine*, 1885) and *Junker Heinz* (1886; revised as *Jung Heinrich*, 1901), were performed in Munich with moderate success.

JOHN WARRACK

Perfect cadence [authentic cadence; final cadence; full cadence; full close] (Fr. *cadence parfaite*, *cadence authentique*; Ger. *Ganzschluss*, *vollkommene Kadenz*; It. *cadenza perfetta*, *cadenza intera*). A CADENCE consisting of a dominant chord followed by a tonic chord (V–I), normally both in root position. In some theoretical writings the term is extended to cover any cadence ending on the tonic, thus including the plagal form (IV–I) as well as the 'authentic' form; particularly in American writings, it is sometimes specified that a cadence is not 'perfect' unless the uppermost voice sounds the tonic note in the final chord.

JULIAN RUSHTON

Perfect consonance. The INTERVAL of a unison, 5th, octave or any of their compounds (12th, 15th, etc.), when neither augmented nor diminished. The term is contrasted in much medieval polyphonic theory with 'imperfect consonance', a simple or compound 3rd or 6th (*see* COUNTERPOINT, §2). The diatonic FOURTH, although usually defined as a dissonance in that context, has since been considered a CONSONANCE when understood as the inversion of the perfect fifth; as a result, the term 'perfect interval' is generally taken to include the 'perfect 4th', and its compounds in addition to the medieval perfect consonances.

JULIAN RUSHTON

Perfect interval. A PERFECT CONSONANCE, or a simple or compound perfect 4th.

Perfectio (Lat.: 'perfection'). A term used in theoretical writings on mensural music from the mid-13th century onwards. It refers to a quality of ligatures that depended on the value of the final note of the ligature. The final note was normally assumed to be a long unless its normal shape was modified. If the last note was of normal shape (for an ascending ligature this meant with a stem descending to the right, for a descending ligature this meant without stem) then the ligature had perfection and the last note was a long. If the ascending ligature ended in a note with no descending stem, or if the descending ligature ended in two notes in an oblique form, then the ligature had no perfection and the last note was a breve. A quality of ligatures that depended on the value of the initial note of the ligature, PROPRIETAS ('propriety'), was governed by similar rules, which for a two-note ligature *cum opposita proprietate* (which had an ascending stem to the left) overruled the above conventions governing perfection and resulted in a pair of semibreves. The usual shapes for two-note ligatures are shown in Table 1. Ligatures of three, four and more notes were governed by the same rules, with all but the first and last notes understood to be breves (except in the case of opposite propriety, when the second note was always a semibreve, or where a note is graphically distinguished as a long or a maxima).

TABLE 1

Quality	*Shape*	*Value*
cum proprietate et perfectione		breve-long
sine proprietate et cum perfectione		long-long
cum proprietate et sine perfectione		breve-breve
sine proprietate et sine perfectione		long-breve
cum opposita proprietate		semibreve-semibreve

PETER WRIGHT

Perfect pitch. *See* ABSOLUTE PITCH.

Perfidia (It.). A term used mainly during the 17th and 18th centuries to designate the persistent repetition of a figure or motif. Its use as a technical term in music would have been suggested by a meaning that was current in the 17th and 18th centuries but is now obsolete: 'obstinacy' or 'persistence'. Berardi, in his *Documenti armonici* (1687, pp.17–20), defined the perfidia as the continuation of a figure according to one's whim ('continuare un passo à capriccio'). His eight music examples clarify his meaning: against a cantus firmus a second voice (higher or lower) develops a contrapuntal line in which the same rhythmic figure is repeated in each bar except the last. Berardi's first example, headed 'Della semiminima col punto sincopata, e perfidiata con trè Crome', is given in ex.1. Brossard, who knew Berardi's treatise, offered a similar but broader definition in his *Dictionaire* (1701): 'an affectation to do always the same thing, to follow always the same pattern'. Brossard's understanding of the term includes the 'fuga perfidiata' as well as ostinato basses. His wider definition permitted him to equate the perfidia with Zarlino's 'pertinacia' (*Le istitutioni harmoniche*, 1558, iii): in Zarlino's examples it is the melodic pattern of the counterpoint to a cantus firmus that remains constant, while the note lengths are changed – the opposite of Berardi's examples, in which rhythm is the constant factor and pitches change. Walther (*Musikalisches Lexicon*, 1732) and Rousseau (*Dictionnaire de musique*, 1768) both followed Brossard's definition closely. Three short passages of music attributed to Torelli (in manuscripts in *I-Bsp*) are given the label 'perfidia' (nos.65–7 in Giegling's catalogue, 1949); the first may be spurious, and the second and third are part of the same work. They are 29, 28 and 13 bars in length, are scored for two violins and bass, and feature brilliant figuration for the violins over a sustained bass pedal. It is reasonable to assume that they originally formed part of longer works. A similar passage, but without the heading 'perfidia', occurs at the end of the second movement of Corelli's sonata op.5 no.3 (*see* CADENZA, ex.6). There is a loose connection between

Ex.1 A. Berardi: *Documenti armonici* (Bologna, 1687)

Berardi's and Torelli's terminology: in both cases passages of figuration are heard either against a slow-moving cantus firmus or above a static bass. The perfidia is discussed by P. Whitmore in *Unpremeditated Art: the Cadenza in the Classical Keyboard Concerto* (Oxford, 1991), 38–41.

ANDREW V. JONES

Performance. Music-making is a virtually universal human activity. At its most fundamental, it is a form of private biological necessity (in that, for example, individual survival is assisted by being sung to as a baby by a birth mother). At its most elevated, musical performance is public property; it played a pivotal role in some of the earliest traces of elaborate Western art, with the story of Orpheus, a pre-Homeric hero (thus now of at least some 3000 years' standing), possessing the legendary ability to tame wild animals and resist the Sirens by singing and by playing the lyre. Across the ages and throughout world civilizations it is the actual, direct, live experience of music that seems to have been integral to the human culture carried forward from its apparent European origins some 40,000 years ago to the modern world (Mithen, 1996, pp.159–63).

1. General considerations. 2. Role of the performer. 3. Basic elements. 4. Learning to perform.

1. GENERAL CONSIDERATIONS. It can be argued that, in this modern world, music performed is perhaps the most widely disseminated kind of public property. In the 1980s and 90s – and for all that the following may prove to be forgotten names from mass entertainment – Queen, Madonna and, later, the Spice Girls were truly global cultural phenomena, and what they were all doing was performing music for other people. In the field of classical or art music, a similar effect has been known for centuries, from Blondel in the 12th to Paganini in the 19th and, we might conjecture, Casals and Segovia in the 20th. Musical performance, then, seems to have a double aspect in human culture, in that it is both endemic, more or less evenly spread throughout the species and its history since prehistoric times, yet also value-bearing. Just as 'fixed' works of art are held to range from the ephemeral (lost in history and never intended to be kept) to the preservable (deliberately saved artefacts, curiosities, social objects) to the canonical (enduring works of 'genius'), so musical performance can range from something ordinary to a level that becomes a gold standard – although we shall encounter, with the example of Inuit throat games (which in early ethnomusicology would have been called 'primitive' music) the challenge of what may well amount to ephemeral genius.

In the Western art tradition, musical performance is commonly understood, and not surprisingly, in something like the way that are the works of music that performance brings to life, so that a familiar list of musicological categories is available: the historical, analytical and psychological dimensions. In performance studies, however, each of these dimensions must take on a special flavour. The history of performance was essentially mute until the 20th century with its invention of non-human storage of music (see §2 below). Time and again, therefore, earlier epochs characterize performance as something valid only for the present, or for veiled, mediated recollection; and though performance may have been reflected, represented and even to some extent 'recorded' in literary or visual art, music in performance was not essentially open to scientific or even philosophical inspection: 'the composer works slowly and intermittently ... the performer in impetuous flight; the composer for posterity, and the performer for the moment of fulfilment. The musical artwork is formed; the performance we experience' (Hanslick, 1854; 1986, p.49). Analytically too – to address the second dimension mentioned above – the 'work' of music has typically taken precedence over any of its 'realizations'. Technical commentary on music since the Middle Ages has largely been restricted to commentary on general musical practices (see the comment in §4 on musical treatises) and on notated pieces or repertories. Only in the late 20th century did momentum begin to gather for the study of 'music in performance ... where analysis, cultural studies, hermeneutics, and performance practice meet' (Bowen, 1999, p.451). Thirdly, music psychology may also be considered inchoate in respect of (as it were) real-time music, for all the strides that have been taken in building models of contemplative musical understanding. We are hardly in a better position than was Lucretius in *De rerum natura* some 2000 years ago to ask interesting questions about the essence of ongoing human experience, although it will be possible to codify modern thinking on the fundamental specifics of contemplating musical performance (see §3). Finally, in these introductory comments, the dimensions of interpretation and notation must also be mentioned, since these concomitants of mainstream musicology are evidently central to the phenomenon and to the study of musical performance; issues entailing them are threaded through the following discussion, which addresses the role of the performer, including the somewhat altered status of performance in the 20th century, the basic elements of musical performance that have nevertheless endured and, more briefly, the musical training and learning of the performer.

For the psychology of performance, *see* PSYCHOLOGY OF MUSIC, §IV.

2. ROLE OF THE PERFORMER. The role of the performer in Western music is nowadays typically characterized in two ways. First, the performer is seen as the composer's ambassador, with decisive powers, a perception that is at least as old as the mid-18th-century: 'What comprises good performance? The ability through singing or playing to make the ear conscious of the true content and affect of a composition. Any passage can be so radically changed by modifying its performance that it will be barely recognizable' (Bach, 1753; 1949, p.148). That is an enduring truth, and in some senses it must be the case that

the great composer-performers, such as Boulez and Britten in recent times, are likely to be offering the 'truest' content and affect of at least their own music (but Rachmaninoff is a cautionary case of a maestro who gave up performing his concertos because he felt that the younger generation of concert pianists included some who could offer better interpretations).

Secondly, however, there has been an emphasis fuelled by social science to examine the relativities and interdependencies of music-making and posit a more democratic picture in which those for whom performances are performed have a supposedly equal significance:

. . . as cognitive psychology has taught us, the temporal materialization of a musical artwork emanates not from the composer alone or from the performer alone but from a triarchical interrelationship among composer, performer, *and* listener . . . for performers to discharge faithfully their aesthetic responsibilities, they must give considerable attention not only to their understanding of the composer's demands and desires but also to the sensibilities of the audience (Narmour, 1988, p.318).

Certainly, through the commercialization of classical music, performing has become strikingly market-led, and since at least as early as the rise of the public concert in the 18th century (Raynor, 1972, pp.314–30) market forces have been significant in the careers of professional performers. Historically, the sensibilities performers have most needed to flatter in approximately the last three centuries have been those of music critics, who were diagnosed by Hans Keller (1987) as constituting an entirely phoney profession but who have been and remain potent arbiters of public taste all the same. Whether we choose to see the performer as a creative vessel of transmission from composer to audience, or as cog in a three-cog mechanism that can never work with only two cogs – and this may come down to the question of whether the art of music conveys a message or is pure activity – there is no known ramified art of music that is performer-less (a notion with which composers using electronic sound generation have indeed toyed, working interestingly against the grain of existing musical constraints).

The place of performance in the history of music changed in the 20th century with the onset of mechanical and acoustic, and afterwards electronic, recording (*see* RECORDED SOUND).

We may be witnesses, the only direct witnesses there will ever be, to the beginning of the music of the future. Is it not easy to imagine that two thousand years or five thousand from now people will say that Western music really only got going properly during the twentieth century from which distant time there date the earliest proper sonic and visual records, following that strange 'mute' early period of music history that spanned the Greeks (of which we know essentially nothing), via medieval polyphony (of which we know a certain amount), to, say, Mahler, the last great pre-technological composer (of whose work and times we know much more but not, really, enough: none of his performances survive recorded, and there are just memories mythically handed on to indicate that he was one of the greatest-ever conductors)? (Dunsby, 1995, pp.15–16).

Musical performance no longer has a lost, silent history but impinges on current practice: we have precious little idea of how Blondel actually performed his songs and of the impression they made, but we have a very good idea of how Schoenberg performed his *Pierrot lunaire* since he conducted a sound recording of it in 1940, 28 years after its composition (now issued on CD) – a continuity that spans nearly the whole century. It is no surprise, then, that in the modern musical world, where we are becoming used to access to sonic history and its visual context, performance is being interrogated continually by the concept of 'authenticity' (Kivy, 1995), or by what it has been suggested should be called 'authenticism' (Taruskin, 1988), the consensus seeming to be that 'historical authenticity alone will never lead us to a true revival without an admixture of a degree of our own artistic beliefs and instincts' (Lang, 1997, p.179): we shall see how inherent in musical performance is the human agent to whom Lang refers.

3. BASIC ELEMENTS. What has endured through the electronic revolution is what might be called the basic elements of musical performance: understanding, actuality and the ineffable – performance being an activity of sentient human beings, an activity that draws on the past and unfolds into the future (satisfying our eagerness to perceive what happens next), but one that exists in that inevitably mobile time called the present.

Understanding follows from sentience and is not restricted to 'high' art. Compare what a conductor is doing in London at a symphony concert with what a female Inuit is doing in northern Canada performing a largely unobserved but locally, socially significant throat game. The conductor is probably highly educated, having learnt a great deal about organology, music history, music theory and so on, and earning large sums of money. Without having achieved a wide cultural assimilation, the conductor would be useless. The Inuit, on the other hand, knows very many more concepts of snow than the Londoner's, and has no concern about the history and theory of Western music. Yet the Inuit performer may actually be singing 'better' than the celebrated conductor is conducting. It is worth bearing this in mind when reading of how sophisticated the musical understanding of some performers needs to be: 'the interpreter, in order to produce more than just an idiosyncratic response, must rely on a combination of sound technical analysis and relevant musicological scholarship' (Cone, 1995, p.242); similarly, of conductors, 'however extensive the scope of his imaginative powers, his comprehension will remain limited unless he is adequately equipped with knowledge' (Scherchen, 1929; 1933, p.18). This may be true in our culture, but analysis and scholarship are of no direct 'emic' (or one might say 'native') concern to the Inuit performer. What 'understanding' really means, then, in musical performance in general, with an eye to other cultures, and to other forms of judged public exposure (see Green and Gallway, 1987, for an application of sport-training methods to musical performance), is informed intensity. The importance of this may be easiest to grasp by contemplating its opposite: where, in all the musics of the world, is there found communal music-making that is fundamentally uninformed and careless? Probably as near to nowhere as makes no difference.

Actuality is the reason that people flock to live performances, and again this is a transcultural fact. The technological revolution mentioned above has not altered this. There have been cases where live performance has been challenged, notoriously by the Canadian pianist Glenn Gould who in 1964, in his 30s, gave up public performance in favour of the recording studio ('no famous musician had ever done anything like it', Page, 1987, p.xii). However, the excitement of actually witnessing performance seems to be at the sharp end of musical practice, the authentic medium for informed intensity, and unlikely to disappear. This excitement surely lies to

some extent in the stimulus to be found in any communal activity, there being something that touches our primeval sensibility in the 'buzz' of a crowd of people. Yet the excitement depends too on a feature proper to music, which is the nature of sound, for it remains true that any electronic reproduction of non-electronic Western music (and probably any non-electronic human music at all) is not in fact a reproduction but a mere simulacrum, an approximation. It is only in live performance, offering 'real' sound and a balance of the expected with the unexpected, that the capacity for plenitude in human musical experience can be fully satisfied (see Clynes, 1982, and Wallin, 1991). That is from the listening side, and it almost goes without saying that performers themselves, *pace* Gould and the unquestionable integrity and depth of his arguments about his own artistic personality, perform differently in public from how they do in private; and this difference between the public and the private is a common human experience in everyday life.

What is called above the 'ineffable' can be discussed under many different rubrics – artistry, charisma, inspiration, magic, star quality – none of which can ever quite capture a quality to which performers would nevertheless not aspire if they did not believe that audiences were acutely sensitive to it. This ineffable quality of musical performance at its highest is bound up with our tendency to believe that something may be 'perfect', and that this is the ideal of artistic experience (see Kant, 1790; 1987, pp.79–84, although noting that unfortunately Kant believed music to be of only secondary importance), an ideal in delicate balance with the fact that real-time musical performance is inevitably contingent, always involving an element of risk (Dunsby, 1995, pp.12–14). Musical performance is held to have a special social power equal, according to Lévi-Strauss, to that of myth, both music and myth being 'instruments for the obliteration of time'; Lévi-Strauss goes so far as to ascribe truly magical powers to the results of musical performance during which he claims 'we enter into a kind of immortality' (Lévi-Strauss, 1964; 1970, p.16; see also Nattiez, 1993, pp.15–19).

4. Learning to perform. The requirements of musical performance in Western culture are stringent. As with the learning of different languages, training is most likely to succeed when begun in childhood, usually between the ages of five and eight. One measure of what is required is provided by the Associated Board of the Royal Schools of Music, by far the world's largest assessment body for educational music-making of many different varieties, administering in the UK alone more than 300,000 individual examinations annually. It indicates some eight or nine years of almost daily practising as a prerequisite for reaching a level on one instrument or in singing that might qualify the student for tertiary-level study. Only after a further three or four years of intensive, full-time study combined with performing experience might a student be ready to (for example) take an audition for a semi-professional orchestra. The proportion of trained performers who go on to be able to work professionally is small, and the proportion who can become soloists is minute. As one source of professional advice to young performers puts it: 'On the realities of the music business . . . unlike the business world, the amount of effort and time put in to master your craft in the arts does not pay off with predictable success. It is difficult to separate reality and fantasy when trying to be good enough to "make it"' (Dunkel, 1990, p.51). Thus professional performers are somewhat rare among the population. They also tend to be specialized; a case such as Mozart, considered by his father Leopold to have the potential to become as great a violinist as he was a pianist, is wholly exceptional. Amateur musical performance, on the other hand, is a huge human phenomenon, from Caribbean steel bands to Welsh choirs, from the Inuit throat games of the western north Atlantic coast and the northern Pacific Rim to the didgeridoo players of native Australia.

Learning musical performance to any significant level has always been arduous but also immensely satisfying, as might be expected of an activity that has demonstrably health-improving clinical effects (*see* Music therapy). Musicians throughout the centuries have written about performing, and it is from treatises on performance that our views on the interpretation of pre-20th-century music back to the Middle Ages are principally founded. However, it has always been agreed that one cannot effectively learn to perform, be it singing or playing, from a book, or from musical notation, given that 'the text carries no more than the minimal necessary information for a new performance. It is not the composition itself' (Boorman, 1999, p.406), and given that Lang's 'beliefs and instincts' are always in play, making each interpretation unique. Rather, the history of performance shows multi-generational chains of apprenticeship and pedagogy, for instance in religious orders, or in traditions linked to repertory and instrument (one fascinating case being the genealogy of the modern style of piano playing, which can be traced back largely to Beethoven through Czerny, Liszt and succeeding generations in both Europe and the USA). It would be pure speculation to suppose that no-one is likely to learn to perform from a computer, yet it can be asserted that technology has so far had little specific impact on becoming a performer, but for the profound effects mentioned above of musical recording.

JONATHAN DUNSBY

Performing practice. A term adapted from the German *Aufführungspraxis* (in America the usage 'performance practice' is generally preferred).

I. Western. II. Non-Western and traditional music.

I. Western

As applied to Western music, the subject involves all aspects of the way in which music is and has been performed, and its study is of particular importance to the modern performer concerned with historically informed performance. Topics that may be considered aspects of performing practice include notational ones (i.e. the relationship between written notes and the sounds they symbolize, especially such matters as rhythm, tempo and articulation); improvisation and ornaments; instruments, their history and physical structure and the ways in which they are played; voice production; matters of tuning, pitch and temperament; and ensembles, their size, disposition, and the modes in which they are directed. Performing practice is generally approached through the study of treatises and instruction books, critical writings and iconographical material, as well as actual instruments and music. The present article summarizes the issues involved in different periods; particular topics relevant to instruments and their use are treated in separate entries.

1. General. 2. Medieval monophony: (i) Sacred (ii) Secular. 3. Polyphony to 1400. 4. 15th- and 16th-century music. 5. 1600–1750. 6. 1750–1800: (i) Continuity and change (ii) Performer and composer (iii) Instruments (iv) Performances. 7. The 19th century: (i) Sources (ii) The orchestra (iii) The piano (iv) Performance and interpretation. 8. The 20th century.

1. General. Musical notation can be understood as a set of instructions indicating to the performer how the composer wished the music to sound. From the accent signs of the ancient Greeks and the staffless neumes of some medieval manuscripts (which reminded singers of the general shape of melodies they already knew, but did not indicate exact pitches or intervals) to the carefully marked scores of most 20th-century composers, methods of notation have changed radically over the centuries, along with the attitudes of composers to the degree of detail and precision they wished to offer the interpreter. Not all the elements of a performance can be fixed in writing. Even in the 20th century, when composers took more care than ever before to state exactly the quality and duration of each sound, different performances of a piece (including sometimes those by the same musician) varied in tempo, phrasing, articulation, timbre and so on. The amount and kind of deviation from a precisely determined ideal tolerated (or even encouraged) by composers have depended partly on convention – habit and training – and partly on the temperaments of the individuals involved and the practical requirements of particular situations – the size of the ensemble, the acoustics of the performing area, the nature of the occasion, and so on. Throughout history musicians in the Western world have cherished those ambiguities of notation that have allowed performers some freedom and given musicians and listeners alike the impression that a piece of music is created anew each time it is heard. The principle that the performers should be allowed some scope to 'interpret' the notation subjectively was challenged successfully for the first time in the 20th century, with the advent of recordings and electronic means of fixing a composition in its definitive form once and for all.

In considering the kinds of information written music of the past supplies to performers, the student of performing practice must make a distinction between those elements of the original notation that may be misleading or confusing to a modern performer unless translated into symbols with which he is familiar, and those that originally had a fixed meaning which is now lost or ambiguous. The problems created by the first category are generally faced by editors, and are thus dealt with under Editing. Consideration of the second category is complicated by the fact that some signs permitted but did not demand particular styles of performance, while others changed their meanings over the years. Thus it is not entirely clear how the rhythms of plainchant and medieval secular monophony were interpreted, or even whether the notation demanded a particular solution; scholars disagree in their transcriptions of the time values of some early polyphony; the hypothesis that the Renaissance mensural system indicated precise tempos and tempo relationships is being questioned; the application to German and Italian music of the French 17th- and 18th-century rules of rhythmic alteration – the convention that allows or demands quavers to be played unequally even though they are notated in equal values – has been sharply challenged; and performers are beginning to learn that some signs for particular bowings and articulations in use today meant quite different things to late 18th- and 19th-century musicians. In short, the student of performing practice must investigate carefully the precise meanings of musical symbols in each period of music history and attempt to discover how they have changed over the years.

Perhaps even more important, scholars must try to establish the amount of freedom allowed the performer, by determining which aspects of performance were not fixed on paper during a particular period. Unwritten conventions make up the most difficult but also the richest category of problems of performing practice. In fact, all players and singers must ask themselves certain basic questions about the compositions they perform, most of which have not been precisely answered by composers: the exact tempo, whether alterations of the written rhythms are allowed or expected, which sonorities are best suited to the piece being played, how each note should be articulated, whether or not melodic embellishments are permitted or forbidden within the convention in question, whether the players are expected to improvise (or prepare for themselves before the performance)

sections of the composition, and so on. The 'correct' tempo of a piece, for example, depends on a number of variable features, among them the size of the ensemble and of the concert hall and the mood of the performers on the day of the concert. Even since the invention and widespread adoption of the metronome, musicians and listeners have tolerated widely divergent tempos for the same piece (and, indeed, arguments continue about the accuracy and appropriateness of many composers' metronome markings). Singers must learn how, when, and whether to embellish their melodic lines, and how to sing florid ornamentation, before they can perform late Renaissance solo songs or late Baroque operatic arias in the way audiences first heard them. Some music calls for the addition of improvised or semi-improvised parts. Many modern performers of medieval music, for example, add drones and heterophony to the unadorned melodies of the troubadours and trouvères; harpsichordists and organists must learn how to invent their own part above a figured bass when they accompany 17th- and 18th-century music; and soloists must prepare cadenzas not supplied by the composers when they perform 18th- and 19th-century concertos and arias. Instrument makers and players have acquired a great deal of collective experience in reproducing the timbres of Baroque music by building replicas of old instruments and relearning the techniques required to play them, and this area of 'practical research' is gradually widening to encompass the timbres of medieval and Renaissance music on the one hand, and late 18th- and 19th-century music on the other. Concurrently with their attempts to clarify the nature of old instruments by learning to play them again, students of performing practice have sharpened their perceptions of the sonorities of the past by studying matters of pitch level, tuning and temperament, research that often yields surprisingly practical results.

The further back one goes in music history, the fewer aspects of performance there are that composers established precisely in writing. The 20th century was something of an exception to that general rule, and offers examples of both extremes: on the one hand the meticulous, almost obsessively careful, markings of Schoenberg, Berg and Webern and the well-known aversion of Stravinsky to 'wilful' interpreters of his music, and on the other the controlled, and sometimes uncontrolled, improvisations introduced into their scores by John Cage and other members of the avant garde since 1945. Composers of the 19th century, beginning with Beethoven, greatly increased the number and precision of their directions for performance by indicating tempos (by means of the metronome as well as by the use of conventional terms), phrasings, bowings, dynamics and so on. In the 17th and 18th centuries tempos were indicated only approximately by means of a fairly well understood convention using descriptive terms; some but not all bowings were marked, and performers were expected to realize keyboard accompaniments above a bass, and in many instances to embellish their own parts. In music before 1600 many aspects of compositions that later became a part of their very conception were left to the performers to determine (and presumably to change from occasion to occasion), such as the choice of voices and instruments, the accidentals required by the rules of *musica ficta*, and the way the syllables of vocal music were made to fit the notes.

Answers to many questions about performing practice – even for music of the not very distant past – can be found only by examining indirect evidence, such as the musical institutions of a period. Thus the subdiscipline of performing practice involves the study of social history, as well as the history of musical instruments (organology), of musical subject matter in works of art (iconography), of theoretical treatises, and of the music itself. Archival documents are often the only way to discover the number of performers engaged for a given occasion, what sorts of events were accompanied by music, and so on. And investigations of the organization and rules of various institutions – the minstrel guilds of the Middle Ages, the courts, cathedrals and academies of the Renaissance and the Baroque era, and the concert societies of the 19th century, for example – are often necessary prerequisites for discovering various details about the way music was performed in past times.

Some, and perhaps many, basic questions about past performing practice can never be answered completely. One can never know, for example, the quality of voice most cultivated by the virtuoso singers of the Italian Renaissance, or the exact specifications of most medieval instruments. Moreover, one might reject on aesthetic grounds some of the qualities most prized by past musicians (early recordings convincingly demonstrate how much taste changed even during the 20th century). Reproducing as closely as one can the techniques and timbres known to be appropriate to a given period can never replace performances that are musically convincing to the audience; and yet the means and style of performance imagined by a composer are so indissolubly bound up with the whole musical fabric that he or she has set down, that the communication and impact of the composition are seriously impaired if the sounds imagined are not at least kept in mind when preparing modern performances.

The study of performing practice as a subdiscipline of musicology has been fostered by an implicit distinction between that which standard notation may indicate precisely – namely an exact pitch (within a given tuning) and duration for each note – and that which requires a knowledge of the style for its proper interpretation. While this approach may be extended to music in non-European notations, it is obvious that for societies without a written tradition distinctions cannot be made between the way the music looks on the page – its style considered in the abstract – and the way it sounds. Thus performing practice is an inseparable part of the central concerns of ethnomusicologists who work with orally transmitted repertories, and of those scholars who work with the music of ancient civilizations, such as those of Egypt, Greece and Rome.

2. Medieval monophony.

(i) Sacred. The principal sources of information about the performance of Western medieval sacred monophony are the chant manuscripts themselves and the writings of theorists. Owing to the widespread preservation of such sources a great deal is known about plainchant performance in the Middle Ages (for a fuller account see Hiley, B(i)1989). However, as is frequently the case in the discussion of performing practice, problems such as contradictory accounts or missing details create obstacles that prevent the confident reconstruction of such performances. Any modern performance, therefore, must depend

considerably on subjective interpretation. Furthermore, unlike more complex music, monophonic chant can support a very wide range of interpretation and still remain ostensibly true to the notes preserved in the sources.

The case of the Eastern (Orthodox) Churches is different, for in some traditions the melodies have been transmitted orally for more than a millennium. Questions naturally arise, therefore, as to the constancy of the transmission, especially since in the best-documented tradition – BYZANTINE CHANT – very grave changes may be seen to have occurred.

For the reconstruction of chant performance, several aspects have to be considered. The first is liturgical context: the function of the chant in the ceremony, the forces needed to sing it, and other practical considerations such as the position of the singers in the building. Such matters were clearly of great importance through the ages, but only gradually were they set out in written documents. The earliest surviving sources in which liturgical ceremonies are described in any detail are the *Ordines romani*, dating from the 7th–9th centuries, regarding Roman liturgical practice; somewhat over two dozen are extant (ed. M. Andrieu, *Les Ordines romani du haut Moyen-Age*, Leuven, 1931–61), many of them copied in the Carolingian period by Frankish churchmen concerned to follow Roman usage. The most widespread monastic Rule, that of St Benedict (*c*530), also sets out broad guidelines about how the canonical Hours are to be performed. During the following centuries such documents became more detailed and were available for a greater number of churches, particularly monastic ones. The Rules of religious orders such as the Cistercians (in the 12th century) and the Dominicans (in the 13th) are full of specific information about liturgical usage. From the 13th century onwards ordinals survive from a number of important churches (Chartres, Paris, Salisbury etc.), providing enough detail to make possible the reconstruction of these aspects of liturgical performance. Knowledge of performance conditions can also help in the reconstruction of the content of liturgical services: for example, if the performance conditions obtaining in a 9th-century service also applied in a 7th-century service of the same kind, there is a strong possibility that the same melody was sung in the 7th century as in the 9th, even though no notated sources for the earlier period exist.

A second aspect, concerning the way the chant sounded, is much more problematic. Little is known about the sort of voice production favoured over the centuries, or about dynamic level or tempo: vocal colour, loudness and speed affect the way chant is sung and heard, but the musical sources are silent on such matters. It is not even clear if all genres of chant were performed in the same way. There are, however, indications that tempo varied according to the solemnity of the day: the more important the occasion, the slower the tempo. One of the earliest such recommendations is a passage in a *Regula canonicorum* of Chrodegang of Metz (*c*755; *PL*, lxxxix, 1069), which states that the number of singers and the rank of the feast day were the determining factors. The Cistercian *Instituta patrum de modo psallendi* (13th century) refers on numerous occasions to faster and slower singing (*GerbertS*, i, 5–8; see also Van Dijk, B(i)1950). Information of a more specific nature is given in a passage in the *Commemoratio brevis de tonis et psalmis modulandis* of about 900, which says that in the antiphons for Office psalms, antiphon and psalm were delivered in the same tempo, but the final repeat of the antiphon was sung at half the speed ('duplo dumtaxatur longius'). Canticle antiphons, however, were sung slowly from the start.

The most detailed account of chant singing almost until modern times is Conrad von Zabern's *De modo bene cantandi* of 1474 (discussion and partial translation in Dyer, B(i)1978). It warns against such faults as aspirating notes within a syllable, over-nasal tone, distorted vowel colours, forced high notes (but trumpet-like low notes are recommended), and lazy delivery and inappropriate posture. The vast majority of texts relating to performance matters simply recommend moderation in choice of tempo and pitch, together with sweetness of voice production. (Many texts are discussed in Müller-Heuser, B(i)1963).

Johannes de Grocheio, writing at the end of the 13th century, is something of a special case. He compared chant genres to those of secular music, whose characteristics he described in more detail in an earlier passage. Thus, for example, he stated that the gradual and alleluia were sung 'in the manner of a *stantipes* or of a *cantus coronatus*, so that they may bring devotion and humility to the hearts of their hearers'; the *stantipes* was previously described as difficult, both textually and musically, which 'makes the minds of young men and girls dwell on it', and the *cantus coronatus* is 'composed entirely from longs, perfect longs', also implying some ceremoniousness. The sequence that follows is, on the other hand, 'sung in the manner of a *ductia*, so that it may make [the hearers] joyful', the *ductia* having been described as 'light and rapid in its ascents and descents'. Yet just when a distinction between grave and lively seems to be emerging, Grocheio states that the offertory 'is sung in the manner of a *ductia* or of a *cantus coronatus*'.

Very rarely, there are hints of what may be called an aesthetic appreciation of tempo. In the *Scolica enchiriadis* (9th century) it is stated: 'Whereas one melody is better sung more quickly, another is sweeter when sung more slowly. For one can know by the very formation of a melody whether it is composed of fast or slow phrases' (Schmid, B(i)1981, p.89; Erickson, in Palisca, B(i)1995, p.53).

Another clear sign that chant was not always sung in a flat and featureless manner is the existence of a small number of 10th-century chant books in which the neumes are supplemented with small letters, most of which have significance for pitch and rhythm, a few for delivery (*see also* NOTATION, §III, 1). The meaning of these letters is explained in a letter reputedly written by Notker of St Gallen at the end of the 9th century (see J. Froger, *EG*, v, 1962, pp.23–72). Among those concerning delivery are 'f' (*cum fragore seu frendore feriatur*: 'to be performed with harsh or percussive attack'), 'k' (*clange*: 'with a ringing tone'), 'p' (*pressionem*: 'driving forward'; *prensionem*: 'with urgency') and 'r' (*rectitudinem vel rasuram ... crispationis*: 'with straight or forthright vibratoless [tone]').

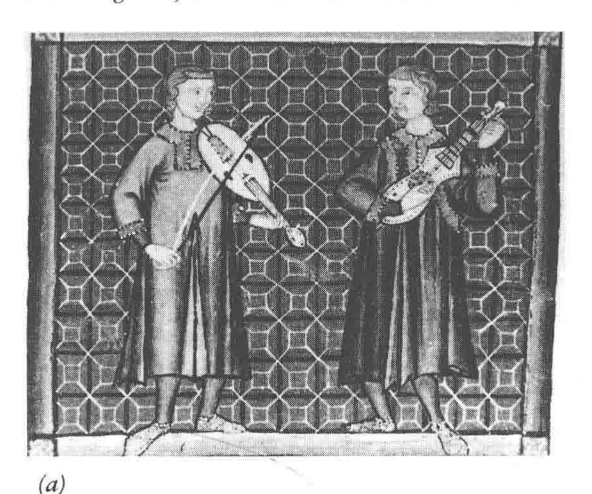
Many more such significative letters refer to rhythmic detail, for example 'c' (*cito* or *celeriter*: 'to be performed rapidly and quickly') and 't' (*trahere*: 'drag out'; or *tenete*: 'hold'). The same manuscripts that are rich in significative letters contain many details of notation that are rare or unknown elsewhere; they include *episemata* and the deliberate modifying or distorting of the normal neume

shape to suggest a different significance. These and many other features have occasioned extensive discussion, the chief issue being whether they can be interpreted in mensural rhythmic terms, and, if so, which rhythmic values are appropriate. On the one side, many have argued that the rhythmic indications are no more than nuances, agogic modifications of the basic flow. This is more or less the position adopted in the early years of this century by the monks of Solesmes; it became known as 'equalist' because all notes are basically of equal length. On the opposite side, the 'mensuralists' have been of varying opinions, some proposing two basic mensural units in the ratio 2:1, while others prefer three or more units (in the ratio 3:2:1 or 4:2:1, etc.). Further scope for varied note values is provided when they are grouped in bars, with the necessary flexibility to accommodate shorter, longer or dotted notes. While such meanings can be read into the notation, there is almost no firm contemporary evidence – in theoretical writings, for example – that these were envisaged. It is true that several authors speak of long notes, but with reference only to the closing notes of phrases. Only the *Commemoratio brevis* (*c*900, therefore contemporary with the manuscripts richest in notation detail) attaches proportional value to long and short notes: 'The longer values consist of the shorter, and the shorter subsist in the longer, and in such a fashion that one has always twice the duration of the other, neither more nor less' (see Bailey, B(i)1979, p.103). Yet the necessary link between such statements and the notational signs is lacking.

It is not surprising, therefore, that a wide range of interpretations have been proposed, ever since Lambillotte made mensural transcriptions from the early St Gallen manuscript *CH-SGs* 359. Pothier believed that the notational signs were a limited and chronological phenomenon and ignored them for the purposes of making the Vatican editions of chant, the *Graduale romanum* (1908) and the *Antiphonale romanum* (1912). This was the cause of the famous break with Solesmes, whose own chant editions, produced under the leadership of Mocquereau, add supplementary bars and dots indicating agogic nuances. For a group of scholars, including Houdard and Riemann, the text-syllable had to maintain a constant length, the notes being shorter or longer depending on how many were allotted to the syllable in question. Wagner transcribed with minim, crotchet and quaver, later with dotted crotchet, crotchet and quaver (in *AdlerHM*). Jeannin used only crotchet and quaver. (For other mensuralist transcriptions see Jammers, B(i)1937 and Vollaerts, B(i)1958.) Dechevrens had the interesting idea that many notes of Gregorian chant were of ornamental rather than structural significance, and he transcribed accordingly. His transcriptions, though barred, have melodic ornamental flourishes: the music thus resembles, at least on the rhythmic surface, the melodies of Coptic chant taken down from oral tradition. The adoption of one of the other mensuralist interpretations, on the other hand, may result in a performance closer to that of Greek Orthodox chant today. Furthermore, the guttural, forceful and vibrant delivery of Orthodox singers need not be ruled out as an impossibility for Western chant. There is, however, no evidence that Latin singers ever used the *ison* or drone note of late Byzantine chant, which in any case does not seem to be documented in the East before the 15th century (Jammers, B(i)1962, p.185; refuted by Nowacki, B(i)1985–6, p.260). The term 'paraphonista' used in a few early *Ordines romani*, sometimes adduced in this context, simply means 'cantor' (Van Dijk, B(i)1963, pp.346–7).

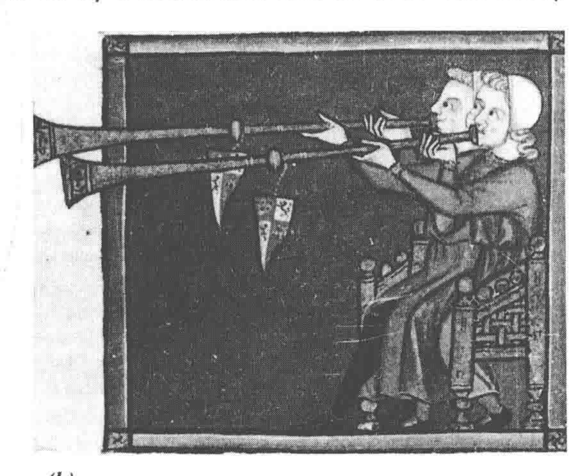
No matter how much scholars read into chant notation and into theoretical writings, these sources cannot be expected to provide a full understanding of performing practice. One of the few hints as to how much remains unexplained may be found in the treatise of Hieronymus de Moravia, who not only gave rules about which notes should be longer than others, but also wrote about 'special effects' in singing chant (see Cserba, B(ii)1935, pp.lxii ff, 181ff). He stated that most notes in chant are equal in length, but with five exceptions: the first note of a chant if it is the same as the final, the *plica longa* (a liquescent neume), the penultimate and final notes of a phrase, and the second note of a phrase. The 'special effects' include various types of vibrato on the long notes; some, including various grace notes (*reverberatio*, *nota mediata*), were peculiar to French singers.

These last remarks are a reminder that chant is a changing, living tradition, and was (and still is) subject to regional variation as well as to changes that happen over time. Later additions to the chant repertory from the 14th century onwards include melodies sometimes found with mensural or semi-mensural notation; these are mostly new melodies, and do not necessarily suggest that the same rhythmic style of performance was applied to the older parts of the repertory. The wholesale revisions of the 17th and 18th centuries (for example NEO-GALLICAN CHANT) meant that the restoration movements of the 19th century (most particularly that of Solesmes) had to reconstruct a long-dead tradition. That chant is part of a living liturgical tradition, therefore, means that for practical purposes decisions have to be made for which hard evidence is, strictly speaking, lacking.



(ii) Secular. It was presumably in the realm of secular monophonic music that the concept of performance was principally fostered in the 12th and 13th centuries. The question of how medieval concepts of performance arose, and of how they were related not only to issues of social status but also to questions of domestic space and court decorum, may yet prove to be one of the most challenging areas of research in medieval performing practice. It is uncertain at present whether performers expected 'audiences' to keep silent, or whether listeners were generally accustomed to sit or stand. If there were discussions after the performance, we know little of the critical language employed. The consideration of such issues requires close attention to the nature of court experience, very remote from the modern scholar's own. A Franco-Italian manuscript of the mid-14th century (fig.2), shows a knight performing before the court of King Arthur. The 'performer' stands before his 'audience' and is separated from them by a space that the modern eye instantly recognizes from the concert hall. The courtiers stand in deference to their monarch's state, but it remains uncertain whether such attendants in the Middle Ages (or long after) would have drawn a sharp distinction between listening and simply waiting in attendance. The call to stand while a musician sang was simply another call upon their obligation of service that they could not deny. Nor it is clear where the performance shown in the picture is taking place. The presence of a throne suggests the great hall, a

large and impersonal space used for council and ceremonial meals, and in no sense a specialized place for music.



The secular music of the Middle Ages survives in a more imperfect state than plainchant. A large corpus of secular monophony exists – Latin songs by clerics, other non-liturgical melodies setting Latin words (e.g. conductus), Spanish *Cantigas de Santa María*, English songs, Italian *laude*, German Minnelieder, and chansons in old French by trouvères and in Old Occitan (Provençal) by troubadours – but there is little information about music intended chiefly for instruments and about the songs of the lower classes. Moreover, most of the courtly songs that survive were written down in staff notation (as opposed to staffless neumes, which served merely as reminders of melodies already known) only from the 13th century onwards. And the manuscript sources often record widely divergent or even completely different versions of the music intended for particular poems – a probable indication that the repertory was transmitted chiefly by oral tradition. For several reasons, then, it should be assumed that only a fragment, and perhaps a small fragment, of the music that must once have been performed outside the patronage of the church has survived.

Most of the important details about the performance of this repertory can never be known. Most past debate on the performance of medieval secular monophony has centred on two questions of fundamental importance: the nature of rhythm in medieval song, and the extent to which instruments took part in its performance.

Secular monophonic melodies are notated mostly in neumes which unambiguously indicate the pitches but not precise time values. However, some trouvère melodies – for example, a number of those in the 13th-century Chansonnier Cangé (*F-Pn* fr.846) – appear in a semi-mensural notation in which the scribe seems to have distinguished between some but not all longs and breves in a rather inconsistent way (or in a manner designed to make the notation look like that of a polyphonic source). Moreover, some trouvère melodies (but very few) were interpolated into 13th-century motets where their rhythms as well as their pitches are unambiguous. These questionable indications that secular songs were sometimes sung in strictly measured time have led some 20th-century

(*d*)

1. Miniature from the 'Cantigas de Santa María', Spain, late 13th century (E-E b.I.2, ff.39v, 268r, 179v, 260r): (a) fiddle and citole (b) trumpet (c) cymbals (d) psaltery

2. King Arthur and his courtiers listening to a knight singing to the gittern: miniature from the 'Roman du Roi Meliadus di Leonnoys' written (1352–62) for Louis II, titular King of Naples (GB-Lbl Add.12228, f.223r)

scholars, beginning with Beck (B(ii)1910) and Aubry (B(ii)1909), to conclude that all trouvère melodies were regulated by RHYTHMIC MODES – repeating patterns in triple metre. Indeed, virtually the entire corpus of secular song has been subjected by scholars to interpretation in modal rhythms, even though the particular pattern to be applied in individual cases is by no means always clear, and scholars have not agreed in their transcriptions.

Other scholars have used both duple and triple metres in their transcriptions, deciding between them apparently on aesthetic grounds. Still others, notably Van der Werf (B(ii)1972), have favoured more or less unmeasured rhythms, suggesting that most medieval song was declaimed freely, while not ruling out metrical and even modal transcriptions of dance-songs and some other chansons. This hypothesis has the virtue of claiming (at least by implication) that the notation indicates in the most efficient way possible the solutions to the musical problems at hand.

Similar controversy surrounds the question of instrumental participation. Some scholars find no justification for the addition of instruments; others add them freely, and still others take some middle position. Their arguments centre on a consideration of three points: the instruments commonly played during the Middle Ages and the musicians who played them; the information derived from musical sources, miniatures, literary works and archival documents; and the way musicians in other cultures with monophonic song repertories perform their music. Professional singers and instrumentalists of the Middle Ages were called *jongleurs*, minstrels, or, in German, *Spielmänner*. The terms describe musicians of widely differing sorts. There were poor vagabonds and wayfarers who sang songs, played popular tunes, juggled, did acrobatic tricks, or entertained townspeople and villagers with trained bears and monkeys; and there were *jongleurs*, associated with noblemen or aristocratic society, who were chiefly responsible for the performance of courtly songs. *Jongleurs* attended schools from time to time to renew their repertories and they were expected to play a number of instruments.

Few instruments from the Middle Ages have survived, so knowledge of the medieval instrumentarium is based almost entirely on secondary evidence. This includes lists of instruments in literary works of the 12th, 13th and 14th centuries (such as Machaut's enumerations in his poems *Remède de Fortune* and *La prise d'Alexandrie*, and the lists in the anonymous 14th-century *Echecs amoureux*), which were apparently intended to be encyclopedic. Paintings and other art works depict large numbers of instruments; the well-known illuminations in the late 13th-century *Cantigas de Santa María* (*E-E* b.I.2) show Christian, Jewish and Moorish musicians playing instruments at the court of Alfonso X ('el Sabio'), King of Castile and León (1252–84) (fig.1). Among the instruments in the various lists are fiddles in several different shapes, rebecs, hurdy-gurdies, lutes, diverse sorts of guitars and psalteries, citoles, harps, rottes, transverse flutes, a variety of flageolets and recorders (some of them with two or more tubes), shawms, cornetts, *douçaines* (probably soft straight-capped shawms), bagpipes of one sort or another, and trumpets and percussion instruments.

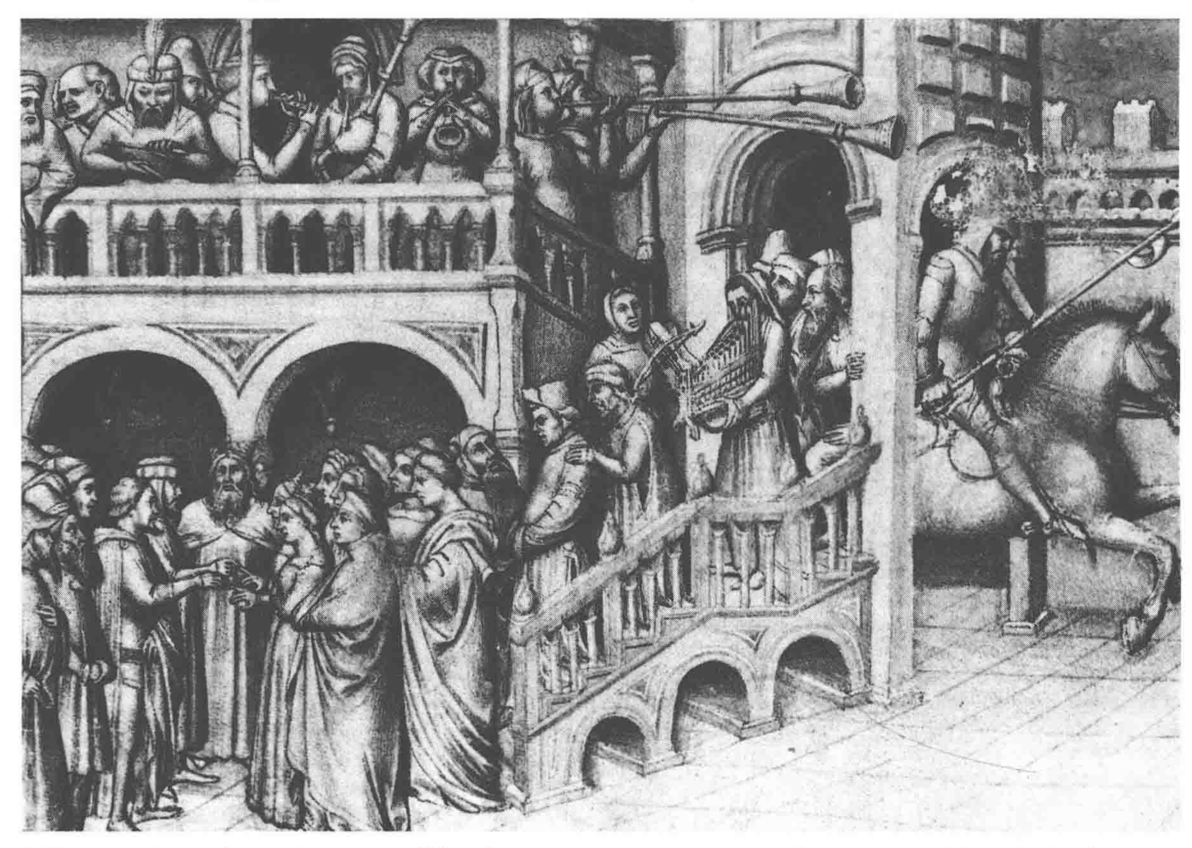
It is by no means clear what music each of these instruments played. If they did take part in performances of medieval secular song, they may have accompanied singers by doubling them literally or heterophonically or by adding drones, preludes, interludes and postludes to the written melodic lines; or they may on occasion have performed the songs completely instrumentally, replacing the singers. (The selfconscious, middle-class Meistersinger of the 15th and 16th centuries, who modelled themselves to an extent on the earlier Minnesinger, forbade instrumental participation, but this should scarcely affect interpretation of medieval practices).

The case for instrumental participation in the performance of medieval secular song rests partly on literary and pictorial evidence (fig.2). The pictorial evidence is often of questionable value. The scene shown in fig.2 is

separated in time from the text it illustrates by more than a century, and the text calls for a harp, not the gittern that is shown. The Arthurian setting of the text, placing the narrative in a time remote from the original readers, and surely securing certain freedoms for the painter, does little to strengthen the authority of the picture. The case for instrumentation also rests partly on the nature of the instruments involved, and partly on the non-historical claim that monophonic repertories are apt to be treated in similar ways in different cultures.

A passage from Huon de Mery's *Le tournoiement de l'Antechrist* suggests that instrumentalists at least on occasion accompanied singing: 'The *jongleurs* stood up, took fiddles and harps, and sang us songs, *lais*, tunes, verses, and refrains, and *chansons de geste*' (translation from *NOHM*, ii, 228–9). The principal reason for supposing that these songs might sometimes have been accompanied by drones derives from the nature of the instruments themselves, some of which – notably the hurdy-gurdy, the bagpipe, and various double pipes and recorders – could not be played without drones. (It is perhaps suggestive that the hurdy-gurdy lost its social standing as a courtly instrument in the 14th and 15th centuries just at the time when monophonic music was going out of fashion.) And the fiddle, perhaps the most versatile and hence most important of the medieval courtly *bas* (that is, soft, as opposed to *haut*, or loud) instruments, was often supplied with drone strings or else tuned in a way to facilitate playing with drones, as Hieronymus de Moravia pointed out in the 13th century.

The highly ornamented character of the 13th- and 14th-century monophonic dances and some medieval songs has given rise to the speculation that instrumentalists played heterophonically – that is, by sounding simultaneously slightly varying versions of the same melody. While the evidence is far from conclusive, the theory is attractive, and it receives some support from the non-historical but nevertheless persuasive fact that heterophony, along with drones and improvised preludes, interludes and postludes, regularly occurs in west European local traditions and in many non-Western cultures (for example, in those Islamic countries that are thought to have influenced so deeply the character of the medieval instrumentarium).



3. Polyphony to 1400. Craig Wright (B(i)1989) has neatly summarized the essential circumstances of medieval performance: 'Medieval music manuscripts carried no presumption of absolute pitch, nor any indication of tempo, dynamics, instrumentation [or] vocal ornamentation . . . All these the performer was expected to supply himself, drawing on a fund of musical experience and using his skill to extend and refine the accepted practices of his day'. The 'accepted practices' of medieval polyphony extended from the performance of elaborate counterpoint to impromptu treatments of plainchant. Many kinds of evidence illuminate them, but the writings of the theorists are the most consistently valuable because the musical manuscripts have not been systematically examined for the information they may provide. Pictorial sources, literary texts and archives also make a contribution, but when all the available information is assembled the result is only a collage drawn from different repertories, procedures and levels of musical literacy.

The composed polyphony of the Middle Ages is generally regarded as music for soloists, but the evidence suggests a more flexible practice which was much the same whether the polyphony was composed or extemporized. Elias Salomo, a French priest from Périgord, but writing *in curia romana*, stipulated one singer to a part in extemporized parallel organum, conceding that the lowest voice might be reinforced if necessary. In 13th-century Paris the tally of singers deputed to sing organum at Notre Dame was usually the same as the number assigned to the unadorned plainchant, so as many as six might be involved in the performance of two-part polyphony. Wright proposed that a soloist sang all parts save the tenor, but this cannot be confirmed. Among the pictorial sources, the 'Notre Dame' manuscript W_2 shows three (or possibly four) singers in the initial to Perotinus's *Salvatoris hodie* in three parts (f.31*r*), while a two-part version of *Presul nostri* has four singers (f.92*r*). These images draw deeply on the iconography of Psalm xcvii, *Cantate Domino* (ii), and their value in this context is open to question.

Two illustrations from the same tradition, but perhaps with a greater claim to authority, have been discovered in English psalters of 1310–20. The work of the same artist, they show three tonsured singers performing the three-voice motet *Zelo tui langueo/Reor nescia/* [*Omnes de Saba*]. The tenor of the motet is derived from the Gradual for Epiphany and the pictures show a singer wearing the starred vestment prescribed for Epiphany by a Sarum ordinal of the 14th century. This is an unusual concatenation of evidence and might serve for a clear ruling about the performance of this motet. However, the artist's contemporary Jacobus of Liège declared that nothing prevented a two-part piece having more than one singer on either tenor or discantus. In view of this evidence it would be difficult to maintain that the aesthetic of medieval polyphony positively demanded a single voice to a part, even if such performances were common.

Some refinements of performing practice are recoverable. The theorists reveal that standards of intonation among the best singers were very high, as might be expected in repertories so consistently based on the octave and 5th rather than the 3rd and 6th (where the ear accepts a greater latitude). Jacobus of Liège disdained any singer who deviated from perfection by as little as a Pythagorean comma, less than a quarter of a semitone, and he associated loss of accuracy in this regard with 'tremulous voices'. This may be a reference to a 'straight' tone allowing the ear to savour the intervals. Many other refinements, however, are beyond recall. Elias Salomo's instruction that a singer 'should lift his voice from note to note in the manner of the French' will probably always remain a mystery, and it is far from clear what Pseudo-Garlandia meant by *nobilitatio*, 'an augmentation or diminution of the same sound'. This is conceivably a reference to dynamics. Hieronymus de Moravia gave some richly metaphorical descriptions of vocal ornamentation and Roesner has used them to reconstruct the nuances of Parisian *organum duplum*. They include the 'harmonic flower', the 'stormy note' ('nota procellaris'), the 'open flower', the 'sudden flower' and 'reverberation', defined by Hieronymus in gratifyingly precise terms. To lay his account beside *organum duplum* as it appears in the sources, blocked out in the ligatures of square notation, is to appreciate the distance that could separate symbol from sound in medieval polyphony.

Hieronymus de Moravia's principal subject when he described these ornaments was the embellishment of

3. Nakers, two shawms, bagpipe, two trumpets, fiddle and portative organ accompanying a wedding procession: miniature showing the marriage of Polynices and Tydeus to Argia and Deipyle from the 'Thebiad of Statius', Padua, c1380–90 (IRL-Dcb W.76A, f.13v)

chant. Performing practice was strongly influenced by plainchant and therefore by 'the organs which generate the human voice' (Engelbert of Admont). By modern standards, the performer of polyphony before 1400 was often a musician with an exceptional experience of consort singing acquired in the choral performance of plainchant. Elias Salomo, though concerned with extemporized organum, may reveal the broader priorities that were instilled into such singers by their rulers or precentors in rehearsal, marking the pauses on the book to ensure good ensemble and seeking a good blend of *voces concordes*. The outstanding concern seems to be unanimity of every kind. The terminology of 'head' voices and 'chest' voices was well established by 1300, and Hieronymus de Moravia emphasized that the different types should not be mixed. Jacobus of Liège confirmed that singing chant in unison required the singers to be 'equal in everything' ('omnino equales'). It is possible to imagine how organum and conductus counted as an especially exacting form of being 'equal in everything' during performance, for in these two genres the participating voices sang the same text and respired together, demanding careful adjustment of phrasing and, in pursuit of precise tuning, the colour of vowels.

The gradual dissolution of this vocal predominance, with all its technical and aesthetic values, owed much to a sweeping social and musical change between 1300 and 1500; by the end of this period composed polyphony touched many more human lives than at the beginning. At present, the balance of the evidence favours belief in a vocal predominance until at least 1400, but the material is not definitive nor is it too abundant for rapid review. Johannes de Grocheio discussed instruments with monophonic secular music, not composed polyphony. English polyphony of the 14th century was composed for vocal ensembles of stable constitution making little or no use of the organ; a survey of the French and Italian sacred repertories might reveal something similar. The two-part madrigals and ballatas of the Italian Trecento appear in most of the sources as vocal duets, while the sources of Landini's music show considerably more full and partial texting in the lower parts than the published edition suggests. A picture in the Squarcialupi Codex (*I-Fl* Med.Pal.87) famously shows Landini playing the portative organ surrounded by other instruments, but the only known description of his music in performance reveals the three-part ballata *Orsù gentili spiriti* sung by two girls and a man (a perfectly plausible scoring). In French chansons of the Machaut tradition the prevailing texture comprises a texted cantus accompanied by up to three textless parts. Eustache Deschamps (probably Machaut's nephew) mentioned a 'triplicité des voix' for the best performance of chansons with tenor and contratenor; if musicians ever regarded the more angular contratenors of this repertory as artistic vocal music it was perhaps precisely because they were not 'faciles ad pronuntiandum', in the words of Jacobus of Liège. The possibility that these underparts were generally texted seems remote; perhaps they were vocalized wordlessly. Machaut himself invited 'orgues, cornemuses ou autres instruments' for his

three-part ballade 33 *Nes que on porroit*, a piece he regarded as 'very novel' and 'very foreign'; whatever he intended by this call for instruments (Leech-Wilkinson, B(ii)1993, is the first to have offered a convincing explanation), theorists throughout the period portrayed instrumentalists as musicians working more by *usus* than by *ars*. Only Arnulf of St Ghislain, whose dates are unknown, evoked a situation with the potential for far-reaching change. The instrumentalists that he described were clerics capable of composing and performing pieces that no singer would attempt to rival, and who remedied their own want of musical knowledge by consorting (perhaps in more senses than one) with trained musicians.

Medieval concepts of musical beauty, as they are understood today, have often been contrasted with those attributed to the Renaissance. J.I. Wimsatt, for example (*Chaucer and his French Contemporaries*, Toronto and London, 1993), argued that 'Machaut and his contemporaries . . . make no attempt to imitate or stir the passions', and it is impossible to imagine such a remark being made about a Renaissance madrigalist. However, there is no single line of development to be discerned. Some of the language used by 16th-century musicians to describe the ideals of the Italian madrigal, surely the most intensely 'Renaissance' musical form, is foreshadowed by chant theorists half a millennium earlier. About 1100 John 'of Afflighem' (Johannes Cotto) ruled that a musical setting should express the meaning of the words ('quod verba sonant cantus exprimere videantur'), and it remains unproved that a Latin song known to him would have been performed with fewer nuances of phrasing, tone-colour or pace than a polyphonic madrigal four centuries later, whatever other contrasts the difference of musical texture might impose. The rise of measured polyphony, however, probably shifted the aesthetic ground of medieval music, at least in the polyphonic sphere. Before 1300, the dialectic between precisely measured and not so precisely measured performance was an important intellectual and aesthetic issue for musicians; that is why some of the most suggestive information about performing practice relates to music without precise measure (*organum duplum* is the clearest example) or music which had newly acquired it (Hieronymus de Moravia's ornamented plainchant). By the 1320s this situation had changed. The Ars Nova treatises suggest an aesthetic based upon the scrupulous calibration of duration and pitch, neither broaching the question of how different polyphonic textures might express 'quod verba sonant' nor hinting at the wealth of nuance in performance noted by their Ars Antiqua forebears. A language about the affective union of music and poetry, known to the plainchant theorists, lost pertinence when composed polyphony, exulting in scrupulous measurement and perhaps a certain objectivity, became the medium of high art. The gradual recuperation of that language for polyphony is a significant chapter in the history of performing practice and deserves a study to itself.

4. 15TH- AND 16TH-CENTURY MUSIC. Occasions for informal music-making are seldom recorded systematically. Passing remarks in literary and historical writings and the evidence of works of art depicting commonplace reality or traditional themes in contemporary guises are our chief source of information about such areas of Renaissance activity as aristocratic music-making (with or without professional assistance), the character of informal music in middle-class homes, and the extent to which peasants and the poorer urban dwellers played and sang in taverns, at fairs, at home and at work. But formal musical activity is easier to document, for records of payments to musicians often survive, as well as traces of the institutional framework within which the music was performed. Accordingly, much research into the performing practices of the 15th and 16th centuries has focussed on these formal occasions and the churches, courts and civic institutions that supported them.

By the 16th century the most important churches and cathedrals in western Europe had polyphonic choirs, and

4. Singers performing from a note roll (rotulus): miniature from Machaut's 'Livre du voir dit', c1390 (F-Pn fr.9221, f.16r)

5. Secular song accompanied by a portative organ: detail from a 15th-century French tapestry in the Musée des Beaux-Arts, Angers

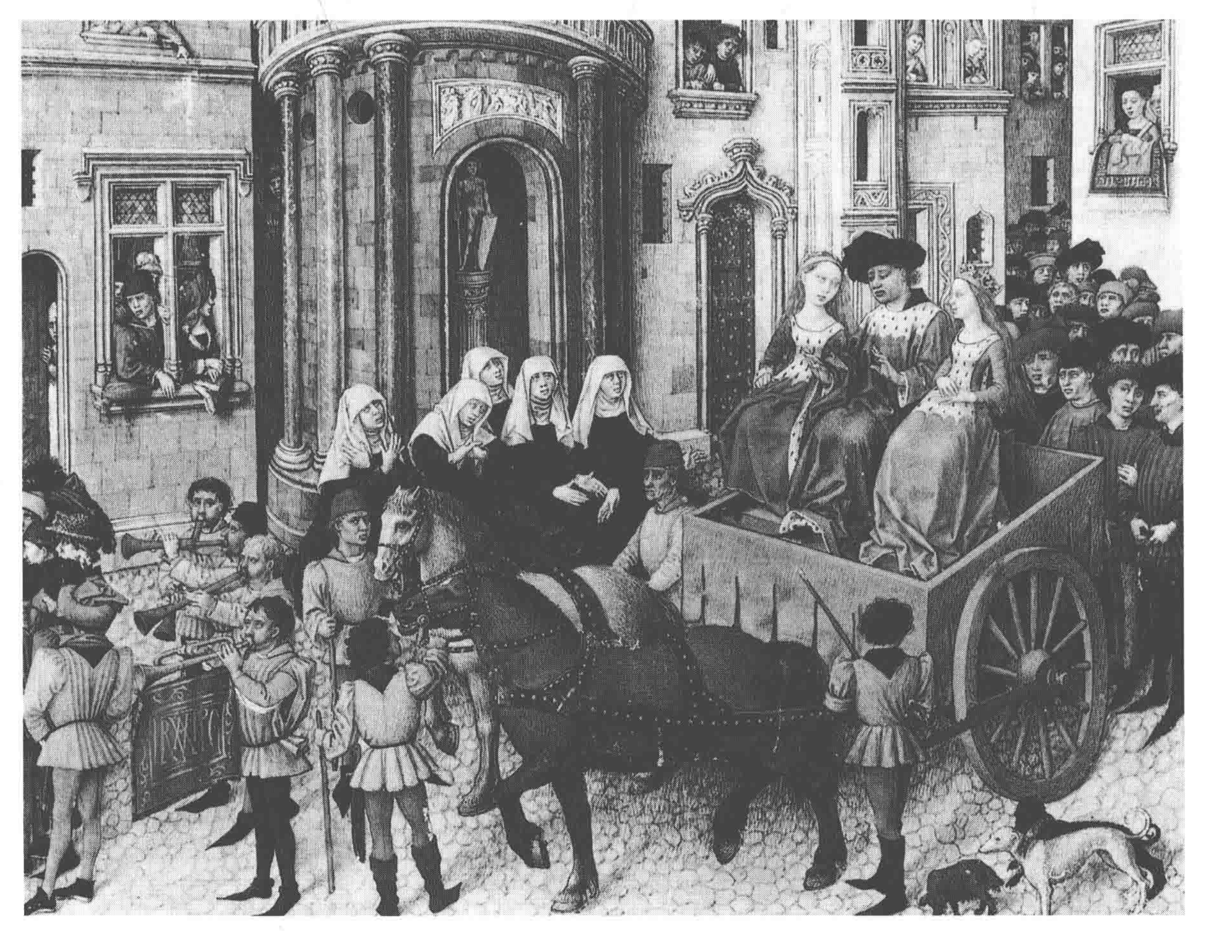
in many cases separate singing groups for performing plainchant. These ensembles were responsible for providing music for the daily liturgical ceremonies, the celebration of Mass as well as Office hours, and for more elaborate performances on feast days and other extraordinary celebrations. Church and cathedral choirs counted among their members the best-trained musicians and almost all the greatest composers except those who performed similar duties at princely courts. They regularly performed the finest and most complex masterpieces of the age. On average, leading 16th-century choirs seem to have consisted of between 20 and 30 singers, although the number varied a great deal; by mid-century the cathedral in Antwerp employed as many as 69 singers, while small provincial centres must have been content with but a handful. Many churches seem to have reorganized and consolidated their musical establishments during the 15th century, and the size of vocal ensembles tended to increase as the century progressed. Nonetheless, even some of the largest and most distinguished ensembles (e.g. the papal chapel) frequently performed polyphony with one singer to a part, especially in polychoral music and mass sections with reduced scoring.

Except in convents (whose musical practices remain largely mysterious), women were excluded from participation in liturgical services, so the polyphony of church and cathedral was sung by all-male choirs. Lower lines were taken by tenors and basses, and the highest parts were typically given to falsettists. (Castrato singers were unknown before 1550 and relatively rare for the rest of the century.) Many churches also maintained a half-dozen or more choirboys, providing for their liberal-arts education and musical training (liturgy, notation, counterpoint, improvisation, and often one or more instruments). In

6. Unaccompanied church choir: woodcut from 'Practica musice' (1496) by Gaffurius

some musical establishments choirboys were a regular feature, taking the top lines of polyphonic compositions; in others, the boys more often formed a separate ensemble by themselves and with their teachers. A number of polyphonic choirs in the 15th and early 16th centuries were proportioned in ways that may seem top-heavy by modern standards: in 1469, for example, Charles the Bold directed that the Burgundian court chapel choir should comprise at least six falsettists, three tenors, two contratenors (men with tenor-range voices but specializing in contratenor parts) and three basses when singing polyphony. Virtually every 15th-century choir whose voice distribution can be determined follows some variant of this pattern, whether the top be boys or adult falsettists; by the late 16th century, however, more equal distributions seem to have become the norm.

By the mid-16th century some churches employed a group of instrumentalists, normally playing loud instruments such as shawm, cornett, trombone and dulcian. Their precise role varied from place to place and should probably not be overestimated: in many churches they played only for wordless portions of the service, and in others their participation with the singers was carefully circumscribed. By the end of the century, however, musicians had begun to cultivate the sonorous possibilities of mixing voices and instruments in the concerted polychoral compositions of the Gabrielis and other Venetian musicians, for example, and in the music of the German italophile Michael Praetorius, whose *Syntagma musicum* (1614–18) offers comprehensive instructions for scoring *concerti* in the early Baroque 'colossal' style. Unambiguous documentation for the use of wind instruments in church during the 15th and early 16th centuries is difficult to find, but the reluctance of church authorities to permit instrumental participation evidently did not extend to the organ. Organs, sometimes of substantial size, were commonplace in European churches well back into the Middle Ages, and throughout the Renaissance organists either doubled singers or alternated regularly with them. An extensive repertory of plainchant settings, toccatas and preludes, and examples of improvisatory technique, suggest the style in which they performed.



Because of the nature of much secular documentation, together with the traditional professional secrecy of the guilds, relatively little is known about the way instrumentalists were educated, or even about their repertory. The rigid medieval distinction between *haut* (loud) and *bas* (soft) bands relaxed but by no means disappeared over the course of the Renaissance. *Haut* ensembles followed an evolving but stereotyped pattern, beginning in the 15th century with typically a few shawms and a slide trumpet (later a trombone), growing by about 1500 to four or five players (sometimes with various sizes of shawm), and with cornetts and dulcians supplementing and later supplanting the shawms in the 16th century. *Bas* ensembles were much more various, admitting a vast array of plucked and bowed strings, recorders, flutes, organs and other instruments. These bands, loud and soft alike, probably learnt to improvise dance music, typically in the 15th century by adding one or two contrapuntal lines around a tenor cantus firmus (e.g. a basse danse), and in the 16th century by harmonizing a melody played in the top voice and by embellishing the melody when it was repeated. But instruments also played all sorts of composed music, not only chansons, madrigals and other

secular music (with or without singers) but motets and even mass movements as well. By the middle of the 16th century such publishers as Attaingnant in Paris and Susato in Antwerp were producing little books of textless music, usually dances with unspecified and presumably very flexible instrumentation, for use by amateur and professional bands of all types; and, by the last decades of the century, independent instrumental ensemble music (e.g. the canzonas of such composers as Florentio Maschera and Giovanni Gabrieli, or the well-known English viol fantasias) had become very sophisticated indeed.

The musical establishment at the court of a king or prince was a microcosm of the outside world. A choir with its organist supplied music for the ordinary services in the prince's chapel, and the chapel singers may also normally have taken part as soloists in secular entertainments sponsored by the court. Most princes also employed one or more bands of *haut* instrumentalists – cornett players, trombonists, shawm players and the like – who played for dancing and outdoor entertainments, and a corps of trumpeters and drummers who served to announce the prince ceremonially during peacetime as well as in battles. And some princes also engaged a few virtuoso *bas* instrumentalists – lutenists, recorder players, viol players and the like – to play chamber music.

Many courts may have enjoyed music at daily meals. Certainly, varied programmes by vocal, instrumental and mixed ensembles enlivened banquets and special meals when the prince entertained important guests. In his cookery book, *Banchetti, composizioni di vivande e apparecchio generale* (Ferrara, 1549), Cristoforo Messisbugo, steward to the Este family, described several typical occasions in the late 1520s when members of the court in Ferrara played host to visitors, and music was supplied by virtually all of the musical establishment; not only singers from the chapel choir took part, but also individual virtuosos, groups of shawms, cornetts and trombones, viols and flutes, and mixed *concerti* consisting of a group of singers, a group of viol players, and one or more groups of wind and string players. Similarly, Massimo Troiano, an Italian at the court of Munich in the 1560s, wrote a detailed account of the music performed at banquets and other celebrations when Duke Wilhelm of Bavaria married Renée of Lorraine in 1568 (fig.9); and Ercole Bottrigari, in *Il desiderio* (1594), explained how many of the townspeople of Ferrara joined the courtly musicians to prepare imposing *concerti* for performance at special events at the Este court late in the century. Doubtless the wind bands of princes played regularly for dancing, and chamber musicians were frequently called upon to entertain the prince and his courtiers with chansons, madrigals and the like.

In sum, a great deal of scholarship concerning the performing practices of the Renaissance has concentrated

7. *Civic procession accompanied by a wind band of three shawms and a folded trumpet: miniature from a French translation (1455–60) of Boccaccio's 'Teseide' (A-Wn 2.617, f.39r)*

on basic questions of instrumentation: how many singers to put on a part, and what kind, and what instruments, if any. Apart from tablatures and other tell-tale notations, almost no Renaissance source gives a reliable clue to the composer's preference, and thus instrumentations must be reconstructed as probabilities based on surviving circumstantial evidence. For most mainstream repertories of the 15th and 16th centuries it is now useful and possible, at least in broad terms, to imagine an 'ideal' instrumentation within the habits of the time and place. The ideals were often violated, of course; but over the years, again broadly speaking, they show a surprising consistency. For almost any piece of Renaissance Latin sacred polyphony, *a cappella* choral performance with falsettists on the top line represents a plausible ideal; for most vernacular songs, throughout the period, voices without accompaniment seem also to have been the preferred medium, but with one singer on a part and with boys, women, or girls on the top line or lines. The notion that textless lines in the sources, most famously in the 15th-century chansons, were meant for instruments has not survived close scrutiny: instruments (especially lute and harp) may have been at least a possibility, but singers, either supplying words or vocalizing on a neutral vowel sound, seem better to represent the usual ideal of the time.

The music sung by church and chapel choirs was prepared in large choirbooks set on a lectern around which the musicians gathered. In the 16th century much music was printed in partbooks. Scores were not in general use but were reserved for keyboard players and, in the second half of the 16th century, for students of counterpoint. Players of chordal instruments other than keyboards, particularly plucked string instruments such as the lute and the guitar, might prepare special parts in tablatures which incorporated all or most of the melodic lines of the polyphonic music they wished to play. Before they performed a composition, Renaissance musicians (and indeed those of later times) had to agree about a number of things besides instrumentation: the tempo, which might not be implied by the mensuration sign; how the text was to be added to the notes in vocal music; which accidentals were to be added to the written notes

following the rules of *musica ficta*; whether or not to embellish the written notes; and, if so, where and how.

The theory of one *tactus* of invariable speed can probably not be sustained for the 15th and 16th centuries, and therefore mensuration signs do not indicate absolute tempos. Various 16th-century writers commented that tempo was variable, dependent at least partly on the character of the words (or the choreography, in the case of dance music). Nevertheless, in extended compositions with changes of mensuration, the relationships between the various tempos seem often to have involved simple arithmetical relationships indicated by proportions. In principle, music in so-called duple proportion, indicated by a slash (and in ¢) moved twice as fast as music in *integer valor* (C); the *brevis* (and every other note value) sounded half as long under the proportional sign. Similarly, music in triple proportion, indicated by C3 or some other sign, moved three times as fast, three semibreves under the proportional sign sounding in the time of one *brevis* of *integer valor*; and in *proportio sesquialtera*, indicated by 3, 3/2 or some other sign, the music moved one and a half times as fast as in *integer valor*, three semibreves under the proportional sign taking the same time as two in *integer valor*. The four basic mensuration signs of the 14th and 15th centuries were C (*tempus imperfectum cum prolatione imperfecta*), O (*tempus perfectum cum prolatione imperfecta*), Ͼ (*tempus imperfectum cum prolatione perfecta*) and ⊙ (*tempus perfectum cum prolatione perfecta*). It is difficult to understand how these were interrelated when they followed directly one after another, with the changes occurring simultaneously in all voices. Mendel's rule of thumb that semibreves (and not breves) remain the same when the mensuration changes from O to C and vice versa is helpful and in most cases produces good musical results. Except for special instances, however, complex mensuration ceased to be a concern of composers from the late 15th century onwards. As ¢ became by far the most common mensuration sign, appearing regularly at the beginning of a piece, it obviously lost its proportional significance and became essentially the new *integer valor*; the chief difficulties facing the performer of 16th-century music thus involve fairly elementary features of the mensural system: for example how ¢ should be interpreted when juxtaposed with the old C or O. How C, O, ¢ and Φ relate to one another when all voices change mensuration signs simultaneously is probably explained by saying that the *semibrevis* stayed the same in *integer valor* and was halved in value under the proportional signs. As to the question of when the composer intended *proportio tripla* and when *proportio sesquialtera*, it can be said that most shifts in tempo in the 16th century seem to involve *proportio sesquialtera* regardless of the sign used to indicate the change, although there are fairly frequent exceptions to this rule of thumb.

Like mensural practice, the principles of text underlay are more difficult to discover for 15th- than for 16th-century music. About 1500 Josquin des Prez and his contemporaries took more pains than any previous composers to write melodic lines that closely fitted the

texts they set, and the following generation of composers (from about 1530 on), led by Adrian Willaert, perfected the union of notes and syllables. During the 15th century, however, most music was highly melismatic, and composers seem often not to have conceived their melodic lines so that text syllables fitted them in only one way. In short, text underlay in the 15th century was left to the performers. Principles of 15th-century text underlay may yet be formulated from the evidence supplied by some manuscripts of the time. But most manuscripts do not indicate precisely where the text syllables are to be sung, and no scholar has succeeded in demonstrating that scribes intended to supply that kind of information. Modern musicians, therefore, are forced to base their decisions on the theoretical evidence of the following century, and especially on the advice given by G.M. Lanfranco (*Scintille di musica*, 1533), Gioseffo Zarlino (*Le istitutioni harmoniche*, 1558) and Gaspar Stoquerus (*De musica verbali libri duo*, *c*1570). Harrán (C1973) has shown that Zarlino's rules for text underlay derive from Lanfranco's, and Lowinsky (*Festschrift Heinrich Besseler*, 1961) explained that Stoquerus's importance lies in his awareness of changes in style between the period of Josquin and his own day. Zarlino's ten rules for text underlay may be summarized as follows: long and short syllables should be combined with notes or figures of corresponding value; only one syllable should be sung to a ligature; a dot augmenting a note should not be assigned a new syllable; a change of syllable should not normally be made on or immediately after a crotchet or shorter note; notes immediately following a dotted semibreve or minim and of smaller value than the dots are not usually assigned a syllable; if a syllable must be sung to a crotchet, another syllable may be given to the note following; a syllable should be sung to the first note of a piece (regardless of its value) and to the first note after a rest; individual words or syllables should not be repeated, although in very melismatic music it is acceptable to repeat a whole clause whose meaning is complete by itself; if the penultimate syllable of a composition is long it may be sung to a melisma; and the last syllable should coincide with the last note. Commonsense application of these rules gives a satisfactory text underlay, at least for most songs, motets and wordier movements of the mass; more serious difficulties, at least for the modern editor and performer, attend mass movements for which the sources give no hint of intended underlay (for example, a Kyrie whose scribe has written 'Kyrie' under the first notes, 'leison' under the last, and 'e' somewhere in the middle). These apparently caused no trouble to singers of the time (any such problem would have been very easy for composers and scribes to solve), and indeed text underlay for such movements is not hard to improvise today, at least when singing one to a part; whether it was thought important for sections to underlay text together, and, if so, how this was accomplished in practice, are not known.

Besides expecting performers to fit the syllables to the notes, 15th- and 16th-century composers also intended that they add sharps and flats to the written notes, following the rules of *musica ficta*. These rules, as summarized by Lowinsky, Berger and others from theoretical evidence, give two reasons for adding accidentals, *causa necessitatis* and *causa pulchritudinis*. Reasons of necessity govern perfect consonances: tritones, diminished 5ths and augmented octaves should normally be made perfect. Aesthetic reasons dictate the rules governing imperfect consonances: perfect consonances should be approached by the nearest imperfect consonances; major 6ths expand to an octave, for example, and minor 6ths contract to a 5th. Related to this regulation, leading notes should be raised in all cadential formulae (except in Phrygian cadences, where the second degree descends to the *finalis* by a semitone). And, in the 16th century, the 3rd in final chords should be made major. While the rules themselves are quite simple, their application often creates difficulties. The largest body of evidence showing the way 16th-century musicians added unspecified accidentals, the intabulations for lute and other plucked string instruments of vocal music of every sort, reveals that instrumentalists disagreed in their solutions to particular passages, even though they generally followed the precepts of *musica ficta*, and, indeed, often added many more accidentals than a modern editor would think seemly.

Several instruction books on instrumental technique, notably those by Ganassi dal Fontego (*Fontegara*, 1535) and Diego Ortiz (*Trattado de glosas*, 1553), reveal that instrumentalists during the first two-thirds of the 16th century considered improvised or quasi-improvised ornamentation a necessary part of their technical equipment; and such works as Coclico's *Compendium musices* (1552) suggest that singers needed some of the same skills. Certainly virtually every lutenist who arranged sacred and secular music for his instrument included runs, turns and trills in his intabulations. Musicians performing in an ensemble probably did little more than decorate cadences and perhaps add divisions or *passaggi* to one or two passages within a composition. Ortiz supplied performers with numerous formulae which they could use for those purposes. Whenever a madrigal or motet was performed by a solo singer with lute accompaniment, and whenever instrumental arrangements (and dance music) allowed a single player to dominate the texture, embellishment probably became a more prominent feature of the performance. Ganassi's tables of ornaments seem to have been designed to transform a relatively simple solo melodic line into an elaborate vehicle for the virtuoso performer, and Ortiz included versions of several compositions for solo viol and keyboard in which the viol player imposes on the music a florid line which is more than merely an embellishment of the original. During the last quarter of the 16th century a series of instruction books, by Girolamo Dalla Casa, G.B. Bovicelli, Giovanni Bassano, Riccardo Rognoni and various others, described and explained the extremes to which virtuoso singers and players went in displaying their agility and inventiveness, even at the expense of the composer's intentions. Indeed, the excesses of the late 16th-century virtuosos probably led composers such as Caccini and Monteverdi to incorporate bravura elements into their music in an effort to reduce the extent to which the performer strayed from the written notes.

The 15th and 16th centuries were times of great change in the nature of instruments and the way they were played. Harpsichords and other similar keyboard instruments came into general use early in the 15th century. The trombone evolved from the slide trumpet in the middle of the century. Late in the 15th century lutenists developed a technique of playing polyphonic music with their fingers to replace the outmoded method of playing single lines with a plectrum. The crumhorn was probably invented later in the century and the viol evolved at the same time

(relatively few years before the violin family came into existence, presumably during the first quarter of the 16th century). About 1500, too, many instruments came to be built in families tuned either in 4ths or 5ths (flutes, recorders, viols, crumhorns and various others) or less regularly, like lutes.

Consorts of like instruments, the instrumental equivalent of the *a cappella* choir, were particularly favoured during the early 16th century. Usually three sizes of instruments took part in a four-part ensemble, the smallest (e.g. a treble recorder in G) playing the top line, two middle-sized instruments (e.g. tenor recorders in C) playing the two middle lines, alto and tenor, and the largest instrument (e.g. a bass recorder in F) playing the bottom line. Because of inherent weaknesses in some sizes of some instruments these pure consorts were sometimes modified. Alto trombones were musically less satisfactory than the standard tenor trombones, for example, and so the top parts in wind bands were often taken by either cornetts or shawms (depending on the quality of sound desired). Trombones, viols or some other bass instrument often played beneath three recorders. However, mixed consorts of unlike instruments were also common, and during the 16th century ensembles tended to become more elaborate and more varied. Often a chordal instrument, a lute or a keyboard, doubled all the voices in a polyphonic composition, and from the custom of supporting an ensemble in this way grew the Baroque technique of basso continuo. Similarly, 'terraced dynamics', traditionally associated with Baroque music, probably originated before 1600, when in so many of the instruments in general use the possibilities of controlling dynamic nuances were relatively limited. Crescendos and diminuendos are impossible, or nearly so, on many 16th-century instruments, such as flutes, recorders, crumhorns, harpsichords and organs.

Keyboard instruments in the 16th century were tuned by preference in mean-tone temperament, a practical method for dividing the Pythagorean comma so that 3rds and 5ths more closely approach just intonation than they do with equal temperament. But equal temperament was also widely adopted during the Renaissance – on all fretted string instruments, for example. Bottrigari (*Il desiderio*, 1594) and others discussed the problem of combining instruments of different temperaments.

11. Consort of recorders: woodcut from the title-page of 'S'ensuyvent plusieurs basses dances tant communes que incommunes' (Lyons: Moderne, c1530–38)

Attempts to determine the pitch level at which Renaissance music was performed have met with varying success. A number of surviving 16th-century recorders and cornetts (two of the few contemporary instruments whose pitch can be tested more or less accurately) are tuned about a semitone above modern pitch, but this was by no means a universal standard: pitch clearly varied from place to place (and some places recognized more than one standard simultaneously), and in vocal ensembles pitch levels may have been set without reference to any outside source and may thus have been in effect flexible. Various theories of systematic pitch shiftings have been developed – for example, that English sacred music of the 16th century should be sung a minor 3rd higher than its apparent notated pitch, or that late 16th-century sacred music written in *chiavette* or high clefs (treble clef on the top line rather than soprano) should be transposed down a 3rd or 4th – but none has yet found universal favour or wide application.

Ganassi, Ortiz and other writers on string and wind instruments imply that single notes were generally played in a more or less detached manner during the 16th century. Ortiz's description of slurred notes suggests that they are something of an exception in his time, and both Ganassi and Dalla Casa (*Il vero modo di diminuir*, 1584) recommended varied and sophisticated double tonguings for even the fastest passage-work. Scattered references suggest that vibrato was available to 16th-century instrumentalists as a special effect (and thus presumably not as a constant presence), but most issues of style and interpretation are either ignored by the contemporary writers on music, or referred to so fleetingly or cryptically that they cannot be interpreted without doubt. Modern performers of Renaissance music are still, in many important respects, on their own.

5. 1600–1750. Baroque performers enjoyed many of the same freedoms as earlier musicians. They were expected to make many of the same kinds of decisions about a wide range of problems as their counterparts in the Middle Ages and the Renaissance, although gradually the conventions changed. There was no sharp break with earlier traditions, merely a slow evolution. For example, early 17th-century performers still had to add a few unspecified accidentals to their parts, but composers came increasingly to write down all the sharps and flats they expected to hear, albeit following a slightly different practice from the modern one. Similarly, the older practice of expecting changes of tempo to follow simple arithmetical proportions, indicated by mensuration signs, did not die out completely until the 18th century, even though complex combinations of mensuration signs or time signatures seldom appeared in music of the Baroque era. Moreover, performers in the 17th and 18th centuries could still play much music on whatever instruments suited the parts. Scoring was not entirely fixed, in spite of the fact that composers began more and more to indicate precisely which instruments they intended, and to write parts idiomatically conceived for those instruments.

Direct musical instruction is plentiful for the Baroque period where many publications dealt with specific instruments and with the voice. These range from treatises and prefaces addressing the needs of accomplished musicians to countless rather primitive manuals aimed at

amateurs. Two encyclopedic works – Praetorius's *Syntagma musicum* (1614–18) and Mersenne's *Harmonie universelle* (1636–7) – provide a wealth of information about instruments and performing practice at the beginning of the era, while at its close four great treatises provide something of a summation: Quantz's *Versuch einer Anweisung die Flöte traversiere zu spielen* (1752), on flute playing; C.P.E. Bach's *Versuch über die wahre Art das Clavier zu spielen*, i (1753), on keyboard playing; Leopold Mozart's *Versuch einer gründlichen Violinschule* (1756), on violin playing; and J.F. Agricola's *Anleitung zur Singekunst* (1757), on singing. Scholars continue to debate the precise character of these works. As composers, these four authors are orientated towards the new world of pre-Classical, Rococo and *galant* styles, but for all that their treatises must, to some extent, reflect their early training in the older techniques of the Baroque era. Agricola's volume is, in fact, an extensively glossed translation of P.F. Tosi's *Opinioni de' cantori antichi e moderni* (1723) and so enshrines the practices of the earlier period. How far these can be used to elucidate Baroque practice is a question to which a simple and definitive answer is unlikely to be forthcoming. So, too, is the question of whether they set down general principles valid for all 18th-century music, or whether their remarks merely clarified local usages and customs. These four volumes nevertheless supply the most comprehensive picture of the way music of the period was performed.

Treatises are usefully supplemented by other kinds of documentary evidence from the period: letters (by such eminent musicians and intellectuals as Monteverdi, Mersenne and Constantijn Huygens), the diaries and memoirs of a musically alert élite (Pepys, Evelyn, Ludovic Huygens, Charles Burney) and the accounts of musical performances which appeared in newspapers and periodicals (themselves a new development). Archival records relating to the musical establishments of courts and churches throw much light on such matters as the emergence of the orchestra in the 17th century. They can also sharpen our sense of the skills and versatility expected of musicians in this period.

Paintings and engravings contribute greatly to our knowledge of performing practice in the era. It is still true, though to a much lesser extent than for earlier periods, that our knowledge of certain kinds of musical instrument (violin bows before the late 17th century, for instance) is heavily dependent on iconographical evidence. Pictures can throw light on such questions as the number of musicians involved and their disposition in certain kinds of ensemble.

The value of individual pictures as evidence is first and foremost determined by their accuracy (often a reflection

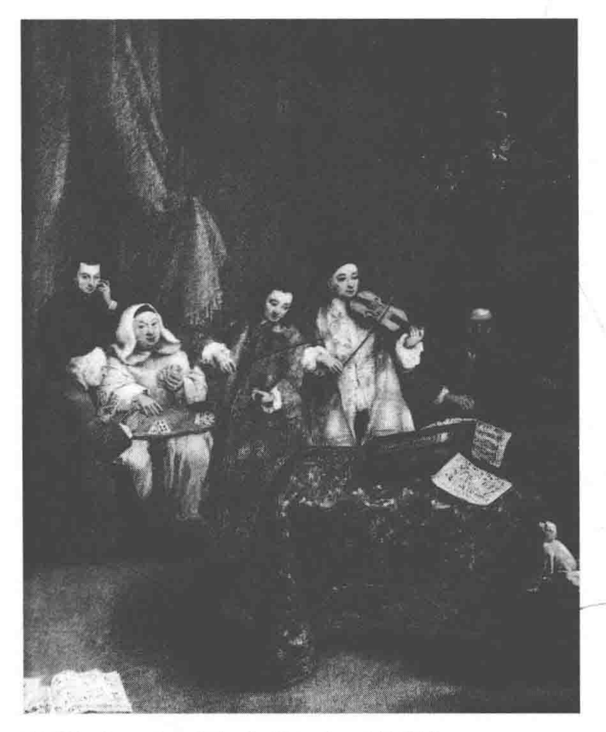
13. Title-page of John Hudgebut's 'Thesaurus musicus' (1693)

of the artist's own interest in music). On the one hand, the interiors of Jan Vermeer (1632–75) and his contemporaries give beautiful and quasi-photographic depictions of people holding or playing instruments. There is, for example, typical Dutch realism in Pieter de Hooch's *The Music Party*, dating from the early 1660s, which gives informative illustrations of a violin, recorder, cittern and bass viol – though what repertory this rather irregular mixed consort might be playing remains a mystery (fig.14). On the other hand, the caricatures of Pietro Longhi (1702–85) or William Hogarth (1697–1764) may give distorted images which nevertheless convey useful information about such matters as performing contexts. Caution is always needed in assessing the musical content of iconographical sources; we need to ask why it has been included (*see* ICONOGRAPHY).

Most of the really new performing practices of the Baroque period arose from three causes: an increased consciousness of national styles, and especially of the difference between French and Italian music and ways of playing it; the rise and development of the technique of improvising a chordal accompaniment over a basso continuo (a technique rooted in 16th-century conventions); and a new desire on the part of composers and performers to be brilliant and expressive in playing or singing melodies. This last is signalled by the rise of the violin family, the decline of the viol family (except for the bass viol), and the virtual disappearance of instruments, such as the crumhorn, which were incapable of dynamic nuance.



Many of the most important innovations of the 17th century – the invention of opera, the rise of an autonomous instrumental music, the development of the violin, the incredibly rapid increase in the amount of music requiring a thoroughbass accompaniment, and so on – are identified with Italian composers. The rhetorical style of the new and expressive recitative in opera (soon transferred to instruments in the early 17th-century canzona and sonata) and the 'singing' melodies in the arias of early and mid-Baroque operas, cantatas and oratorios, made different demands on performers from the balanced, classical, polyphonically intricate music of the 16th century. And the Italian manner soon dominated music in many parts of western Europe, especially in the Germanic countries. France, on the other hand, resisted Italian influence

14. 'The Music Party': oil painting by Pieter de Hooch (1663); the instruments are (left–right) bass viol, recorder, cittern and violin (Cleveland Museum of Art)

(except, paradoxically, for the most influential of all 17th-century French composers, the Italian Lully). The reticent declamation of classical theatre set to music in the *tragédies lyriques* of the second half of the 17th century differed significantly from the more flamboyant Italian operatic style. And French music was shaped by the predilection of musicians and audiences for dance music, with its emphasis on rhythmic detail; for lute music, with its need to elaborate single chords in order to keep the fragile sound alive; and for music that expressed some literary or at least non-musical idea (character-pieces, *hommages* and the like) and which thus placed great importance on subtle changes of sonority and on a rich, decorative surface. Before the Restoration, Britain remained largely untouched by the competing claims of French and Italian musical styles. Even after 1660 – and in the face of royal support for French and Italian music – composers continued to produce works which in their contrapuntal textures and mannered use of expressive dissonance demonstrate continuity with a quite specifically English tradition. This sense of a separate musical identity is less strong in the 18th century, when the latest musical novelties imported from the Continent were much appreciated and foreign virtuosos often enjoyed remarkable successes in London (by far the largest and most cosmopolitan centre in Europe).

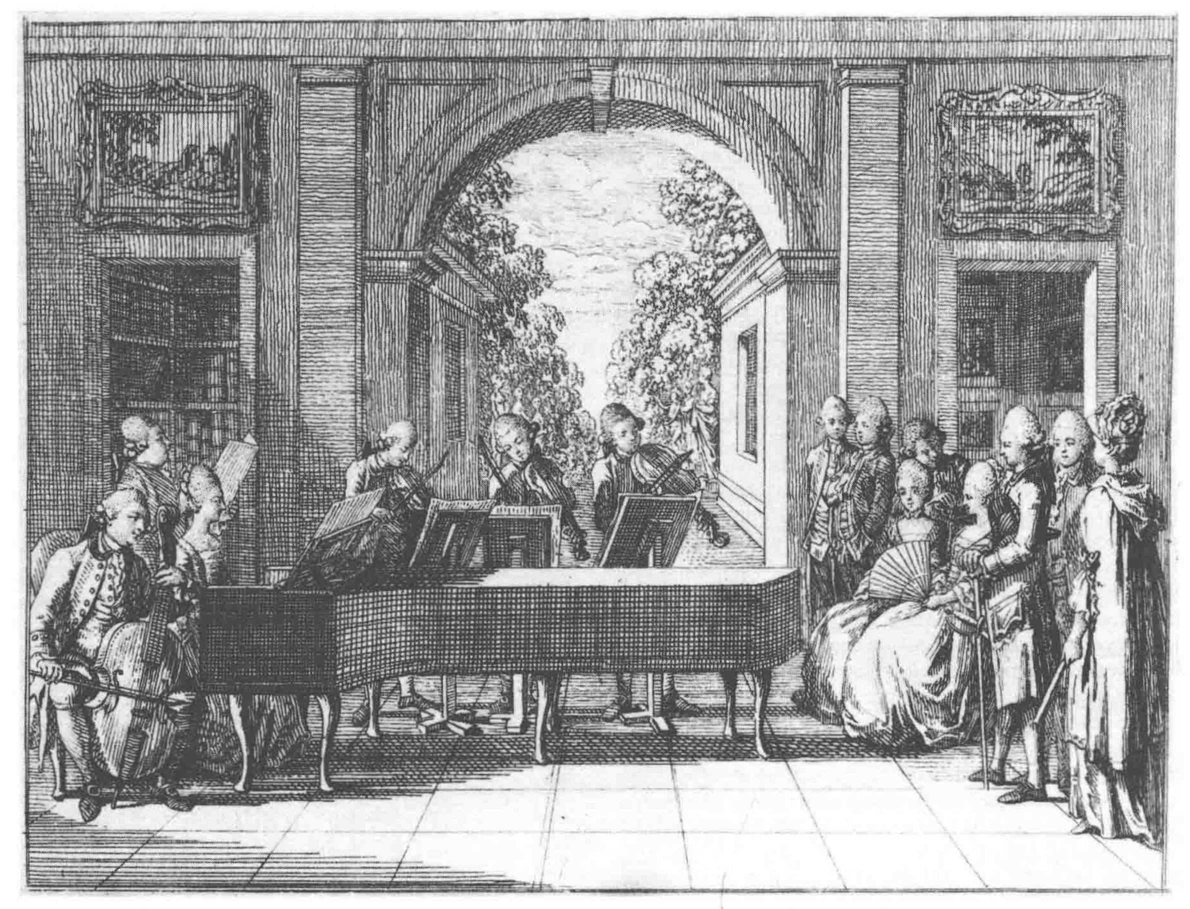
Each of the two main styles of the Baroque period presupposed a different technique of playing and singing, a fact that should always be kept in mind when considering particular aspects of performing practice during the period. French music was very different from Italian in its ornamentation, for example, and the principles for applying it. The extent to which the two competing national styles interpenetrated, particularly in 'peripheral' countries like Germany, remains debatable. Few other aspects of performing practice will elicit such diverse or such heated scholarly opinion as, for example, the question of the propriety of applying French ornaments or French rhythmic alterations to the music of J.S. Bach (*see* NOTES INÉGALES, §3). Paradoxically, the very fact of Germany's being outside these two main performing traditions helps explain why we owe to German musicians (Muffat, Quantz) the most thorough instructions on how to perform in the French and Italian styles: the conventions could not be taken for granted.

15. 'The Concert': painting by Pietro Longhi (1741)

The technique of composing an independent bass line, which guided performers of keyboards and plucked string instruments in devising their chordal accompaniment, was something quite new in the early 17th century. The operas, secular monodies and sacred *concerti* by Peri, Caccini, Cavalieri and Viadana, published in the first decade of the 17th century, were the earliest volumes to include a figured or unfigured basso continuo. But the practice has its roots deep in the 16th century, when it was common for harpsichordists, organists and lutenists to double the singers of both secular and sacred music. Performers gradually realized that it was easier to invent a chordal part than to prepare a special score in order to follow the vocal lines exactly. Short scores and so-called 'organ basses' – with a *basso seguente* (a part made up of the lowest sounding line) and some sketchy indication of one or more upper parts – began to appear about 1575, and after 1600 more and more music was published with an obligatory thoroughbass.

A number of writers in the 17th and 18th centuries set down rules for playing from figured bass, among them Banchieri (1605), Agazzari (1607), Werckmeister (1698), Gasparini (1708), Heinichen (1728), Mattheson (1731) and C.P.E. Bach (1753–62). F.T. Arnold and Peter Williams have conveniently summarized the information about continuo playing to be found in these and other treatises of the period, which change slightly from generation to generation and from country to country. Most Baroque writers on thoroughbass stressed grammatical correctness – how to play the right harmony, which notes to double, how best to space chords, and so on – rather than instructing their readers as to how to make an accompaniment stylish and elegant. While it is impossible to formulate general principles that would be valid for the entire Baroque period about the most appropriate sort of accompaniment, it would not be unrealistic to attempt to describe ideal continuo realizations for a particular repertory (e.g. mid-17th-century French opera recitative, or mid-18th-century German solo song) by combing the theorists carefully for passing remarks about what constitutes good style, and by examining the relatively rare examples of written-out realizations. Nevertheless, the answers to questions about how full the accompaniment should be, the extent to which the accompanist might double the solo line (or lines), how imitative or contrapuntal the texture should be, how widely spaced the chords and so on depend not just on the style of a particular repertory, but on circumstances that may change with each performance – such as the instruments available and the skill of the performers.

The instruments used for accompaniments during the Baroque period similarly changed with the generations, the country and the genre. Early 17th-century Italian operas and grand concerted vocal music were inclined to include a wide variety of chordal accompanying



instruments among the members of the 'orchestra', not only harpsichords and organs, but also lutes, chitarroni, theorbos, harps, lironi and guitars, as well as one or more melodic instruments (bass viol or violone) to strengthen the written bass line; on the other hand, the chitarrone alone (without viol) was a favourite accompanying instrument for solo songs during the same period. Agazzari, in his treatise *Del sonare sopra il basso* (1607), distinguished between foundation and ornamenting instruments, that is, between chordal instruments such as organ and harpsichord, and melody instruments 'which disport themselves and play counterpoints' such as lutes, harps and violins. Thus he seemed to envisage the possibility that melody instruments, too, could play a more or less contrapuntal 'realization' of the harmonies over the written bass. In the 17th and early 18th centuries chamber music continuo practice seems to have been quite varied. There is little reason for assuming an obligatory partnership between a keyboard and a melodic bass-line instrument, and it is likely that Corelli and others who specified 'violone ò cembalo' for the bass parts of their sonatas really did regard either instrument as sufficient (although, for marketing reasons, title-pages tend to emphasize minimum requirements rather than ideal resources). By the mid-18th century, however, C.P.E. Bach was recommending a keyboard instrument and cello as 'the most complete accompaniment', one which could not be criticized.

In the orchestras of the Opéra in Paris in the late 17th and early 18th centuries, keyboard continuo was regarded as essential in vocal numbers and three-part *ritournelles* but took no part in dance music or *symphonies*. It seems likely that this practice was followed by the orchestras for the late 17th-century semi-operas in England. In larger orchestras of the 18th century it was not unusual to find two harpsichords, one (playing with cello and sometimes double bass) to support singers or instrumental soloists, and the other (playing with cello, bassoon and double bass) to support the principal string section of the orchestra; in a smaller orchestra one harpsichord usually sufficed. Even though the keyboard instrument is not always clearly heard while playing continuo, its presence is crucial, for it gives the orchestral sound brightness and a slight cutting edge.

The differences between French and Italian musical styles are apparent from the surviving music, and the differences in manner of performance were described in detail by a number of writers. The techniques and styles of realizing figured basses can be deduced from treatises, surviving realizations, and the nature of the composition to be performed (*see* CONTINUO). The third new aspect of Baroque performing practice – the expressiveness and brilliance in singing or playing melodic lines – is not so easy to reconstruct, since it is impossible to describe objectively qualities of sound and manners of performance. It is unclear, for example, how much dynamic contrast was cultivated in the 16th century, or to what extent Renaissance performers made use of crescendos and diminuendos in shaping the phrases of motets and madrigals. Baroque writers on the voice and vocal technique, such as Caccini in *Le nuove musiche* (1601/2), Christoph Bernhard in *Von der Singe-Kunst oder Maniera* (*c*1649) and Tosi in *Opinioni de' cantori antichi e moderni* (1723), all discussed dynamic nuance in detail, and encouraged singers to practise *messa di voce*, the gradual swelling and diminishing of a single pitch. Moreover, those instruments incapable of making crescendos and diminuendos because of their construction, such as the crumhorn and the wind-capped shawms in general, disappeared from common use in the 17th century, while instruments with only a limited capacity for dynamic nuance, such as the transverse flutes and recorders of the Renaissance, went into a decline. At the same time the brilliant and expressive violin and those instruments that could imitate its effects, such as the cornett, came into a new prominence. Put another way, the instruments which flourished were those that could have a solo (rather than a predominantly consort) role. The less flexible, consort-orientated woodwind (which constituted the *haut* (loud) music so frequently referred to in early 17th-century sources) were displaced by more refined instruments with a solo potential developed (principally by the Hotteterre family) in France and the second half of the 17th century.

An inventory of instruments owned by the Württemberg court in 1718 (including such items as 15 'good Munich violins', seven French basses, oboes at different pitches and a couple of French bassoons) has a separate section listing disused items where we find sets of flutes, rackets, crumhorns and cornetts. All told, it gives a fascinating picture of a radical shift in taste which had rendered whole classes of instruments obsolete. Indeed, one of the principal differences between Renaissance and Baroque performing practice may well have been the greater reliance of earlier musicians on 'terraced dynamics' (abrupt changes of dynamic level from section to section). This practice is often incorrectly described as a new characteristic of Baroque music, though the technique better fits the nature of Renaissance instruments and instrumentation, and especially the habit of scoring festive motets and madrigals for several different self-contained groups – for example, an ensemble of singers, joined by a consort of wind instruments, one of plucked strings, another of bowed instruments and so on. The concept has continuing relevance in the Baroque period through, for example, the concertino–ripieno contrasts fundamental to the concerto grosso style; but it is important to recognize that this is structural – a matter of instrumentation rather than performing practice.

The relatively great power and brilliance of the violin, and the bel canto singer (particularly the virtuoso castrato, whose voice combined force with agility), could achieve the new rhetorical affects demanded by composers of the 17th and 18th centuries in a way that earlier instruments could not. The emphasis on dynamic nuance went hand in hand with the attitude to vibrato, which was treated as an ornament rather than as a constituent of good tone production. The amount of vibrato favoured seems to have varied greatly in the course of the 17th and 18th centuries. Mersenne (who praised the violinist Bochan's use of 'certains tremblemens qui ravissent l'esprit') noted that vibrato was less used in 1636 than it had been in the past. At the end of the 17th century, Roger North thought it was a 'late invention' (and eloquently described the ways in which it could be varied for different expressive effects). Some writers (Muffat, Bremner) insisted that vibrato should be suppressed in orchestral music, where it simply interferes with good tuning. But the character of performances in the Baroque period was determined also

16. Chamber music ensemble with harpsichord, cello, two violins, viola and a singer: engraving (1769) by Daniel Nikolaus Chodowiecki

by new techniques of ornamentation and by new attitudes towards notated rhythm.

In their rather careful stipulation of the vocal ornaments required, composers of the early 17th century, including Monteverdi and Caccini, seem to have been reacting against the excesses of late 16th-century virtuosos, whose elaborate *passaggi* sometimes destroyed almost completely the composer's intended effects. Caccini, stressing that the function of ornamentation was to underline the emotional content of what was being sung, allowed some additional embellishment, and even encouraged the development of rubato and dynamic effects. Except perhaps for an occasional decoration at important cadences, complex division can have had no place in recitative (especially in view of its status as heightened speech). While simple strophic arias might well have been embellished profusely by some singers, Monteverdi and his contemporaries often made ornamental figures an integral part of their compositional style, so that additional embellishment can hardly have been tolerated. In *Orfeo* (1607) Monteverdi provided an elaborately decorated version above the basic vocal line for the aria 'Possente spirto' (which also has virtuoso instrumental ritornellos). Here – the point at which Orpheus must summon all his rhetorical skills to persuade Charon to allow him across the Styx – the expressive function of such ornamentation is clear (although, ironically, Charon is lulled to sleep rather than moved by Orpheus's eloquence). As the ratio of arias to recitative scenes in Italian operas increased, so the conventions of embellishment changed. By the 18th century, with the firm establishment of the da capo aria as the chief musical 'number' in *opera seria*, singers were clearly expected to ornament the repetition of the initial section of each composition, and they were allowed, as well, to add brief cadenzas to the final cadences of each section, and possibly even to embellish modestly the initial statement of the first section as well as the second. Tosi described the practice, and several arias survive with embellishments written in by 18th-century musicians.

The practice of embellishing Italian instrumental music in the Baroque period involved a gradual evolution from a flexible convention rooted in earlier practice to a more rigidly defined set of options, where in some cases ornamentation was required and in others it was possible but not necessary. Performers were more or less free to add a variety of graces (short, clearly defined ornaments that apply to single notes) in both fast and slow movements, whether or not the composer had indicated them. Thus trills can always be added to cadences, and the music permits the addition of appoggiaturas, mordents, slides, turns and other changing or passing notes (*see* ORNAMENTS and IMPROVISATION). In some instances, notably in slow movements notated only with a structural outline of the melody, it was obligatory for the performer to add more elaborate ornamental figuration. Here one

can see that, over the course of the 17th century, division or diminution techniques rooted in Renaissance practice (but still fostered, particularly in England) gave way to a more sweeping improvisatory style of florid embellishment. The most celebrated written-out exemplar in this style is the 1710 Roger edition of Corelli's op.5 violin sonatas, which has graces for the adagios of part 1 supposedly supplied by the composer. Other examples of florid embellishment for Corelli sonatas survive, most of them in manuscript. Telemann's *Sonate metodiche* (1728, 1732) were advertised as being 'very useful to those who wish to apply themselves to cantabile ornamentation', but the most systematic treatment of the subject comes in Quantz's *Versuch* (1752), where several chapters are devoted to the decoration of simple intervals and then to the manner of treating Adagio movements.

French musicians used a greater number of signs than Italians to indicate a more varied repertory of graces; moreover, they put much less emphasis on the performer's ability to add melodic figuration. Since they normally wrote out instrumental slow movements more completely than Italians, and did not make use of da capo forms in their operas, the principal opportunities for *passaggi* were lacking in French music. Composers such as François Couperin (ii), who prepared a detailed table of graces for his important treatise, *L'art de toucher le clavecin* (1716), advised the performer to pay close attention to the signs indicated in the printed music and to follow the composer's instructions closely – remarks symptomatic of the greater control French composers wished to exercise over the circumstances of performance, and, indeed, of the greater importance of surface detail and refinement of sonority in French musical style in general. Quantz made the point that whereas performers wishing to embellish pieces in the Italian style needed to understand harmony and the principles of composition, no such knowledge was needed for the ornamentation of French music.

Moreover, French musicians were more precise in their application of the principles of rhythmic freedom than musicians in other countries. Performers everywhere and in various historical periods have modified the rhythms notated by composers, and flexibility of rhythm is certainly desirable in Baroque music. The Italian Girolamo Frescobaldi, for example, wrote a series of enlightening prefaces to his volumes of keyboard music in the early 17th century which make clear, among other things, the importance of *tempo rubato* in the performance of his compositions (significantly, he commented that the tempo should be as free in his toccatas as in the madrigals of his day). But 17th- and 18th-century French writers on music (Bacilly, Loulié, J.-M. Hotteterre, François Couperin (ii) and many others) described certain rhythmic modifications that came to be closely associated with the music of their countrymen and which were applied to the written notes in particular situations. Thus, some notes written in equal values were intended to be played unequally. Moderately fast quavers moving stepwise, for example, might be grouped in pairs and each pair played unequally, normally with the first note lengthened (either a lot or a little), but sometimes with the first note shortened and the second lengthened.

When and how to apply the conventions governing rhythmic alteration – especially for notated DOTTED RHYTHMS – in the Baroque era has been one of the most fiercely debated issues in recent years. In some compositions (for example, many French overtures) it may be that a dotted quaver followed by a semiquaver, or even a dotted crotchet followed by a quaver, ought to be performed with the short notes sounding even shorter than written. In some compositions the dotted figures are smoothed out and turned into triplets; and in others equal quavers are dotted, or quaver upbeats are played as semiquavers in order to maintain the pattern of rhythms evidently intended by a composer in a particular movement. Much French music (and indeed much Baroque music of all countries) was derived from dance forms and rhythms, and in performance the underlying rhythmic patterns of the dance must be brought out. All of these slight modifications of the written rhythms – NOTES INÉGALES, over-dotting, under-dotting and dance rhythms – give some of the music of the 17th and 18th centuries, especially that composed in France, its lilting, easy grace and its sophisticated refinement of surface detail.

Composers in the Baroque period, unlike those in earlier times, often used a word or phrase to indicate the approximate tempo at which they wished their compositions to be played: *lento*, *adagio pesante*, *allegro ma non tanto*, and the like. These are inevitably vague, and they often suggest the mood as much as the speed of a composition. Moreover, they were often used inconsistently by composers or defined in contradictory ways by different writers on music from the period. Georg Muffat (*Ausserlesener Instrumental-Music*, 1701) warned that the Italians played movements marked Adagio, Grave and Largo much more slowly than his compatriots, whereas they took those marked Allegro, Vivace and Presto 'incomparably faster'. Yet these terms offer the most precise surviving information about the tempo of Baroque music. Various writers, such as Brossard and Grassineau in their dictionaries of musical terms and Leopold Mozart in his treatise on violin playing, defined these descriptive terms in prose. In addition, Quantz in his treatise on flute playing included a systematic table of groups of tempos, with an approximation of absolute speeds measured against the human pulse (Table 1), and he gave even more precise descriptions of the tempos proper to various dances.

Modern performers have concerned themselves not only with styles of playing Baroque music but also with the revival of precise sonorities. More often than not,

TABLE 1: Tempos indicated by Quantz

(after Donington, *Interpretation of Early Music*, 1974 edn., p.391)
The approximate speeds are given for music in common time; the metronome readings should be doubled for music in *alla breve* time.

Tempo	Speed
1. Allegro assai (including allegro molto, presto, etc)	crotchet = 160
2. Allegro (including poco allegro, vivace, etc)	crotchet = 120
3. Allegretto (including allegro ma non tanto, non troppo, non presto, moderato, etc)	crotchet = 80
4. Adagio cantabile (including cantabile, arioso, pomposo, maestoso, larghetto, soave, dolce, poco andante, affettuoso, alla siciliana, adagio spiritoso, etc)	crotchet = 40
5. Adagio assai (including adagio pesante, lento, largo assai mesto, grave, etc)	crotchet = 20

increased knowledge about the details of Baroque instruments and performing practices has brought with it an increased sensitivity to the sound of older music and a heightened awareness of the connection between musical style and the history of technology. Thus 20th-century instrument makers copied ever more closely the details of surviving instruments of the 17th and 18th centuries in the realization that the so-called 'improvements' of modern technology (often intended to eliminate mechanical disadvantages) may destroy some essential quality of sound. Moreover, modern builders (especially of keyboard instruments) have come to appreciate the vast differences between, say, a 16th-century Italian harpsichord and its 18th-century French counterpart, and have passed on to players and listeners their conviction that the best instrument for a particular piece is the sort for which it was originally intended. The concept of a 'period instrument' is rather different for the violin family from what it is for keyboard and wind instruments where, by and large, the Baroque versions differ so much from their modern equivalents that they are essentially distinct instruments. (No amount of alteration could make an 18th-century flute or trumpet function as a modern instrument.) Violinists, however, still prize 17th- and 18th-century instruments above all others – and many internationally famous violinists perform Romantic and 20th-century repertory on instruments made in the Baroque era but extensively modified since (through resetting the neck, strengthening the bass-bar and substituting a thicker soundpost). One of the paradoxes of the modern world is that while Stradivari is acknowledged as the greatest violin maker of all time, every surviving Stradivari instrument has been altered ('improved') to conform to 19th-century notations of how a violin should sound. Those ('period-instrument') players who feel that Baroque and Classical repertory is best served by instruments set up as they were when the music was composed use either newly made replicas or older instruments restored to their pre-19th-century condition. And, of course, they use bows which, as far as possible, match those in use at the time the music they are playing was composed. Related to this concern to reproduce as exactly as possible the original timbre of older music is the persuasive case scholars have made that older conventions of performance should be observed even when they run counter to modern tastes. Thus, writers such as Winton Dean have argued that castrato roles in Baroque opera should be sung by women (a common 18th-century solution when no castratos were available) rather than by tenors or baritones in transposed versions which destroy the sonorities conceived by the composer. (Assigning castrato roles to countertenors is the most common modern solution to the problem, though it is virtually without historical precedent.)

The increasing use of old instruments or of accurate modern reproductions has in many cases required performers to relearn techniques by studying instruction books published during the 17th and 18th centuries. Thus keyboard players have studied and adopted the fingerings included in such sources as English virginal books or François Couperin's *L'art de toucher le clavecin* (1716; *see* FINGERING, §I, 1). For wind players, the study of Baroque tonguing conventions provides similar insights into articulation and phrasing. Musicians who play on violins (that is to say, violins set up as they would have been in the 17th or 18th century: *see* VIOLIN, §I, 4) have had to learn an entirely new technique, particularly in the use of pre-Tourte bows. While some useful information can be gleaned from the instrumental tutors published before 1750, it is not until the end of the Baroque era that we find treatises written by truly accomplished violinists (Geminiani, Herrando, Leopold Mozart, L'abbé *le fils* and Tartini) addressed to players of more than amateur aspirations. Moreover, violinists must take into account the differences between the more rhythmic, dance-orientated playing technique of the French (described in detail by Georg Muffat in the preface to *Florilegium secundum*, 1698) and the freer singing tone and more varied bowings of the Italian musicians of the period.

Once they have acquired the proper instruments and learnt to play them, modern performers of Baroque music must then decide at what pitch they should play and in which temperament. An international standard pitch was not established until the 20th century. Pitch seems to have varied fairly widely from place to place; and even within one city various pitches were used for different ensembles. Praetorius who (confusingly) reversed what even in 1619 appears to have been the usual application of the terms 'Chor Thon' and 'Cammer Thon', noted the use of other regional variations on these two basic pitch standards. In 18th-century Germany, chamber pitch (Cammerton) was a tone lower than that to which church organs were tuned (Chorton); but a low chamber pitch a minor 3rd beneath Chorton was also used (*see* PITCH, §I, 2). Some modern performers of Baroque chamber music have adopted a lower pitch standard, normalized for convenience a semitone below the modern level (i.e. at *a'* = 415). It is, however, fast becoming recognized that such factors as vocal ranges or the kind of sound quality wanted from string instruments make it appropriate to regard pitch – like so many other aspects of performance – as something which needs to be considered in relation to particular repertories. Similarly, investigation of the way instruments were tuned in earlier times (in various kinds of mean-tone temperament or in other more elastic tunings for keyboard instruments, for example) has shown that old techniques were not only practical but also capable of adding nuances unknown in performance of more recent music. Mean-tone tuning, favoured in the early Baroque period, produces a spectrum in which the most-used chords (broadly speaking, the pivotal chords in keys with fewest accidentals) have beautifully pure 3rds while those in more remote tonalities vibrate with dissonance (or, in the case of the 'wolf' chord, are unusable). The 'circulating' temperaments which became standard in the 18th century (and which are implied by the term 'well tempered') retain something of this chiaroscuro, while allowing modulation through any tonal area.

The modern orchestra had its origins in the lavish ensembles assembled for late 16th- and early 17th-century court festivities, such as the Florentine *intermedi*, the French *ballet de cour* and the English masque (Monteverdi's *Orfeo* orchestra is essentially like this – a spectacularly varied ensemble assembled for a specific court festivity). It became regularized as a relatively fixed ensemble of instruments with strings as its core in the mid-17th century, with Lully's Petits Violons du Roi and the opera orchestras of Venice. The size and disposition of 17th-century orchestras varied enormously. On the one hand, there are reports of Corelli directing ensembles

which would be very large even by modern standards, while on the other we know that he performed concerti grossi in the 1690s with an ensemble of just nine players.

The practice of regularly including a 16′-pitch string instrument on the bass line seems to have originated in Italy in the late 17th century; such an instrument had no place in 17th-century French or English orchestras. A number of these organizations achieved great fame. Lully's orchestral discipline set new standards everywhere in western Europe, and his elaborate instrumentation encouraged wind players to develop new and mechanically improved instruments; the oboe, and the Baroque flute and recorder, probably developed as a direct result of the need for more brilliant and more reliable wind timbres which could combine well with strings in French orchestras. And the orchestra at the court of Mannheim in the 18th century astounded listeners with its refined playing and its control of a variety of effects: diminuendo, crescendo and so on. But these organizations differed in many particulars from the modern orchestra, not only in the types of instruments used and their playing styles, but also in the number of musicians employed, the way they were arranged, and the kinds of balance between strings, wind and continuo instruments they aimed to achieve. The wind parts, for example, were often doubled in 18th-century orchestras, producing a substantial counter-force to the relatively few string players.

As with orchestral music, much choral repertory was likely to have been performed with quite small forces. In the early 1980s Joshua Rifkin initiated a debate (which still continues) when he suggested that Bach may have used very small instrumental and vocal ensembles with, typically, a single voice to each part for performances of his cantatas and Passion settings in Leipzig. Rifkin argued his case on the basis of surviving performing parts and on Bach's own 'Entwurff einer wohlbestallten Kirchen Music' of 1730 in which he described the numbers of musicians he needed to fulful his obligations to the various Leipzig churches. There is evidence that the situation in Leipzig may have been paralleled in many other German centres.

6. 1750–1800.

(i) Continuity and change. Performing practices of the late 18th century followed on with little change from those of the earlier part of the century; however, changes in musical style, experimentation in the construction of musical instruments, and new performing situations and aesthetics all brought changes in performance. It is clear that performing styles continued to undergo gradual change during the course of the 19th and 20th centuries: by the end of the 19th century musicians were playing on instruments vastly different from those of Mozart's time and designed to be part of a new musical aesthetic; the advent of recordings has allowed us to hear the changes that took place during the 20th century, a period in which many performers believed that they continued to follow traditions reaching back to the late 18th. Most performers and audiences from the late 18th century onwards (at least until the mid-20th) were accustomed to performing and hearing most music, whether new or old, in a common style – that suited to the instruments and aesthetic of their own time. What is more, instruments, and in some cases musical perceptions, were considered to have improved with each generation. Thus Mozart reorchestrated Handel's *Messiah*; Beethoven and Brahms wrote cadenzas in their own styles for Mozart's Piano Concerto in D minor K466 (Beethoven's cadenza is much longer and has far wider-ranging modulations than any of Mozart's, and Brahms's has chains of orchestrally conceived tremolo accompaniments unlike anything used by Mozart); Wagner and others 'corrected' Beethoven's symphonies; and late 19th-century singers sang music by Mozart and Verdi very much alike.

Although there had been some interest from the 1950s and even earlier in how the music of Mozart might have been performed, a more general awareness that the study of performing practice could be relevant to music of the late 18th century came about only in the 1970s, as an extension of work on music of the Baroque and earlier periods. The corresponding entry in *The New Grove Dictionary of Music and Musicians* (1980) devoted little space to music after 1750, invoking the idea of continuity of tradition from the mid-18th century to the present, but *The New Grove Dictionary of Musical Instruments* (1984) added an extended discussion on this period. By the end of the 20th century much detailed work had been carried out on performing practices of music after 1750.

(ii) Performer and composer. The relationship between performer and composer remained in the late 18th century much the same as that of the age that preceded it. In a concerto performance the performer was often also the composer, and the work was tailored to his or her talents. A manuscript might be written in a way that only the composer-performer could readily interpret. Leaving aside the cadenzas and *Eingänge* to be added (*see* CADENZA, EINGANG and IMPROVISATION, §II, 4(i)), Mozart, for example, did not fully write out every detail in the solo part of some of his piano concertos but left some passages of figuration in shorthand (e.g. the third movement of K482 and the last movement of K491, in which long notes provide an outline to be realized as passage-work; and K537, where the left-hand part is missing in a number of bars), notated few dynamic nuances, provided figures to indicate that the soloist was to realize a continuo accompaniment in tutti passages, and occasionally left a passage sparely ornamented (as in the Andante of K451, for which Mozart composed an ornamented version at the request of his sister). Composers expected that other professional performers would ornament soloistic works such as concertos or arias as appropriate and in their own individual style: Dittersdorf could comment that as a boy he had once ornamented a piece 'quite in the Huber style' (that is, in a style recognizable as that of Karl Huber, principal violinist of the church orchestra in which Dittersdorf also played). Individualistic interpretation, yet within the bounds of accepted style, was also appreciated, certainly by the end of the century: the pianist Marie Bigot was praised at the beginning of the 19th century by both Haydn and Beethoven, Beethoven remarking 'That is not exactly the character which I wanted to give this piece, but go right on. If it is not wholly mine, it is something better'.

But performers (and audiences) otherwise expected a composer to write with someone particular in mind, providing music that showed off his or her strengths and downplayed weaknesses. Thus Mozart wrote stately old-fashioned arias in *Idomeneo* for the elderly Anton Raaff and remarked of the composition of *Die Entführung aus dem Serail* that he 'had sacrificed something to the flexible throat of Mlle Cavallieri'. Composers were likewise acutely aware of the capabilities of the instruments for

which they wrote: Haydn lamented that Marianne von Genzinger, for whom he was composing some sonatas, did not own a piano by Schantz, his favourite maker, 'because everything can be better expressed' on such an instrument; he further wrote, 'I know I ought to have composed this sonata for the capabilities of your instrument, but I find this difficult because I am no longer used to writing this way' (1790).

In published works, intended for sale to performers not necessarily in direct contact with the composer, notation had to be complete enough to explain the composer's intentions. Thus it tended to become more detailed towards the end of the century, but still left up to the player many details of articulation, dynamic and rhythmic nuance, etc. Burney, for example, commented on hearing the Besozzi brothers (oboe and bassoon) play:

[Their compositions] are in a peculiar manner adapted to display the powers of the performers; but it is difficult to describe their style of playing. Their compositions when printed, give but an imperfect idea of it. So much expression! Such delicacy! Such a perfect acquiescence and agreement together, that many of the passages seem heart-felt sighs, breathed through the same reed. No brilliancy of execution is aimed at, all are notes of meaning. . . . each *forte*, *piano*, *crescendo*, *diminuendo*, and *appoggiatura*, is observed with a minute exactness, which could be attained only by such a long residence and study together (*BurneyFI*, 2/1773).

(iii) Instruments. During the second half of the 18th century the piano replaced the harpsichord, although not everywhere at once. The key-bed of the late 18th-century piano was shallower, the string tension less and the action lighter than those of a modern instrument, all combining to produce a delicate sound and to enable the pianist to play quickly and lightly. Two distinct types of action were in use: the *Prellmechanik* or 'Viennese', with an extremely light touch, favoured in Germany and Austria, and the English, favoured in England and France (*see* PIANOFORTE, §I, 5). Mozart's works from the 1770s were written for a five-octave, wooden-framed piano with small, hard, leather-covered hammers and Viennese action. His own concert instrument (Anton Walter, *c*1780, now in the Mozart Geburthaus, Salzburg) originally had hand stops to raise the dampers; the knee levers were added later. Detailed study of this instrument has revealed that it may have been altered considerably after Mozart's death to conform to the style in vogue around 1800 (Latcham, E1997): thus this instrument, long held as a standard for the performance of Mozart's music, may not provide us with the information we would like to have concerning Mozart's style of playing. But the changes in timbre produced with either hand stops or knee levers were expressive options rather than an integral part of the sound as on a modern piano. The light action is fundamental to the concept of a piece such as the *perpetuum mobile* Presto of the finale of Mozart's concerto K271 (1777); this action also supports the flexibility of dynamics and delicate touch called for by Mozart's many small-scale articulation marks. Beethoven, in the Sonata op.13 (*Pathétique*; 1797–8), used the limitations of the instrument to create a tension that is an essential part of the rhetoric of that work: the gradual crescendo from *p* to *ff* combined with an outward expansion to almost the highest and lowest notes of the instrument seems to push the limits of the instrument and of its musical expression, an effect entirely absent on a modern grand piano with its larger range, sturdier frame and even sound (ex.1). He continued to use instruments of the Viennese type throughout his life. By the mid-1790s Haydn was composing for an instrument with English action; the instrument had a range of five and a half octaves and was heavier than the Viennese piano, with a more sonorous sound and damping that was purposely less effective (Sonata in C, HXVI:50). It was the legato sound concept of the English instruments that came to dominate in the 19th and 20th centuries. According to Czerny, Beethoven described Mozart as having a 'fine but choppy [*zerhacktes*] way of playing, no *ligato*'; this comment must be understood in the context of the instrument in use and of changes in taste.

Woodwind instruments were constructed throughout most of this period, as in the Baroque era, with the idea that each individual note and thus also each scale had a characteristic sound. The oboe of the period, while it tended to have a narrower bore and smaller tone holes than earlier types, still had only two keys; chromatic notes were still produced by cross-fingerings, which had a more veiled sound. It was a softer instrument than the Baroque oboe and played more easily in the high register; the note *f‴* is used in Mozart's Quartet for oboe and strings K370/368*b* (1777) and began to appear in fingering charts in the 1790s. The variety of wind colourings was increased in the late 18th century with the rise of the clarinet and associated instruments such as the basset-horn. Many clarinettists played with the reed against the upper lip rather than the modern position: the reed-above position allowed the player to make rapid leaps and play especially high, while the reed-below position gave the softest tone. The flute began to acquire additional keys late in the century. Tromlitz, writing in 1791, still advocated the use of an instrument with two keys, for E♭ and D♯ (just as Quantz had done), a register (tuning device in the foot joint) and a graduated screw-cork; additional keys could be used to make the first octave more even and trills better in tune, suggesting that players and makers were beginning to move towards a more even sound by the last decade of the century, if not earlier. The added keys, according to Tromlitz, were useful in slow movements but not in fast ones; their use for improved facility was a later development. Both flutes and oboes could be provided with

Ex.1 Beethoven: Sonata op.13, 1st movt, bars 299–310

Allegro molto e con brio

300

p

cresc.

305

ff

several middle joints of varying lengths to accommodate variations in pitch standards in different regions (*see* PITCH).

Tromlitz makes it clear that singing remained the model for instrumental playing, and indicated that players were to use varied patterns of articulation based on tonguing syllables. He favoured finger vibrato (*flattement*), although others were using breath vibrato (*see* VIBRATO). For brass instruments the ability to play the complete scale, so that the instrument could be used melodically, was gaining importance. The art of hand-stopping on the horn, developed around 1750, reached a high level, and by the end of the century various experimental trumpets, for example the keyed trumpet for which Haydn wrote, had appeared.

The late 18th century was a period of transition for string instruments. Greater volume and brilliance began to be required of these instruments in order to fill the larger halls now needed for new audiences. This was achieved in a variety of ways: greater tension was produced through use of higher pitch, the neck began to be tilted back, the strings became longer for more resonance, the bass-bar and soundpost were made more substantial. Gut strings remained the most common, but metal-wound strings were increasingly used on the lower strings of violin, viola and cello towards the end of the century. Treatises of the period recommend a variety of ways of holding the violin, varying from at the breast to the chin-braced grip that would be later universally adopted (L'abbé *le fils*); the latter allowed greater freedom of movement in the left hand for easier shifting, and freer vibrato. The cello was placed between the knees with the weight supported on the calves or supported on a footstool or small peg. Leopold Mozart's influential treatise (*Versuch einer gründlichen Violinschule*, 1756) recommended avoiding unnecessary finger activity, although Galeazzi (*Elementi teorico pratici di musica*, 1791–6) advocated the use of higher positions for expressive purposes, providing violin G-string fingerings up to the 8th position. Open strings were generally avoided when stopped notes were possible, and sequences were played with matching fingerings. Vibrato was generally used sparingly, as an expressive ornament, although Geminiani (*The Art of Playing on the Violin*, 1751) appears to have recommended a continuous vibrato in the modern fashion.

The construction of bows was the subject of much experimentation, with various versions of straight and concave bows being developed. The use of a greater amount of hair and of a ferrule to hold it flat also helped the player achieve greater volume and brilliance. Such bows produced greater volume and a larger dynamic range, and led to the development of new styles of articulation. Convex bows such as that employed by Leopold Mozart commonly produced an articulated, non-legato stroke, with dynamic nuances on long notes for variety of expression. Transitional and Tourte-style bows had a larger repertory of bow strokes, a more immediate attack, and a more sonorous cantabile style. But all these kinds of bow, of old and new design, were used together in the same orchestras, and uniformity of bowing was rare. The variety of instruments and bows in use makes the establishment of a suitable combination for a particular work a difficult matter, and in cases where the composer's preference is not known, the particular relationship that may have existed between the instrument used and the music itself remains unknown. (For further discussion of bows and bowing techniques *see* BOW).

(iv) Performances. All kinds of performances took place, and performers and ensembles were praised for their nuanced dynamics, their ensemble and their good taste. Extensive rehearsal, insisted on by Haydn, and also employed by Mozart to reach his musical ends, (see, for example, his account of the preparations for *Idomeneo*), seems to have been uncommon. Performance traditions varied from place to place: it is clear that we must be careful about general comments. Sources of such information include: documentary material (see, for example, Edge and Eisen, both in 'Performing Mozart's Music', E1991–2); manuscript music (Edge, in Zaslaw, E1996); newspaper reports (McVeigh, E1993); letters (Mozart, Haydn); diaries (Burney, Rosenbaum, Zinzendorf) and autobiographies (Dittersdorf, Dülon, Grétry) of musicians and audience members; works of literature (Fanny Burney); iconography; dictionaries (Rousseau, Koch); and the commentaries of travellers (Burney, Schubart). Burney, for example, provided many accounts of performances heard in the various places he visited in the 1770s, with comments on the performance of church music in various places (noting, for example, that the serpent was an especially favoured accompaniment in France); descriptions of opera houses he visited, with accounts of the sort of music performed, the behaviour of the audience and the technique and talents of the singers; and accounts of private academies and public concerts, noting the size and disposition of the performing forces, and commenting on the use of unusual instruments and on performing techniques, all from the perspective of an educated Englishman. Burney also noted that the French continued to maintain a pronounced independent style of performance and taste in spite of the encroachment of the Italian style.

A keyboard instrument continued to be used in the orchestra in many places to play the continuo line. The instrument was often a piano rather than a harpsichord by the 1780s, and the keyboard player played unobtrusively, doubling the principal parts in the right hand or, in louder passages, playing chords. Mozart played continuo in the tuttis of his piano concertos and according to one report was known to have conducted a symphony from the keyboard. Nannerl Mozart accompanied symphonies on the harpsichord in Salzburg in 1778. By the end of the century, however, as direction of the orchestra passed from the keyboard player to the principal violinist, the keyboard instrument disappeared or else the seat at the keyboard became a position of honour. Haydn 'presided at the keyboard' during performances of his London symphonies in that city, and the honorary function of the instrument was well enough established for Haydn to make it the subject of wit, bringing the instrument forward suddenly as a soloist in the coda of the finale of Symphony no.98.

Orchestra size varied from place to place and according to the performance venue, but there were two general styles of orchestration: the French, followed also in some Austrian and German cities, and the Italian. In the French tradition there was a stronger middle part, and thus more violas; in the Italian, a strong treble and a treble–bass polarity. In many Italian orchestras, and also in Salzburg (see table of orchestra sizes in Zaslaw, E1989, pp.458–9), there were more basses than cellos (*see* ORCHESTRA).

A subject of much discussion has been the use of articulation marks by composers, especially Mozart. In his case it seems most likely that whether the symbol appeared as a dot or a stroke or something in between was in most cases a result of the speed with which he wrote down the music (Riggs, E1997). Clear dots appear under slurs as an indication of *portato*, but otherwise there seems to be no attempt to distinguish between dots and strokes, and indeed it seems clear from examining copies of Mozart's music that his contemporaries did not recognize a distinction. Many theorists from the second half of the 18th century recognized only a single type of articulation marking, which was, according to C.P.E. Bach, to be executed 'according to the length of the note . . . whether the tempo is fast or slow, whether the dynamic is *forte* or *piano*'. Others recognized two signs, but there was no agreement as to their intended articulation. No specific style of performance is implied by either dots or strokes in Mozart's music, except in the case of long strokes in certain works with organ (for example, the church sonata K144) where they appear to indicate that the organ line is to be played unison rather than realized (Eisen, E1991). Rather, interpretation is to be determined by context, according to an understanding of the meaning of the passage. Theorists recognized that different styles of articulation were needed also for notes not provided with articulation marks. Thus according to J.F. Reichardt (*Ueber die Pflichten des Ripien-Violinisten*, 1776): 'the bowstroke in an Adagio is very different from that in an Allegro, and contrasts mainly in that the former remains more on the string than in the Allegro'.

7. THE 19TH CENTURY. It had become increasingly apparent by the end of the 20th century that the idea of continuity of tradition even from the 19th century into the 20th was problematic. In a period of such experimentation and change as the 19th century, exactly whose traditions were continued? And how are they related to what a composer might have heard or envisaged? What especially distinguishes this period is the vast amount of source material: owing to advances in technology and the rise of literacy, there are literally thousands of eyewitness accounts of performers and performances. In part because of this sometimes bewildering variety of material, but also because tradition was long considered eminently satisfactory as a guide, many of even the central works of the modern repertory have not yet appeared in scholarly editions.

(i) Sources. As in any other period of music history, the materials used by musicians themselves are primary evidence of their practices. Manuscript parts and conducting scores from the 19th century exist in abundance, although many were lost in fires or wars or just thrown away to make room for the new. A complete set of manuscript material associated with the origin of a work is usually as good a record of its early performance history as of its compositional genesis. Players liked to sign and date their parts; alterations to the musical text bespeak the decisions made while preparing the work for its première, the compromises reached between composers and performers, and the lessons learnt by composers from the players. The number of parts alone tells a great deal about the size of the performing forces. Original manuscript parts often resolve dilemmas resulting from printer's errors or other interruptions in the transmission of the composer's intention to the printed page. Assessment of such materials – without which there would be neither a Paris *Don Carlos* nor a viable *Benvenuto Cellini* – is one of the most intriguing tasks of modern musicology. Standards in such musicological investigation have been set by new complete editions of the works of Rossini, Verdi and Wagner.

Published music too needs careful study. Chopin, for example, published works simultaneously in France, Germany and England, resulting in as many as half a dozen authentic sources for a single work. Editors must separate the intentional discrepancies from the unintentional, and determine which variants are so substantial as to merit publication of separate versions, considering at the same time that some elements may have been considered variable by the composer: there may be no one 'correct' version.

Other useful material includes opera production books, the manuscript notebooks in which singers kept track of their cadenzas (e.g. those of Laure Cinti-Damoreau) and the corrected or amplified published editions of composers' works prepared for their pupils, as in the case of Jane Stirling's copies of Chopin. Iconographical sources, including lithographs and photographs, depict costumes, sets, and the disposition of the singers at an opera, the number and disposition of orchestral players, methods of holding instruments, and performance spaces and situations. Method books, many intended for the training of professional performers, offer information on instruments, sound production, performing techniques and interpretation (a useful bibliography of these appears in Brown and Sadie, A1989). Treatises on orchestration (Kastner, 1837; Berlioz, F1843; Gevaert, 1863 and 1885; Prout, 1876, 1897–9) discuss instruments, their tone qualities and their use, orchestral placement and what the writer felt could be improved; those on conducting (Berlioz, 1856; Wagner, F1869) discuss techniques and philosophies of performance. Berlioz insisted on the conductor's responsibility to follow the composer's intent, while later treatises, such as that of Wagner, favour schemes for modernizing works to suit the large symphony orchestra.

The writings of composers (Berlioz, Spohr, Wagner), performers (William Thomas Parke, Gustave-Hippolyte Roger) and bystanders (Chorley) provide much important material. Berlioz in his *Mémoires*, for example, described musical conditions in Paris, and also recounted in vivid style the problems encountered in the course of his tours: the logistics of raising orchestras and hiring halls, playing standards, rehearsal practices, and practices of substitution when instruments such as the english horn were unavailable. Accounts in periodicals provide information about dates of performance, the progress of tours and performance repertory. The reports of critics are often revealing. Composer-critics (E.T.A. Hoffmann, Weber, Schumann, Berlioz, Liszt, Wagner) in particular were sensitive to details of performance, sometimes even discussing a particular artist's style of ornamentation. In any event, newspaper journalism is more accurate as to who actually played than the printed programmes, and it is our chief source for understanding how performances were received by the public. The RIPM project (Répertoire International de la Presse Musicale) indexes 19th-century

periodicals, providing scholars with access to much useful material.

Edison's tinfoil phonograph (1877) inaugurated the era of sound reproduction, offering an important new type of source for the study of performing practice. The early technology worked most successfully with solo instrumentalists, who could get close to the recording apparatus: Joachim and Sarasate both left revealing recorded performances. Joachim, for example, played in a style using little vibrato. Singers too were successfully recorded, and many of their earliest recordings document 19th-century styles. Maurel and Tamagno, the first Othello and Iago (Verdi, *Otello*), made recordings in the early years of the 20th century, as did Adelina Patti, a singer well known to Verdi, who praised her 'purest style of singing'. The last castrato of the Cappella Sistina, Alessandro Moreschi, also left recordings, our only aural documents of this voice quality of such importance to Roman Catholic church music and to 18th-century opera. Although he was the last of a dying tradition, his voice is like nothing else, reaching into the high range with great power and clarity. But even more astonishing to modern ears is his singing style, which is truly that of his age, making heavy use of portamento and dramatic sobbing effects. The seriousness of intent of the modern discipline of performing practice still finds such obvious emotion a little embarrassing.

(ii) The orchestra. Central to the musical life of the 19th century was the rise of the philharmonic society and the symphony orchestras. The Paris Société des Concerts du Conservatoire was founded in 1828, inspired by curiosity about Beethoven's music; the Philharmonic Symphony Society of New York and the Vienna Philharmonic both trace their origin to 1842. The Leipzig Gewandhaus Orchestra flourished under Mendelssohn from 1835. Concerts sponsored by the Philharmonic Society of London can be traced to 1813, as can those of the Vienna Gesellschaft der Musikfreunde. Characteristic of these orchestras was a clear breach with continuo practice, public concert series supported by subscription and leadership by a true conductor. The orchestra of the 19th century was a youthful institution, not yet constrained by precedents. Spohr experimented in the 1810s with his *Taktirstäbchen* ('directing baton'), which replaced the violin bow, and along with Weber gave rise to modern conducting and to discussions of the proper role of the composer-conductor. By contrast, Spontini and others conducted with a baton held in the centre, and all manner of stamping of the floor and tapping on candle racks was considered by many to be the only successful way to coordinate a performance (although these practices, it must be added, were deplored by many).

Orchestral seating arrangements were varied. The members of the Gewandhaus Orchestra stood to perform, but other orchestras were seated. Proper balance between chorus and orchestra was achieved by Berlioz and others by placing the orchestra behind the chorus on raised tiers. For the popular monster concert the conductor was to be found in the centre of his forces, surrounded by assistant conductors and mirrors. From the 1860s Verdi devoted considerable attention to the seating arrangement of his orchestras, insisting that the double basses be placed together to improve ensemble and that the strings surround the wind instruments to create a homogeneous sound (*see* ORCHESTRA).

Four bassoons had been common in many orchestras since the 18th century, but the practice of doubling the wind section gained momentum as the century progressed. The addition of piccolo, english horn, contrabassoon and other instruments vastly enhanced the symphonic palette. An equally sweeping change in the sound of orchestras resulted from new mechanisms for the traditional instruments. These allowed instrumentalists to master the vivid melodic figurations and the new spectrum of keys that progressive composers required. But the increase in the number of keys on woodwind instruments was only part of the story of the performing practice of those instruments: there were many experiments in key configuration, in bore proportions and sound-producing mechanisms: some clarinettists (especially in England and Italy) were still playing with the reed against the upper lip in the 1830s, and for all the woodwinds there were several competing concepts of sound, which led to different styles of instrument in different places and sometimes even to the use of radically different instruments within the same orchestra (*see* FLUTE §4(iii)(d)). This lack of uniformity kept orchestras individual and colourful in sound.

From the same period come piston and rotary valves for brass instruments (*see* VALVE (i)). By the end of the 1820s piston-valves were common in Paris, and by mid-century rotary valves of increasing technical perfection were widely used. But, as with woodwinds, local tastes varied. There was considerable resistance to the valve horn, as the characteristic inequalities of tone of the natural horn were considered essential to the nature of the instrument. Although a valve horn class was established under Meifred at the Paris Conservatoire in 1833, it was discontinued on his retirement in 1864 and not reformed until 1896. Brahms's Trio op.40 (1865) was conceived with the natural horn in mind. Schumann, on the other hand, worked to develop an idiomatic technique for the valve horn. The bass of the brass section was particularly variable as early valves were not effective with the wide bore of the large instruments: the serpent was employed by Berlioz and Mendelssohn, and the ophicleide remained in use at the Paris Opéra until 1874 and in English orchestras until the end of the century. Different styles of instrument developed in different places: Wieprecht's Bass-Tuba in F (1835) in Germany; the tuba in 8′ C, with its large four-octave range, in France (works written with this instrument in mind pose difficulties for players using other instruments); the bombardon in Italy; and Červený's large-bore instrument in eastern Europe and Russia (from the early 1880s).

The conversion of string instruments into the high-powered models now almost universally in use resulted in a dramatic change in string sonority. It is thought that fewer than 30 or so good violins escaped remodelling for volume, a process that lengthened necks and fingerboards, heightened bridges and permitted the increased tension of metal strings. The widespread adoption of the Tourte bow almost completed the modernization of the violin: gut E and A strings remained in use into the 20th century.

The philharmonic societies were adventurous in their choice of repertory, at least in the first half of the century (music by Beethoven held a special fascination for many) but by the 1850s works by popular favourites such as Weber and Mendelssohn were programmed season after season. Old masters began to dominate concert programmes just as they do today. Enthusiasm for novelty

slackened as the decades passed, and responsibility for promotion of new music largely shifted to more progressive organizations.

(iii) The piano. Like other instruments, the piano developed along somewhat different lines in different places. The simple and light action of the enlarged Viennese piano of Graf and Stein was favoured in parts of Europe for most of the century, though the London instruments of Broadwood and Clementi had their admirers. By the 1820s metal framing had been added to the piano to allow it to support the greater string tension required for greater volume, at the expense, it was held, of some degree of nuance. The repetition action patented by Sébastien Erard in 1821 made the heavier-tensioned instruments workable. Combined with the greater mass of felt-covered hammers (from the 1840s) and carefully devised striking points (in which Erard was also a pioneer), the resultant tone was more sustained, richer in overtones and more uniform throughout the compass of the instrument. But the widespread assumption that by the 1860s the piano, with its one-piece cast-iron frame, had reached a final plateau of development is demonstrably false. The tone of the 1892 Steinway concert grand in the Smithsonian Institution, used by Paderewski for an American tour, projects a velvety mellowness quite unlike the steely, more brilliant tone of comparable instruments of the late 20th century.

(iv) Performance and interpretation. During the 19th century, advances in technology allowed music, and musicians, to travel further afield. Travelling virtuosos required modern instruments and skilled instrumentalists when they arrived to perform, and often stimulated progress in cities and towns formerly content with indifferent standards. As early as the 1830s a successful opera at La Scala would be required within a season or two in London, Paris, Vienna and St Petersburg (the commercial ramifications of this were quickly recognized, by the house of Ricordi in particular). Wagner's music reached Boston within a few months. Musical compositions, in short, strayed further and further from home, and the increasingly complex annotations in published music reflect these developments (*see also* ORNAMENTS, §9).

Even so, individual markings were not always interpreted in the same way. Spohr, for example, used vertical strokes over notes to indicate, in different contexts, legato bowing and short, sharp *martelé* strokes. Many composers employed both dots and strokes, but the notation did not always have the same meaning. The French generally followed J.L. Adam (*Méthode du piano du Conservatoire*, 1802) in using the marks to indicate the length of notes: he gave the strokes as the shortest, the dots as longer and dots under slurs as the longest. But Germans emphasized the degree of accent: Fröhlich (*Kontrabass-Schule*, 1829) considered that strokes indicated the more powerful staccato, the dots a more gentle style. Baillot (*L'art du violon: nouvelle méthode*, F1834) used the dot for *martelé*, where the bow stays in contact with the string, and the wedge for light bouncing strokes, whereas Ferdinand David (*Violinschule*, 1863) used the marks in the opposite way (Brown, E1993). (For further discussion of bowing in this period, *see* BOW, §II, 3).

The existence of different pitch standards in different places as well as a general rising trend brought demands for an international standard (*see* PITCH, §I). A standard of *a′* = 435 (the *diapason normal*) was established in Paris in 1859. It was soon adopted in Britain, and more generally at an international conference in Vienna in 1885. But although some Italian opera houses adopted the new standard in the late 1860s, Verdi found it necessary to inquire in 1871 whether the wind in the orchestra and the stage band at La Scala would play at a uniform pitch level, and when on tour in the final decade of the century the clarinettist Richard Mühlfeld sent a tuning-fork ahead so that the piano might be tuned to his preferred pitch; his instruments suggest that this was about *a′* = 440, lower than was usual in many places by that time.

The rise of the modern conservatory considerably elevated standards of performance. Important conservatories existed in Paris (1794, reorganized 1816), Prague (1811), Vienna (1817), Leipzig (1843) and St Petersburg (1862). Graduates had a systematic training and attained a new technical security, prompting them to extend the technical possibilities of their instruments. The Paris Conservatoire was especially influential through the many method books produced by its instructors. As the century progressed, conservatory teachers seem to have done much to establish what has become the standard repertory.

Amateur music-making was similar to that in the preceding century. Properly bred young ladies studied the piano and harp; aristocratic dilettantes still played the flute. As mechanization made the piano cheaper to produce, it found its way into the parlour of every tasteful family. Music was more popular than ever, and a proper view of the performance history of, say, Meyerbeer's *Robert le diable* will not exclude the piano fantasies and the promenade quadrilles based on it, just as the study of performing practice in general must also deal with such durable traditions as the performance of Handel's *Messiah* by a large massed chorus, with soloists producing a sound capable of filling the large halls in which the performances took place.

The musical text was often treated with greater freedom in the 19th century than was acceptable in the 20th. Liszt, for example, noted after his retirement from concert-giving that

> I then frequently performed . . . the works of Beethoven, Weber and Hummel, and I confess to my shame that in order to compel the bravos of an audience . . . I had no scruples against changing their tempos and intentions; I even went so far as insolently to add to them a host of passages and cadenzas.

One can therefore understand Berlioz's surprise on the occasion when Liszt performed Beethoven's Hammerklavier Sonata with 'not a note . . . left out, not one added'. In spite of his penitence, the 'tradition' passed on by Liszt in his later years to numerous pupils like the young Rosenthal was one in which editorial licence was taken for granted. In private and public performances solo works and sometimes even concertos were preceded by improvised (or prepared) preludes designed to set the mood. Sometimes works were joined together with similar interludes.

The invention of the metronome gave composers another means of documenting their wishes. Beethoven, in his initial enthusiasm, wrote down metronome marks for all the symphonies and quartets to op.95 (as well as for the Piano Sonata op.106 and a few slighter works). He placed great faith in the metronome, yet new markings devised as substitutes for those he had lost were often

significantly different: Beethoven's marks represent how he imagined the work in his head at the time. Whether these marks are performable or not has been the subject of much discussion. Schumann provided metronome markings in most major genres except the songs (those for the piano music were revised after his death by his wife and may indicate her tempos rather than his). The belief that Robert Schumann's metronome was faulty was not shared by the composer. But how is a marking such as the 'Nicht schnell ♩ = 100', given in the first edition (1850) of the third of his *Romanzen* op.94 for oboe and piano, to be used? This work, like many others, progresses through a detailed series of tempo modifications: *ritard*, *in tempo*, *zurückhaltend*, and so on, and the metronome marking can indicate only a starting- point. Later in the century Brahms and Wagner registered their strong reservations about metronome markings, Brahms noting that 'As far at least as my experience goes, everybody has, sooner or later, withdrawn his metronome marks'. Brahms seems to have considered his painstaking written designations as the best indications of tempo, and contemporary timings and his own metronome markings provide clues about what the speed might have been. He considered tempo to be fluid, and that *accelerando* and *ritardando* were essential in achieving the desired expression. (For further discussion of the implications of metronome markings for performing practice *see* METRONOME (i).)

It is not clear how much freedom to vary the pulse was sanctioned by 19th-century performers. Czerny considered rubato to be an important means of expression, recognizing 11 types of subtle rhythmic deviation (all determined by the emotion of the passage) within the framework of constant tempo. As used by Chopin in his early works, 'rubato' probably referred to the practice of allowing the melody to fall behind the regular pulse provided by the bass. According to Liszt, rubato was a matter of taste: 'a metronomical performance is certainly tiresome and nonsensical: time and rhythm must be adapted to and identified with the melody, the harmony, the accent and poetry'.

Practices of ornamentation were varied. Italian opera was embellished well into the century and a number of examples of the practice are preserved, including those for arias by Rossini, Donizetti, Bellini and others prepared by the soprano Laure Cinti-Damoreau (*Méthode*, 1849). Both Rossini and Verdi, however, disapproved of the excessive interpolation of embellishments into their music. At the end of the 20th century the question of adding embellishment to Schubert's music was the subject of discussion. Johann Michael Vogl, who often sang with Schubert, left ornamented versions of many songs. Yet the musical style with which Schubert can be more generally associated seems to have used little added embellishment, even though contemporaries such as Hummel allowed some. With composers such as Hummel, whose *Anweisung* (1828) advocates principal-note starts for trills, the trill became less an intensifier of harmony and more an element of texture. Beginning with the generation of Mendelssohn and Schumann, most trills are to be played starting on the main note and unterminated unless specified otherwise. However, Fétis and Moscheles (*Méthode des méthodes*, 1840) continued to advocate an upper-note start.

Attempts in the final decades of the 20th century to produce performances of 19th-century music in historically informed styles revealed excellent reasons for doing so and for continuing to investigate and experiment with the repertories and performance styles of the century: a metronome marking close to Beethoven's own points up, for example, the multi-level metric complexity of a movement such as the Scherzo of the Third Symphony (Orchestre Révolutionnaire et Romantique, cond. John Eliot Gardiner, DG 445 944–2, 1994); the characteristic sound of the ophicleide creates a colourful bass, admirably suited to Mendelssohn's luminous orchestration (*Midsummer Night's Dream* overture, Orchestra of the Age of Enlightenment, cond. Charles Mackerras, Virgin VC 90725–2, 1988); the four Erard harps in the *Valse* of Berlioz's *Symphonie fantastique*, placed in Roger Norrington's recording (London Classical Players, EMI CDC 7 49541 2, 1989) at the front of the orchestra as Berlioz had recommended, stunningly dominate the texture. Many such popular works had been, by the end of the 20th century, recorded in several different historically informed interpretations.

8. THE 20TH CENTURY. Music historians are able to study the performing practice of the 20th century quite differently from that of earlier centuries because of the development of sound recording. For the first time in history, the performances themselves were preserved, rather than just documentary evidence about them. This had a profound effect on performance during the 20th century. The dissemination of recordings meant that musicians could hear themselves, and could influence each other more directly than in earlier periods. The performing practice of one generation was also preserved for study by later generations, giving them unprecedented insight into the development of their own performing practice.

A survey of recordings over the 20th century reveals a number of clear trends: the growing use of continuous vibrato, the decreasing use of portamento, a trend towards a narrower range of tempos within movements, a trend towards more accurate and literal interpretation of note values, a growing insistence on rhythmic clarity, a trend towards greater homogeneity of ensemble (in tone quality, phrasing and rhythm) and a general rise in standards of accuracy and discipline. There was also a tendency towards increasing volume, and greater force and intensity of expression, which was associated with changes in instruments during the century.

The brilliant-toned metal flute, first adopted by the French, largely replaced the softer-toned wooden flute (except in period performance) by the second half of the century; the fuller-toned German bassoon largely replaced the quieter, more subtle French bassoon; violinists increasingly adopted the metal E string from the 1930s onwards, and more powerful bow-holds came to predominate over the traditional 19th-century grips used by Joachim's generation. Brass instruments tended during the century to become wider in bore, producing a broader, more massive tone. The powerful concert Steinway piano came to predominate in the second half of the century; earlier pianists had used a variety of makes of piano, many of them lighter in touch and more delicate in tone.

The increasing power of instruments was associated with a general increase in the use of vibrato to intensify tone. In the early years of the century, vibrato was used only to a very limited extent by wind players, and most

did not use it at all. Many string players adhered to Joachim's advice: 'A violinist whose taste is refined and healthy will always recognize the steady tone as the ruling one'. Ysaÿe encouraged a trend towards a more liberal (though delicate) use of vibrato, but it was Kreisler, closely followed by Heifetz, who initiated the continuous use of vibrato on the violin, which was echoed in viola and cello playing. The use of vibrato by woodwind players similarly increased during the century. It was led by the French, particularly pupils of the flautist Paul Taffanel, and it had spread, on both the flute and the oboe, to most of Europe and the USA by the 1940s. The spread of vibrato was less general on the bassoon, and only sporadic among clarinettists.

Singing followed the general trend towards greater power, together with wider, more continuous vibrato. Though vocal styles in the early years of the century varied greatly, much of the singing of the period was more delicate, and more restrained in its vibrato, than later in the century.

While power and the use of vibrato generally increased, the use of portamento decreased. Until the 1930s, the habitual use of emphatic portamento was common among string players. The trend towards more sparing and subtle portamento was encouraged by a number of prominent players and teachers, including Flesch on the violin and Casals on the cello. This involved not only changes in shifting technique and choice of fingerings, but also a fundamental change in attitude to portamento as an ornament in a melodic line. Portamento which occurred simply as a convenient way of moving from one position to another gradually became unacceptable. Among singers there was a similar trend from frequent and prominent portamento towards a preference for lines in which portamento was reserved for points of particular emphasis or softening.

There were major changes during the century in approaches to rhythm, with a general tendency towards the more literal interpretation of note values. In the early part of the century, musicians often 'over-dotted' dotted rhythms (see above, §5) and lightened and hurried groups of short notes. This freedom on the small scale was paralleled by freedom on the larger scale: tempo was often flexible within movements, tending to accelerate in loud and vigorous passages, and to slow down in quieter and more gentle ones, so that a second subject in a movement of a sonata or symphony would often be given a quite different tempo from the first subject. Such freedom, both in detail and on the large scale, gradually lessened. The hurrying of short notes and the over-dotting of dotted rhythms came to be regarded as undisciplined and unclear, and acceleration came to denote lack of control. That is not to say that all freedom was lost, only that it was more restrained than earlier in the century.

This development was associated with a trend towards greater clarity and rhythmic precision, which was linked in turn with discipline and rehearsal. Most early 20th-century orchestras were rhythmically imprecise by later standards, partly because many of them were under-rehearsed and irregular in their membership (the sending of deputies to rehearsals in Paris and London, for example, was deplored by Stravinsky and Henry Wood). But the trend towards modern precision was not simply a matter of more rehearsal time. Session musicians in the late 20th century routinely achieved rhythmic precision with little rehearsal, whereas regular and thoroughly rehearsed ensembles of the early 20th century, such as Stokowski's Philadelphia Orchestra, and the Léner and Bohemian quartets, played with a looser approach to rhythmic detail. The difference was a matter not just of competence but also of expectation and style. Even solo pianists of the early 20th century were, compared to later pianists, informal in their approach to rhythm. The arpeggiating of chords, and styles of rubato which often led to lack of synchronization between melody and accompaniment, were practised, to a varying extent, by pianists of many different schools and nationalities.

Such freedom was not restricted to pianists. Solo instrumentalists and singers in the early 20th century were often freer in relation to accompanists than musicians of later generations. This kind of freedom, between solo and accompaniment, and between the two hands of a pianist, was clearly linked to earlier styles of *tempo rubato* described in the 18th and 19th centuries. The trend later in the 20th century was towards a stricter approach to rhythmic coordination.

Alongside these general trends, various forces were at work during the century, including the development of recording and its industry. At the beginning of the century, all musicians played either to themselves or to an audience which heard the performance only once. By the end of the century the principal means of hearing classical music was by recordings, which could be repeated many times. This development had a subtle but profound influence on performing practice. At the beginning of the century there were substantial contrasts between performers in different countries and of different schools, but as the century wore on a growing uniformity of style and approach could be discerned, as the availability of recordings (and the general development of international communication and transport) enabled musicians to be influenced by each other. At the beginning of the century, minor inaccuracies during a performance were of little importance; the overriding aim was to convey the thrust of the piece of music to an audience which might rarely hear it again. By the end of the century, recordings had accustomed both musicians and audiences to expect a very high standard of competence and accuracy, an expectation enhanced by the development of sophisticated editing techniques. Recordings also enabled musicians to listen to themselves and to learn exactly what they sounded like. The late 20th-century musician was therefore selfconscious to a degree which had been impossible before the invention of recording. This too contributed to the general increase in accuracy, and to the gradual refinement of the habits associated with a less selfconscious age, such as the routine use of portamento and the rhythmic looseness of traditional rubato. The abandonment of old habits, however, was largely restricted to performers of 'classical' music. Rubato independent of the beat continued to be an essential component of the new jazz and popular performing styles. As the split between classical and popular music widened, classical performance became more strictly controlled and more concerned with precision of detail and faithfulness to the text, leaving some of the traditional freedoms to the popular genres. It is as if classical performers felt obliged to demonstrate that they were serious by distancing their styles from those of popular performers.

A new influence on performance in the second half of the century was the growth of interest in the reconstruction of historical performing practice. A few musicians (notably the Dolmetsch family) had pioneered the use of period instruments since the late 19th century, and the performance of 'old music' had always been carried on by small numbers of specialists. But from the 1960s onwards there was an enormous growth in the performance of Renaissance and medieval music by groups performing on period instruments (originals or reproductions) and attempting period vocal styles. The use of period instruments not only extended the performed repertory back to earlier and earlier music, but also provided a new approach to the familiar repertory of the 18th and 19th centuries. For further discussion *see* EARLY MUSIC.

The end of the century saw contrasted approaches to performance co-existing side by side. In new music, late 20th-century composers ranged from those who wished to exert strict control over every detail of performance to those who wished to control almost nothing (*see* ALEATORY), or for whom conventional concepts of performance had ceased to be meaningful. As the period movement reached early 20th-century repertory, such as the music of Elgar, a new contrast became apparent: between period-style Elgar as performed in the late 20th century, and Elgar's own recorded performances from the 1920s. Knowledge of historical recordings began to reveal, for the first time, the extent to which attempts to reconstruct earlier performing styles take place within the conventions of the performer's own time.

II. Non-Western and traditional music

1. Introduction. 2. Definition. 3. Sources. 4. Scholarly approaches and issues.

1. Introduction. This section will focus on studies of performing practices worldwide conducted primarily by ethnomusicologists. An outline of the range of meanings denoted by performing practice is followed by a survey of sources for the study of performing practice and their approaches, the central issues that have arisen and some applications of knowledge about performing practice.

Not all ethnomusicologists use the term performing practice, but most have studied it. The term, or its more common variant 'performance practice', figures relatively rarely in titles of books or articles and is missing from the index of definitive works on ethnomusicology, but this does not indicate a lack of interest. Rather, performing practice is so central to knowledge of the world's musics that it has usually been integrated into studies rather than set aside as an independent field of study. Performing practice has, in fact, been one of the prime areas of ethnomusicological investigation, particularly in the third quarter of the 20th century, when many studies of non-Western and other traditional musics were devoted to defining normative performance.

While some ethnomusicologists have studied questions of performing practice as a direct outgrowth of Western musicology and have brought to this study the issues raised by historical musicologists, others have been impelled by their involvement in performance and a consequent need to make sense of musical practice. Still others are motivated by anthropologically or sociologically informed interests in human behaviour. The influence of practice theory and the work of Pierre Bourdieu, in particular, is extensive and growing.

The issues that occupy scholars and performers of Western art music, specifically those concerning authenticity and the feasibility and desirability of re-creating earlier European performing practices, have no direct analogies in ethnomusicology. There is widespread and largely tacit agreement, however, that performing practice can and should be studied. Conflicts may arise between champions of contemporary practice and scholars of older ones, but these are relatively infrequent. A notable instance is the mixed reception in Japan of revisionist histories of Japanese court music by Laurence Picken and associates (see Picken, 1982–90). Considerable efforts have been made in various parts of the world to document older practices that appear to be changing or vanishing altogether, but this is rarely done for the sake of historically accurate reconstruction. The vast majority of performer-scholars do not attempt to reinstate earlier practices, by choice or for lack of evidence. Rather, fidelity to teachers' models and observed practice are the rule. This is due in part to the predominance of non-native scholarship and the resultant deference towards experts born into the tradition. As scholars (and some performers) have developed more sophisticated understanding of longstanding processes of cultural exchange and change in virtually every part of the world, notions of purity and authenticity have become irrelevant except as tropes in local discourses on music that may themselves become the subject of study. Similarly, musics which were once presumed to be 'hybrid' or 'impure' and therefore unworthy of study are now the focus of considerable scholarly attention as are processes of change.

2. Definition. Performing practice is generally understood by ethnomusicologists to refer to the conventions that govern music-making and accompanying activities, such as dance, theatre and ritual in a socially, culturally and historically defined context. These conventions delimit a range of appropriate choices in performance and, increasingly, are understood to be situated, negotiable and often gendered. In other words, despite their apparent stability they are subject to change and highly dependent on context and power relations between performers and others who influence performances, such as patrons, scholars and audiences. For the most part, the conventions of performing practice are unwritten and, in some cases, unarticulated, but they are nonetheless observable in performance. They extend beyond a single composition, being linked to or defined for a particular time period, group of musicians, set of pieces – a single genre, an entire repertory – and types of performance.

Ethnomusicologists have been mostly concerned with that which is traditional and typical and with variations thereon. Ethnomusicological research stresses the synchronic over the historical; most publications concern contemporary performing practice, not because of a lack of interest in earlier practices or an assumption that current practice is essentially the same as earlier practice, but because of the difficulty of pursuing historical research in musical traditions that are primarily or exclusively transmitted orally/aurally.

In ethnomusicological writing there is overlap between the concepts of 'performing practice' and 'style' since both terms refer to ways of doing. Yet the two concepts are usually distinguishable; 'style' often refers to the way a piece is composed regardless of the way it is performed (performing practice), or about certain ways of performing those pieces. Style does not cover such aspects as piece selection, a piece's transformation within performance, or instrumentation and orchestration (role assignment), which define the constitution of ensemble. These issues belong to the domain of performing practice.

Performing practice is thus related to but at least partly separable from the pieces performed. But what is the piece? Transferring performing practice as it is used in Western musicology requires that ethnomusicologists distinguish between an item (song, composition or piece) and its normative realizations. Studies of performing practice for notated musics may deal with aspects of

interpretation similar to those considered by scholars of European art music. But the concept of performing practice is also viable in traditions where notation either does not exist or plays a less central role, such as when it is used for archival or pedagogical reasons, but not in performance. Thus, it is more useful to think of performing practice as a range of possibilities for realizing some sort of representation of a piece; this representation may be written in great detail, sketched in mnemonics or a completely mental phenomenon.

Almost every kind of music-making is less reifiable as text than most European art music, partly because much of it is not notated. Even for Japanese, Chinese, Arab and Javanese traditions of musical notation, where this distinction between 'text' and 'act' (Taruskin, 1995, p.356) might seem clear, there may be problems due to the necessity of aurally transmitted knowledge for interpretation. When no notation is used, defining realization in performance can be complicated. For instance, solo improvisations such as the Middle Eastern *taqasim* are open to such variations that one can only describe a performance, not prescribe a specific *taqsim*. Yet much can be said about the performing practice associated with *taqasim*, as Scott Marcus does in his study of common patterns of modulation in Middle Eastern improvisation (1992). Even when a piece is notated, one must ask whether the notation represents the most important aspects of the piece or simply the ones that are easiest to write down or are most likely to be needed by less experienced performers. In Javanese gamelan music, for example, the commonly notated *balungan* is only one melodic strand and may not be the most important. Some performers and scholars maintain that an unplayed melody abstracted from the live sound and heard only in the musicians' heads is the best representation of the piece. This has generated substantial discussion of the nature of this essence and its realizations (Sutton, 1979; Sumarsam, 1984; Perlman, 1994).

Even in the most integrated cases, such as improvised performances where the abstract concept of a constant composition hardly applies, distinguishing between the structure that is created in performance and the performing practice with which that structure is created provides two complementary perspectives on the performance. The problem of filtering performing practice can be reformulated by defining performing practice not with respect to the details of a particular piece, but as the things musicians must know in order to perform a certain group of pieces or even an entire repertory suitable for ceremonies, nightclub shows or formal concerts. The questions that could be asked concern appropriateness: which sort of piece, performed by whom, when and how.

3. Sources. Sources for the study of performing practice, and hence the methods of study, vary greatly among different musics. Ethnomusicologists undertake ethnographic studies of current practice, elicitation of oral histories and analysis of notation that draw on written and iconographic materials. They also rely on older recordings and archaeological evidence where available.

(i) Ethnographic data and performance study. Since the early 1960s ethnomusicologists have favoured working in the present, conducting interviews, observing performances, recording and, perhaps more important than anything else, pursuing practical study from a variety of musicians. Ethnographic work contrasts with the methods of historical musicologists owing to the availability of living sources. Often a substantial portion of performing practice is implicit, deducible from the actions of experienced performers in particular circumstances. The scope of the unsaid varies greatly, requiring a variety of approaches to eliciting that which has not yet been articulated in words. Often the most fruitful approach is practical study which enables the scholar to participate in performance, experiencing the working of conventions from within and gauging responses to his or her musical choices (Kippen, 1992; Brinner, 1995).

(ii) Oral history. In order to study both performing practice of earlier times and change over time, observation of and participation in contemporary practice are clearly insufficient. Eliciting oral histories is an approach used worldwide. Interviewers seek to document changes within living memory and hope for echoes of still earlier practices. For completely non-literate societies this is the primary and often sole resource of historical study.

(iii) Notation. Many musical traditions rely on some form of notation, but the 'notes themselves' often lack crucial information as to how they are to be performed. Tablature for the Chinese *qin*, for example, includes precise indications for playing techniques, but durations are left to the player's interpretation, which is informed though not fully determined by performing practice handed down from teacher to pupil. In this case, as in many others, the notation serves largely as a set of mnemonics for a repertory that has been transmitted and memorized in a fundamentally aural manner. Practice can change substantially under these conditions, as demonstrated by Picken and other researchers who examined early notation of music exported to medieval Japan from Tang dynasty China; evidence demonstrates that crucial aspects of performing practice, particularly tempo and ornamentation, must have changed significantly over the past 1000 years, even as the same pieces continued to be played by *gagaku* musicians (Marett, 1986). Based on this material, as well as evidence from medieval Europe and Central Asia, Picken has proposed a far-reaching continuum of performing practice in dance music (1982–90, ii). The introduction of notation is likely to alter performing practice substantially in a formerly aural tradition, as shown in Ruth Davis's study of Tunisian performing practice (1992).

(iv) Textual evidence. Written sources that document earlier performing practice include comments attached to notation, descriptions of performances and lists of performers or ensembles. Comments on notation may convey information about variations in performing practice, with possible repetitions or substitutions indicated, for example. Texts concerning performances and performers may indicate what was played in particular circumstances, including the constitution of an ensemble, the sequence of pieces or genres and the interaction between performers and audience. For instance, George Sawa has shown continuities between medieval and modern Arab performing practice in his interpretation of 10th-century Arab treatises (1989) and Carol Meyers has speculated on the type of music performed by Jewish women in biblical times, based on passages in the Bible (Marshall, 1993). There are also examples of recent music traditions. The recovery of African retentions in early African-American musical practice based on accounts of slaves

written by whites is a particularly large and varied project of this sort.

(v) Archaeological and iconographic evidence. Meyers's speculation on questions of gender and performing practice in biblical Israel also relied on terracotta figurines to support the interpretation of textual evidence. Lise Manniche's marshalling of a panoply of iconographic, textual and other archaeological evidence from ancient Egypt is a particularly comprehensive undertaking (1991). Working with manuscript illustrations from Mughal India, Bonnie Wade has recovered aspects of performing practice at a crucial juncture in Indian music history, namely the mixing of Indian and foreign instruments and practices occasioned by the Mughal conquest (1998).

(vi) Recordings. Recordings are an important source for studying performing practice from the late 19th and early 20th centuries onwards. Jihad Racy (1988) and, more recently, Henry Spiller (1996) and Amy Stillman (1996) have used early recordings of Arab, Sundanese and Hawaiian musics to ascertain changes in performing practice. In the Middle East, for example, this wealth of early recordings bears witness to a period of great change, a shift from smaller ensembles with one performer to a part and substantial improvisation, divergent interpretations and ornamentations to larger orchestras with unified sound ideals, string sections, greater stress on composition and more unified conceptions of the piece, greatly aided in many cases by notation (see Davis, 1992). Of course, the severe time limitations of early recordings, the decontextualization of performance and the difficulty of recording large ensembles limit the types of questions one can approach. Nevertheless, performers involved in the revivals of musics as disparate as Jewish klezmer and Amerindian songs have made use of early recordings not only for repertory but to learn earlier ways of performing that repertory (Witmer, 1991). Recordings, especially those made in the field by the researcher, are also particularly helpful for tackling the difficult problem of distinguishing between ornamentation and the simpler, more basic, or more essential aspects of a piece. Ethnomusicologists sometimes compare differing performances of a piece or repetitions within a piece in order to separate the varying details, the so-called surface of the music, from what is presumed to be the more permanent or stable core.

4. Scholarly approaches and issues. Studies of performing practice vary in scope, focus, theoretical assumptions, methodology and emphasis. The scope of generalization in studies of performing practice may be as limited as a short time period, a single community, or a lineage of performers, and it may be as broad as a continent or other large cultural area, such as the Indian subcontinent (Wade, in Béhague, 1984), Jewish musical traditions (Shiloah, 1992) or the African diaspora (Brown, 1992). The focus of a study may be the piece as independent entity, the scholar then asking what is the range of ways that it can be performed (Nettl and Foltin, 1972; Vetter, 1981) or the way in which components are assembled into larger performance sequences (Picken, 1982–90; Racy, 1983; Schuyler, in Béhague, 1984; al-Faruqi, 1985). Others address a more generalized, systemic level as Robert Garfias has done for Japanese *gagaku* (1975), David Morton for Thai music (1976), Anderson Sutton for Javanese gamelan (1993) and Lawrence Witzleben for Chinese instrumental music (1995). The phenomena studied under the rubric of performing practice range from aspects of intonation, ornamentation and playing techniques (Garfias, 1975; Wade, in Béhague, 1984) to the constitution of ensembles (Berliner, 1978, p.112), from the realizations of individual pieces to the considerations that govern the choice of repertory for an entire occasion (Nettl and Foltin, 1972; Vetter, 1977 and 1981; Schuyler, 1984; Sugarman, in Béhague, 1988).

The theoretical assumptions methodologies and emphases that shape studies of performing practice have changed rapidly over time. Though early reports from missionaries, explorers and other travellers during the age of exploration can hardly be considered ethnomusicological studies, such sources convey more information about aspects of performing practice, however tersely and subjectively, than about other aspects of foreign musics (Harrison, 1973). These accounts constitute the bulk of early textual evidence for ethnomusicologists working in many parts of the world (Bohlman, 1988; Bor, 1988). Comparative musicologists working from the late 19th century to the mid-20th focussed on scales, instruments and items of repertories rather than on practice though contextual information is often scattered in field reports. The dominance of so-called armchair analysis, removed from sites of performance, precluded the analysis of processes of musical performance.

It was with the rise of ethnomusicology in the mid-20th century that aspects of performing practice began to receive considerable attention. This body of work exhibits a tendency to normative generalizations, often based on an individual or a small sample. This is taken to an extreme in the work of Alan Lomax, whose cantometrics project sought correlations between social structure and song style. For Lomax, cantometrics is a term that means style of performance, i.e. performing practice, including aspects such as the type of ensemble, the musical relationships between singer and instrumentalist, and the degree of ornamentation (Lomax, 1968; see critique in Henry, 1976). At the same time a large body of ethnomusicological work has filtered out performing practice by looking for essential features of compositions or pieces to find points of connection between them, just as comparative musicologists had done earlier.

The new emphasis on performance advocated in the 1970s by folklorists such as Richard Bauman urged ethnomusicologists to pay more attention to events and the processes played out in them as opposed to the more systemic accounts of earlier work. This led to the development of new field methodologies and to collections of articles devoted to performing practice (McLeod and Herndon, 1980; Béhague, 1984). The authors in Gerard Béhague's collection, in particular, showed how performing practice is contingent on context.

In the 1990s, alongside a continued interest in process and event, attention has shifted to individual agency, to the multiplicity of viewpoints within a community or tradition and to the constructedness of norms in which performers, critics and scholars are implicated. The relationship between practice and theory, both oral and written, has been one such direction (Zemp, 1979; Schuyler, 1990; Marcus, 1992; Weintraub, 1993; Barz and Cooley, 1997). Much of this change in orientation is due to recent sociological and anthropological concerns

such as the growing influence of Bourdieu's concept of 'habitus' in ethnomusicological work (Waterman, 1991, pp.50–54). Concurrently, many scholars have given closer attention to the intersection of gender and performing practice, demonstrating that one can study which pieces are appropriate for a given occasion, for example, or how an ensemble for a particular performance context should be constituted with regard not only to instrumentation but also, for example, to gender and social status (Meyer, Teeter and Weiss, in Marshall, 1993; Sugarman, 1997; Walton, 1997). Scholars have also broadened the scope of musical investigation to include popular musics (Booth, 1991–2) and the performance of traditional musics in new contexts (Rasmussen, 1989).

Perhaps the most important contribution of ethnomusicology to the study of performing practice is that performing practice itself becomes the subject of interpretation. Going beyond analyses of source materials for the purpose of determining what performing practice is for a given music, ethnomusicologists attempt to analyse why those particular conventions have formed in order to determine what relationship this formation may have with other cultural and social aspects. Interpretation may focus on aesthetics, sociological concerns, world-view or other cultural issues. Lomax's ambitious and methodologically flawed global mapping of song style and social structure is one example (1968). In a far more focussed and successful study, Anthony Seeger not only describes how men of the Suya people in Brazil perform *Akia* songs, but he also interprets the social significance of this practice (Mcleod and Herndon, 1980). Studying the performing practice associated with Balinese *gender wayang*, Lisa Gold has shown the narrative and ritual links that join shadow play and life-cycle ceremonies (1992, 1998). Benjamin Brinner has analysed the interaction that takes place in the performance of Javanese gamelan, explaining it in terms of the intertwining of musical and social forces and issues (1995).

Writings on performing practice in the world's musics are not usually as concerned with prescriptive agendas as many writings on historical practice in European art music are, yet some research on performing practice is practically motivated and more prescriptive than descriptive; such research is conducted with the goal not only of documenting current, or somewhat older, practice but of seeking out the 'best' or the most representative practice as a basis for standardized teaching. Such work is generally associated with and often instigated by national institutions for education in performing arts, and the standardization or codification of performing practice may serve a political agenda. Nationalist works are further differentiated from most other works on performing practice in that they are conducted by local researchers rather than foreign scholars. In the case of Central Java the displacement of the royal courts by national conservatories as training-grounds and extravagant patrons of the arts led to a similar shift in the custodianship of court-based performing practices, although these did not remain unmodified (Brinner, 1995, pp.158–9). Certain performing practices also became emblematic of regional identity and thus politically charged (Sutton, 1991). Similar processes have been played out elsewhere as post-colonial governments created national arts institutes with far-reaching pedagogical and curatorial mandates (Davis, 1997, p.2). Even when creation of a unified standard is not the goal, standardization may take place at a lower level as examples of regional practices are simplified to fill curricular needs at conservatories (Witzleben, 1995, p.132).

Study of performing practice has been a standard part of the training of many ethnomusicologists, due in part to Ki Mantle Hood's championship of the ideal of bi-musicality. Bi-musicality is primarily a pedagogical tool rather than a field of intellectual inquiry; the student absorbs the conventions of the music to be studied rather than researching them. As instruction in a broad variety of musical traditions has become more widespread and readily available through much of the Western world, many musicians in addition to ethnomusicologists have developed an eclectic musicianship based not only on acquisition of playing techniques and specific items of repertory, but also on absorption of some aspects of performing practices from highly diverse sources.

Pergament, Moses (*b* Helsinki, 21 Sept 1893; *d* Gustavsberg, nr Stockholm, 5 March 1977). Swedish composer and music critic of Finnish birth. Compared with his Swedish colleagues (he became a Swedish citizen in 1918) Pergament had a cosmopolitan background and training: he was born into a Jewish family; he studied in St Petersburg as a violinist (and served as such for four years in the Helsinki Philharmonic Society) and in Berlin at the Stern Conservatory; he also trained as an opera conductor; and he spent much of the interwar period in Berlin and Paris before settling permanently in Stockholm. There he worked steadily as a composer and as one of the city's most influential and trenchant music critics, with some part-time choral and orchestral conducting.

The varied experiences of Pergament's formative years gave him a breadth of perspective which is obvious in his vast output and which sets him apart from his compatriots. His interest in Russian music (particularly Musorgsky) and German Expressionism is balanced with Impressionist touches and later French traits, notably from Les Six. Besides this, some of his most important works treat Jewish themes and are partly influenced by Hebrew cantillation. *Den judiska sången* (1944) is a central work, and the orchestral *Rapsodia ebraica*, written in protest at the massacres under the Nazis and parodying *Deutschland über alles*, is another Jewish-inspired piece. Pergament's major works also include the ballet *Krelantems och Eldeling*, composed for the Ballets Suédois, the chamber opera *Himlens hemlighet*, choral works, songs, various orchestral pieces and chamber compositions of many kinds.

WORKS

(*selective list*)

Stage: Krelantems och Eldeling (ballet), 1920–21; Vision (ballet), 1923, Helsinki, 1925; Himlens hemlighet [The Secret of Heaven] (chbr op, after P.F. Lagerkvist), Stockholm, 1953; Eli (mystical play, N. Sachs), Stockholm, 1959

Choral orch: Hosiannah, 1928; Nedanförmänskliga visor [Subhuman Songs] (G. Fröding), 1936; Den judiska sången [The Jewish Song] (R. Josephson), choral sym., 1944; De sju dödssynderna [The Seven Deadly Sins] (K. Boye), 1963; Al nahrat bavel (Bible), cant., 1974

Songs with orch: 4 kinesiska sånger, 1946; Ångest [Anguish], 1963; 4 dikter av Edith Södergran, 1966; Drömmen om mullen och vindarne [The Dream of the Earth and the Winds], 1969

Orch: Dibbuk, vn, orch, 1935; Rapsodia ebraica, 1935; Swedish Rhapsody, 1940; Kol nidre, vc, orch, 1949; Vn Conc., 1950; Pf Conc., 1952; Vc Conc., 1954; Violino Grande Conc., 1965; Fantasia differente, vc, str, 1970; Intermezzo, fl, str, 1973

Chbr: Suite, vn, vc, 1919; Sonata, vn, pf, 1918–20; Str Qt no.1, 1918–22; Pf Trio, 1924; Str Qt no.2, 1952; Str Qt no.3, 1967; Pezzo, 4 fl (1 player), 1972

Other works: over 100 songs, *c*60 choral pieces

Principal publisher: Nordiska Musikförlaget

HANS ÅSTRAND

Pergament, Ruvim Samuilovich (*b* Petrozavodsk, 30 Aug/9 Sept 1906; *d* Petrozavodsk, 6 March 1965). Karelian composer, violinist and conductor. He was one of the founders of the school of composers and the first chairman of the Union of Composers in the Karelian republic. His studies in the violin class at the Petrograd Conservatory (1914–17, 1920–26) were interrupted by the war and he began to compose music independently in consultation with R.I. Mervol'f at the conservatory. In 1926 he began working as a violinist in Petrozavodsk, directing the music departments at the theatres of Working Youth and Young Viewers. His acquaintance with the ethnographer, poet and musician V.P. Gudkov, drew to his attention the local northern Russian, Pomor, Karelian-Lyudik, Finnish and Vepsian traditions. He became aware of the diverse forms of folk music (runic and pastoral), as well as the work being done to revive the *kantele* (both the natural and harmonic types of the instrument) and to expand the repertory for the ensembles made up of its various types. Continuing Russian nationalist practices, he doggedly practised harmonizing folk melodies.

His first large-scale composition – the symphonic poem *Ayno* for soprano and orchestra – commemorated the centenary of the first published edition of the Kalevala. The work was successful with audiences both in concert and on radio; Sollertinsky commented that '*Ayno* is a fine and serious piece'. The thematic material is generated by using variation technique to develop the Karelian wedding song *Priletal oryol* ('An Eagle Came Flying'). The work is imbued with symphonic intensity in the spirit of Rimsky-Korsakov and in part of Sibelius; along with the *Karelian Suite* (1938) it opened up a path for the composition of large-scale orchestral genres in Karelia.

During the 1940s Pergament concentrated on operatic works. His comic opera *Kumokha*, based on Karelian folk tales about a wooden clown, was given a concert performance in 1948 but, following the party resolution about Muradeli's opera *The Great Friendship*, the opera was declared formalist. In 1959 *Kumokha* was revised and the music (especially the dance numbers and games) became very popular. The one-act opera *Tri brata* ('Three Brothers'; 1949), after Karelian songs about Vyaynemeynen, Illmoyllin and Yogamoyn, was conceived in epic terms and might have become a milestone in the establishment of Karelian music for the stage, but for the same ideological reasons it suffered a hapless fate; it was performed only in 1985 by students of the Petrozavodsk Conservatory. The opera employs leitmotifs that come close to standard runic melodies. Pergament gave clear proof of his lyrical gifts with psychological expressiveness bound up with the rivalry between the brothers over the capricious but beautiful Katerina.

During the 1950s and 60s Pergament continued the vein of folkloric symphonism; *Iz severnogo al'boma* ('From a Northern Album') is a lyrical orchestral suite that reinterprets the traditions of Russian and European romanticism as embodied by Tchaikovsky and Grieg, but nonetheless contains original harmonic turns. Many of his major works have remained in manuscript.

WORKS
(selective list)

Ops: Kumokha (V. Chekhov and N. Ruban), 1944–6, rev. 1959, Petrozavodsk, 1959; Tri brata [Three Brothers] (1, V. Gudkov, after Kalevala), 1948–9, concert perf., Petrozavodsk, 1985

OL'GA ALEKSANDROVNA BOCHKARYOVA

Pergolesi, Giovanni Battista (*b* Iesi, Marche, 4 Jan 1710; *d* Pozzuoli, nr Naples, 16 March 1736). Italian composer. He was a leading figure in the rise of Italian comic opera in the 18th century.

1. Life. 2. Posthumous fame. 3. Works.

1. LIFE. His grandfather, Cruciano Draghi, was a shoemaker, a son of Maestro Francesco from Pergola; he married a woman from Iesi in that town on 1 January 1663. The family was known as 'Pergolesi' from the town of their origin (although the composer's elder brother and sister were entered in the baptismal register under the name 'Draghi'). In the files of the conservatory where he studied, Giovanni Battista is entered under the name 'Jesi', although he called himself 'Pergolesi'; in contemporary records the form 'Pergolese' is also used.

The composer's father, Francesco Andrea Draghi-Pergolesi, was a surveyor, and in that capacity formed links with the nobility of Iesi. One such nobleman was the godfather of Giovanni Battista, the third child; another defended his interests in a dispute over the will after his

father's death on 27 May 1732 (his mother had died in 1727). The composer's two brothers and one sister died in infancy, and even as a child Giovanni Battista seems to have been sickly: it is significant that he was confirmed as early as 27 May 1711. The caricaturist Pier Leone Ghezzi met the composer in Rome in 1734 and sketched his profile that May. After Pergolesi's death Ghezzi expanded the sketch to a full-length caricature with a note that he suffered greatly from a deformed leg and limped (fig.1). This is the only likeness of Pergolesi linked with any certainty to the composer. He died from tuberculosis.

According to later tradition, Pergolesi received his elementary musical training from the *maestro di cappella* at Iesi, Francesco Santi, and was instructed on the violin by Francesco Mondini, the public music master. Through the Marquis Cardolo Maria Pianetti, of Iesi, he was sent to study at the Conservatorio dei Poveri di Gesù Cristo in Naples at some time between 1720 and 1725. Gaetano Greco, *maestro di cappella* of the conservatory until his death in 1728, was Pergolesi's instructor in composition; Greco was succeeded for a few months by Leonardo Vinci and then, from October 1728, by Francesco Durante. Pergolesi did not have to pay maintenance or tuition expenses at the conservatory because he took part in musical performances, first as a choirboy, later as a violinist and as *capoparanza* (the leading violinist of one of the groups of instrumentalists made available by the conservatory for performances in Naples and the surrounding area). Villarosa, whose account is based on a manuscript by Giuseppe Sigismondo, wrote in superlatives of his skill and improvisations as a violinist.

1. Giovanni Battista Pergolesi: caricature by Pier Leone Ghezzi, pen and ink, 1734 (I-Rvat Cod. Ottob. lat.3116,.f.139v)

A *dramma sacro* by Pergolesi, *Li prodigi della divina grazia nella conversione di S Guglielmo Duca d'Aquitania*, was performed by the conservatory in summer 1731 at the monastery of S Agnello Maggiore. Such performances were part of a tradition whereby the Naples conservatories gave their advanced students the opportunity to make their public débuts as composers; they were commissioned to compose *drammi sacri*, three-act religious operas with *buffo* scenes. After Pergolesi's death *S Guglielmo* was twice revised, once as a two-part opera (in Rome, 1742).

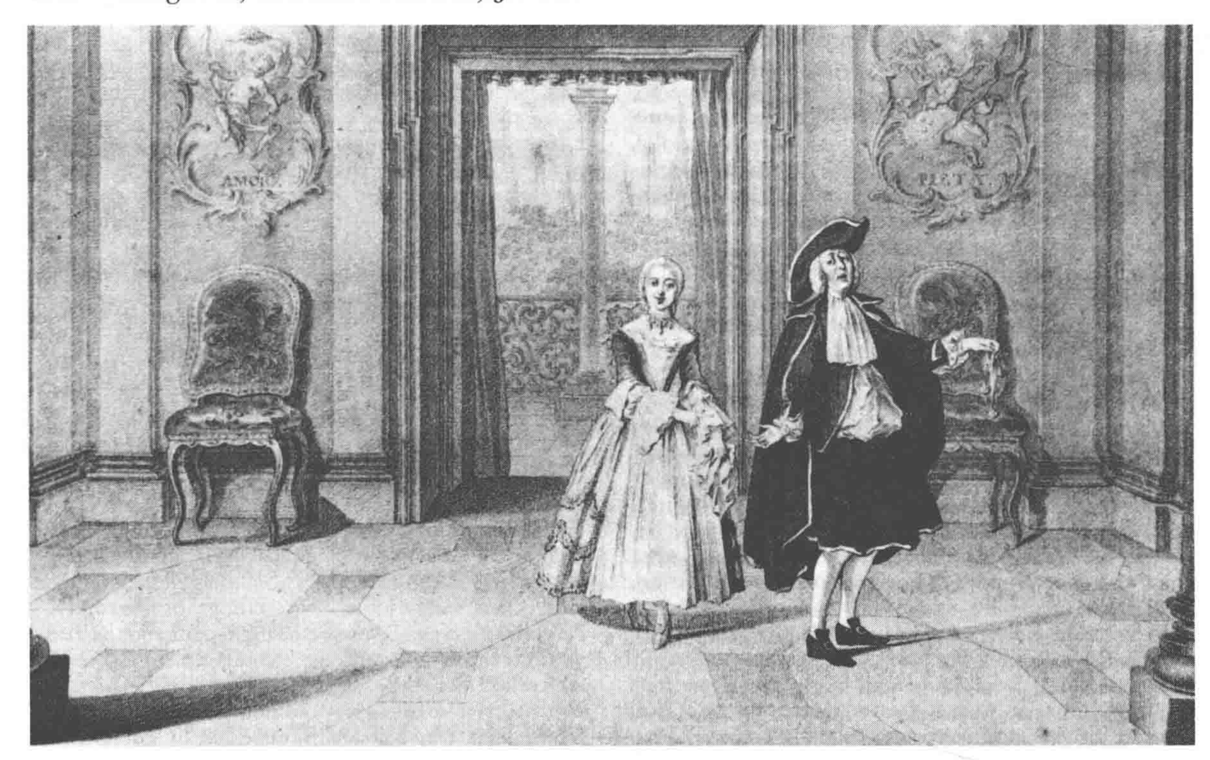
Pergolesi must have left the conservatory in the late summer of 1731. A Mass in D probably dates from this era and he received his first opera commission in 1731, which reflects his growing and influential patronage. The libretto chosen was *Alessandro Severo*, written by Zeno for Venice in 1716 and now revised as *Salustia*. It would seem, from the fact that the author of the text for the intermezzo (possibly Domenico Caracajus) himself set the recitatives of the second part to music, that Pergolesi had to compose the music in haste. The most famous member of the cast for *Salustia*, Nicolini, died on 1 January 1732; Gioacchino Conti was brought from Rome, two roles changed hands, and Pergolesi had to make last-minute alterations. Accordingly, the opera was not staged until the second half of January 1732, and apparently it had little success; the second opera of the season, *Alessandro nell-Indie* by the court *maestro di cappella* Francesco Mancini, followed as early as 2 February.

In 1732 Pergolesi became *maestro di cappella* to Prince Ferdinando Colonna Stigliano, equerry to the Viceroy of Naples. *Lo frate 'nnamorato*, his first *commedia musicale*, was performed at the Teatro dei Fiorentini in Naples on 27 September 1732; the libretto was by G.A. Federico, a lawyer and the leading Neapolitan comedy writer of the time. *Lo frate 'nnamorato* met with unusual success. The performances may have continued into 1733, and for Carnival 1734 Pergolesi had to revise the work for a new cast. When there was a new production of the opera in 1748, at the Teatro Nuovo, the work was said to have been recited and sung in the city streets for the previous 20 years.

There were earthquakes in 1731 and again in November 1732; the archbishop summoned the people to services of atonement and the municipality elected St Emidius, protector against earthquakes, as the city's special patron saint. A vow was taken to celebrate his festival annually with a solemn mass and double vespers, and the decree was formally proclaimed on 31 December 1732 in the church of S Maria della Stella. Villarosa reported that Pergolesi composed for the occasion a mass for double chorus, a *Domine ad adjuvandum me* and the psalms *Dixit Dominus*, *Laudate* and *Confitebor*. It is probable that the Mass in F and perhaps the vesper introit *Deus in adjutorium* ('Domine ad adjuvandum me'), as well as other vesper psalms, were performed on this occasion; the extant psalm *Laudate pueri*, however, belongs among Pergolesi's last works. The brief interval (19 days) between the election of St Emidius and the celebration suggests that the mass (the autograph of which is dedicated to the saint) may have been written earlier, or for a later celebration of the event.

During Carnival 1733 the theatres in Naples remained closed as a sign of atonement. For the empress's birthday (28 August 1733) Pergolesi was commissioned to write an opera, *Il prigioniero superbo* (after Silvani's libretto

La fede tradita e vendicata). The impresario had engaged an unusual and small cast: there was no primo uomo and the prima donna was an alto. The text of the intermezzo, *La serva padrona*, was written by Federico. For some reason the first performance did not take place until 5 September 1733; there were further performances continuing into October. On 23 February 1734, presumably because of his services during the festivities in honour of St Emidius, Pergolesi was appointed deputy to the *maestro di cappella* of the city, Domenico Sarro, with the right to succeed him.



In March 1734 the claimant to the Neapolitan throne, Charles Bourbon, approached the city with Spanish troops. The Austrians, who had ruled Naples since 1707 through a viceroy, retreated into the citadel and remained there until the beginning of May; on 10 May Charles celebrated his solemn entry into the city and reinstated the Kingdom of Naples. Pergolesi's patron, the Prince of Stigliano, had withdrawn to Rome. Another Neapolitan nobleman, Marzio Domenico IV Carafa, Duke of Maddaloni, ordered a performance of a mass by Pergolesi in the church of S Lorenzo in Lucina, Rome, on the festival of St John Nepomuk (16 May 1734); this was the Mass in F (probably performed earlier in Naples), which aroused great interest, if only because the Neapolitan 'number' mass was unusual in Rome. In his diary Ghezzi reported mockingly that it was an extraordinary event and a 'musica spaventosa' performed by all the singers and violinists of Rome. In Valesio's chronicle it is stated that the *maestro di cappella* had been specially brought from Naples at the expense of the duke's mother (an aunt of the Prince of Stigliano). Because of the congestion in the church, it was noted, the floor and the corner of the choir rostrum subsided.

It may have been in connection with the performance that Pergolesi entered the Duke of Maddaloni's service as *maestro di cappella*. He probably returned to Naples in the duke's entourage in June 1734. The duke was interested in literature and was an amateur cellist; Pergolesi's cello sinfonia was no doubt composed for him. The duke's uncle and guardian, Lelio Carafa, Marquis d'Arienzo, was among the closest friends of King Charles, and in September 1734 was entrusted with the supervision of the opera house. Pergolesi was commissioned to write an opera for the birthday of the king's mother on 25 October 1734. The libretto chosen was Metastasio's *Adriano in Siria*; the text of the intermezzo (now known as *Livietta e Tracollo*) was supplied by Tommaso Mariani. One of the most famous singers of the 18th century, Caffarelli, who had been admitted into King Charles's musical establishment, was engaged as primo uomo. In setting the libretto Pergolesi had to take note of Caffarelli's wishes, and Metastasio's text was considerably rewritten. This was Pergolesi's last serious opera for Naples. In a statement by the impresario of the Teatro S Bartolomeo to the Marquis d'Arienzo in 1735, Pergolesi is no longer mentioned among the composers who could be called on, and in a second document it is stated that he was esteemed as a musician but that his last opera had failed to please.

It must accordingly have come as some compensation to Pergolesi that his mass in S Lorenzo in Lucina had aroused the interest of the Roman public; he was commissioned to set Metastasio's *L'olimpiade* for the Teatro Tordinona in Rome for Carnival 1735. Metastasio, who had reports sent to him in Vienna about the preparations for the première, became indignant: the chorus which he required had been omitted, and the cast was mediocre. Nevertheless, Pergolesi (who apparently wrote most of the opera in Naples) had to make further alterations for the singers; he composed one new aria, and in four others drew on *Adriano in Siria*. The performances began in January. After a few days they were interrupted when the Rome theatres were closed because of the death of Maria Clementina Stuart-Sobieski, wife of the pretender to the English throne. Performances were resumed on 23 January, but the theatres were again closed on 1 and 2 February for the Candlemas festival; by 5 February the next opera, Ciampi's *Demofoonte*, was in production. Grétry's report, which depends on Duni for its evidence, states that *L'olimpiade* was a failure and that a member of the audience threw an orange which struck Pergolesi on the head (one of the many traditional stories about him). It must be admitted that initially *L'olimpiade* did not apparently enjoy any special success; but it lived on in multiple restagings, and some passages in the opera, such as the aria 'Se cerca, se dice', were later considered unrivalled for dramatic effect; Galuppi, Hasse, Jommelli and others based their own settings of the text on Pergolesi's model. It was also heard in numerous pasticcio versions throughout Europe, including the one given on 20 April 1742 at the King's Theatre, London, as *Meraspe*. An extensive manuscript tradition attests the fact that *L'olimpiade* was still highly esteemed by connoisseurs and operagoers in the second half of the century.

Pergolesi's health seems to have deteriorated in summer 1735. He had his last theatrical success with *Il Flaminio*, a comedy on a text by Federico produced in the Teatro Nuovo in Naples in autumn 1735; the libretto refers to Pergolesi as organist of the royal chapel. The comedy was performed again in winter 1737 at the Teatro dei Fiorentini, and for Carnival 1743 it was given in Siena as a *divertimento giocoso*; it was also staged with a new production of *Lo frate 'nnamorato* in the Teatro Nuovo in Naples in 1748 and 1749. Pergolesi was commissioned to write a serenata (*Il tempo felice*) for the wedding of Raimondo di Sangro, Prince of Sansevero, at Torremaggiore in December 1735. According to the libretto, dated 9 November 1735, the second part was set by Nicola Sabatino because Pergolesi was in poor health.

Early in 1736 Pergolesi moved into the Franciscan monastery in Pozzuoli founded by the ancestors of his patron, the Duke of Maddaloni. His aunt, Cecilia Giorgi, from Iesi, who had been his housekeeper, remained in Naples; he is said to have handed his possessions over to her, which suggests that he did not expect to recover. According to Boyer, during his final illness Pergolesi composed the cantata *Orfeo*, the *Stabat mater* and (his last work) the *Salve regina* in C minor for soprano and strings (the cantata was in fact written before *Il Flaminio*). Villarosa, however, said that Pergolesi's last work was the *Stabat mater*, written for the noble fraternity in the church of S Maria dei Sette Dolori in Naples as a replacement for Alessandro Scarlatti's *Stabat mater*. Pergolesi, aged 26, died in Pozzuoli and was buried in the common pit next to the cathedral. The Marquis Domenico Corigliano di Rignano, who then owned the *Stabat mater* manuscript and was a friend of the first Pergolesi biographer, Villarosa, had a memorial tablet for him set up in the cathedral at Pozzuoli; the inscription on it was by Villarosa. In September 1890 a side-chapel of the

2. *Scene from part 2 of an early Paris production of Pergolesi's intermezzo 'La serva padrona': engraving, after 1752*

cathedral was prepared as Pergolesi's burial chapel and the memorial tablet was transferred there.

2. POSTHUMOUS FAME. Highly romanticized accounts of Pergolesi's life written in the late 18th and the 19th centuries distorted his career and influence, but he was clearly among the most successful and respected composers of his generation. He wrote regularly for the Teatro S Bartolomeo from the moment he left school, his comic works in minor theatres were enormously popular, he was appointed *vicemaestro* to the royal chapel at the age of 22, and was offered the protection and commissions of Naples's most important royal families. The almost universal fame he attained posthumously represented a new phenomenon in music history. Shortly after his death a collection of four of his cantatas was published: this was the first time that cantatas had been printed in Naples, and as early as 1738 a second edition appeared. Queen Maria Amalia of Naples ordered in 1738 that *La serva padrona* and *Livietta e Tracollo* be performed, and added: 'Questo autore è difonto, ma fu uomo grande'. President De Brosses called Pergolesi 'mon auteur d'affection' as early as 1739. Pergolesi's fame was spread by performances of *Lo frate 'nnamorato*, *Il Flaminio*, *L'olimpiade* and his church music, but above all by travelling troupes of players who took his comedies, particularly *La serva padrona*, into their repertory. The work received at least 24 new productions in its first ten years at places that included Rome, Spoleto, Parma, Milan, Fermo, Graz, Lucca, Venice, Munich, Dresden, Modena, Siena and Hamburg. Remarkably, and uncharacteristically for its day (and in contrast to *Livietta*), *La serva padrona* remained largely unaltered in its text throughout its 18th-century performance history. It was given on 1 August 1752 in Paris, where it had first been heard in 1746. This second series of performances met with a tremendous response (fig.2) and was the cause of the Querelle des Bouffons, the pamphlet war between the supporters of traditional French opera and the proponents of Italian *opera buffa*; Pergolesi's name came to symbolize the aesthetics of J.-J. Rousseau and the 'progressive' party. Two printings of *La serva padrona* appeared in Paris in 1752; these were followed by two editions of a French adaptation under the title *La servante maîtresse* by Baurans, and in 1759 by the appearance of *The Favourite Songs in the Burletta La serva padrona* in London.

Livietta e Tracollo, the *Salve regina* and above all the *Stabat mater* achieved equally widespread fame. The *Stabat mater*, first published in London in 1749, became the most frequently printed single work in the 18th century. It was also circulated in many adaptations, including one by Bach (as *Tilge, Höchster, meine Sünden*). The vogue for Pergolesi caused many works to be wrongly attributed to him, creating a confusion that has long persisted and is reflected in the early *Opera omnia* (1939–42), and corrected in the new *Complete Works*. Among the most important misattributions are an intermezzo, *Il maestro di musica* (based largely on a work by Auletta), the song *Tre giorni son che Nina*, sets of trio sonatas and harpsichord lessons, two flute concertos and six *Concerti armonici* (details of these misattributed works are given in the work-list below).

3. WORKS. Pergolesi's music is among the earliest consistently to reflect the new principles of an evolving 'natural' or 'galant' style in the 18th century. Writers such as Mattei and Manfredini a generation later praised him for his regular and well-developed motifs, and for his expressive text-setting, although much of this can be traced to Vinci and other earlier composers. Above all,

3. Autograph MS of part of the Kyrie from Pergolesi's Mass in F (3rd version) (I-Nc)

his music seems spontaneous and fresh, often with a distinctive Neapolitan character tinged by a popular style, Spanish motifs and alternately comic, sentimental and heroic gestures. His operas reflect the social and intellectual upheaval of early 18th-century Naples, the comic ones (such as *Il Flaminio*) in particular exploring a new rising and ambitious middle class.

A collection of Pergolesi's *solfeggi* (two- and three-part exercises in melody) is extant; traces of modality and elements of the doctrine of proportion can be seen in them. If they represent student work at the conservatory, they are a unique document of the methods of instruction used there, but they give little indication of any special talent for composition. Otherwise the earliest extant work by Pergolesi is the cantata *Questo è il piano* (*Ritorno*), dated 24 April 1731. It bears the marks of an exercise in composition: its two arias, constructed from musical 'blocks' of one and a half to several bars, are exemplary models of the da capo form. *S Guglielmo*, his *dramma sacro*, also gives the impression of being a student work; one can sense the didactic purpose behind it as well as the instructor's correcting hand. The most remarkable parts are the *buffo* scenes; Pergolesi already used with great skill and accuracy the gesture-like style of *buffo* melody which had been developed by Neapolitan intermezzo composers during the preceding decade.

Pergolesi had the good fortune to be able to apply himself at an unusually early age to what was then the most important musical genre, the *opera seria*. All his *opere serie* were written under unfavourable circumstances. *Salustia* has conservative features not to be found in his later works; this may be connected with the choice of libretto and with the fact that the intended primo uomo, Nicolini, was at the end of his career (and died before it was performed). No other of Pergolesi's operatic characters has the grandeur and pathos of Marziano, intended for Nicolini: it is like an echo of the music of the high Baroque era. The notable influence of the *buffo* melody in some of the arias is a new and significant departure for Pergolesi. The style, so disjointed in *Salustia*, is more polished in *Il prigioniero superbo*. Pathos is replaced by sentimentality and gallantry, and formal accompanying figures become more prominent in the orchestral writing. Because of the unusual cast there are none of the splendid soprano arias that normally highlight an *opera seria*. This makes the opera a strangely colourless work, for Pergolesi was not yet able to turn the performers' lack of virtuosity to account so as to increase the dramatic intensity.

Adriano in Siria is an excellent example of the extent to which the composition of an *opera seria* could be influenced by the demands of a single singer. The alterations to Metastasio's libretto affected not only the part of Pharnaspes (composed for Caffarelli) but also the relationship of his arias to those of the other performers, which in turn affected their number, position and character. Of Metastasio's 27 aria texts, only ten were retained: eight were omitted, nine replaced by different

texts; one additional new aria was inserted, making ten new arias altogether. Caffarelli's three arias are extended beyond anything else in Pergolesi's music up to that date; they are the focal points of the opera. Each of these expresses a different 'affection', but the expression is subordinated to the need for allowing Caffarelli the opportunity to shine vocally; this is done differently each time and with new effects. The unusual care and precision which Pergolesi lavished on the arias of the supporting cast is still more remarkable. In *L'olimpiade*, composed for Rome, the special requirements which Pergolesi had to fulfil were comparatively modest. The fact that in *L'olimpiade* he used arias from no opera older than *Adriano in Siria* might be taken to suggest that he was conscious of his recent development as an artist. *L'olimpiade* is characterized by idyllic and delicate tone-colours, smooth, expressive melodies with reserved virtuosity, free treatment of the text (for example with verbal repetitions of the kind used in *opera buffa*) and a greater intensity of feeling. Pergolesi excelled as a dramatic composer in his variety of mood, figure and expression.

Of Pergolesi's two *commedie musicali* the earlier, *Lo frate 'nnamorato*, is his first completely independent work and also the most important extant example of the genre. It is in Neapolitan dialect, and a local note is prominent in its music. Folksong-like pieces, *seria* arias, *seria* parodies and *buffo* numbers are juxtaposed with great assurance. Federico's text for *Il Flaminio* is particularly dependent on the contemporary upheaval in social status under the Spanish regime; Flaminio, a bourgeois without noble title, aspires to express himself in aristocratic Italian, though he cannot leave his Neapolitan roots, as his opening aria 'Mentre l'erbetta' (borrowed by Stravinsky for *Pulcinella*) illustrates. The roles were performed by *commedia dell'arte* actors, and the spontaneity, juxtaposition and stratification of styles in the music surely flows from that influence. Pergolesi's music seems to be full of allusions and quotations, only a few of which can be deciphered. In *Il Flaminio*, unlike *Lo frate 'nnamorato*, the *parti serie* and *parti buffe* are clearly differentiated, and what were later to be known as *parti caricate* are introduced; using a wide stylistic repertory, Pergolesi endowed these roles with unusually personal and individual traits.

La serva padrona, the intermezzo to *Il prigioniero superbo*, is a work of true genius. Pergolesi's basic method of portrayal is the gesture-like *buffo* style, which he developed to an unsurpassed vitality and effectiveness. Federico's libretto, exuding in a particularly inventive way the rhythms and inflections of Neapolitan dialect, provided him not only with effective *buffo* scenes but also with a plot which develops logically between credibly drawn characters. It was possible both for the characters to express themselves naturally within the idiom of the music and for the music to make clear the characters' motivation. Mariani's libretto for *Livietta e Tracollo*, the intermezzo to *Adriano in Siria*, is less unified, but still consistently implies the dialect of its origin. Pergolesi's *buffo* style is still more concentrated and cryptic than in *La serva padrona*, but the individual numbers are not part of a plot which develops in a credible way; instead they appear as single pieces (including some of a characteristically melancholy and tender tone for Livietta).

In his masses Pergolesi used a style that had recently been developed in Naples, in which only the Kyrie and the Gloria were set to music on a large scale (fig.3). The Kyrie is made up of a long 'Christe' fugue with concertante elements, framed by a slow introduction and a broad cadence on the words 'Kyrie eleison'. The Gloria is divided into choral, ensemble and solo movements. Pergolesi produced different versions of his masses in D and F, for one, two and four choruses (there was still a demand for polychoral music on festive occasions). These are not, however, genuinely polychoral, for the music, designed for one chorus in five parts (with double soprano), is merely assigned to several choruses so as to achieve antiphonal and tutti effects. There is no early evidence for the authenticity of the Mass in F published under Pergolesi's name in Vienna in 1805, but it is similar in style to his known masses. This may be explained by Guglielmo della Valle's statement (*Memorie storiche del p.m. Giambattista Martini*, Naples, 1785) that the dukes of Maddaloni held performances of church music each year on the third Sunday in September in the Neapolitan parish church of S Maria dei Sette Dolori (where their family had its burial vault), and that Pergolesi composed music for this occasion which the Maddaloni family had jealously guarded.

Pergolesi's psalm settings are intended for vespers. They too are on a large scale and are divided into choral and solo sections, with concertante movements for soloists and chorus. The solo sections in Pergolesi's church music are two-section, aria-like pieces, different from the typical opera and oratorio arias and apparently derived from the vocal and instrumental concerto movement. Many of the choral movements, too, betray the same influence, and some of them show signs of being reduced polychoral settings. Within its stylistic bounds, Pergolesi's church music is distinguished by the lively declamation of the text and the melodic charm of the solo sections, and by the rich contrasts of the choral ones. It may have influenced the later work of his teacher, Francesco Durante, and of Leonardo Leo, both of whom survived Pergolesi. The *Stabat mater* for two solo voices and strings, his most famous work, was evidently written in competition with Alessandro Scarlatti's *Stabat mater* for the same voices and instruments. A comparison between the works shows Pergolesi's new approach to the concertante vocal movement and his development of the 'church aria', as well as the earliest application to sacred music of the style of expressive sensibility. The work stirred considerable controversy at home and abroad for its religious propriety and musical style. Padre Martini's traditional views towards counterpoint incited some to criticize Pergolesi's setting, while others found it 'galant', expressive and new. The same bittersweet tone is present in the *Salve regina* in C minor for solo soprano and strings, composed (like the *Stabat mater*) at the very end of Pergolesi's life.

Most of the instrumental music under Pergolesi's name is wrongly attributed; his few authentic pieces are insignificant by comparison with his vocal music. The apparently authentic double harpsichord concerto is among the earliest examples of the keyboard concerto and demonstrates (along with other early Italian examples) a parallel development of the genre outside Germany.

WORKS

Editions: *G.B. Pergolesi: Opera omnia*, ed. F. Caffarelli (Rome, 1939–42/*R*) [C]
[Of the 148 works in this edition, 69 are misattributed, 49 are questionable and only 30 may be considered genuine. A large number of works attributed to Pergolesi, some of which may be authentic, were omitted. For further information see Paymer: *Giovanni Battista Pergolesi:* (1977)]

HELMUT HUCKE, DALE E. MONSON

Peri, Achille (*b* Reggio, nell'Emilia, 20 Dec 1812; *d* Reggio, nell'Emilia, 28 March 1880). Italian composer. He studied in his native city with two local teachers, Gregori (piano) and Rabitti (harmony and composition), and then spent several years in Paris studying with Carafa. He assembled an opera company in Paris and toured the provinces, putting on his first stage work, *Una visita a Bedlam*, in Marseilles in 1839. Economic difficulties forced him to return to Italy where the first of his serious operas, *Il solitario*, was performed in 1841. Several of those that followed had considerable success, particularly *Dirce* (1843), *Tancreda* (1847) and his best work, the biblical drama *Giuditta*, which, after a disastrous première at La Scala in 1860, was revived there two years later with great success. His last two operas, also performed at La Scala in 1861 and 1863, were complete failures, causing him to give up writing for the stage. Peri was also *maestro di cappella* of Reggio Cathedral, for which he composed a large amount of church music of slight value, and conductor at the opera there. As an opera composer he was an imitator of Donizetti and Mercadante.

GIOVANNI CARLI BALLOLA

Peri, Jacopo ['Zazzerino'] (*b* Rome or Florence, 20 Aug 1561; *d* Florence, 12 Aug 1633). Italian composer, singer and instrumentalist. His most significant contribution was his development of the dramatic recitative for musical theatre. His most characteristic examples of this style are found in *Euridice* (1600), the earliest opera for which complete music has survived.

1. LIFE. Although Peri may have been born in Rome, he claimed descent from Florentine nobles with a long record of public service. He settled in Florence at an early age, and on 1 September 1573 he was taken into the convent of SS Annunziata 'to sing laude to the organ'. His musical education continued under Cristofano Malvezzi, who included a four-part ricercare by him in his print of 1577 and the madrigal *Caro dolce ben mio* in his first book of five-part madrigals (1583). On 1 February 1579 Peri began service as organist at the Badia at a yearly salary of 15 scudi. He held the post until April 1605, and by 1586 he was also employed as a singer at S Giovanni Battista. The young Peri was praised by A.F. Grazzini for his instrumental and vocal performances, knowledge and grace, but Grazzini was annoyed that Peri's talents as a musician appeared to be insufficiently recognized. In 1584 the Duke and Duchess of Mantua spoke of Peri's endearing qualities. Although there is no known documentation it is likely that he participated during the 1580s in the discussions of the so-called Camerata which met in the house of Giovanni de' Bardi. When later recalling his father's acquaintances in a letter to G.B. Doni, Pietro de' Bardi praised Peri's performances on the organ and other keyboard instruments, his compositions and his singing, in which, he said, he intelligently imitated speech in sound.

In 1588, shortly after the accession of Grand Duke Ferdinando I, Peri's name first appeared as an official employee of the Medici court with a monthly salary of six scudi, which was increased to nine scudi in September 1590. His earliest recorded connection with a dramatic production had been in February 1583, when he had collaborated with Malvezzi, Alessandro Striggio (i) and

others in composing music (which is lost) for the *intermedi* to Giovanni Fedini's comedy *Le due Persilie*. In 1589 he took part in the festivities celebrating Ferdinando's marriage to Christine of Lorraine. He performed the role of Arion in the fifth *intermedio* for Girolamo Bargagli's comedy *La pellegrina*, singing his own aria *Dunque fra torbid'onde* in which he illustrated the miraculous powers of music. According to the descriptive commentary published with the music in 1591 he captivated the audience, accompanying himself with amazing skill on the chitarrone. Peri's costume for this role is depicted in a sketch by Bernardo Buontalenti (see illustration).

Peri apparently met with musicians, poets and philosophers at the home of Jacopo Corsi during the 1590s. With the encouragement and collaboration of Corsi and Ottavio Rinuccini he wrote music for the latter's short pastoral *Dafne*. Although *Dafne* was reportedly planned as early as 1594, the earliest recorded performance was during Carnival 1597–8. Pietro de' Bardi described the event as including a few numbers in short scenes, which were recited and sung privately in a small room. The first version was subsequently improved for later Florentine performances in 1599, 1600 and 1604. Although details of the casting are unknown Peri sang the role of Apollo in some of them.

Peri's next and most significant collaboration with Rinuccini was in their opera *Euridice*, first produced for the Florentine celebrations of the wedding of Maria de' Medici and Henri IV, King of France. The première took place before a small audience in the Palazzo Pitti on 6 October 1600, although the libretto contains the dedicatory date of 4 October. Peri's musical rivals, Giulio Caccini and Emilio de' Cavalieri, each had a part in this

Jacopo Peri's costume for the role of Arion in the fifth intermedio for Girolamo Bargagli's comedy 'La pellegrina': sketch by Bernardo Buontalenti, pen and ink, 1589 (I-Fn)

initial performance: Caccini rewrote music for the parts sung by his musicians (the role of Eurydice, three choral numbers, and solos for some nymphs and shepherds), while Cavalieri appears to have directed the production. The set and costume designers are unknown (Ludovico Cigoli may have been one), but the décor was quite simple in comparison with Caccini's spectacular *Il rapimento di Cefalo* presented three nights later (and in which Peri sang). In the preface to the publication of *Euridice*, Peri identified prominent members of the original cast: Francesco Rasi (Aminta), Antonio Brandi (Arcetro), Melchior Palantrotti (Pluto) and a boy soprano, Jacopo Giusti, from Lucca (Daphne, the messenger). Handwritten annotations on a copy of the original libretto name additional singers, including Peri himself in the role of Orpheus (see Palisca, 1964). Peri also listed in the preface four instrumentalists, who played from behind the scenes. *Euridice* received high praise, particularly from Marco da Gagliano, who was impressed not only by the work but also by Peri's own expressive singing. The composer's rivals, however, found the recitatives tedious and the stage designs inadequate. In 1616 Peri and Rinuccini supervised a revival in Bologna.

After 1600 Peri continued to serve the Medici court. His later professional activities were primarily in composition, although he sang the role of Neptune in an unnamed ballo on 14 February 1611, and again in a new version of the ballo, now named *Mascherate di ninfe di Senna*, on 5 May 1613. He wrote at least some of the music for the celebrations of the wedding of Prince Cosimo in 1608, and his setting of one of the choruses of the younger Michelangelo Buonarroti's *Il giudizio di Paride* (*Poichè la notte con l'oscure piume*), performed during the festivities, reappeared with a new text (*Se tu parti da me, Fillide amata*) in his 1609 volume of songs. Few other compositions from this period survive, but contemporary reports and librettos indicate that at least in the 1610s he wrote much for dramatic productions. Among these *intermedi*, ballets and equestrian shows were some of the most spectacular court *feste* that had ever been seen in Florence. Peri generally collaborated with other Florentine composers, particularly Marco da Gagliano and Francesca Caccini. He may have specialized in writing recitatives for these productions, but there is no evidence that this was his exclusive concern.

Peri's close relationship with the Mantuan court during the early years of the 17th century is documented by numerous letters, mostly sent to Ferdinando Gonzaga, and by his active membership in the Accademia degli Elevati. The composer planned two large-scale projects for Mantua: *Le nozze di Peleo e Tetide* (libretto by Francesco Cini), intended for the Gonzaga wedding festivities of 1608 but rejected in favour of Rinuccini and Monteverdi's *Arianna*, and *Adone* (libretto by Jacopo Cicognini), projected for a performance in 1620. He composed songs, now lost, on texts by various members of the Mantuan court. The Gonzagas frequently praised his talents. In 1618 the duke and duchess recommended him for an appointment in Florence as 'Camarlingo dell'Arte della Lana', a position that he held initially with a monthly salary of ten scudi. In Florence too his talents did not go unrecognized, and in 1616, with Francesca Caccini and her husband, G.B. Signorini, he accompanied Cardinal Carlo de' Medici to Rome, while in 1619 the publisher Zanobi Pignoni was moved by the 'continual

requests' for his music to reissue his 1609 volume of songs, to which he now added several more recent works.

In his later years Peri collaborated with G.B. da Gagliano on three *sacre rappresentazioni*, performed before the Compagnia dell'Arcangelo Raffaello, and with Marco da Gagliano on two operas, both to texts by Andrea Salvadori. The first of these operas, *Lo sposalizio di Medoro ed Angelica*, based on an episode from Ariosto's *Orlando furioso*, was staged at the Palazzo Pitti on 25 September 1619 in honour of the election of the Emperor Ferdinand II, brother-in-law of Grand Duke Cosimo II. An extant libretto of 1623 reports numerous revisions, probably for a proposed but unrealized performance in Mantua in 1622. The second opera with Marco da Gagliano, *La Flora*, was in honour of the wedding in 1628 of Duke Odoardo Farnese of Parma and Margherita de' Medici. Peri composed only the role of Clori. For these festivities Peri had originally planned a different opera, *Iole ed Ercole*, also on a libretto by Salvadori. Although there is no evidence that this work was fully composed, a lament of Iole, *Uccidimi, dolore*, is attributed to Peri (in *CZ-Pnm* II La 2 and in *I-Bc* Q49). In 1630 Peri suffered a serious illness and on 15 March 1630 prepared his will. He died three years later and was buried in the church of S Maria Novella.

Composition for Peri was often a slow and apparently difficult task, a circumstance that may explain the number of works he left incomplete. His most natural musical activity seems to have been performance. Severo Bonini said that he could move the hardest heart to tears through his singing, and he also praised his superb instrumental accompaniments. Marco da Gagliano claimed that no one could fully appreciate Peri's music until he had heard dramatic interpretations by the composer himself. In the preface to *Euridice* Peri suggested that the secret of his expressive singing lay not only in his written embellishments but much more in the subtle nuances and graces which can never be completely indicated in notation. His success brought praise from many other contemporaries but also created inevitable jealousies. The most famous attack came in the form of a satirical sonnet by Francesco Ruspoli, presenting otherwise unfounded slurs on his professional reputation and family. Stefano Rosselli, in a commentary on the sonnet, explained the implications of the poem and also added valuable information on the composer's character and appearance. Peri was very slender and of medium height, and had long, blond hair, this last feature being reflected in his well-known nickname, 'Zazzerino'.

2. Works. Peri's earliest published compositions are in various styles. The sectional ricercare in four parts (1577) combines a number of themes through standard contrapuntal devices. The madrigal for five voices (1583), basically homophonic but occasionally enlivened by imitations, is a syllabic setting of an ottava. In the more expansive aria for the *intermedio* of 1589 the tenor soloist has elaborate embellishments, which are at times echoed by two other voices. The publication of 1591 provides a simple four-part instrumental accompaniment despite the reference in the commentary to the composer's own performance on the chitarrone.

Peri's first complete drama in music, *Dafne*, follows the literary genre of the tragicomic pastoral. Rinuccini's libretto tells of the slaying of the Pythian dragon, Apollo's boasts to Cupid, Cupid's revenge by afflicting Apollo with love for Daphne, Daphne's transformation into a laurel tree and Apollo's final grief. Printed librettos for Peri's setting survive from the 1600 and 1604 performances, but only fragments of the music are preserved in two manuscripts of Florentine origin (now in *I-Fn* and *B-Bc* respectively). Two of the six excerpts are ascribed to Corsi in the latter source. The four pieces presumably by Peri consist of the Prologue sung by Ovid, a choral monody *Almo Dio, ch'il carr'ardente*, Venus's ottava *Chi da' lacci d'amor* and the messenger's narrative *Qual' nova meraviglia!* The last-named setting is the only surviving excerpt with a non-strophic text and a consistent recitative style. Since the words deviate somewhat from the librettos of 1600 and 1604 this piece may represent the recitative writing in the earliest version of the pastoral. The vocal line has no written embellishments, and few dissonances with the slow-moving bass. Two of the strophic numbers in *Dafne* closely resemble later pieces by Peri with similar poetic structure. The music for the Prologue was adapted for the Prologue to *Euridice*, while the music for *Chi da' lacci d'amor* reappears in modified form in *Torna, deh torna, pargoletto mio*, published in Pietro Benedetti's *Musiche* of 1611. Similar relationships to other contemporary songs suggest that Peri may have at times employed stock formulae for standard types of poetry.

Peri and Rinuccini's second collaboration, *Euridice*, is a significant advance on the experimental *Dafne*. The longer libretto has a more intricate design, and the music a wider range of expressive techniques. Tragedy, who sings the Prologue, dismisses fear, bloodshed and sorrow and then calls for sweeter emotions to be evoked through the forces of music. In the classical tale which follows, Rinuccini's Orpheus only temporarily loses his beloved Eurydice. Once successful in the underworld he makes an unconditional return with his wife to the joyous land of shepherds and nymphs. Although the text provides poignant expressions of intense grief by Orpheus and the chorus, lighter emotions and simple narration are just as prominent. Following the Prologue of seven stanzas, the libretto may be divided into five scenes, each concluded by a strophic number which reflects on the preceding events. In these interludes Peri mixed choral writing, usually in four or five parts, with stanzas for solo voices. The texts have simple rhyme and metrical patterns, mostly with lines of seven or eight syllables, which sharply contrast with the freer rhyming of the 7- and 11-syllable lines elsewhere in the libretto. Outside the interludes the only comparable texts occur in two short songs for Tirsi and Orpheus. In setting the strophic poetry Peri imposed musical organization in three ways: through the re-use of material from one stanza to another, either in exact repetition or in strophic variations; through recurring rhythmic and melodic patterns within single stanzas; and through frequent use of refrains.

The continuous recitatives in the scenes between the set choral numbers contain Peri's most innovatory writing in *Euridice*. He described this style as 'an intermediate course, lying between the slow and suspended movements of song and the swift and rapid movements of speech'. The pacing of the voice and accompaniment is carefully coordinated with the rising and falling tensions in the text, thereby achieving a broad scale of emotional expression. In the narrative sections of the libretto the singer imitates the rhythmic and melodic inflections of a normal speaking voice. Peri's slower accompaniment

moves according to the principal words of the text, showing no apparent regard for large-scale tonal design. More intense sections are created by unprepared dissonances, suspensions and frequent rests for the voice; by unexpected harmonic progressions; and at times by altering the normal motion of the bass. These devices are well illustrated in Orpheus's impassioned monologues *Non piango e non sospiro*, which is sung after he hears of Eurydice's death, and *Funeste piaggie, ombrosi, orridi campi*, which is delivered at the gates of the underworld.

Peri's extant opera with Gagliano, *La Flora*, treats the origin of flowers, symbolic of Florence and Parma, the two cities honoured in the wedding festivities of 1628. Blossoms are transformed from the tears of joy shed by Zephyr upon finally winning his beloved Clori. Peri's contribution, the role of Clori, consists of the virtuoso aria *O campagne d'Anfitrite* in Act 2 and numerous recitatives. The aria, in the form of strophic variations, contains far more embellished phrases for the voice than does Peri's earlier surviving dramatic music. The accompaniment is more active and supplies a short ritornello between each stanza. As in *Euridice*, the recitatives range from a normal narrative to a highly emotional style; the latter is used particularly in Act 4 when Clori jealously believes that Zephyr has turned his affections to another nymph.

Only a few fragments remain from Peri's other dramatic works. The above-mentioned *Torna, deh torna, pargoletto mio*, patterned after Venus's song in *Dafne*, is an aria of Venus from the Rinuccini ballo of 1611 later named *Mascherate di ninfe di Senna* (1613). In his setting of the ottava text Peri used a modification of the first four lines of music for the second half of the song. The triple metre with hemiolas is retained from the earlier version in *Dafne*. One other fragment from the *Mascherate di ninfe di Senna* survives in manuscript but is unattributed and consists only of four lines of recitative.

Peri's song collection, *Le varie musiche* (1609), contains four settings of Petrarch sonnets, each divided into four parts; nine madrigals with non-strophic texts; four arias with extra stanzas printed after the music; and one strophic aria with minor variations written out for each stanza. The sonnets and six of the solo madrigals mix Peri's recitative style with phrases of more lyrical character. Embellishments are confined to occasional turns and trills or to short cadential roulades. The remaining three madrigals, for two and three voices, contain passages of imitation, of note-against-note writing and of a single voice emphasized against an accompaniment. The four arias with extra stanzas of text are in triple metre throughout and frequently repeat melodic and rhythmic patterns. The aria in strophic-variation form, *Se tu parti da me, Fillide amata*, is unique in this collection, since each stanza presents a sharp distinction between recitative and aria styles. The second edition of *Le varie musiche* (1619) omitted this song and one madrigal but contains seven additional strophic arias, including simple dance-songs, one recitative setting and several pieces in mixed styles. The few further songs by Peri that have survived in other prints or manuscripts from the period include *O dell'alto appenin figlio sovrano*, with four sections partly using strophic-variation technique, and three solos in a style similar to the expressive monologues in *Euridice*: *Se da l'aspro martire*, *Tu dormi e 'l dolce sonno* and *Uccidimi, dolore*; as was mentioned above, this last piece may be a survival from Peri's incomplete *Iole ed Ercole* of 1628.

For the opening of *Euridice*, see OPERA, §II, 1, fig.1.

WORKS

DRAMATIC

first performed in Florence unless otherwise stated

title	*librettist*	*first performance*	*remarks; sources*
Dafne	O. Rinuccini	Palazzo Corsi, carn. 1597–8	collab. J. Corsi; rev. 1598–1600; frags. *B-Bc*, *I-Fn*, see Porter (1965) and Carter (1989)
Euridice	Rinuccini	Palazzo Pitti, 6 Oct 1600	5 scenes; collab. G. Caccini; (Florence, 1600/*R*, repr. 1607), ed. in RRMBE, xxxvi–vii (1981)
Le nozze di Peleo e Tetide	F. Cini	unperf.	planned for Mantua, 1608
Adone	J. Cicognini	unperf.	comp. 1611, planned for Mantua, 1620
Lo sposalizio di Medoro et Angelica	A. Salvadori, after L. Ariosto	Palazzo Pitti, 25 Sept 1619	collab. M. da Gagliano; rev. *c*1622
Iole ed Ercole	Salvadori	unperf.	planned for Florence, 1628; ?frag. 'Uccidimi, dolore' in *CZ-Pnm* and *I-Bc*, ed. in RRMBE, l (1985)
La Flora, o vero Il natal de' fiori	Salvadori	Palazzo Pitti, 14 Oct 1628	collab. M. da Gagliano, only Clori's music by Peri (Florence, 1628)

Sacre rappresentationi (all collab. G.B. da Gagliano): La benedittione di Jacob (G.M. Cecchi, rev. Cicognini), 1622; Il gran natale di Christo salvator nostro (Cicognini), 1622; La celeste guida, o vero L'arcangelo Raffaello (Cicognini), 1624

Other: Intermedio I in G. Fedini: Le due Persilie, 1583; Intermedio V in G. Bargagli: La pellegrina (Rinuccini), 1589, RISM 1591[7]; [Torneo] (M. Buonarroti), Pisa, 1605; Chorus in Il giudizio di Paride (Buonarroti), 1608, ed. in RRMBE, l (1985) [Ballo], 1611, rev. as Mascherate di ninfe di Senna (Rinuccini), 1613, collab. M. da Gagliano and others, ed. in RRMBE, l (1985); [?Torneo] (G.C. Villifranchi), 1613, collab. M. da Gagliano and others, ed. in RRMBE, l (1985); [Marte e Amore] (F. Saracinelli), 1614; Intermedi to Veglia delle grazie (G. Chiabrera), 1615; Guerra d'Amore (festa a cavallo, Salvadori), 1616, collab. P. Grazi and G.B. Signorini; [Ballo] (Saracinelli), collab. L. Allegri; Guerra di bellezza (festa a cavallo, Salvadori), 1616, collab. Grazi; [Ballo] (? A. Striggio (ii)), Mantua, 1620; La precedenza delle dame (Salvadori), 1625

Doubtful: Ballo della cortesia (Buonarroti), 1614 [collab. A. Brunelli or by F. Caccini]; La liberazione di Tirreno ed Arnea (Salvadori), 1617 [? by M. da Gagliano]

SONGS

for 1v, bc, unless otherwise stated, all ed. in RRMBE, l (1985)

Le varie musiche … 1–3vv, con alcune spirituali in ultimo, per cantare, hpd, chit, ancora la maggior parte di esse per sonare semplicemente, org (Florence, 1609, enlarged 2/1619) [1609, 2/1619]

Al fonte, al prato (Cini), 2vv, bc (bc also has text), 1609, 2/1619
Anima, ohimè, che pensi, che fai (Rinuccini), 1609, 2/1619
Bellissima regina (Rinuccini or Chiabrera), 1609, 2/1619, *I-Fc* Barbera
Care stelle, 2/1619
Caro dolce ben mio, perchè fuggire (L. Celiano), 5vv, 1583[16]
Caro e soave legno (Rinuccini or B. Barbarino), 3vv, bc (bc also has text), 1609, 2/1619
Che veggio, ohimè, che sento, 2/1619 *Fn* Magl.XIX.114
Con sorrisi cortesi (Chiabrera), 2vv, bc (bc also has text), 1609
Freddo core che in amore, 2/1619
Hor che gli augelli, 2/1619, 1620[13]
Ho visto al mio dolore (A. Striggio (ii)), in G. Montesardo: L'allegre notti di Fiorenza (Venice, 1608), 1609, 2/1619
In qual parte del ciel, in qual idea (F. Petrarch), 1609, 2/1619, *B-Bc* 704
Intenerite voi, lacrime mie (Rinuccini), 2vv, bc, *Bc* 704, *I-Fn* Magl.XIX.66
Lasso ch'io ardo et altri non me 'l crede (Petrarch), 1609, 2/1619
Lungi dal vostro lume, 1609, 2/1619
O core infiammato, 2vv, bc (bc also has text), 2/1619, *Fn* Magl.XIX.114
O dell'alto appenin figlio sovrano (Saracinelli), in Brunelli: Scherzi … libro secondo (Venice, 1614)
O dolce anima mia, dunque è pur vero (G.B. Guarini), 3vv, bc (bc also has text), 1609, 2/1619
O durezza di ferro e di diamante, 1609, 2/1619
O miei giorni fugaci, o breve vita (Rinuccini), 1609, 2/1619, *Fn* Magl.XIX.115 (arr. kbd)
Qual cadavero spirante, 2/1619
Quest' humil fera un cor di tigre o d'orsa (Petrarch), 1609, 2/1619
Se da l'aspro martire, *CZ-Pnm* II La 2
Se tu parti da me, Fillide amata (Buonarroti), 1609, *I-Fc* Barbera (with text Poichè la notte con l'oscure piume (Buonarroti))
Solitario augellino, 1609, 2/1619
Torna, deh torna, pargoletto mio (Rinuccini), in P. Benedetti: Musiche (Florence, 1611), *Vm* Ms 10318 (codex 742)
Tra le donne onde s'onora (?Rinuccini), 1609, 2/1619, *Fc* Barbera (with text Fra le donne ond'il bel Arno (Rinuccini))
Tra le lagrime e i sospiri, 2/1619
Tu dormi e 'l dolce sonno, *CZ-Pnm* II La 2, *GB-Lbl* Add.30491, *I-Fc* Barbera
Tutto 'l dì piango e poi la notte quando (Petrarch), 1609, 2/1619
Uccidimi, dolore (Salvadori), *CZ-Pnm* II La 2, *I-Bc* Q49 (possibly from op Iole ed Ercole)
Un dì soletto (Chiabrera), 1609, 2/1619

INSTRUMENTAL

Ricercare, a 4, in C. Malvezzi: Il primo libro de ricercari (Perugia, 1577, inc.), *Fn* Magl.XIX.107; ed. in RRMR, xxvii (1978)

WILLIAM V. PORTER (with TIM CARTER)

Periáñez, Pedro (*b* Babilafuente, *c*1540; *d* Santiago de Compostela, before 3 May 1613). Spanish composer. He may have been the singer Periáñez who was a member of the viceroyal *capilla* at Naples in February 1558. After working in Almería as *maestro de capilla* Periáñez took up a similar post as successor to Juan Cepa at Málaga. The competition for the position in late September 1577 included composing overnight a motet on *John* xvii.11*b* and a villancico, adding two voices to a given cantus firmus and improvising other counterpoints, and adding a third voice to the duo that had been used 26 years earlier at the competition won by Cristóbal de Morales. A chapter vote was taken on 16 October, and Periáñez

was declared the winner. In the meantime he had been offered the post of *maestro de capilla* of Córdoba Cathedral, but he accepted the offer from Málaga. On 1 August 1583 he took up a more attractive position at the cathedral in Santiago de Compostela, which he held for the rest of his life. His duties included not only direction of the music but also the organization of dances and playlets by the choirboys for Corpus Christi. Málaga attempted to win him back with the offer of a canonry on 7 June 1595, when he was visiting the city. In 1612 he retired from the post at Santiago, and on 3 April offered to give half his salary to Bernardo de Peralta of Burgos; but a competition was held of which 'Antonio Carrera' (his uncle; *see* CARREIRA family, (3)), *mestre de capela* at Braga, was named the winner on 2 July 1612. A five-voice motet, *Ave domina Maria*, which survives in manuscript (at *E-E*), is printed in Eslava y Elizondo's *Lira sacro-hispana*.

ROBERT STEVENSON

Peričić, Vlastimir (*b* Vršac, 7 Dec 1927). Yugoslav composer and writer on music. He studied composition with Rajičić at the Belgrade Academy until 1951, and with Uhl in Vienna (1955–6). He was a professor at the Marinković Music School, Belgrade (1948–51), and the Slavenski Music School (1951–5), and then joined the Belgrade Academy of Music as an assistant (1955–61), lecturer (1961–5) and from 1965 as professor; from 1988 to 1993 he was professor ordinarius. Peričić's music is characterized by its sound construction and polished craftsmanship. Generally neo-classical in style, his works frequently exhibit lively rhythms and a marked contrapuntal variety. His principal works, written mostly during the 1950s, show a fondness for strong thematic links between the various parts. Outstanding among these is the *Simfonijeta* (1957) with its excellent handling of contrapuntal devices. Peričić has latterly concentrated on writing, his principal works being a comprehensive reference book on Serbian composers and a large multi-lingual dictionary of musical terms. He has contributed extensively to lexicographical works on music.

NIALL O'LOUGHLIN

Pericope (Gk. *perikopē*: 'passage', from *perikoptein*: 'cut off'). In Christian liturgies an extract from the Bible or other ecclesiastical source intended for public recitation or chanting, for example, Old Testament lesson, EPISTLE or GOSPEL.

Périer, Jean (Alexis) (*b* Paris, 2 Feb 1869; *d* Paris, ?3 Nov 1954). French baritone. He studied with Taskin and Bussine at the Paris Conservatoire and made his début in 1892 as Monostatos (*Die Zauberflöte*) at the Opéra-Comique, where he remained (except from 1894 to 1900) until 1920. His repertory lay chiefly in operetta (he sang leading roles in the first performances of Messager's *Véronique* in 1898 and *Fortunio* in 1907) but he also sang Don Giovanni, Lescaut, Sharpless and was the first Pelléas (Opéra-Comique, 30 April 1902) and the first Ramiro (*L'heure espagnole*). He sang Pelléas at the Manhattan Opera in 1908 and appeared at Monte Carlo, but remained firmly a part of the Parisian musical and theatrical scene. He acted in several films between 1900 and 1938. His was essentially a declamatory art, and even with limited gifts as a singer he created convincing characters with the help of his clear diction and his ability

as an actor. Seven published recordings of his voice (on cylinders, later issued as discs) were made about 1905.

HAROLD BARNES

Perigourdine [perijourdine]. A French folkdance, usually in 3/8 or 6/8, from the region of Périgord in south-west France, similar to the PASSEPIED. The best-known example in art music is in Verdi's *Rigoletto* (Act 1 scene iii).

Perile, Joseph. *See* RIEPEL, JOSEPH.

Perinet. *See* PERRINET [Perinetus] and FONTAINE, PIERRE.

Perinet, Joachim (*b* Vienna, 20 Oct 1763; *d* Vienna, 4 Feb 1816). Austrian dramatist, pamphleteer and actor. He swiftly squandered a sizeable inheritance, thereafter living penuriously by his wits. His stage career swung between the Leopoldstadt and Wieden/Wien theatres, for both of which he supplied a string of mainly ephemeral farces, dramatic caricatures, travesties and parodies. The most popular were a series of Singspiel adaptations of comedies by Philipp Hafner, including *Die Schwestern von Prag* (1794), which remained in the repertory of the Theater in der Leopoldstadt (later Carltheater) until 1859 and may have influenced *Die Meistersinger von Nürnberg* through its interrupted serenade scene and street riot. *Kaspar der Fagottist, oder Die Zauberzither*, long (but wrongly) held to have influenced the story line of *Die Zauberflöte*, is an entertaining rescue opera with some social satire; it and a few of Perinet's other stage works have been successfully revived in recent years. Perinet's pamphlets include *Mozart und Schikaneder: ein theatralisches Gespräch* (Vienna, 1801), written, like so many of his works, in doggerel verse. Though seldom rising above the level of competence, he played an important part in the development of the repertory of Vienna's suburban theatres.

PETER BRANSCOMBE

Perini, Annibale (*b* north Italy, *c*1560; *d* Graz, late 1596). Italian composer and organist. Following the tradition begun by Annibale Padovano, who was probably his uncle, he and Simone Gatto continued to import Venetian musical style to Graz. He arrived there from Venice about 1575, and in 1579 was appointed organist of the court chapel of Archduke Karl II, who provided for his further training. On the archduke's death in 1590 he went as organist to the Protestant collegiate church at Graz. When he introduced the Venetian style there it pleased the Protestant nobility but displeased the church authorities, who remained obstinately loyal to music in the traditional German style. In 1594 he returned to the court at Graz, which had remained Catholic, and in 1595 was confirmed in his post as court organist under Archduke Ferdinand. A collection of 40 of his motets for four to 12 voices, along with similar pieces by Gatto, was edited posthumously by Orazio Sardena (Venice, 1604, inc., 1 in MAM, xlvii, 1979). An eight-part *Missa super Benedicite omnia opera Domini* (*SI-Lng* 340) and a few motets also survive. The seven-part *Cantate Domino* is one of his finest works: it is found in six sources (including the *Promptuarii musici*, RISM 1612[3]), and Christoph Demantius used it as a model for a mass.

HELLMUT FEDERHOFER

Perino Fiorentino [Perino degli Organi] (*b* ?Florence, 1523; *d* 1552). Italian lutenist and composer. As a child he was a pupil of Francesco da Milano; his position as Francesco's protégé apparently placed him in high regard at the court of Pope Paul III, for he is mentioned in the papal account books as recipient of a cash gift at the age of 13 (in January 1537) and again in the following year. His name appears twice more after Francesco's death in 1543–4.

Five of Perino's compositions were published in *Intabolatura de lauto di M. Francesco Milanese et M. Perino Fiorentino, suo disciplulo* (RISM 1547[21]), a collection made up principally of Francesco's pieces. The volume was reprinted three times up to 1566, and some of its pieces probably appeared in Phalèse's now lost fifth book, *Des chansons, gaillardes, paduanes et motetz reduitz en tabulature de luc* (Leuven, 1547, see *BrownI*). Three of the pieces are fantasias. Two of them show a grasp of composition in an imitative style; the third is chordal, with diatonic melodies and ornamented cadences. Two other pieces are intabulations of four-part madrigals by Arcadelt: *O felici occhi miei* and *Quanti travagli*. The Siena Lutebook (*NL-DHgm* 20.860) contains Perino's parody on Francesco's *Fantasia de mon triste* (which is based on Richafort's chanson *De mon triste desplaisir*).

Period. The interval of time between successive events, such as rhythmic pulses or peaks in a vibration pattern; commonly, a musical statement terminated by a cadence or built of complementary members, each generally two to eight bars long and respectively called 'antecedent' and 'consequent'. A musical period has been compared with a sentence, or period, in rhetoric. Zarlino, in *Le istitutioni harmoniche* (1558), associated the two concepts when he described the cadence as a *punto di cantilena*, which could not appear until the sense of the underlying text had been completed (p.221); in this sense a period, however short or long, extends until its harmonic action has come to a close. It is this view of structure that governed musical form for much of the 18th century, extending below and above the period itself, from two-and four-bar phrases to entire movements. With the technique of *Fortspinnung* a composer such as Bach could build long periods out of short figures and motifs; the harpsichord cadenza to the first movement of Brandenburg Concerto no.5, for instance, constitutes a harmonic period 43 bars long (another example, in which a four-note motif in semiquavers is extended to a 12-bar period, is quoted in FORTSPINNUNG, ex.1). Wagner extended this concept of

period to apply to large-scale musico-dramatic units, although he often used an interrupted cadence, instead of a conclusive one, to terminate a 'period' in his music dramas.

Symmetry provides another defining element in period structure. Complementary figures and phrases establish a regular pattern of movement that allows the listener to anticipate the final point of arrival in a self-contained unit, for example the last bar of the theme or a variation in a theme and variations movement. When a period, such as that formed by the theme of the slow movement of Haydn's 'Surprise' Symphony, is built of two 'equal' members – the first of which is punctuated by an imperfect cadence, the second by a perfect cadence, and both of which are themselves further divisible into two equal parts – it is said to be 'regular' or 'normal'.

Regular period-like structures can be found in music from as early as the 13th century; the two strains of an *estampie* were designated *primus punctus* and *secundus punctus*, and their respective endings 'ouvert' and 'clos'. This symmetrical pattern, which is fitted to music for dancing and to settings of poetry built in quatrains, has been pervasive in music to the present day. However, it was primarily in the 18th century that the manipulation of period structure became the most important feature of musical form, because of the interplay of symmetry and cadential harmony that characterizes the musical language of the time. Classical composers were specially resourceful in building long periods by extending one or both of a pair of complementary phrases beyond their regular length by internal repetitions, interrupted cadences and harmonic digressions. A striking example of extended phrase lengths is provided by the first movement of Mozart's String Quintet in C K515, whose 368 bars (making it the longest first movement of all his quartets and quintets) can be divided into 11 periods.

Period structure in music was discussed extensively by 18th-century theorists. Koch's *Versuch einer Anleitung zur Composition* (1782–93) provides the most comprehensive treatment, beginning with short symmetrical patterns, discussing the compression and extension of phrases and periods and eventually arriving at what he called *Hauptperioden*, namely the principal sections in a large-scale form (exposition, development, recapitulation). There has been considerable disagreement on the terms used to discuss period structure, and even on the exact nature of the period itself; and the 19th-century view, which has sought to narrow it to two phrases each usually consisting of two, four or eight bars, has limited the period to the regular construction.

In the terminology of Hugo Riemann, 'period' expresses a purely rhythmic, hierarchical concept (*see* RHYTHM).

LEONARD G. RATNER

Periodicals. The present article provides a general account of musical periodicals and their history; it is supplemented by a comprehensive list of musical periodicals, arranged by continent and country, with an alphabetical index. Periodical editions of music are presented in a separate section.

In this article, dates given normally represent first and last volumes or, in certain special cases, issues; dates given with an oblique stroke (e.g. 1971/2) refer to a volume beginning in one year and ending in another. Fuller information on title changes and on breaks in a periodical's run will be found in the lists.

For a comprehensive list and index of musical PERIODICALS see volume 28.

I. General. II. Continental and national surveys.

I. General

1. Definitions, nomenclature. 2. Origins. 3. History.

1. DEFINITIONS, NOMENCLATURE. Periodicals are publications appearing at regular (or sometimes irregular) intervals and, normally, furnished with serial numbers indicating annual volumes. They primarily contain such material as essays, reports, critiques and news items. In addition to their periodical mode of publication they have in common with newspapers an intention of continuance, an approach determined by publisher or editor, an objective of variety of content and to some extent contemporary relevance. In music, the concept of the periodical also includes yearbooks, annual reports and the proceedings of institutions, almanacs on music and similarly orientated publications; works published in fascicles (part-works, serials etc.) are to be distinguished from periodicals proper.

The essential criterion is that of periodical appearance, be it regular (daily, weekly, fortnightly, monthly, bimonthly, quarterly, half-yearly or annually) or occasional. The term 'journal' came into English with the connotation of 'daily' as a translation of the French 'journal'. The expression 'journal' generally had this French sense at the end of the 17th century (i.e. diary, newspaper, periodical). J.P. Kohl, editor of the *Hamburgische Berichte von neuen gelehrten Sachen*, defined the term in the preface to the first annual volume in 1732, alluding to the change of meaning:

> A *journal* ... is to the French what the Greeks called *ephemerides*, the Romans *diarium*, the Italians a *giornale*, and the Germans a *Tag-Buch*. In all these languages however it also means, by extension of its original significance, a paper or a publication which appears not monthly but daily, or at least weekly. Similarly the word 'journal' has undergone the same change or alteration, so that it means today not so much a weekly paper with the latest learned news but any publication that appears either monthly, quarterly or yearly.

In musical publications the term 'journal' first appeared in the titles of French and Belgian periodicals, for example in the periodical edition of music *L'écho, ou Journal de musique françoise, italienne* (Liège, 1758–66). In Germany, where H.C. Koch's *Journal der Tonkunst* (Brunswick and Erfurt, 1795) may be noted, it was gradually replaced by the perfectly adequate German word 'Zeit-

schrift', which was also considered by contemporary dictionaries a substitute for 'journal and periodical writings' (as in the supplement of 1813 to J.H. Campe's dictionary). In England the word 'journal' first appeared in a main title in the periodical edition of music *The Monthly Musical Journal*, edited by Thomas Busby in London in 1801. 'Journal' was often used along with expressions relating to periodicity, e.g. 'Monthly Journal' (or simply 'Monthly'); similarly in French 'journal mensuel' and in German compounds such as 'Monatsschrift'. Other virtually synonymous titles used in English were 'Magazine', 'Review', 'Register', 'Gazette', 'Record', 'Circular', 'Guide', 'Herald', 'Times', 'Reporter', 'News' etc.; in French 'Echo', 'Chronique', 'Revue', 'Gazette', 'Album', 'Courrier', 'Moniteur', 'Presse' etc.; and in German 'Beiträge', 'Nachrichten', 'Briefe', 'Magazin', 'Blatt', 'Archiv', 'Rundschau', 'Zeitung' etc. Some of these terms also occur in the titles of daily papers. From the beginning various such names were used equally for musical periodicals and for periodical editions of music.

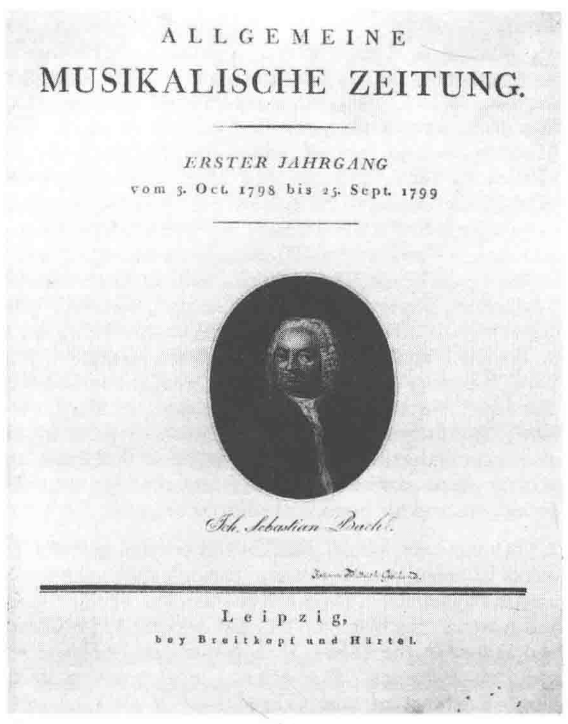
2. Origins. Periodical publications consisting solely of pieces of music preceded music periodicals (in the sense used in this article) in almost all countries except Germany and Austria. The first such editions appeared in England and France in the 1690s. Such periodicals exercised an enduring influence. The practice of furnishing each number or year of a musical journal or almanac with musical appendixes or supplements is no doubt attributable to them. So is the two-part format, with one part devoted to practice and the other to theory: that arrangement appears in the late 18th century and in the 19th, as in the *Musikalische Realzeitung* (1788–90) published by Bossler with its 'practical part', *Musikalische Anthologie für Kenner und Liebhaber*, William Ayrton's *The Harmonicon* (1823–33) and *The Flutist's Magazine; and Musical Miscellany* (1827–?1830), or the publications by Schott (Mainz) of *Der Minnesänger* (1834–8) and *Der Gesellschafter* (1837–8). In the second half of the 18th century and the first of the 19th periodical editions of music also included supplements with articles on theory and critiques of new books and works. Musical periodicals in the narrower sense seem to have developed from these literary supplements in England, Russia and Bohemia. *The Literary Part of the Musical Magazine* of *The New Musical and Universal Magazine* (1774–5) can be considered a prototype.

Other factors too played an important part in the rise of musical periodicals. Occasional musical items in newspapers and musical reports in general journals may be seen as forerunners. For example the literary and political journal *Mercure galant* (*Mercure de France* from 1724), founded in 1672 by the writer Donneau de Visé and published until 1832, carried important notices on musical events, and is specially relevant to French opera. In Germany the *Monathliche Unterredungen* of E.W. Tentzel (1680–1707) offered an essay with comments on musical compositions and an article about the use of musical instruments in church services (September 1692). German scholarly journals of the time contain essays on 'Musik und Oper der Italiener' (*Historische Remarques der neuesten Sachen in Europa des 1699ten Jahrs*, Hamburg, 1699–1700) and contributions on the 'Missbrauch der Kirchenmusik' and on the 'Verwerffung der musicalischen Harmonie' in the church (*Nova literaria Germaniae*, Hamburg, April 1704), with announcements and discussions of books on music. In England Peter Motteux's *The Gentleman's Journal, or The Monthly Miscellany, by Way of Letters to a Gentleman in the Country, consisting of News, History, Philosophy, Poetry, Musick* (1691/2–4) offers commentary on Purcell's music with reports on musical events and announcements of books. Moral weeklies, which were primarily journals of instruction, occasionally contained references to opera. In 1710 Joseph Addison published in the *Spectator* three satirical and critical articles about Italian opera in England. One issue of *Der Vernünfftler* (Hamburg, 1713/14), the first publication of the kind in Germany, edited by Johann Mattheson, contained his article 'Theatralische Remarques' on J.P. Förtsch's *Thalestris* and Reinhard Keiser's *Julius Cäsar* and *Iphigenie*. *Der Patriot* (Hamburg, 1724–8), as the organ of the Teutsch-Übende Gesellschaft, a society devoted to the promotion of the German language and to works, written in it, at first contained articles or conduct during opera performances but later included essays on stage sets and machinery, performers and dance; no.25 of the first volume was devoted exclusively to opera in Hamburg and took a rationalist attitude towards illusionism in Baroque opera. In his moral weekly *Vernünfftige Tadlerinnen* (Leipzig, 1725), too, Gottsched tried to influence his readers with opinions and verdicts on various opera-related topics.

As this conspectus shows, music had assumed a place, even if peripheral, in magazines and journals of the 17th and early 18th centuries long before the establishment of true musical periodicals. Their emergence had the deeper purpose of providing the musical endeavour of the time with its own platform. The ground for the earliest musical periodicals, which began in 1722 with Mattheson's *Critica musica*, was thus prepared by scholarly journals of an encyclopedic nature and moral weekly magazines devoted to learning and improvement.

3. History. The intellectual history of an epoch is strikingly reflected in its periodicals. This applies not only to general journals but also to musical ones, the articles and reports of which offer a variety of material for study as regards the outlook of the era. The first musical periodicals of the 18th century represent the publications of individual personalities, whom F.W. Marpurg called 'periodical writers' (*Der critische Musicus an der Spree*, i, 1749). They saw their task as consisting essentially in assisting the development of musical knowledge and ensuring its recognition by the critical exegesis of literature. These early musical periodicals are partly in the tradition of the encyclopedic scholarly journals and partly in the tradition of weeklies designed to serve education and moral improvement.

If these periodicals were mainly for musical connoisseurs, succeeding ones were increasingly concerned with the music of their own time, musical life and institutions. This was connected with the emergence of musical life into the public domain instead of its confinement within a more exclusive social group. Not only connoisseurs ('Kenner') but also musical amateurs ('Liebhaber') were drawn into the journals' circle of interest. The didactic and critical tendencies of the age of rationalism, at first prominent, retreated during the later 18th century, with the growing middle-class musical public, before a striving for the 'general' and a more marked tendency towards immediacy. While all the musical periodicals of the first half of the 18th century were published in Germany, in



the second half France and the Netherlands, and then Austria and England, produced their first musical journals.

1798, the year the *Allgemeine musikalische Zeitung* was founded in Leipzig, saw a new phase of development in the history of musical periodicals which continued until the end of World War I, characterized by its orientation towards the universal rather than the specialist journal. The development towards comprehensive journals on the one hand and to ever narrower specialist fields on the other reached its apogee at different times during the 19th century in different European countries and the USA.

In addition to the journals of wide scope, of the standing of the *Allgemeine musikalische Zeitung* (Leipzig, 1798/9–1848), *Le ménestrel* (Paris, 1833/4–1914, 1919–1940) or *The Musical Times* (London, 1844/5–), which covered all the musical activities of their time, there were many others, some of them important, that concentrated on particular musical centres, especially the chief cities of Europe – in Germany, Berlin and (especially) Leipzig, and in the USA (mainly Boston). With the increasing development of musical life the large general periodicals and the more locally orientated journals were joined by those catering for special interests. This trend began in the 1840s and gained momentum in the second half of the century. For example, the foundation of choral societies and the organization of music festivals gave rise to publications largely devoted to choral singing and vocal music. Developments in instrument manufacture demanded the appearance of specialist periodicals. Reforms in music education led to numerous periodicals dealing with general educational matters or more specific ones such as piano or singing pedagogy, or eurhythmics on the Jaques-Dalcroze system, or notation (e.g. John Curwen's Tonic Sol-fa method). Liturgical reforms, the revival of hymns and sung services and the founding of church music organizations encouraged the appearance of many more. The increasing cultivation of instrumental and vocal music also gave rise to periodicals dealing with particular genres, including chamber music, popular music (for such instruments as the guitar, mandolin and zither), and even light music, including that of the music halls and smoking concerts.

The widespread commercialization of musical life after 1870 led to an increase in journals serving groups of like interest, whose task was mainly to further professional interests. Continuing specialization led to the provision of periodicals and yearbooks devoted to individual composers, for example Wagner. The consolidation of musicology as a discipline and the formation of musicological societies initiated the publication of musicological journals in the later 19th century. During this development the general journals came to devote significantly more attention to practical matters of music and musical life, while research articles and studies appeared in specialist ones. In the 19th century the development of national schools, mainly in north-east and south-east Europe, led to the founding of periodicals stressing the national element, in Scandinavia as well as in the Slavonic countries, Hungary and Greece. Outside Europe and North America, the first music periodicals appeared in the later 19th century and the early 20th; these were mainly devoted to national music and musical life, such as that of Australia, Japan, Mexico and New Zealand.

Towards the end of the 19th century came recognition of a need, in music as in other cultural areas, to proceed

1. Title-page of the first issue of the 'Allgemeine musikalische Zeitung' (Leipzig, 1798)

outwards from national groups into international ones. As opposed to the national element so dominant in the 19th century, international cooperation was seen as an urgent task in order to constrain further national fragmentation and compartmentalization, in music as well as musicology. The International Musical Society, founded in 1899, the first of its kind, published two important periodicals to further such aims; both lasted until the beginning of World War I (1914).

As in all branches of cultural life, the end of World War I occasioned a turning-point in the development of musical periodicals. The fundamental change of the years after 1918 is reflected in the titles of certain new periodicals. Together with general periodicals (some revived, others newly established), which were mainly concerned with the musical life of the time, there were many concerned solely with modern musical developments, for example impressionism or expressionism, or the structural and tonal problems of modern music. The range of specialized journals was widened by the development and spread of gramophone records and by the new directions of research taken by teachers and theorists such as Heinrich Schenker.

In particular, the musicological specialist journals underwent notable expansion in many countries between the wars, partly because of the founding of more musicological societies (e.g. in France, Germany, Sweden, Great Britain, Switzerland and Belgium). In some countries outside Europe, for example in parts of Latin America, musical periodicals came into existence only after 1940. In several countries, activity in musical periodicals was halted or even destroyed by World War II. Only a few were able to reappear after the end of the war in 1945. At the end of the 1940s and still more in the 1950s and 60s the number of musical periodicals in the advanced countries of the world increased considerably

and, by the 1970s, presented an uncommonly varied total picture. The new journals are for the most part general ones dealing with the musical life of their own time and country, e.g. in Austria, Germany and Great Britain, as well as several concerned with traditional specialist areas such as music education, church music, instrument making, vocal and choral music or folk music. New topics such as copyright, sound reproduction (records, tape, electronic instruments, stereophony) and jazz, as well as beat, country music and (increasingly) pop and rock music, are all covered by periodicals. Periodicals concerned with records in particular can be seen as a mirror of various repertories, famous virtuosos, singers and conductors; the importance of technical and commercial aspects should also be emphasized. The progress of musicology after World War II, in Europe and especially in the USA, found expression in the establishment of musicological periodicals and yearbooks. Some sought to cover all areas of the discipline; others were (and are) confined to particular periods, composers, genres or instruments.

Since the early 19th century, and particularly since 1850, many music periodicals have been issued by music publishing firms with the propagation of their own music publications as an important objective; when such factors have been permitted to influence editorial policy, such periodicals may give a highly partial view of the musical scene. Many others, for example the official organs of institutions or learned societies, or independently owned periodicals, are unaffected by such factors. Commercial considerations over the years have increasingly dictated the necessity for periodicals to include advertising material; the nature of such advertising may often provide clues as to a periodical's readership.

Sound reproduction, electro-acoustical experimentation and electronic technology have increasingly been topics for consideration in music periodicals. This development began in the mid-1950s. Journals devoted to musical instruments came to discuss new electronic technology and its application to keyboards, guitars, drums, woodwind and other instruments. There are specialized journals dealing with the promotion of experimental and improvised music. From the later 1970s computer music came to be considered. Some periodicals deal with the role of science and technology, or with methods and issues arising from the use of contemporary technology in such fields as multimedia art-forms, sound sculpture as generated by computer and electro-acoustic composition; in the USA, the application of computers and technology to the study of music and musicology is a favoured topic.

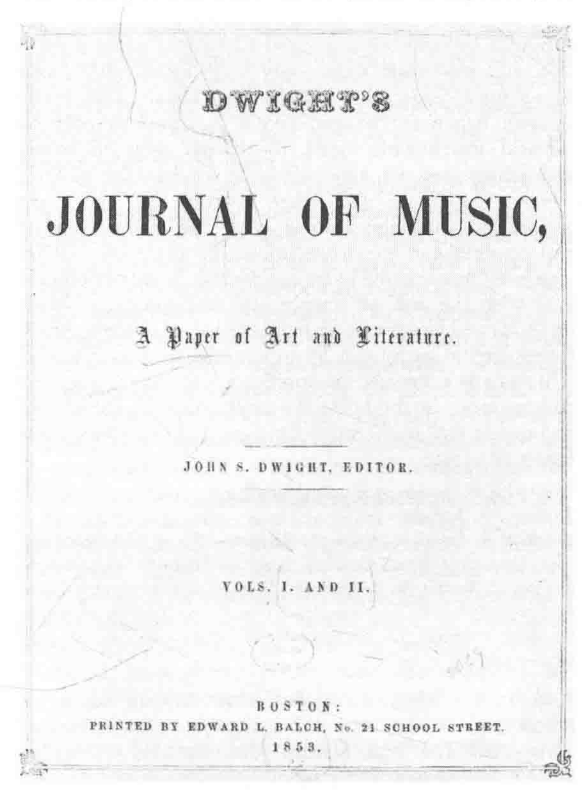
II. Continental and national surveys

1. Africa. 2. America: (i) Canada (ii) United States of America (iii) Latin America. 3. Asia: (i) India (ii) Israel (iii) Japan. 4. Australasia. 5. Europe: (i) Austria (ii) Belgium (iii) France (iv) Germany (v) Great Britain (vi) Italy (vii) The Netherlands (viii) Russia (ix) Central eastern European countries (x) Scandinavia (xi) Spain and Portugal (xii) Switzerland.

1. Africa. Music journals on the African continent reflect a musical culture either European or European-influenced. The first African journals with a regular musical component came from the French-ruled Algeria and Tunisia; these were devoted to the theatre and the fine arts generally as well as music, e.g. *Lorgnette bônoise* (Bône [now Annaba], 1897/8), *Alger artistique* (Algiers, 1898) and *La revue noire* (Tunis, 1898). The first exclusively musical journals were *Le bulletin musical* (Mustapha [now Algiers], 1904–6) and *L'avenir musical de Tanger* (Algiers, 1904–14), organ of the Algiers Conservatory. Similarly most African music periodicals continue to represent institutions or organizations. Among the more important were the *Newsletter* published 1948–53 by the African Music Society founded in 1947 in Roodeport near Johannesburg (continued 1954–1975/6 as *African Music*), which was concerned with investigations into folk music, popular music, dance and poetry in Africa, and the journal of the All-Africa Church Music Association (Salisbury, Zimbabwe, 1963–). Further attempts towards a more systematic view of African music are seen in *Notes on Education and Research in African Music*, published by the Institute of African Studies of the University of Ghana since 1967, and in *The Nigerian Music Review* (1977–), published by the Department of Music, University of Ife. In South Africa, the musicological journal *Ars nova* was founded in 1969 at the Department of Musicology, University of South Africa; it was joined by the *South African Journal of Musicology* (Pretoria, 1981–) of the Musicological Society of Southern Africa. Two specialized journals are the *South African Journal of Music Therapy* (Cape Town, 1982–) and the *Nuusbrief*, later *Cantando Gaudeamus* (Bloemfontein, ?1989–), published by the South African Choral Society.

2. Canada.

(i) Canada. Musical supplements were published in Canadian literary journals from 1839, but musical journals as such appeared in Canada only from the mid-1840s, at first in French-speaking areas, where the earliest Canadian musical centres had been established: *Le ménestrel* (Quebec, 1844–5) which presumably derived its title from the Paris journal, and *L'artiste* (1860). Probably one of the first Canadian music journals in English was *The Musical Journal* (1887–?1890). Besides numerous short-lived publications there have been three significant longer-lasting periodicals: *Le passe-temps* (1895–1935, 1945–9), *Canadian Music Trades Journal* (1900/01–1932/3) and *The Violin* (1906/7, called *Musical Canada* from 1907 to 1933). In more recent times Canadian music journals have generally concentrated on the various facets of musical life, as did the *Canadian Review of Music and Art* (1942–1947/8), devoted to musical life, to conductors, composers and performers and more widely to musical education. The first journal, published by the Canadian Music Council was *The Canadian Music Journal* (Sackville, NB, later Toronto, 1956/7–1961/2), followed by *Les cahiers canadiens de musique/The Canada Music Book* (1970–76). Mention should also be made of Canada's leading opera journal *Opera in Canada* (from July 1963 *Opera Canada*; 1960–), published by the Canadian Opera Guild. Other music journals are devoted to music education, for example the journal of the Canadian Association of University Schools of Music (1971–9), continued as *Canadian University Music Review* (1980–), or on Canadian composers, folk music and the music industry. A first step towards a Canadian musicological periodical is represented by *Studies in Music* (1976–87, 1991–), with contributions exclusively by members of the music faculty of the University of Western Ontario. Journals specializing in early music appeared, such as *Le tic-toc-choc*, later



Journal de musique ancienne (1979–89) and *Musick* (1979–), published by the Vancouver Society of Early Music. In 1983 the yearly newsletter *Periodica Musica* was founded as organ of RIPM, which is involved in the cataloguing and indexing of musical periodicals, published by the Centre for Studies in 19th-Century Music at the University of British Columbia, from 1986 at the University of Maryland, USA. There are several periodicals devoted to contemporary music, among them *Array Newsletter* (1972/3–1978), intended to improve communication between composers and performers. *Musicworks* (1978–) deals with new music from Stockhausen to John Cage, microtonal music and experimental developments in visual art and dance. *SoundNotes* (1991–), a single-handed effort by the composer and author Colin Eatock, reports on the new music scene across Canada. *Circuit* (1991–) deals with postmodernism and is orientated towards continental Europe.

(ii) United States of America. In the USA, the forerunners of true musical periodicals were periodical music publications, obviously English-influenced. The first, edited by Amos Doolittle and Daniel Read, was *The American Musical Magazine* (1786–7), which consisted of compositions by American and English composers. But a successor, *The Musical Magazine*, edited by Andrew Law (1792–1801), offered in addition to 'Psalm and Hymn Tunes' an essay – an exception to the general trend in early USA musical periodicals, which however cannot be seen as a first step, historically, towards a true musical journal. The *Ladies' Literary Museum, or Weekly Repository* (1817–20) was a literary journal which included musical supplements from 1818, and from 1819 turned occasionally to musical topics.

The Euterpeiad, or Musical Intelligencer (1820/21–1823), edited by J.R. Parker, may be seen as the first true musical periodical in the USA. In addition to a serial conspectus of musical history it offered mainly news and reviews of Boston musical life, which was becoming increasingly lively in the 1820s. Among other early, short-lived periodicals are *The Euterpeiad* (1830/31–1831), containing essays on musical and stylistic questions, biographical sketches and anecdotes about well-known musicians as well as discussion of printed music and concert reviews, and *The Musical Magazine, or Repository of Musical Science, Literature and Intelligence* (1839–1841/2), which strove to familiarize its readers with the European musical scene. The first really ambitious musical journal was *Dwight's Journal of Music* (1852–81). In a circular of 1852 its editor John Sullivan Dwight (1813–93) stressed the independence of his publication: 'The tone to be impartial, independent, catholic, conciliatory, aloof from musical clique and controversy, cordial to all good things, but not eager to chime in with any powerful private interest of publisher, professor, concert-giver, manager, society or party'. The journal offered essays on such composers as Handel, Haydn, Mozart and Beethoven, and on music history, theory, education and style, together with critical reports on the musical scene and announcements of new compositions. Another more comprehensive musical periodical of extra-regional significance was the New York publication *Musical America* (1898–9, 1905–64, 1987–92), while other general musical periodicals focussed on individual centres, for example *The Musical Leader and Concert-Goer* (Chicago, 1895–1967) and the *Pacific Coast Musician* (Los Angeles, 1911–48), the oldest important Californian musical periodical.

As musical culture spread in the 1870s, numerous publications appeared dealing with particular interests. The movement, European in origin, towards the revival of church music and sung services led in the USA to the publication of several church music magazines, such as *Caecilia* (Regensburg, 1874–6; New York, 1877–), the journal of the American Cecilia Society, *The Catholic Choirmaster* (1915–64), the journal of the Society of St Gregory of America, incorporated in 1965 into *Caecilia*, and *The Church Music Review* (1901/2–1934/5) of the American Guild of Organists. With the growing commercialization of musical life these were joined by periodicals devoted to the music trade, such as *The Music Trades* (1890–), or to the sale of musical instruments, e.g. *Music Industry* (?1906–). Other publications were concerned with light music, e.g. *Metronome* (1885–1961), and the various branches of music entertainment, e.g. *The Billboard* (1894/5–). Interest in music education reform led to the foundation of journals dealing generally with the subject, e.g. *The Etude* (1883–1957), which circulated widely, and *The Musician* (1896–1948), or with new methods of notation, e.g. *Tonic Sol-fa Advocate* (1881/2–1885/6), the organ of the Tonic Sol-fa movement in the USA and Canada.

Many special interests were incorporated into the framework of musical publications of the 20th century. In a deliberate campaign for progressive European music and for the compositions of the incipient American avant garde the magazine *Modern Music* (at first *The League of Composers' Review*) was founded (1924–46). On the other hand, *Chord and Discord* (1932–1963, 1969), as

DWIGHT'S

JOURNAL OF MUSIC,

A Paper of Art and Literature.

JOHN S. DWIGHT, EDITOR.

VOLS. I. AND II.

BOSTON:
PRINTED BY EDWARD L. BALCH, No. 21 SCHOOL STREET.
1853.

2. *Title-page of the first issue of 'Dwight's Journal of Music' (Boston, 1852)*

the magazine of the Bruckner Society of America, was devoted to the works of Bruckner and Mahler. Next to appear were journals representing the interests of operatic societies, such as *Opera, Concert and Symphony*, from 1952 *Counterpoint* (1934–53) of the San Francisco Opera Association, and *Opera News* of the Metropolitan Opera Guild (1936/7–), which contains news of the Metropolitan Opera and the Guild and is a leading organ of both the Metropolitan and the international operatic scene. Sheets dealing with records, jazz and film music followed at the beginning of the 1940s. The following decades saw an upsurge of musicology in the USA. The first comprehensive musicological periodical *The Musical Quarterly* (1915–) was founded by the pioneer of American musicology O.G.T. Sonneck; successive editors have followed his declared policy of securing contributions from the best scholars regardless of nationality. As well as essays on various aspects of musicology, there later followed selective book, music and record reviews and 'Current Chronicle' (reports on performances of new music) as well as quarterly book and record lists. Among more recent musicological journals are the *Journal of Renaissance and Baroque Music* (from 1948, *Musica disciplina*; 1946/7–) and the *Journal of the American Musicological Society* (1948–). Mention should also be made of *Notes*, the organ of the American Music Library Association (1943/4–), with its comprehensive bibliographical contributions and useful conspectuses of new music, books and records. *The Music Index* (1949–), published in monthly parts and collected in annual volumes, offers a continuous guide, in the form of an author and contents index, to over 100 musical periodicals mainly in English. In 1967 the periodical *RILM Abstracts* was founded by the International Association of Music Libraries Archives and Documentation Centres with the International Musicological Society and the American Council of Learned Societies, designed to provide a conspectus of all significant musicological writing. The *RIdIM/RCMI Newsletter* (1975/6–), the organ of the Répertoire International d'Iconographie Musicale, published by the Research Center for Music Iconography of the City University of New York, provides a coverage of research in music iconography, addressing issues relevant to the music of both Western and non-European cultures.

In addition to these important publications devoted to documentation and research, attention has been given to the cataloguing and classifying of sources and documents to increase their accessibility and usefulness to scholarship, for example in the *Music Cataloging Bulletin* (founded 1970) of the Music Library Association. Mention should also be made of some library journals, such as *Cum notis variorum* (1976–89), the newsletter of the Music Library at the University of California, Berkeley, reporting on acquisitions and meetings, *Impromptu* (1982–?5), which notified librarians, scholars and musicians about the activities of the Music Division of the Library of Congress, and *The Full Score* (1985–), the newsletter of the Music Library at UCLA, which is concerned with research based on the library's materials. Other specialist preoccupations reflected in periodicals of the 1970s were concentrated more than before on particular countries, in respect either of historical studies or of the contemporary situation. Thus *Bach* (1970–), the periodical of the Riemenschneider Bach Institute, offers analyses and essays on the forms, styles and performances of the music of Bach and other Baroque composers, with translations of significant theoretical and musicological works, as well as *Bach Perspectives* (1995–), published by the University of Nebraska. *Ethnomusicology Newsletter*, later *Ethnomusicology*, was founded in 1953 by the Society for Ethno-Musicology and soon became a leading organ in this field, joined since 1983 by *Ethnomusicology at UCLA* and since 1995 by *Ethnomusicology Online*. Specific ethnic groups are considered in *Asian Music* (1968/9–), focussing on performing arts traditions, and in the *Chinese Music General Newsletter*, from 1979 *Chinese Music* (1978–), the organ of the Chinese Music Society of North America, as well as in *Music from China News* (1991–) and *Music in China* (1998–). The twice-yearly *The Black Perspective in Music* (New York, 1973–90) is devoted to the historical study of the African and black American musical tradition and its revival. It was joined by the *Black Music Research Newsletter* (from 1988 *Bulletin*) (1977/8–1990) and the *Black Music Research Journal* (1980–), published by the Institute for Research in Black American Music of Fisk University, mainly devoted to theoretical, sociological and aesthetic problems of the living musical traditions and their historical past, more recently followed by *Lenox Avenue* (1995–) of the Center for Black Music Research at Columbia College, Chicago.

Emphasis has recently been laid on research in American music. *The Sonneck Society Newletter* (1975–) provides information; more substantial is *American Music* (1983–), edited by the same society, covering not only art music but also jazz, folk, country and gospel. The *Newsletter* of the Institute for Studies in American Music (1971/2–) deals with folk and urban music in both North and South America. Most important are the *Inter-American Music Review* (1978/9–), edited by Robert Stevenson, relevant for the history of Latin and North American music, and the *Latin American Music Review* (1980–), edited by Gerard Béhague, which continues the tradition of Chase's *Yearbook for Inter-American Musical Research* (1965–77), with articles based on original Latin American material. International folk music research was considered in the *Yearbook for Traditional Music* (1969–86) of the International Council for Traditional Music. Besides *The Journal of Musicology* (1982–), which covers a wide variety of branches of the discipline, there are several scholarly journals devoted to particular areas. Music education periodicals include *Update* (1982–), for teachers on a national level, the *Philosophy of Music Education Review* (1993–) and *Teaching Music* (1993/4–) of the Music Educators National Conference, and music psychology, such as *Psychomusicology* (1981–) and *Music Perception* (1983/4–). Some journals are concerned with particular periods such as *19th Century Music* (1977/8–) and *Divisions* (1978–80), which dealt with the Baroque, including translations of theoretical works. Music theory occupies an important place in the realm of periodicals, with *In Theory Only* (1975–) of the Michigan Music Theory Society, *Music Theory Spectrum* (1979–) of the Society for Music Theory and *Music Theory Online* (1993–). Several periodicals deal with particular genres, such as chamber music or choral music; religious traditions are considered in *Folk Mass and Modern Liturgy Magazine* (1973/4–), *Musica judaica* (1975/6–) of the American Society for Jewish Music and *Hymnology Annual* (1991–), which is on an international basis. The

Journal of Research in Singing (1977/8–), *Voice*, later renamed *The Voice of Chorus America* (1978–) and *Ars Lyrica* (1981–) are concerned with vocal music; some journals are devoted to opera, such as *The World of Opera* (1978/9) and especially *The Opera Quarterly* (1983/4–), while the *AIVS Newsletter* (1976–), published by the American Institute for Verdi Studies and renamed *Verdi Newsletter* in 1977, includes a bibliography of publications on the composer since 1974. Periodicals devoted to composers more generally include *The Composer* (1969/70–1981), while *Women of Note Quarterly* (1993–) is concerned with women composers; others, published by societies, are dedicated to individual composers such as the *Bulletin* of the Arnold Schoenberg Institute (1975–6) and the *Journal of the Arnold Schoenberg Institute* (1976/7–1995/6), the *Journal of the American Liszt Society* (1977–), *The American Brahms Society Newsletter* (1983–) and *Beethoven Forum* (1992–). Several journals are devoted to special instruments or groups, among them *The Winds Quarterly* (1980–81), the *Flute Journal* (1981–) and *ClariNetwork* (1982–8). Periodicals in the field of sound reproduction are numerous and include the *Antique Phonograph Monthly* (1973–93) and the *ARSC Newsletter* (1977–), while record reviewing is the concern of *Fanfare: the Magazine for Serious Record Collectors* (1977/8–), *Record Review* (1977–84) and *New Review of Records* (1994–) as well as *Resound* (1982–), from the Archives of Traditional Music, which deals with archival materials (tapes, disc and cylinder recordings). Other technical developments, especially computer applications for musical purposes, are covered by the *Computer Music Journal* (1977–), *Computing and Musicology* (1985–) and *Computers in Music Research* (1989–). There are also increasing numbers of journals devoted to popular music and jazz.

(iii) Latin America. The first authenticated music periodical of Mexico and Central America is *El violín* (Mexico City, 1862). That in South America is *L'Union musicale* (Rio de Janeiro, 1852–?; traceable only bibliographically), followed by the Venezuelan opera journal *Dulcamara* (1873/4), the *Boletín musical* (Buenos Aires, 1878–?) and in Venezuela *El arte musical* (1878–?), the *Revista musical e de bellas artes* (Rio de Janeiro, 1879–80) and the *Montevideo musical* (1885–?1939), published for half a century by the Instituto Verdi and exercising a significant influence in Latin America. At first its only successors were isolated and short-lived music publications, but this situation changed radically at the beginning of the 1940s. From then on many musical periodicals were published, concerned with day to day happenings of musical life (for example *Polifonía*, Buenos Aires, 1944–?82, *Buenos Aires musical*, 1946–?78, or the important *Nuestra música*, Mexico City, 1946–53), music education (*Armonía*, Panama City, founded in 1943), church music (*Música sacra*, Petrópolis, 1941–59), modern music (*Música viva*, Rio de Janeiro, 1940–41) or folk music (*Anuario de la Sociedad folklórica de México*, Mexico City, 1938/40–1959); *Folclore* (São Paulo, 1953–; *Revista brasileira de folclore*, Rio de Janeiro, 1961–76, or *Revista colombiana de folclor* (1947–) and light music (*La canción*, Buenos Aires, founded in 1942). Another important publication is the *Revista musical (chilena)* (Santiago, 1945–), brought into being by the Instituto de Extensión Musical, the governing body of Chilean musical life since 1940; at first based on North American and European models, it later developed a certain independence as a review of Chilean and Latin American art and indigenous and folk music from the colonial epoch to the present. Mention should be made of the more recent *Heterofonía* (Mexico City, 1968–), which became the official journal of the Conservatorio Nacional de Música, and the monthly *Revista do músico* (Rio de Janeiro, 1974–), both of which deal with the current musical life of their countries. The first periodicals devoted to musicology were the *Boletín latino-americano de música* (Montevideo, 1935–46), published from 1941 by the Instituto Interamericano de Musicología, and *Música viva* (Montevideo, 1942), which contained important contributions on the history of South American music. The establishment in 1965 of a musicological society in Argentina gave rise to a specialized journal, the *Argentine Review of Musicology* (Buenos Aires, 1973–), which places its main emphasis on ethnomusicology and folklore as well as covering historical, sociological and aesthetic questions. The 1980s saw the establishment of musicological journals in other South American countries, such as the *Revista musical de Venezuela* (Caracas, 1980/81–), since 1982 the official organ of the Sociedad Latinoamericano de Investigaciones Musicales, founded in September 1982 under F.C. Lange, or the *Boletim da Sociedade brasileira de musicologia* (São Paulo, 1983–). Other musicological periodicals emphasize the special traditions of the country concerned, such as the *Revista colombiana de investigación musical* (Bogotá, 1985–). The *Boletín andino de música* (Cochabamba, 1988–) deals with research and bibliography of traditional Bolivian music. Further specialized music journals are concerned with opera (for example *Ayer y hoy de la opera*, Buenos Aires, 1977–92), new music and contemporary composition (*Pauta*, Mexico City, 1982–) and folk and popular music (*A Contratiempo*, Bogotá, 1987–) as well as current musical life, such as *Boletín de música* (Havana, 1970–), which lists new works by Cuban composers, the *Boletím de documentação musical* (São Paulo, 1977–81), since 1982 forming a section of *Caderna de música* (São Paulo, 1980–), which lists Brazilian works in supplementary catalogues, or *Música brasileira* (Rio de Janeiro, 1996–).

3. Asia.

(i) India. The earliest Indian music periodical was the *Annual Report of the Bengal Music School* (1871–?). This was followed by *Oriental Music* (1892–3), devoted to indigenous music. Two important periodicals founded by Indian institutions appeared in the 1930s: *The Journal of the Music Academy Madras* (1930–), which contains contributions on Western as well as Indian music (mainly on Hindu music), and *Music of India* (1937–8), the organ of the Calcutta Music Association. The 1960s saw the establishment of the *Indian Music Journal* (1964–) and at the beginning of the 1970s the foundation of the Indian Musicological Society; an English supplement to the periodical *Sangit Kala Vihar* served from November 1970 as its official organ, from 1971 as *Journal of the Indian Musicological Society, incorporating Sangeet Kala Vihar*, from 1973 *Journal of the Indian Musicological Society*. It deals mainly with Indian music and related arts.

(ii) Israel. The first music periodical of Palestine, as it then was, was the journal *Hallel* (1930), published by the Institute for New Music. After the founding of Israel various musical periodicals appeared. *Bat-kol* (1956,

1960–61) and *Tatzlil* (1960–70) represent local journals in which Israeli scholars published their research, while material from the congresses of the Israel Institute for Religious Music were printed in the yearbook *Dukhan* (1960–66). The *Bulletin of the Israel Musicological Society* (1968–) provides reports on that society. Since 1971 Israel has produced *Orbis musicae*, a specialized musicological journal, and since 1978 *Israel Studies in Musicology*, containing contributions on various topics, including music theory and ethnomusicology; the first volume has served as a Festschrift for Edith Gerson-Kiwi and Hanoch Avenary. In 1983/4 the scholarly yearbook *Music in Time* appeared, from the Rubin Academy of Music and Dance, with articles by well-known musicians and music educators.

(iii) Japan. Japan's first musical periodical, *Ongaku zasshi* (1890–98), appeared at the end of the 19th century. This and its successors were manifestly influenced by the Western tradition, for example *Ongaku-shinpō* (1904–7), whose title reflects that of Schumann's journal *Neue Zeitschrift für Musik*. It contains essays, theoretical studies and reports on European musical life. Among the periodicals of the following years those mainly devoted to European music are the journals *Ongaku* (1910–22), and *Philharmony* (1927–), the organ of the NHK SO. Those devoted to traditional Japanese music in general began to appear towards the end of the 1920s: outstanding is *Tōyō ongaku kenkyū* (1936–42, 1951–) published by the Society for Research in Asiatic Music. But periodicals concerned with specific types of Japanese music hardly appeared before the 1940s; an example is *Engeki sekai* (1942–), which consists of studies of the *kabuki* and its music. There are however numerous magazines on records and jazz, e.g. *Chikuonki to kyōiku* (1931–) and *Swing Journal* (1947–), known by its Japanese name of *Suingu jānaru* until 1987. The establishment of the Musicological Society of Japan in the 1950s led to the publication of the country's first specialized journal of musicology, *Ongakugaku* (1954–), mainly based on European models but also containing articles on Japanese music. Similarly, the *Bulletin of Musashino academia musicae* (1962–) is a yearbook in which historical questions and current problems of musicology, especially of the Western world, are discussed by both native and foreign authors.

4. Australasia. The oldest music periodical of Australia is *Williams's Musical Annual and Australian Sketch Book* (1858). Apart from music supplements, which were clearly appropriated from the *Illustrated Journal of Australasia* (1855), it contains only ephemera about musical life in Melbourne. It was followed by the *Adelaide Musical Herald and Journal of Literature* (1862/3). Like these, later periodicals mainly devoted to the musical life of individual centres such as Melbourne, Adelaide and Sydney were generally short-lived. Of particular importance was the periodical *Music and Dance* (founded as *The Australian Musical News*, 1911–63/4), which provided graphic reports on events and circumstances in various parts of Australia. Among later publications two are of special interest: *The Canon* (1947/8–1966) and *Con brio* (1973), the journal of the NSW State Conservatorium of Music. More specialized magazines were or are concerned with jazz, e.g. *Jazz Notes (and Blue Rhythm)* (1941–62), which for a time relied heavily on the English journal *Jazz Music*; or with records, e.g. *Record Guide* (1953–8); or with copyright, e.g. the *APRA Journal* (1969–92) and *Music and Copyright* (1989–), published by the Australian Copyright Council. The establishment of musicological studies in the 1960s in Australia led to the publication of several periodicals, such as *Studies in Music* (1967–92) and *Miscellanea musicologica* (1966–90), published by the music departments at the universities of Western Australia and Adelaide respectively, as well as *Musicology* (from 1985 *Musicology Australia*) (1964–), the organ of the Musicological Society of Australia, with articles on the music of various continents, the Indian and Pacific Oceans, Australian Aborigines and Australian composition, and the society's *Newsletter* (1977–). Periodicals devoted to music education include the *International Journal of Music Education* (1983–), published by the University of Western Australia and later by the University of Reading, Great Britain, and *Australian Music Teacher* (1990–). Emphasis is laid on Australian music in *Australian Record and Music Review* (1989–), in the *Newsletter* (1995–) of the Centre for Studies in Australian Music and in *Music Forum* (1996–), the journal of the Music Council of Australia.

3. Title-page of the fortieth issue of the 'Bulletin of Musashino academia musicae', iii (Tokyo, 1969)

The New Zealand Muse: a Musical Paper (1880) is the first authenticated New Zealand musical periodical; it was followed by the *The New Zealand Musical Monthly* (1888–90), whose coverage included Australia. The journal *The Triad* (1893/4–1927) was of particular

importance; in its early years it was mainly devoted to music, offering essays, news and music supplements, though it later turned more to literature and art. Day to day musical life was dealt with in *Music in New Zealand* (1931–7). Important articles on New Zealand composers, musicians, publications and criticism appeared in *Music Ho* (1941–8). *Third Stream* (1968) was founded on an attempt to establish an important New Zealand music periodical, but it ceased publication after four numbers for financial reasons. In 1979 *Canzona*, the organ of the Composers' Association of New Zealand, started publication and after some years widened its scope to general musical topics. The leading journal of today is *Music in New Zealand* (1988–), from the music publisher W. Dart, which covers all fields from rock and pop to classical music.

5. EUROPE.

(i) Austria. Austria's first music periodical, *Der musikalische Dilettante* (1770–73), founded by J.F. Daube, can in a sense be considered a scholarly journal in Mattheson's tradition: it is essentially a primer of composition and theory, with pieces by Daube and others. An important source for information about opera at the beginning of the 19th century is the *Wiener Hof-Theater-Almanach* (1804–16), called from 1805 the *Wiener Hof-Theater-Taschenbuch*, edited by H.J. Collin and I.F. Castelli. The *Wiener Theater-Zeitung* (1806–60), edited by Adolf Bäuerle (1786–1859), sought to fulfil the function of a Viennese music periodical; *Thalia* (1810–11), edited by I.F. Castelli, played an analogous role for opera – Castelli was sharply critical of Italian productions. The *Wiener allgemeine musikalische Zeitung* (1813), edited by Ignaz von Schönholz, did not long withstand the competition of the *Wiener Theater-Zeitung*; it was followed by the comprehensively conceived *Allgemeine musikalische Zeitung, mit besonderer Rücksicht auf den österreichischen Kaiserstaat* (1817–24) which, especially under the editorship of F.A. Kanne (1778–1833), successfully espoused Beethoven's cause and is an important source-book for the musical life of those years. The short-lived *Wiener Journal für Theater, Musik und Mode* (1806) was initially popular in Vienna. Ten years later there appeared the *Wiener Moden-Zeitung*, from 1817 *Wiener Zeitschrift für Kunst, Literatur, Theater und Mode* (1816–48); alongside Bäuerle's *Wiener Theater-Zeitung* it owned special weight at a time when no true music periodical existed; in 1816 and 1825–8 it published reviews of operatic productions in Vienna (including works by Auber, Bellini, Boieldieu, Donizetti, Meyerbeer, Mozart, Rossini and Weber).

The *Allgemeiner musikalischer Anzeiger* (1829–40), edited by Castelli, contained mainly reviews of new music; it was joined by the important *Allgemeine Wiener Musik-Zeitung* (1841–8) edited by August Schmidt (Aloys Fuchs also collaborated on it). The *Neue Wiener Musik-Zeitung* (1852–60) of Franz Glöggl jr had such notable contributors as Simon Sechter and Gustav Schilling; it offered substantial articles on music history as well as regular weekly reports on the Hofoper and news of musical events. On its demise, Selmar Bagge (1823–96) founded the *Deutsche Musik-Zeitung* (1860–62); he understood the importance of securing as contributors such important figures as Eduard Hanslick, Gustav Nottebohm, W.J. von Wasielewski and Arrey von Dommer, and thus of setting high standards. It was continued by the new series of the *Allgemeine musikalische Zeitung* (Leipzig, 1863–5), which Bagge edited from 1863, but many facets of Viennese musical life could be covered only in reports from correspondents.

In the second half of the 19th century and the first decades of the 20th new specialist periodicals were founded, for example those dealing with choral music, such as *Die Liedgenossen* (1861–5), which arose as choral societies and glee clubs developed. The organization of professional musicians into associations for the furtherance of their interests led to the publication of corresponding journals such as the *Österreichische Musiker-Zeitung* (1875–8; new series 1893–1934). The Austrian contribution to Wagner was *Parsifal* (1884–8). The resurgence of Catholic church music led to the founding of such publications as the *Gregorianische Rundschau* (1902–13), edited by Johann Weiss, which included material on the plainchant research at Solesmes, and its sequel *Musica divina* (1913–38) under the aegis of the Schola Austriaca. Attempts at the reform of music education led to such periodicals as the *Musikpädagogische Zeitschrift* (1911/12–1927). In 1904 the noted Viennese critic and composer Richard Heuberger founded the yearbook *Musikbuch aus Österreich* (1904–13), which contains valuable critical and musicological essays.

The first musicological yearbook, *Studien zur Musikwissenschaft* (1913–), was founded by Guido Adler as *Beihefte* of the Denkmäler der Tonkunst in Österreich (published in Germany). The music and theatre periodical *Der Merker* (1909/10–1922) offered, together with substantial articles on Vienna's musical past, the first reports on the new Viennese School of Arnold Schoenberg; but it was not until the advent of the *Musikblätter des Anbruch* (1919–37) that a clear new forum became available, after

World War I, for the discussion of a new direction for music. Similar aims were pursued by *23: Dreiundzwanzig: eine Wiener Musikzeitschrift* (1932–7) edited by Willi Reich. New theories of music were also diffused by periodicals, e.g. the teaching of Schenker in his journal *Der Tonwille* (1921–4) and his yearbook *Das Meisterwerk in der Musik* (Munich, Vienna and Berlin, 1925–30), while *Der Dreiklang* (1937/8) was concerned with promulgating these doctrines after Schenker's death. Further music journals were devoted to particular composers, such as *Bruckner Blätter* (Klosterneuburg, later Vienna, 1929–42). From 1946 the *Österreichische Musikzeitschrift* fulfilled the role of a general music periodical in the broadest sense, concerned with current Austrian musical life as well as the country's past. Specialist journals include *Der Opernfreund* (1956–64), dealing primarily with contemporary issues in music drama in Vienna. Among periodicals devoted to particular composers are the *Chopin-Jahrbuch* (1956, 1963, 1970) and the *Nachrichtenblatt* of the Österreichische Richard-Wagner-Gesellschaft, Landesstelle Steiermark (1959–1988) and its sucessor *Richard Wagner Nachrichten* (1989/90–), as well as the *Richard Strauss Blätter* (1971/2–1978; new ser., 1979–), each number of which is devoted to one of the composer's principal works. Musicological organs are, since 1956, *Kommission für Musikforschung: Mitteilungen* of the Österreichische Akademie der Wissenschaften, since 1967 the *Beiträge* of the Österreichische Gesellschaft für Musik, and since 1977 *Musicologica austriaca* (the last two published in Germany). *Komponist und Musikerzieher* (originally called *Der Komponist*) has appeared since 1971 as the organ of the Österreichischer Komponistenbund.

The following decades show a wide variety of more than 50 current music periodicals, most of them being supported by the Austrian state. The traditional special topics have been pursued, such as church music (*Praxis der Kirchenmusik*, 1981–, of the Protestant Church) and the concern for new religious music (*Musik und Leben*, 1987–), folk music (*Musikanten-Express*, 1982–7, and *Briefe des Steirischen Volksliedwerkes*, from 1985 *Der Vierzeiler*, 1980–) and music instruments (*Okey*, 1994–, dealing with organs and keyboards). Other journals are devoted to Viennese music life – to opera and concert (*Der neue Merker*, 1989/90–) and from jazz (*Jazz live*, 1983–?94) to the musical (*Musical-Cocktail*, 1994–). There are important scholarly yearbooks and the like, which are devoted to individual Viennese composers such as *Nachrichten zur Mahler-Forschung* (1976–) of the Internationale Gustav Mahler-Gesellschaft, the *Bruckner-Jahrbuch* (1980–) of the Bruckner-Institut Linz, *A propos Haydn* (1983) of the Haydn-Gesellschaft Wien, *Mitteilungen* (1986/7–1993/4) of the Internationale Schönberg-Gesellschaft, *Mitteilungen: Schubert durch die Brille* (1988–) of the Internationales Schubert-Institut Wien (published in Germany) and *Die Fledermaus* (1990–) of the Wiener Institut für Strauss-Forschung. Newer areas are music therapy (*ÖBM*, from 1993 *Musiktherapeutisches Forum*, 1985–), contemporary music (*KompAkt 23*, 1987, published by the Austrian Section of the Internationale Gesellschaft für Neue Musik), electronic keyboards (*Manual*, 1986/7–) and new developments in electro-acoustic techniques (*Elektroakustik, Akusmatik & Raum*, 1992–, published by the Austrian section of the Internationale Gesellschaft für Neue Musik).

(ii) Belgium. The earliest periodical publications in the southern Netherlands (present-day Belgium) included music ones: beginning with *Récréations harmoniques, ou recueil de chansons françaises* (1756–7), they appeared in some profusion. But the earliest musical periodical in the strict sense was the *Gazette musicale de la Belgique* (1833/4), founded by F.-J. Fétis in the year after his return to Belgium. The *Annuaire dramatique de la Belgique* (1839–47), edited by Félix Delhasse, contains critiques of musicians and composers and of concerts in Brussels; *La Belgique musicale, beaux-arts, belles-lettres* (1839) and its continuation *La revue musicale belge* (1840–59) are also locally orientated. A more broadly based music periodical was Delhasse's *Le guide musical* (1855–1917/18), which contained substantial contributions on current musical life, and which under Maurice Kufferath (1852–1919) became a forum for the discussion of Wagner's work; after World War I *La revue musicale belge* (1925–39), organ of the Sociétés Musicales et Dramatiques, continued the tradition of that journal but with a more objective approach. *Muziekwarande* (1922–31) focussed mainly on Flemish music and its composers. An important periodical, *La revue internationale de musique* (Paris and Brussels, 1938/9–1952), extended its coverage to France. There also appeared periodicals devoted to special topics, such as Catholic church music, for example *Musica sacra* (1881/2–1964) or the *Courrier de Saint-Grégoire* (1889–1914), and some dealing with liturgical issues such as *Ad te levavi* (1959–67) or *Gewijde dienst* (1961–5); others dealt with modern music, such as *Musica viva* (1936), edited by Hermann Scherchen or *La Sirène*, from 1938 *Syrinx* (1937–46). With the founding in 1931 of the Vereniging voor Muziekgeschiedenis te Antwerpen, Belgium achieved its first musicological journal, *Vlaamsch jaarboek voor muziekgeschiedenis* (1939–42, 1959, 1977). The *Revue belge de musicologie* was founded in 1946 by the Société Belge de Musicologie, particularly for the study of the musical history of the Low Countries. It has been joined by the *Brussels Museum of Musical Instruments Bulletin* (1971–), concerned with the investigation of historical and folk instruments, and later by the *Mededelingen van het Ruckers-Genootschap* (1982–91). Several periodicals are devoted to particular instruments, mainly to the organ, such as *De schalmei* (1946–50), continued as *De Praestant* (1952–72), followed by *Orgelkunst* (1978–) and *Organum novum* (1994–). Some are published by societies, such as *L'organiste* (1969–), from the Union Wallonne des Organistes, and *Orgel positief* (1985), from the Vlaamse Orgel Vereniging. The restoration of historical organs is covered by *La renaissance de l'orgue* (1968–94) and the manufacturing of music instruments in general by *Celesta* (1987–). Other periodicals are published by opera houses, for example *De Munt/La Monnaie* (1986/7–), or concert societies, such as *Filharmonia* (1989/90–1995). Journals devoted to particular composers include *Feuilles wagnériennes* (1960–66), published by the Association Wagnérienne de Belgique, *Cahiers Albert Roussel* (1978–9, 1981) by Les Amis Belges d'Albert Roussel and *Le paon* (1981–), published by the Association Kodály-Belgique. Musicological periodicals underwent further specialization, such as music education, for example *Orphée apprenti* (1987–94), music of the past, as in *Musica 'antiqua'* (1983/4–) and the *Jaarboek van het Vlaams centrum voor*

oude muziek (1985–7), while new directions in musical philosophy are explored in *Musicae scientiae* (1997–).

(iii) France. The appearance of music journals in the strict sense in France was preceded by numerous periodical publications of music, e.g. in the *Meslanges de musique latine, françoise et italienne* (1725–32), issued by Ballard. Musical reports and news were granted a measure of space in general cultural journals, e.g. *Mercure de France* (at first *Mercure galant*) from 1672. At the beginning of the development of French music periodicals mention should be made of the long-running almanac, the *Calendrier historique des théâtres de l'opéra, et des comédies françoise et italienne et des foires* (1752–1793/4, 1800–01, 1815). The first purely musical French periodical, *Sentiment d'un harmoniphile sur différens ouvrages de musique* (1756), consisted of two issues, in the first of which Abbé de Morambert offered learned essays in Mattheson's style; this was followed by the *Journal de musique historique, théorique et pratique* (1770–71); continued as *Journal de musique par une Société d'amateurs* (1773–7) in which N.E. Framery (editor until April 1771) wrote about new trends in music and discussed theory. In 1775–83 appeared the *Almanach musical*, which offered a conspectus of the Parisian musical scene in its numerous lists of composers, performers, publishers and printers, concerts and opera. Equally significant for Paris was the *Annuaire dramatique* (1805–1821/2), giving names and addresses of the directors, actors, musicians and other employees of all the Parisian theatres. Information about Parisian musical events, though no regular critiques, was also provided by *Correspondance des amateurs musiciens* (1802/3–1805), edited by Cocatrix.

The *Revue musicale* (1827–35), founded by F.-J. Fétis, was the first significant French music periodical of the 19th century: in addition to historical essays and biographies of contemporary composers it contained detailed notices of performances in Paris. Its amalgamation with the *Gazette musicale de Paris*, founded in 1834, resulted in the *Revue et gazette musicale de Paris* (1835–80), which enjoyed particular success. It had the services of notable writers, including Liszt and Berlioz as well as Fétis; Berlioz published his articles on Rameau and on Beethoven's symphonies in this journal, and Meyerbeer's operas were prominently featured. Of equal stature were *Le ménestrel* (1833/4–1940) and *La France musicale* (1837/8–1870). The former developed into a journal of considerable renown, concerned both with historical matters and with contemporary events and offering valuable reports on Paris and other European musical centres. It also published for the first time, before they appeared separately, important works such as Lussy's *Traité de l'expression musicale* which defended Rossini and the Italian school.

Along with these, specialized publications developed in the later 19th century. The formation of choral unions brought into being journals on choral singing, e.g. *L'orphéon: moniteur des orphéons et sociétés chorales de France, d'Algérie et de Belgique* (1855–1939). The revival of liturgical traditions gave rise to periodicals on church music generally and on the current reforms, e.g. *Musica sacra: revue du chant liturgique et de la musique religieuse* (1874/5–1901) or the monthly publication of the Paris Schola Cantorum, *La tribune de Saint-Gervais* (1895–1929). Discussions of Wagner's music led to the founding of the *Revue wagnérienne* (1885/6–1887/8). The system of notation developed by the Galin-Paris-Chevé school resulted in publications designed to propagate the method, e.g. *La réforme musicale* (1856–70) and its sequels. Other specialist publications owed their origin to the increasing spread from the 1860s of light music and its ancillary commercialization in cabaret and music hall, e.g. *La lyre phocéenne: echo des théâtres et des cafés concerts* (1866/7) or *L'art lyrique et le music-hall* (1896–1901). The cultivation of the 'chanson' played a salient part, engendering such journals as *La chanson française* (1874, 1876/7) and *La chanson* (1902–?1922), which covered research into the chanson and its poetry. The increasing expansion from the 1870s had the further consequence of the inception of periodicals with bibliographical digests of French music, old and new, e.g. *Le bibliographe musical* (1872–6) continued as the *Catalogue des nouvelles oeuvres musicales françaises* (called the *Bibliographie musicale française* for most of its run; 1875–1920).

The rise of French musicology at the turn of the century and the establishment of a French section of the International Musical Society led to the founding of various musicological publications. The *Revue d'histoire et de critique musicales* (1901–12), founded by Jules Combarieu, was the first of the kind; in 1912 it was amalgamated with the *S.I.M. Revue musicale mensuelle* (originally entitled *Le Mercure musical*; 1905–14), published by the French section of the International Musical Society. *L'année musicale* (1911–13), edited by leading French musicologists, contained important historical and critical articles; to its final issue Michel Brenet contributed her important 'Bibliographie des bibliographies musicales'. The *Revue de musicologie* (originally the *Bulletin de la Société française de musicologie*; 1917/19–) began publication before the end of World War I and has remained the main organ of French musical scholarship. The 1920s saw the inception of the important general periodical *La revue musicale* (1920–91), founded by Henry Prunières, which soon developed into a forum for the French avant garde and also followed modern music in other countries; the *Revue Pleyel* (1923/4–1926/7) also covered general musical life. The interest in organ music and organ playing gave rise to various specialized periodicals, e.g. the *Bulletin trimestriel des Amis de l'orgue* (*L'orgue* from 1939; 1929–). Mention should also be made of *L'opéra-Comique*, published by the Association des Amis de l'Opéra-Comique (1929–32). There were also journals devoted to records, such as *Disques* (1934–47) and its successor of the same name (1948–62) and, from the 1930s, to jazz, e.g. *Jazz hot* (1935–9, 1945).

Several lapsed journals resumed publication at the end of World War II. Among the new journals, special mention should be made of *Contrepoints* (1946–?1951), which was concerned not only with the general musical scene but also dealt vigorously with new musical developments. As regards opera, the Académie Nationale de Musique et de Danse began publication of *L'Opéra de Paris* (1950–67), the official organ of the Théâtres Lyriques. A publication of note is *Opéra international* (1977–), which had begun publication in 1961 as the *Opéra 61* (later with title changes to reflect the year). *L'avant-scène opéra* (1976–) contains excellent articles on operas, devoting each issue to a single work. The decades from the 1950s were notable mainly for musicological publications, dealing either with documentation

and research, such as *Bulletin du Centre de documentation de musique internationale* (1951–4), or with particular periods, such as *Annales musicologiques*, issued from 1953 by the Société de Musique d'Autrefois and containing studies of medieval and Renaissance music, or with developments in musicology, such as the quarterly *Musique en jeu* (1970–78), devoted mainly to the semiology of music.

From the 1970s a considerable number of French music journals were devoted to national music life, such as *Le monde de la musique* (1978/9–) and *La lettre du musicien* (1984–), but there were also local journals such as the *Annuaire musical et chorégraphique de la Haute-Garonne*, later *Annuaire musique et danse* (1987/8–) or on an international level, including opera, *Music & Opera around the World* (1997/8–). *Les cahiers de l'animation musicale*, from 1986 *Les cahiers du CENAM* (1976–93), each number of which was devoted to a particular aspect of French music life (festivals, music in school, instrument manufacture), should be noted. During the late 1980s and early 90s new journals dealing with instruments appeared, including the yearbook *Piano* (1987–), *Keyboards magazine* (1987–), *Guitarist magazine* (1989–), *Les cahiers de la guitare* (1982–) and *Guitar & Bass* (1993–), as well as *Clarinette magazine* (1984–93) and *Traversières* (1991) of the Association de la Flûte, and also, for collectors of

instruments, *Larigot* (1988–), of the Association des Collectionneurs d'Instruments de Musique à Vent. There have also been a number of journals issued by various centres and societies devoted to specialist topics, such as *Les cahiers de la Société Jean-Philippe Rameau* (1980); *Analyse musicale*, from 1994 *Musurgia* (1985/6–), issued by the Société Française d'Analyse Musicale; and *Les Cahiers de CIREM* (1986–), published by the Centre International de Recherches en Esthétique Musicale of Rouen University.

(iv) Germany. The first periodicals – in fact the earliest of all such musical publications – arose in Germany in the first half of the 18th century. Their starting-point was provided by the two main types of general publication at that time, the scholarly periodicals and the moral weeklies; these were their immediate models. The earliest music periodicals appeared as a succession of fascicles contributed by individual musicians and theorists aiming to instruct and, particularly, to foster the development of a scientific approach to music in reviews of publications from both older and more recent musical literature. The very first such periodical, edited by Johann Mattheson in 1722, already exhibits all the characteristics, as its title shows: *Critica musica, d.i. Grundrichtige Untersuch- und Beurtheilung vieler theils vorgefassten, theils einfältigen Meinungen, Argumenten und Einwürffe, so in alten und neuen, gedruckten und ungedruckten musicalischen Schrifften zu finden, zur möglichsten Ausrottung aller groben Irrthümer und zur Beförderung eines besseren Wachsthums der reinen harmonischen Wissenschaft, in verschiedene Theile abgefasset, und stück-weise heraus gegeben* ('*Critica musica*, that is, searching critiques and assessments of the many opinions, arguments and objections, whether preconceived or spontaneous, that are to be found in old and new, printed or handwritten, papers on music. Designed to eradicate so far as possible all vulgar error and to promote a freer growth in the pure science of harmony. Arranged in several parts and issued separately'). As a model Mattheson cited the German scholarly publication *Acta eruditorum* (1682–1782) and at the same time offered a justification of the choice of this medium for his argument: 'Since I can discern that the matter is too weighty to be advanced suddenly or with one single work, I have determined to undertake this enterprise at intervals'. In a section 'Neues von musicalischen Sachen und Personen', he published commentaries on the music and performance of operas currently being mounted in various European cities. By contrast with *Critica musica*, which typifies the scholarly journal, Mattheson's anonymously published *Der musicalische Patriot* (1728) typifies the moral weekly. It consists of 43 'discourses' and appeared in weekly sheets; its title was derived from the organ of the 'German-speaking community' in Hamburg, the *Patriot* (1724). Mattheson included a list of all the operas produced in Hamburg since 1678, but he was mainly concerned with protecting music against decadence and outmoded techniques; his moralizing tone is unmistakable.

A parallel to *Critica musica* is offered by Lorenz Mizler's *Neu eröffnete musikalische Bibliothek, oder Gründliche Nachricht nebst unpartheyischem Urtheil von musikalischen Schriften und Büchern* (1736/8–1754), which embodies the scholarly type of publication in an even more significant way. In his periodical, which in 1738 became the organ of his Correspondirende Societät der Musicalischen Wissenschaften, he sought to investigate music in its acoustical and physiological as well as its practical and theoretical aspects, with the aim of extending the knowledge of music as a natural science. It also contains essays on the merits and significance of opera, such as Gottsched's 'Gedanken vor den Tragödien und Comödien' and Uffenbach's 'Von der Würde der Singgedichte oder Vertheidigung der Oper'. At the same time he brought out the periodical *Musikalischer Staarstecher* ('Musical Eye-opener'; 1739/40) as a practical supplement. In a sense J.A. Scheibe's *Critischer Musicus* (1737/8–1739/40) was the spiritual successor to Mattheson's *Der musikalische Patriot.* Scheibe too sought to exercise an educational influence and thereby to affect the formation of taste. In this he followed both the title and the content of the *Critische Dichtkunst* (1730) of his teacher J.C. Gottsched, whose rules for poetics Scheibe applied to music.

F.W. Marpurg published anonymous didactic essays in letter form in *Der critische Musicus an der Spree* (1749/50); this weekly also contained perceptive comments on musical misconceptions and debate with J.F. Agricola on French and Italian music. Marpurg's *Kritische Briefe über die Tonkunst* (1759/60–1764) included critiques of musical works and, for the first time, anecdotes as well as essays in letter form; above all, it was the vehicle for Marpurg's polemic against G.A. Sorge. These may be considered the last musical representatives of the typical moralizing weekly. Marpurg's most significant achievement among the periodicals he edited were the *Historisch-kritische Beyträge zur Aufnahme der Musik* (1754/5–1778) in which he sought to continue Mizler's tradition but laid more stress on the practical. The contributions included short essays, reviews of historical, critical and didactic writings, biographical information on musicians, and news of court orchestras, theatres and music societies; there is discussion of the state of opera in Berlin and Paris and catalogues of operas performed in Paris, 1645–1752, and in Venice. Classifiable as a scholarly journal it was of

fundamental importance in the development of musical periodicals.

Such periodicals were aimed at the musical connoisseur. J.A. Hiller, who in his *Wöchentliche Nachrichten und Anmerkungen die Musik betreffend* (1766/7–1770) set out to cover the interests of the amateur, opened up a new line of development. His was the first such periodical to appear weekly. It included discussions of performance, announcements of publications and essays on musical topics. Hiller gave special prominence to musical events and commentaries on opera productions in Dresden, Vienna and other cities. Among the essays, his own 'Kritischer Entwurf einer musikalischen Bibliothek' (1768), in which he discussed critically the writing on music available to him, deserves special mention. In the periodicals of the ensuing years an increasing part was played by discussions of contemporary music. Thus J.N. Forkel, in his *Musikalisch-kritische Bibliothek* (1778–9), dealt with musical life and institutions, and the scientific background and general state of music; he detected, and strove to combat, a deterioration. In addition the musical almanacs he edited in 1782–4 and 1789, with their numerous catalogues, as well as essays, reviews, condensed biographies and news items, afford valuable and varied insights into contemporary musical life. Similarly J.F. Reichardt, in his *Musikalisches Kunstmagazin* (1782–91), sought to arrest the 'decay of art'. He supplied analyses and commentaries on compositions (such as Gluck arias) and extracts from the writings of Herder, Goethe and Kant. In his *Musikalisches Wochenblatt* (1791/2) he tried to influence the formation of taste among connoisseurs and amateurs with critiques of important compositions and writings whether of German, Italian, French or English origin. The *Berlinische musikalische Zeitung historischen und kritischen Inhalts* (1793/4) followed the same general pattern.

In contrast to the critical periodical of the age of the Enlightenment, there emerged in the later 18th century a trend towards the general or universal, with emphasis on a greater immediacy, like Nicolai's *Allgemeine deutsche Bibliothek* (1765–1802) and the *Allgemeine Litteratur-Zeitung* (1785). Hiller's *Wöchentliche Nachrichten und Anmerkungen die Musik betreffend* and the journals of Forkel and Reichardt had shown this tendency, but the first to do so comprehensively was the *Allgemeine musikalische Zeitung* (Leipzig, 1798–1848; see fig.1). It represents the highest period of development in the 18th century and at the same time ushered in a new era in the history of musical periodicals. Its division – into (*a*) essays, (*b*) biographical information, (*c*) reviews, first of theoretical works and second of music, (*d*) descriptions of instruments, (*e*) news items, in and from letters, and (*f*) miscellaneous – became a model for future magazines. Friedrich Rochlitz, editor from 1798 to 1818, realized this plan in exemplary fashion: he raised the journal to a high intellectual level and founded its international reputation as the leading musical periodical. It was the first such journal to use an extensive panel of collaborators; no fewer than 130 can be identified in its first decade. The editor from 1818 to 1827 was Gottfried Härtel. He was succeeded by G.W. Fink, who was unable to maintain its intellectual level or to sustain the competition of the *Neue Zeitschrift für Musik*. His successors were C.F. Becker, Moritz Hauptmann and J.C. Lobe. In 1848 Breitkopf & Härtel discontinued publication on the grounds of a changed situation in which there was 'no further place for a general musical journal'.

The next most important and comprehensive music periodical in Germany was the *Neue Zeitschrift für Musik*, founded by Robert Schumann (with Friedrich Wieck, Ludwig Schunke and Julius Knorr) in 1834. Its contents were organized on the same lines as those of the *Allgemeine musikalische Zeitung*, but its intellectual outlook, dominated by Schumann until 1844, was entirely different from the earlier journal's rationalism. Schumann's aim was to use his periodical – which he saw as the standard-bearer of the Romantic movement in music – to improve the musical resources of Germany, depleted after the deaths of Weber, Beethoven and Schubert, and affected by increasing superficiality and the domination of the virtuoso, and to restore the 'poetry of art' to its rightful position. To this end he used the journal as a forum for the creative artist, excluding the dilettante. Schumann edited the journal with true independence and with the highest artistic motivation; but under his successor Franz Brendel, editor from 1845 to his death in 1868, it became increasingly the organ of the 'new German' school of Liszt and others, and not all the composers of the time agreed with its views (see for example the *Erklärung* against Brendel's journal of 1860, initiated by Brahms and also signed by Joachim, Grimm and Scholz). Brendel also defended Wagner's operas in particular; Schumann's own essay on a production of *Tannhäuser* appeared in 1852. In 1887 it became the organ of the Allgemeiner Musikverein and went through a variety of phases, under different management, up to 1974. From 1975, when it amalgamated with *Melos*, it appeared as *Melos/NZ Neue Zeitschrift für Musik*; from 1979 it was again separately published as *NZ Neue Zeitschrift für Musik*.

The only comparable universal journal was the new series of the *Allgemeine musikalische Zeitung* (1863–5), which, however, did not regain its former high level. It was a continuation not only of the journal of the same name (1798–1848) but also of the *Deutsche Musik-Zeitung* edited by Selmar Bagge (see §5(i) 'Austria' above). Despite its vaunted independence it could not always remain above factional dispute. In 1866 it was continued as the *Leipziger allgemeine musikalische Zeitung* and then (1869–82) reappeared under its original title. Under Bagge's editorship (1866–8) the emphasis was on contemporary music-making, while under Friedrich Chrysander (1868–71, 1874–82), who considered it a continuation of his *Jahrbücher für musikalische Wissenschaft* (1863–7), it increasingly covered music history and scholarship.

From the beginning of the 19th century there were numerous journals dealing with individual musical centres. J.F. Reichardt brought out the *Berlinische musikalische Zeitung* (1805–6) concerned with local musical life and containing reviews of published music in which Reichardt aimed to provide 'justice for the artist and instruction for the art-lover'. Nor did the later Berlin music journals have any lasting life. In 1821–3 came the *Zeitung für Theater und Musik*, edited by August Kuhn, and in 1824–30 the more important *Berliner allgemeine musikalische Zeitung* edited by A.B. Marx, who aimed 'to serve not only artists and connoisseurs but also the general public of cultivated music-lovers' – he justified the music of his own time in accordance with this dictum, especially that of Beethoven and Spontini. *Iris im Gebiete*

der Tonkunst (1830–41), edited by Ludwig Rellstab, provided essentially a conspectus of musical events and publications. The first to attempt a more comprehensive policy, with special regard to historical perspective, was the *Berliner musikalische Zeitung* (1844–7), which was replaced by the influential *Neue Berliner Musikzeitung* (1847–96) published by Bote & Bock. The *Signale für die musikalische Welt* (1843–1941), brought out by Bartholf Senff in Leipzig, earned a wider distribution by the broad scope of its news coverage and became an important source not only for Leipzig musical life but for wider developments. It also contains news and detailed accounts of major operatic productions at home and abroad. In the Rhineland two important music journals were inaugurated by the Cologne critic Ludwig Bischoff (1794–1867), the *Rheinische Musik-Zeitung für Kunstfreunde und Künstler* (1850/51–1859) and the *Niederrheinische Musik-Zeitung für Kunstfreunde und Künstler* (1853–67); their tradition was pursued by the *Rheinische Musik-Zeitung* (1900–37), edited by Gerhard Tischer.

Along with those of a general nature and those concerned with local centres, more and more periodicals came into being, from the 1840s, devoted to special areas of music. The establishment of choral societies and glee clubs led to the founding of periodicals devoted to choral singing, e.g. *Die Sängerhalle* (1861–1908), continued as *Deutsche Sängerbundeszeitung* (since 1958 entitled *Lied und Chor*; 1909–). Advances in instruments favoured the appearance of new periodicals, general or particular, e.g. the *Zeitschrift für Instrumentenbau* (1880/81–1942/3) founded by Paul de Wit in Leipzig. Reformist ideas in music education brought into being such periodicals as *Der Klavierlehrer* (1878–1931) and *Die Stimme: Centralblatt für Stimm- und Tonbildung* (1906/7–1934/5). The reawakening of interest in Gregorian chant, the renovation of the Catholic liturgy and the establishment of church music (or Cecilian) associations led to the foundation of journals such as the two edited by Franz Witt, *Fliegende Blätter für katholische Kirchenmusik* (1866–) and *Musica sacra* (1868–1937). Efforts to reactivate the Lutheran hymn and the Protestant liturgy lay behind the foundation of journals for evangelical church music such as *Siona: Monatsschrift für Liturgie und Kirchenmusik zur Hebung des gottesdienstlichen Lebens* (1876–1920) and the *Korrespondenzblatt des Evangelischen Kirchengesangvereins für Deutschland* (1887–1933). The extension of musical life led to the creation of journals dealing with individual genres, such as chamber music, e.g. *Die Kammermusik* (1897/8–1901), popular music, e.g. *Echo vom Gebirge* (1883–1934) and military music, e.g. *Deutsche Militär-Musiker-Zeitung* (1879–1944), and also journals concerned with musicians' professional interests, e.g. *Deutsche Musiker-Zeitung* (1870–1933), the organ of the Allgemeiner Deutscher Musiker-Verband. Other periodicals aimed to publicize the work of a particular composer, for example Wagner, in the *Anregungen für Kunst, Leben und Wissenschaft* (1856–61), which concentrated on Wagner and the 'Kunstwerk der Zukunft', the *Bayreuther Blätter* (1878–1938) and the Wagner yearbooks (1886 and 1906–8, 1912–13).

In the second half of the 19th century the development of musicology gave rise to a new kind of periodical. *Cäcilia* (1824–48), edited by Gottfried Weber in Mainz, was a hybrid of the scholarly periodical of the 18th century and the new specialized musicological publication. It inclined to the former in its rationalistic outlook, to the latter in its choice of topics and its large number of important contributors. It was *Cäcilia* that Chrysander took as his model in his *Jahrbücher für musikalische Wissenschaft* – the first attempt at an independent musicological journal. From 1868 Chrysander continued his efforts on behalf of musicology in the *Allgemeine musikalische Zeitung* (Leipzig), but that collapsed in 1882 for lack of competent correspondents and no doubt also because of increasing competition from the daily press. While the *Musikalisches Wochenblatt* (1870–1910), published by E.W. Fritzsch, emphasized contemporary music-making, the musicological efforts of Chrysander, Philipp Spitta and Adler found an outlet in the *Vierteljahrsschrift für Musikwissenschaft* until 1894 (the year of Spitta's death). The founding of this publication completed the separation of the general music periodical and the musicological one foreshadowed by Chrysander's *Jahrbücher* and Eitner's *Monatshefte für Musikgeschichte* (1869–1905), which contain valuable studies of source material from the 15th century to the 17th. Musicological aims were also pursued by the *Bach-Jahrbuch* (1904–), the *Beethovenjahrbuch* (1908–9) and the *Gluck-Jahrbuch* (1913–18), as well as the *Jahrbuch der Musikbibliothek Peters* (1894–1940), which published seminal musicological studies and valuable classified bibliography of music literature. From 1899 the newly founded International Musical Society published two important musicological periodicals. While one of them, the *Zeitschrift der Internationalen Musik-Gesellschaft*, was primarily concerned with the actualities of musical life, with essays, critiques, announcements and reports as well as advertisements and reviews, the *Sammelbände der Internationalen Musik-Gesellschaft* dealt with research designed to deepen the understanding of music, by exploring new areas of musical history besides covering music theory and the relation of music to the other arts and the sciences. Both publications, which attained high reputations, lasted until the beginning of World War I (1914).

There developed from the 1870s, in succession to the universally orientated music periodical (of which the Leipzig *Allgemeine musikalische Zeitung* was the last true representative in Germany), a newer type of general musical journal, entirely factual in content and largely concerned with practical music and musical life: for example the *Musikalisches Wochenblatt* (1870–1910), the *Allgemeine (deutsche) Musik-Zeitung* (1874–1943), the *Neue Musik-Zeitung* (1880–1928) and *Die Musik* (1901/2–1942/3).

World War I caused a hiatus in the development of German musical periodicals. A few of the great mass-circulation journals maintained publication; these were then joined by numerous new ones with modern ideas. The preoccupation with modern music was crystallized in periodicals partly or wholly devoted to new directions in music. At the focal point was *Melos*, founded in Berlin in 1920 by Hermann Scherchen, which adopted a decidedly cosmopolitan stance: it dealt mainly with structure, tonality and atonality, and the relationship between words and music. The realm of specialized music publications was further extended by the youth music movement, as in *Die Musikantengilde: Blätter der Erneuerung aus dem Geiste der Jugend* (1922/3–1930), and through popular cultural aspirations, as in *Musik im Leben: eine Zeitschrift der Volkserneuerung* (1924–30).

Several journals devoted to opera began to appear; various opera houses started to publish annuals, beginning with the Jahrbuch of the Deutsches Opernhaus in Charlottenburg (1919/20–1922/3) and *Die Oper* of the Königsberger Opernhaus (1930/31–1933/4). On the musicological front, two pioneer journals were founded in 1918, the *Zeitschrift für Musikwissenschaft* (1918/19–1935) and the *Archiv für Musikwissenschaft* (1918/19–1926). The successor of the both music periodicals, published by the International Musical Society, as the organ of the International Musicological Society, was *Acta musicologica* (initially *Mitteilungen*; 1928–), which survived World War II. Since about 1967 musicological studies have been supplemented by reports on research in particular countries, periods, genres or composers. Special mention should also be made of the *Zeitschrift für vergleichende Musikwissenschaft* (1933–5), edited by Robert Lachmann in association with E.M. von Hornbostel and Johannes Wolf, which was concerned exclusively with ethnomusicological matters and was the first journal of its kind to deal with non-European music. In succession to the *Zeitschrift für Musikwissenschaft* there appeared the *Archiv für Musikforschung* (1936–43), while *Deutsche Musikkultur* (1936/7–1944) was devoted as much to musical life as to musicology.

In the years 1933 to 1945 the few existing periodicals, whether old or new, became increasingly imbued with the political theology of the National Socialist regime and were either subordinated to or invigilated by state institutions. In World War II German music periodicals almost came to a standstill; many journals ceased publication or appeared in a much reduced form. But from 1945 there was a rapid revival, and by about 1950 there were already many periodicals to meet particular interests. The immediate development was in the general music periodical, now concentrated even more closely on practical matters in public musical life, such as *Musica* (1947–96) and *Musik und Gesellschaft* (1951–90), continued by *Motiv: Musik in Gesellschaft anderer Künste* (1991), of which only one issue appeared.

An important part was played by specialist publications: some represented successors of earlier journals, as in evangelical and Catholic church music, e.g. *Musik und Kirche* (refounded 1947; 1929–) and *Zeitschrift für Kirchenmusik* (refounded 1949; 1866–) and of music education, e.g. *Musik im Unterricht* (refounded 1949; 1903–68), amalgamated with *Kontakte* (1958–68) to form *Musik & Bildung* (1969–) and covering the whole of music education, and the *International Music Educator* (1960–72), and its sequel *International Music Education* (1973–92), organs of the ISME. Another specialized area was opera, such as *Oper und Tanz* (1961–), a kind of union journal, *Opernwelt* (1960/61–) and its annual *Oper* (1966–); the *Jahrbuch der Komischen Oper Berlin* (1960/61–1971/2) and its successor *Musikbühne* (1974–7), devoted to an exploration of Walter Felsenstein's idea of realistic music drama in the GDR, succeeded by *Oper heute* (1978–90); *Oper und Konzert* (1963–97) and the informative arts bulletin *Orpheus* (1973–). *Das Opernglas* (1980–) focusses on Hamburg, but contains reports from Berlin, Bonn, Cologne, New York and Salzburg. More recently, the *Jahrbuch für Opernforschung* (1985–90) can be viewed as a forum for studies in the literary and social history of operatic production with essays particularly on librettos. *Musik & Theater* (1986–7) is a comprehensive international artistic journal concerned with opera, ballet, dance and music drama. Such specialized areas, including also folk music and light music, were augmented by new ones such as copyright, e.g. *Musik und Dichtung* (1954/5), modern techniques of sound reproduction, e.g. *Fono Forum* (1956–), electro-acoustic experimentation, e.g. the *Gravesaner Blätter* (1955/6–1966) and jazz, e.g. *(Das internationale) Jazz-Podium* (Vienna, 1952–4; Munich etc., 1955–). In the field of musicology, *Die Musikforschung* has been published since 1948 as the journal of the Gesellschaft für Musikforschung, the resurrected *Archiv für Musikwissenschaft* since 1952, the *Deutsches Jahrbuch der Musikwissenschaft* (Leipzig, 1956–77), continued as *Jahrbuch Peters* (1978–87), and the *Beiträge zur Musikwissenschaft* (East Berlin, 1959–92). There are also specialist journals of individual institutions, e.g. the *Jahrbuch des Staatlichen Instituts für Musikforschung Preussischer Kulturbesitz* (1968–), with contributions on historical and systematic musicology, and the *Hamburger Jahrbuch für Musikwissenschaft* (1974–) of the musicological institute of Hamburg University. Other periodicals of a musicological nature are devoted to more specialized topics, such as *Ars organi* (1952/3–), *Zfmth, Zeitschrift für Musiktheorie* (1970–78) and the *Beethoven-Jahrbuch* (1953/4–1981), the *Händel Jahrbuch*, second series (1955–), *Acta sagittariana* (1963/4–), relating to Schütz, and the *Schütz-Jahrbuch* (1979–), the *Haydn-Studien* (1965/7–) and the *Hindemith-Jahrbuch* (1971–), as well as the *Göttinger Händel-Beiträge* (1984–). Regarding documentation and bibliography, *Fontes artis musicae* (1954–), the organ of the International Association of Music Libraries, Archives and Documentation Centres (IAML) has to be mentioned. In 1984 *Imago Musicae*, yearbook of Rėpertoire International d'Iconographie Musicale (RIdIM), was founded.

Among further specialized musicological journals are *Beiträge zur Gregorianik* (1985–), with research reports on the interpretation of plainchant, and several dedicated to individual instruments, such as the yearbook of the International Viola Research Society, *Die Viola* (1979–), which reports on the instrument's literature, repertory, history and technique, and the periodicals *Flöte aktuell* (1986–), *Die Klarinette*, since 1989 *Oboe, Klarinette, Fagott* (1986–), and the *Piano-Jahrbuch* (1980–83). There are also periodicals devoted to organ building, such as *ISO-Information* (1969–90), issued by the International Society of Organbuilders, and *Organ: Journal für die Orgel* (1998–), concerned with interpretation and performing practice as regards new instruments. Other journals concerned exclusively with music of the past include *Concerto: das Magazin für alte Musik* (1983/4–), which carries reports of early music and opera performances, and *Alte Musik aktuell* (1986–), published by Pro Musica Antiqua. At the opposite end of the spectrum stand periodicals devoted to new music, such as the series on composers, *Musik-Konzepte* (1977/8–), less a journal than a series of regularly issued, single thematic volumes, with new information mostly on 20th-century composers. There is also *Musiktexte: Zeitschrift für neue Musik* (1983–), concerned with compositional and aesthetic issues.

The Leipzig journal *Positionen* (1988–), founded as *Beiträge zur neuen Musik*, appeared from no.8 as *Forum für experimentelle und grenzüberschreitende Musik*; this drastic change reflects political developments surrounding

the reunification of Germany in 1990 and the different situation that ensued: the new orientation of the periodical that it represented was highly significant for the former GDR. Matters of music pedagogy always receive increasing attention: *Musik in der Schule* (East Berlin, 1949/50–), strongly linked to practical issues, now serves under new democratic circumstances and deals with the training of music teachers and the improvement of musical education. Alongside this is *Üben & Musizieren* (1983–), the newsletter of the Akademie für Musikpädogogik Mainz and other groups. *Musik und Unterricht* (1990–) is regarded as a basic and comprehensive journal, a successor to *Zeitschrift für Musikpädagogik* (1976–89). Lastly, *MusE: Zeitschrift für Musik und Eltern* (1991–2–) should be mentioned for its concern with arts and cultural educational issues in Germany. The area of music pedagogy was affected by the marked interest during the 1908s in interdisciplinary studies, and the yearbook *Musikpädagogische Forschung* (1980–) provided a forum for interdisciplinary research, with material not only on theory, method and practice but also basic work on music psychology and didactics. There have been similar trends in the fields of music theory, with the journal *Musiktheorie* (1986–) tending towards an art-theoretical outlook, and music psychology, where the *Jahrbuch Musikpsychologie* (1984–92), published by the Deutsche Gesellschaft für Musikpsychologie, moves between psychology and musicology and deals with the problems of access to music, and also since the 1970s has noted the development of music therapy: considered in journals from *Musiktherapie* (1973–4) through *Musik + Medezin* (1975–82) to *Musiktherapeutische Umschau* (1980–) and such specialist publications as *Musik und Kommunikation, MUK: Hamburger Jahrbuch zur Musiktherapie und intermodalen Medientherapie* (1987/8–) and *Musik-, Tanz- und Kunsttherapie* (1990–).

(v) Great Britain. Surviving music periodicals from the end of the 17th century and the early 18th offer series of vocal compositions; but general cultural and historical journals from the end of the 17th century onwards allocated space to reports on individual composers and musical events. The first tentative step towards a true musical periodical was arguably taken by *The Literary Part of the Musical Magazine* of *The New Musical and Universal Magazine* (1774–5); this was followed by the first independent musical publication, T. Williams's *The Review of New Musical Publications* (1784), which contains useful bibliographical information. Besides two short-lived music periodicals in the early 19th century, the *Quarterly Musical Register* (1812) and Arding and Merritt's *The English Musical Gazette, or Monthly Intelligencer* (1819), *The Quarterly Musical Magazine and Review* (1818–28) and *The Harmonicon* (1823–33) contain significant articles on London musical life.

The Musical World (1836–91) was England's first comprehensive music periodical; in some aspects it was modelled on its German and French predecessors. It contained not only historical articles but also detailed reports from the main European musical centres, together with critiques of publications and performances. An even more widespread significance was to be attained by the monthly *The Musical Times and Singing Class Circular*, founded by J.A. Novello in 1844 as a continuation of *Mainzer's Musical Times and Singing Circular* (1842–4): now called *The Musical Times*, it is the oldest of all

THE

LITERARY PART

OF THE

MUSICAL MAGAZINE,

For SEPTEMBER 1774.

Drury-lane, Sept. 22, 1774.

MUNGO's *Addreſs to his kind, candid, and good-natured Readers.*

LADIES and GENTLEMEN,

S I have had the honour and happineſs of pleaſing you from the *ſtage*, I have now endeavoured to do ſo from the *preſs*: I have been, therefore, trying my poſſibles, what I could do, to edify and inſtruct, as well as to amuſe and entertain you both in your *ſerious* and *laughing* hours. For this purpoſe, I have, during this ſummer's receſs from the *ſtage*, got a birth in *the king's kitchen*, under my good *Lord Talbot*, and have been toſſing up an *Oglio*, *Gallimawfry*, or call it what you pleaſe, made up of the *ſcraps* and *fragments* of invention from *my own* poor brains, or from my picking the brains of *others* much wiſer than myſelf, and is now beginning to be ſerved up at the *table* of the *public*: and as there is variety of *conſtitutions* as well as faces and opinions,

(For *books*, like *diſhes*, various palates ſtrike,
Since All muſt *eat*, tho' All may'nt *taſte* alike.)

A If

7. *Title-page of the first issue of 'The Literary Part of the Musical Magazine' (London, 1774)*

musical journals with a continuous record of publication. At first its main task was envisaged as the furtherance of the popular resurgence of singing brought about by Joseph Mainzer, John Hullah and others, in line with the policies of the Novello publishing house. Thus J.A. Novello wrote in the prospectus of his journal, contained in the last issue of *Mainzer's Musical Times*:

The music of the chorus will, in future, occupy at least three pages; and the greatest care will be exercised in its selection. The literary department will be superintended with an assiduous desire to combine interesting intelligence of the current month; reports of important musical performances, and a brief chronicle of minor events as they transpire; especially with a view to what may be interesting to Choral Societies and Singing Classes, including the announcement of all publications expressly adapted to their use.

But *The Musical Times* soon developed into a music periodical covering all aspects of music and musical life, and commanded general respect. From the 1870s it also covered opera, with articles on operatic organizations, English opera houses, individual operas from all over Europe (with perhaps less attention to those of Wagner), ballet and melodrama. From the 1920s to the 90s it had a special association with the Royal College of Organists, which contributed to a renewal of interest in church

music. The current policy is to strive for a broad view that maintains a careful balance between historical articles and contributions on present-day music and musical life, and thus to continue the two basic types of periodical, the general and the scholarly. In the late 1990s, after several changes in ownership, it became a quarterly. Among the music periodicals of broad scope Augener's *The Monthly Musical Record* (1871–1960) should be mentioned, with its wide-ranging contributions on a variety of topics and detailed reports on music centres in and outside Britain.

Many journals were established to cover special topics from the middle of the 19th century onwards. With John Curwen's development of the Tonic Sol-Fa method, *The Tonic Sol-Fa Reporter* (1851, 1853–1920) was founded as the main organ for its propagation and published in association with *The Tonic Sol-Fa Record* (1904–6) of the Tonic Sol-fa College. The cultivation of choral music led to the establishment of periodicals specially concerned with choral singing, often in association with church music, such as *The Choir and Musical Record* (1863–78), aimed at clergymen, organists, choirmasters and choristers, whose tastes it sought to influence, *The Organist and Choirmaster* (1893–1920) and *The Choir (and Musical Journal)* (1910–64). Other periodicals were devoted to church music of various denominations, such as *The Musical Standard* (1862–71, continued in three other series until 1933), which also covered musical events in general, the Scottish *The Presbyterian Psalmodist* (1871–3) and *The Nonconformist Musical Journal* (1888–1910).

The increasing spread of musical life and its commercialization led in the 1870s to the foundation of periodicals concerned with the music trade, such as the *London and*

Annual Subscription, postage free, 2s. 6d.*

TO CORRESPONDENTS.

All communications of the progress of Singing Class Teaching, addressed to the Editor of the Musical Times, 69, Dean Street, Soho, will be interesting.

THE AMATEURS OF LONDON.

IT is satisfactory to those who desire and have laboured for the general diffusion of a taste for music amongst all classes of the community, to observe the sure results of what has been doing for the last few years.

Some twenty years since, the execution of concerted and choral music in private was almost unknown; indeed it then required more than ordinary industry to organise such a performance. The libraries of the few, who possessed classical works then only in MS. had to be visited, much diligence used in multiplying sufficiently the copies, and then the small number of performers who could be got together, although "willing," were far from "able to take a part." Some zealous individuals, about the time mentioned, formed themselves into a society called the "Classical Harmonists," and such was the existing scarcity of able amateurs, that for several years their limited number of some twenty members, "willing and able to take a part," remained incomplete.

This society was the parent of many other associations, having for their object the performance of somewhat similar music; and the influence of this constant private performance of the highest classical works, and the production of good printed copies, on the taste and practical ability of the amateurs of London, that we find in 1834 that there was designed and effectively carried into execution, the Amateur Festival—a meeting which was highly creditable to all engaged, and was very beneficial to the excellent charity to which the surplus funds were dedicated. The taste for this rational and delightful manner of passing the evening, has so much increased since 1834, that the many important societies existing in London are more in number than the individual members required for the formation of the parent society, besides the numerous friendly meetings where the young people of neighbouring families join for the execution of concerted music.

With this growing feeling, it is not surprising, that when a few years ago, Mr. Mainzer, Mr. Hullah, and others, proposed to teach the rudiments of singing to large classes at a small individual cost, that great numbers should have been found willing to avail themselves of their assistance, and that their schools should have been crowded. It is to be regretted that the foes, and still more injudicious friends, should have done some damage to these systems, which pretended to teach no more than the rudiments, by ascribing results to them which they never proposed to achieve. The retirement from the classes of these self-deceived persons has given an appearance of falling off in the interest of these schools not warranted by fact. There is this comfort for the doubters, and answer to the sneerers, who are dissatisfied with the slow advance, that the aggregate of all the efforts made in the last twenty years, has created a body of amateurs in London capable of doing much themselves, and giving them a high appreciation of exalted talent in professors, and affording abundant promise of great future advancement for the cause of good music.

8. Title-page of the first issue of 'The Musical Times and Singing Class Circular' (London, 1844)

Provincial Music Trades Review (1877–1971) and *Musical Opinion (and Music Trade Review)* (1877/8–). Several periodicals dealt with individual instruments or groups of instruments; among the most important was *The Strad* (1890/91–), which is concerned with the whole range of bowed string instruments and is addressed equally to professional musicians and to amateurs. The controversy about Wagner in the 1880s, and the formation of a London branch of the Wagner Society under the chairmanship of his biographer and translator W.A. Ellis, led to the founding of *The Meister* (1888–95), which acted as an extension of the *Bayreuther Blätter*. Musicological activities first crystallized in periodical form with the *Proceedings of the (Royal) Musical Association* (1874/5–), which published papers read to the association and thus catered for research and discussion of the scientific, aesthetic and historical aspects of music. The first periodical devoted solely to such topics was *The Musical Antiquary* (1909/10–1912/13), edited by G.E.P. Arkwright, which also contained valuable studies of source material. *Music & Letters*, founded by A.H. Fox Strangways in 1920, was recognized within its first year of publication as the leading journal of English musicology; it covers a broad range of topics and includes a sizable critical section. Its title stressed the relation between music and literature and between word and note – as in song, opera and oratorio – and it also stood for the journal's emphasis on a high literary level. Among the progressively orientated periodicals Granville Bantock's *New Quarterly Musical Review* (1893/4–1895/6), mainly concerned with contemporary music, should be mentioned. But the main representative of progressive trends was *The Chesterian* (1915–19; new series 1919–61), edited by G. Jean-Aubry from 1919, which concentrated on modern Russian and French music. *Tempo* (1939–), published by Boosey & Hawkes, is devoted almost exclusively to modern music. A significant area of interest was opened up in the 1920s with the advent of gramophone records, which gave rise to numerous publications, notably *The Gramophone* (1923–), which offers detailed record reviews and contains useful discographies. Further specialization led to the production of journals dealing with the manufacture or reconstruction of historic instruments, such as *The Organ* (1921/2–), which contains articles with descriptions of important organs, while *The Consort* (1929–), founded in the course of the revival of early music associated with Arnold Dolmetsch, is mainly concerned with the use and manufacture of instruments modelled on historical ones and the music apt to them.

The period after World War II ushered in a series of significant general musical periodicals. Among them was *Con brio: a Scots Magazine for the Modern Music Lover* (1946–51), important for musical life in Scotland. Mention should be made of the *Music-Journal* (from 1948 *Music-Survey*; 1947–52), with reports on concerts and accounts of new books, compositions, periodicals and records, and *The Score* (1949–61) which, among essays on history, theory and performing practice, emphasized contemporary composers, notably Messiaen, Schoenberg, Stravinsky and Britten. *Music and Musicians* (1952–) aims to keep the music lover in touch with current musical events. Since the 1950s, specialist opera journals have appeared in increasing number. In 1950 the Earl of Harewood founded the journal *Opera* (1950–), which he edited for its first three years, his intention being to include

items on all subjects of interest to the intelligent operagoer. With Harold Rosenthal as editor, *Opera* continued to develop into the highly regarded journal it is today, covering opera in Britain and elsewhere, including festivals; it devotes much space to new works. *Opera Annual* (1954/5–1961/2), also edited by Rosenthal, contained accounts of the previous season's productions in various opera houses, with details of singers, conductors and repertories. By contrast there are periodicals with more scholarly aims. With *The Music Review*, founded by Geoffrey Sharp in 1940 and edited by him single-handed until 1974, England had a second musicological periodical, comparable to *Music and Letters*; it soon achieved international recognition. It contains scholarly studies and critical essays, biographical material on composers and detailed analyses (especially of works of the Classical and Romantic periods, as well as the 20th century), often by leading British and continental scholars. Later musicological journals turned to more specialized areas, especially instruments: *The Galpin Society Journal* (1948–) is devoted to the history, construction and function of early instruments, while the *Bulletin* of the Viola da Gamba Society (1948–68), continued as *Chelys* (1969–), contain scholarly articles on the viol's technique and repertory and *The (English) Harpsichord Magazine*, from 1987 *The Harpsichord and Fortepiano Magazine* (1973/7–), which also deals with other keyboard instruments. Finally, *Early Music* (1973–) deals with instruments of the Middle Ages, Renaissance and Baroque, and with repertory and performing practice. In a similar way *Early Music History* (1981–) is devoted to manuscript studies, analyses, iconography and criticism as well as social issues before 1700, as is the *Journal* of the National Early Music Association, from 1991 *Leading Notes* (1984–), whereas *Early Music Today* (1993–) is more a news journal for the promotion, performance, study and enjoyment of early music, as too is *Early Music Review* (1994–). There are journals dealing with special areas of church music, e.g. hymnology in *News of Hymnody* (1982–) and plainchant in *Plainsong & Medieval Music* (1992–). Besides several music educational journals, there are several in the field of music psychology, such as *Psychology of Music* (1973–) of the Society for Research in Psychology of Music and Music Education, and for music therapy, the *British Journal of Music Therapy* (1968–87), the *Journal of British Music Therapy* (1987–), and the *Bulletin* of the British Society for Music Therapy (1987–). The *IAMS Newsletter* (1993–), as organ of the Institute of Advanced Musical Studies at King's College, London, serves the interaction of teaching and research and the dialogue between the disciplines.

Journals concerned with particular composers include *The Haydn Society of Great Britain Newsletter*, from 1993 *Haydn Society Journal* (1979–), containing scholarly studies and reviews, *Wagner* (1980–) and *Wagner News* (1980–), both continued from *The Wagner Society Newsletter*, from 1971 *Wagner* (1965–80), consisting of contributions of a scholarly nature, and *The Bruckner Journal* (1997–), organ of an informal Bruckner Society. In ethnomusicology, the *British Journal of Ethnomusicology* (1992–) is a continuation of the *Bulletin* of the International Council for Traditional Music (UK Chapter) (1983–90), publishing scholarly essays on traditional music. Besides many general pop music journals, *Popular Music* (1981–) is an interdisciplinary periodical, dealing from a scholarly point of view with the musicological, literary, sociological and economic issues. An interdisciplinary tendancy can be also seen in opera research as regards the *Cambridge Opera Journal* (1989–), devoted to the study of various musicological, literary and dramatic aspects as well as from anthropological, historical and philosophical viewpoints. Electronic technology has become an increasingly important, with *Electronics & Music Maker* (1981/2–1985/6), continued as *Music Technology* (1986/7–1994), considering modern technology of keyboards, guitars, drums, woodwind and other types, including articles on sound recording and reproduction, and *Rhythm for the Contemporary Drummer, Percussionist and Programmer* (1987–), dealing with new electronic drum technology. Other periodicals are devoted to promoting experimental musics, such as *Rubberneck* (1985–), dealing with improvised music, or cover all aspects of computer music, such as *Future Music* (1992–), which also contains news, reviews of music equipment and profiles of musicians, and *Organised Sound* (1996–), dealing with methods and issues of contemporary technology in multimedia performance, sound sculpture and electro-acoustic composition.

(vi) Italy. The earliest Italian musical periodicals, which go back to the last decades of the 18th century, were mostly devoted to the theatre in general and to the opera stages of Italy or the whole of Europe, such as the *Foglio periodico e ragguaglio de' spettacoli musicali* (1808–9), the *Indice, o sia Catalogo dei teatrali spettacoli italiani di tutta l'Europa* (1764–1823), which covers Italian theatres and Italian opera on foreign stages and contains a list of singers, composers and librettists of operas performed in Italy, or *Il censore universale dei teatri* (from 1838, *Il corriere dei teatri*; 1829–40); they sometimes included dance, as in *I teatri: giornale drammatico, musicale e coreografico* (1827–31) and the *Rivista teatrale: giornale drammatico, musicale e coreografico* (1831–5). There were also yearbooks, either concerned with the country's musical past, e.g. *I fasti musicali* (1818) and *La Polinnia europea, o sia Biblioteca universale di musica* (1823), or, on a higher intellectual plane, dealing with general artistic as well as purely musical subject matter, as in the weekly *Notizie teatrali, bibliografiche e urbane* (1825). There were also musical almanacs with biographical notes on composers and general musical news, e.g. *Rossini e la musica* (1827) or *La virtù e la musica* (1831).

The first significant general music periodical in Italy was the *Gazzetta musicale di Milano* (1842–8, 1850–62, 1866–1912; from 1903 *Musica e musicisti*, from 1906 *Ars et labor*, and revived later as *Musica d'oggi*) which gave special attention to Italian opera, in Italy and abroad, and deserves special mention for its chronological lists of productions at La Scala and La Fenice. It also provided biographical, historical and bibliographical contributions and reports on Italian and other main musical centres. Besides smaller-scale journals, some of which were locally orientated and ephemeral such as the *Gazzetta musicale di Firenze* (1853–9), founded by E. Picchi, which espoused Meyerbeer's cause, and the *Gazzetta musicale di Napoli* (1852–68) or *L'Italia musicale* (1847/8–59), which offered detailed critiques of recent operas, there were others such as *L'arpa* (1853/4–1902) or *Il trovatore* (1854–1913), which enjoyed a wide circulation by covering the arts in general while according music a leading place. Another important publication was *La cronaca musicale*

(1896–1917), edited by T. Mantovani, with its articles on historical subjects. But the comprehensive general music periodical of high quality was the *Rivista musicale italiana* (1894–1955), which offered important articles by well-known contributors, news of musical events at home and abroad, and catalogues and critiques of recent publications; it was continued in 1967 as the *Nuova rivista musicale italiana*.

There were periodicals serving individual interests from the 1860s onwards. The increasing cultivation of chamber music brought into being specific publications such as *Boccherini* (1862–82), the organ of the Società del Quartetto in Florence, and the *Giornale della Società del quartetto di Milano* (1864/5). Endeavours to restore church music and the well-known controversy about the liturgy led to the publication of numerous periodicals, among which *Musica sacra* (1877–1942; continued 1956–), the journal of the Cecilian Society in Milan, and the *Rassegna gregoriana* (1902–14), the journal of the Scuola Superiore di Musica Sacra di Roma, were specially influential. There were also important yearbooks and proceedings of music academies, e.g. the *Atti dell' Accademia del R. istituto musicale di Firenze* (1863–1941). Controversies over Wagner's music and the foundation in Bologna of a branch of the Wagner Society engendered the *Cronaca wagneriana* (1893–5), followed in 1909 by the *Rassegna wagneriana*.

Other fields of interest covered by periodicals included new musical publications (e.g. the *Bollettino bibliografico musicale*, 1899/1900–1933), the music trade (e.g. *870 ottocentosettanta*, 1906–9), popular instruments such as the guitar and the mandolin (e.g. *Il plettro*, 1911–43) and light music (e.g. *Ba-ta-clan*, 1897–1902). *Ars nova* (1916/17–1918/19), the journal of the Società Italiana di Musica Moderna, dealt exclusively with the music of the neo-classical school typified by Casella. *Musica d'oggi* (1919–42) covered current musical life in general. The important general periodical *La rassegna musicale* (1928–62), edited by G.M. Gatti, contained important essays by well-known authors, musical news from home and abroad, and lists and reviews of new publications, while *Note d'archivio per la storia musicale* (1924–43), sponsored by Raffaele Casimiri, provided a variety of information and documentation on Italian musical history. The political influence of the Fascist regime made itself felt in journals such as *Rivista nazionale di musica* (1920–43) and *Bollettino dei musicisti* (from 1934, *Il musicista*; 1933/4–43), the organ of the Sindacato Nazionale Fascista dei Musicisti.

After World War II several substantial music periodicals were founded, some with novel features. Among general ones, *La rassegna musicale* was continued as the *Quaderni della Rassegna musicale* (1964–72); it devoted each volume to a single topic. Specialized ones, besides those devoted to jazz or recordings, e.g. *Musica jazz* (1945–) and *Musica e dischi* (1945–), include music education journals *Educazione musicale* (1964–75) and *Musica domani* (1971–), the quarterly publication of the Società Italiana per l'Educazione Musicale. The resurgence of Italian musicology since around 1950 gave rise to several substantial periodicals which together offer a general conspectus of the discipline: notable are the *Rivista italiana di musicologia* (1966–), the journal of the Società Italiana di Musicologia, *Quaderni della Rivista italiana di musicologia* (1966), and *Chigiana: rassegna di studi musicologici* (1964–), of the Accademia Musicale Chigiana, which contains essays either commemorating a composer's anniversary or specially written for the annual Settimana Musicale in Siena. Of strictly scholarly character is *Studi musicali* (1972–), with important articles by Italian and foreign authors. Others are concerned with the life and works of individual composers, e.g. the two series of the *Bollettino del Centro rossiniano di studi* (1955/6–1959/60, 1967–), *Verdiana* (1950/1) and the *Bollettino quadrimestrale dell'Istituto di studi verdiani* (1958–). Some specialize in the medieval period, e.g. *Quadrivium: rivista di filologia e musicologia medievale* (1956–89), or discuss new scientific methods, e.g. *Music and Communication* (1970–).

The following decades show a wide variety of Italian music periodicals. General music periodicals have had an important place in present-day Italian musical life, among them *Musica/Realtà* (1980–), dealing with music, culture and society, past and present, the *Annuario musicale italiano* (1981–), published by the Centro Italiano de Iniziativa Musicale (CIDIM), and *Il giornale della musica* (1985–), containing information about musical events, new recordings, music publications and musicological activities at Italian universities. There are several periodicals devoted to church music, notably *Rivista internazionale di musica sacra/International Church Music Review* (1980–), which contains articles by leading authors on liturgical music of all periods. The *Istituto di Musica Vincenzo Amato: Quaderni* (1985–) discusses theological, philosophical and aesthetic aspects of sacred music, including that of the Byzantine church, and *Cantus planus* (1992–?1996) is devoted to Gregorian chant. Other special fields are music therapy (*Bollettino d'informazione A.I.S.Mt.*, 1975–, of the Associazione Italiana Studi di Musicoterapia) and music theory and education (e.g. *Analisi: rivista di teoria e pedagogia musicale*, 1990–). The numerous journals dealing with instruments include both the particular (*Liuteria*, 1981–, *Piano Time*, 1983–) and the general (*Strumenti musicali*, 1979–, is devoted to acoustic and electronic instruments). Others are concerned with contemporary music, e.g. *La musica* (1985–8), *Konsequenz* (1994–) and *Notizie dell'Archivio sonoro di musica contemporanea* (1987–). New technical developments are discussed in *Quaderni LIMB* (1981–) of the Laboratorio Permanente per l'Informatica Musicale, while *Quaderni di informatica musicale* (1982–) of the Studio di Sonologia Computazionale E. Varèse deals with the technology of electronic music and composition and *Sonus* (1989–) with analysis, computer music and new instrumental techniques.

(vii) The Netherlands. The *Samenspraaken over Muzikaale beginselen*, published in eight numbers in Amsterdam in 1756 by J.W. Lustig, was a scholarly periodical in the tradition of Mattheson, whose pupil Lustig was and on whose writings Lustig's were to some extent based. The first 19th-century periodical was the Groningen monthly *Amphion* (1818–22), which was organized on the lines of the Leipzig *Allgemeine musikalische Zeitung*; it contained critiques, news and biographical anecdotes as well as articles. The Viennese type of theatre, music and fashion periodical is to be found with *Omnibus: journal mensuel de la littérature, des anecdotes, des faits politiques, des théâtres, de la musique et des modes* (1835–6). In 1836 the *Muzijkaal tijdschrift*, the first official organ of the Maatschappij tot Bevordering der Toonkunst, appeared; it offered short articles on musical

questions, announcements and criticisms of music by Dutch and other composers, biographical notes on well-known musicians and news items. Among the more comprehensive general musical periodicals was *Caecilia: algemeen muzikaal tijdschrift van Nederland* (1844–1944), founded by F.C. Kist, which included historical studies, for example on the origins of opera, the musical life of Utrecht from 1400, church music and folksinging, together with detailed discussions of musical works, especially by contemporary composers. Other general musical journals include the *Weekblad voor muziek* (1894–1909), the organ of the musicians' union in Amsterdam.

There were also numerous periodicals devoted to particular areas of music, a few of them dating from the first half of the century. The revival of Catholic church music and Gregorian chant led to the publication of such journals as *De Gregoriaan, of Bijdragen ter bevordering van het Gregoriaansch gezang* (1834–7) and the *Sint Gregorius-blad* (1876–?1995), from 1911 the organ of the Nederlandsche Sint Gregorius Vereeniging. The spread of choral activity in the Netherlands, with the foundation of choirs associated with particular denominations, led to the establishment of periodicals either dealing with vocal activity in general, such as *Zangersalmanak* (1881–2), which contains a complete list of choral societies in the Netherlands, and *Euphonia* (1919–71), or concentrating on folksong, e.g. *De varende zanger* (1911–22), or acting as the journals of particular societies, e.g. *Ons maandblad* (1908/9–1916/17), organ of the Christelijke Oratoriumvereeniging, or *De stem des volks* (1927–), organ of the Bond van Arbeiders-Zangverenigingen in Nederland. Among other such publications of those decades, special importance attaches to the yearbook *Bouwsteenen* (1869/72–1874/81), published by the Vereeniging voor Nederlandsche Muziekgeschiedenis and devoted to the country's musical past. With the *Tijdschrift der Vereeniging voor Noord-Nederlands muziekgeschiedenis* (1882/5–) Dutch musicology gained its main specialist journal, of which the central function was the study of early Flemish composers. The *Maandblad voor muziek* (1888/9–1893/4), the organ of the Wagner-Vereeniging te Amsterdam, should also be mentioned. These were joined in the 1920s by two leading general music periodicals, *Symphonia* (1923–60), partly the journal of the Federatie van Amateur Symphonie Orkesten, and *De muziek* (1926/7–1932/3), the organ of the Federatie van Nederlandsche Toonkunstenaars-Vereenigingen, which was incorporated into *Caecilia* in 1933. After World War II, *Mensch* (*Mens* since 1948) *en melodie: algemeen maandblad voor muziek* was founded (1946) as a factual, generally orientated music periodical providing reports on events in the Netherlands and abroad, with articles on a wide range of topics including modern music, historical questions and non-European music. By contrast, *Sonorum speculum* (1958–74), the organ of Donemus, was concerned exclusively with current Dutch musical life and new Dutch music. This journal of information was continued as a twice-yearly publication, *Key Notes* (1975–97), which covers Dutch musical life more widely, dealing with the cultivation of chamber music, orchestral activities, teaching and concert life. In the musicological world, besides *Mededelingenblad* (1961–8), published by the Vereniging voor Nederlands Muziekgeschiedenis, several specialist publications have appeared: *The Organ Yearbook* (1970–) deals mainly with historic organs and other keyboard instruments, while *Electronic Music Reports* (1969–71), prepared by the Institute of Sonology at Utrecht, reported on new scientific methods in the electro-acoustic field; it was continued as *Interface* (1972–93), which dealt mainly with questions on the borders of music, science and technology. It has been continued by the *Journal of New Music Research* (1994–), which is mainly devoted to computer music. Besides these important Dutch periodicals, some of them still alive, there are few music journals coming into existence. They are devoted to ethnomusicological aspects, such as *CHIME* (1990–), the newsletter of the European Foundation for Chinese Music Research; to music of the past, such as *Tijdschrift voor oude muziek* (1986–), containing articles on music history and performances and listings of concerts; to contemporary music, *Opscene* (1987–), dealing with avant garde and independent music; to music instruments, e.g. *Piano Bulletin* (1984–), published by the European Piano Teachers Association, with information about repertory, technique, interpretation and new recordings; or to opera, for example *Opera jaarboek* (1980–85) of the Nederlandse Operastichting and *Odeon* (1990–) of the Nederlandse Opera, with news and synopsis of operas performed there. There are journals dealing with country music, such as *Country gazette* (1973–), or with all kinds of pop music, such as *Nashville Tennessee* (1984–), covering country and rock and roll, or with jazz, such as *Jazz-press*, from 1978 *Jazz nu* (1976–), notable for the high quality of its articles.

(viii) Russia. The general press in Russia carried material on music in the 18th century, for example items and articles about the history and aesthetics of music and early examples of criticism. Cultural journals contained reports on musical events. The first periodical publications of music were compositions issued in series such as *Muzïkal'nïye uvesel'nïya* (1774–5), a collection of pastimes and entertainments with songs and instrumental dances, and *Journal de musique pour le clavecin ou piano forte* (1785–94) which consisted mainly of opera extracts.

The first attempt in the direction of a true musical periodical was *Literaturnoye pribavleniye k 'Nuvellistu'* (1844–74), the literary supplement to the periodical music publication *Le nouvelliste* (1840–1906); this consisted mainly of biographical sketches of such composers as Schubert, Chopin, Mendelssohn and Cherubini and studies of the music of various European and other countries. It was followed by *Le monde musical/Muzïkal'nïy svet* (1847–78), which adopted a conservative stance and published reports in chronicle form and lighter essays as well as music supplements with works by leading Classical and Romantic composers, or salon pieces. Among subsequent periodicals are the ultra-conservative *Muzïkal'nïy sezon* (1869/70–1870/71); *Muzïkal'nïy vestnik* (1870–72), consisting of a musical part with pieces by undistinguished Russian and German composers and a literary part with biographical sketches of western European composers and reports on musical life abroad; and *Muzïkal'nïy listok* (1872/3–1876/7), noted for the contributions of the outstanding critic G.A. Laroš. A comprehensive and influential music periodical was the *Russkaya muzïkal'naya gazeta* (1894–1917), founded by the important scholar N.F. Findeyzen (1868–1928) in St Petersburg: it represented a more progressive outlook and offered contributions on significant sources of Russian

musical history and articles on musical history, theory, interpretation, education and ethnology, as well as providing a forum for important correspondence later collected in book form (notably between Musorgsky and V.V. Stasov). Also of significance was *Muzïka* (1910/11–1915/16), which was concerned mainly with contemporary music, especially that of Skryabin; it was here that B.V. Asaf'yev, later to attain fame as a musicologist, began his career as a critic. *Muzïkal'nïy sovremennik* (1915/16–1916/17), edited by A.N. Rimsky-Korsakov, the composer's son, contains useful material towards a history of Russian music, for example the correspondence between Balakirev and Rimsky-Korsakov, 1862–98, as well as informative special issues on Skryabin (1915), Taneyev (1916) and Musorgsky (1917).

Besides these there appeared, from the 1840s, periodicals devoted to theatre and music, e.g. *Repertuar russkogo i Panteon vsekh yevropeyskikh teatrov* (1842–53) which from 1847 offered mainly careful and detailed reports on music, and *Teatral'nïy i muzïkal'nïy vestnik* (1856–60), an art periodical through which A.N. Serov exerted an important influence. *Muzïka i teatr* (1867/8), edited by Serov and his wife, adopted a deliberately provocative stance to induce polemics, and so acted as a forum for the current controversies. *Yezhegodnik imperatorskikh teatrov* (1892–1915) contains important factual data on Russian musical life and articles on the history of Russian music; *Teatr i iskusstvo* (1897–1918) and *Rampa i zhizn'* (1909–12) should also be mentioned for their relevance to the musical situation in the early 20th century. Other music periodicals founded in the early 20th century covered specialized interests. Thus *Muzïkal'nïy truzhenik* (1906–10), devoted to the interests of professional musicians and teachers, sought to extend their musical horizons with articles about composers, correspondence and news items. By contrast, the aims of *Muzïka i zhizn'* (1908–12) were national and cultural, including the aim of bringing music to the people as a whole.

All periodicals were brought to an end by the October Revolution of 1917. In the new era that dawned, music and musical life took new paths, as the titles of new periodicals reflected: *K novïm beregam* ('Towards new shores') (1923) or *Muzïkal'naya nov'* ('New territory in music') (1923–4). There was an increase in the number of periodicals on contemporary music-making whose contributors were mostly themselves composers, such as *Sovremennaya muzïka* (1924–9), the journal of the Assotsiatsiya Sovremennoy Muzïki of the State Academy of the History of the Arts in Moscow. Ideas for the reform of musical life were expressed in, for example, *Muzïkal'naya kul'tura* (1924), while the reform of music education, of musicological research and socio-musical questions were dealt with in *Muzïkal'noye obrazovaniye* (1926–30). The special nature and tasks of Soviet music were discussed in such journals as *Muzïka i revolyutsiya* (1926–9). The interests of amateur musicians were catered for by, for example, *Proletarskiy muzïkant* (1929–32). With the foundation (1932) of the Union of Soviet Composers the leading general music journal of the USSR, *Sovetskaya muzïka* (1933–), made its first appearance: it reflects not only the development of Soviet music and its main genres (song for the people, folk art, programmatic orchestral music, opera, ballet, oratorio and cantata) but also provides a conspectus of Soviet musicology from the 1930s, partly in the form of popularized scholarly contributions. Another comprehensive periodical, *Muzïkal'naya zhizn'*, appeared first in 1957/8; it offers entertainingly written articles on modern compositions or on works that have been unfairly neglected or misjudged. In 1972 Ukraine achieved its own general music periodical *Muzyka*, in its own language, dealing almost exclusively with Ukrainian music and musical life. The preoccupation with Russian folk music and its relation to Soviet music led to the establishment of *Muzïkal'naya fol'kloristika* (1973–). After *perestroika*, two more general music periodicals came into existence in 1989, the *Rossiyskaya muzikal'naya gazeta* and the *Muzikal'naya gazeta*, later under the title *Muzikal'noye obozreniye*. After the break-up of the USSR in 1992 the chief general music periodical *Sovetskaya muzïka* (1933–) changed its title to *Muzikal'naya akademia*; it now includes material on the music on the Russian Orthodox church and has also published material on the history of Russian Soviet music.

(ix) Central eastern European countries.

(a) Bulgaria. Only when Bulgaria was liberated from the Turks in 1878 did its independent musical development begin. The first periodical was *Gusla* (1891), soon followed by *Kaval* (1894/5–1901/2). Succeeding periodicals, like these, were general musical journals, some of which also dealt with the theatre, while *Muzikalen vestnik* (1904–28) was mainly devoted to music education. The country's most important music periodical is *Balgarska muzika* (originally *Muzika*), founded in 1948 as the organ of the Union of Bulgarian Composers and of the Culture and Arts Committee, containing articles, reports and news about Bulgarian music, musical life and education. The *Informatsionni musikalni byuletin*, published since 1969 by the Union of Bulgarian Composers, has the prime purpose of informing the rest of the world about Bulgarian musical life and its organizations. The beginning of the 1970s saw the establishment of the first musicological periodical *Balgarsko muzikoznaniye* (1971–) and later of *Muzikoznanie* (1977–), published by the Institute of Musicology at the Bulgarian Academy of Sciences.

(b) Croatia. The earliest musical periodical in Croatia was *Sv. Cecilija* (1877–), which, concerned with both sacred and secular music, represents a substantial source for Croatian musical life. The existing journals were joined by newcomers that gave composers and scholars the opportunity to publish their music or research, whether in general periodicals such as *Glazbeni vjesnik* (1927–31) or in specialist journals such as *Ćirilometodski vjesnik* (1933–40), devoted to church music. After World War II a number of general music periodicals were founded, such as *Muzičke novine* (1946–8). In 1969 Josip Andreis and others, founded the yearbook *Arti musices* at the musicological department of Zagreb Music Academy. Specializing in aesthetics and sociology, Ivan Supičić founded the *International Review of the Aesthetics and Sociology of Music*, originally *The International Review of Music Aesthetics and Sociology* (1970–), which has gained a high reputation. Other periodicals are devoted to music education, such as *Tonovi* (1986–) and ethnomusicology, *Baščinski glasi* (1992–).

(c) Czech Republic. The founding of independent musical periodicals in the Czech lands was preceded by news items on music in daily papers of the 18th and 19th centuries, such as the *Pražské poštovské noviny* (1719–86), the

Prager Intelligenzblatt (1774–1811) and the *Prager Zeitung* (1825–48), as well as in cultural and socio-historical journals, e.g. *Časopis Českého musea* (1832–1908) and *Česka včela* (1834–56). J.F. von Schönfeld's *Jahrbuch der Tonkunst von Wien und Prag* (1796) printed accounts of opera orchestras in the national theatres of Vienna and Prague and articles on operas. But the *Allgemeine musikalische Zeitung* (Leipzig, 1798–1848) offers the main source for reports on the work of Czech composers. The earliest attempt at a Czech music periodical was the literary supplement to the song collection *Věnec* (1843). The first independent music periodical was *Caecilie* (1848–9), devoted mainly to the interests of organists and teachers. More important for Czechs were its successors *Dalibor* (1858–69) and *Slavoj* (1862–5). The earliest Moravian periodical was *Hlasy hudební* (1873). Special importance attaches to the controversies between the journal *Dalibor* (1878/9–1927) and *Hudební listy* (1884/5–1887/8) about the national character of Czech music and about Wagnerianism. A significant general musical journal is *Česká hudba* (1895–1939), which originally consisted solely of musical compositions, but from 1904 had a regular literary supplement which then developed into a reputable periodical. As a counterblast to more conservative journals such as *Hudební revue* (1908–20) the periodical *Smetana* (1910/11–1926/7) espoused the cause of progressive Czech music. Among specialist music periodicals are *Cecilie* (later *Cyrill*; 1874–1948), devoted to Catholic church music in Bohemia, Moravia and Silesia, and *Hudební sborník* (1913–14) in musicology. The creation of Czechoslovakia in 1918 fostered an expansion of musical life, leading to the publication of new periodicals. Several were concerned with contemporary music, e.g. *Der Auftakt* (1920/21–1938), *Klíč* (1930/31–1933/4) and *Rytmus* (1935–48); there was also the specialist *Musikologie* (1938–58). After World War II *Hudební rozhledy* (1948/9–) was made into a general music periodical by the Union of Czechoslovak Composers. The Czech Academy of Sciences began publication of *Hudební věda*, a specialist musicological journal, in 1961. In Moravia the general periodical *Opus musicum* was founded in 1969, while musicological articles and reports have been published annually since 1966 in the *Series musicologica* of the *Sborník prací Filosofické fakulty* of the University of Brno.

(d) Estonia. The first Estonian music magazine, *Laulu ja mängu leht* (1895/6–1898), played a leading role in the country's cultural life, with material on education and writings about music history, musicians and cultural events. The periodicals of the 1920s and 30s, apart from *Eesti lauljate liidu muusikaleht* (1924–40) were short-lived. In the 1980s and the early to mid-90s the periodical *Teater, muusika, kino* functioned as the only musical journal, containing articles and reviews on the performing arts, until 1997, when *Music in Estonia*, the organ of the recently founded Estonian Music Council, was established. The weekly newspaper *Sirp* usually contains two pages devoted to music.

(e) Greece. The first music periodical of Greece was *Armonia* (1900–02); the annual of the *Odion Athinon* had appeared since 1871. Further music journals followed at short intervals, devoted to music and musical life, mainly of Athens; but material on Byzantine music was published in non-musical periodicals. Since the 1970s, specialized journals have come into existence, devoted to high fidelity and stereophony. The first periodical in the field of musicology, *Mousikología*, was founded in 1985 by a group of Greek musicologists and is focussed on research into Greek music; musicology is presented here for the first time in Greece as a modern science in its historic and systematic outlines following the central European tradition.

(f) Hungary. General cultural periodicals, published in the first half of the 19th century in Hungary, deal mainly with literature, art and the theatre but contained only brief items on music. The first true Hungarian music periodical, Kornél Ábrányi's *Zenészeti lapok* (1860–76), espoused the cause of a national style while also accepting the western European tradition; it includes essays and substantial discussions of performances (mainly in Budapest theatres and concert halls), including little-known material on Brahms's appearances as a pianist in 1867 and 1869. The foundation of the Philharmonic Society (1867), the Academy of Music (1875) and an independent opera house (1884) led to an increase in the number of music periodicals, but most were short-lived. There followed other general music periodicals, some of considerable duration, such as *Zenélő Magyarország* (1894–1913), *Magyar zenészek lapja* (1897–1904), *A zene* (1909–44) and *Zenei szemle* (1917–29, new series 1947–9). There were also periodicals for Gypsy music (e.g. *Magyar cigányzenészek lapja*, 1908–31), concert guides (*Harmonia*, 1893–6), music trade journals (*Zenekereskedelmi közlöny*, 1911–14), and journals of music societies (*Magyar zenészek lapja*, 1917–38) and choral unions (*Magyar dal- és zeneközlöny*, 1895–1944). A wider field was covered by the church music periodicals of various denominations such as *Katolikus egyházzenei közlöny* (1894–1918), *Protestáns zeneközlöny* (1902–14) and *Református zeneközlöny* (1905–6). Most notable of recent publications are the journals *Muzsika* (1958–), *Magyar zene* (1960–) and the news sheet *Hungarian Music News* (1969–). Since 1961 Hungary has possessed, in the *Studia musicologica Academiae scientiarium Hungaricae*, a musicological publication which, though mainly concerned with Hungarian music history, also deals with general musicological problems and takes a particular interest in the autograph material in the nation's libraries. It was joined by a few general music journals of a more informative character, such as *Hungarian Music News* (from 1989 *Quarterly*) (1969–), published by the Budapest Office of Music Competitions, and briefly by *Hungarian Dance News* (1985–6).

(g) Poland. In the early 19th century Polish composers sent reports on Polish music to foreign journals, e.g. J. Elsner in the Leipzig *Allgemeine musikalische Zeitung*. The Warsaw composer Karol Kurpiński founded Poland's own first music periodical, the *Tygodnik muzyczny* (1820–21), which dealt mainly with the life and work of Polish Composers, especially in song and opera. The next really significant development was the appearance of *Ruch muzyczny* (1857–62) published in Warsaw by the leading Polish music critic Józef Sikorski. Among other general music periodicals mention should be made of *Echo muzyczne i teatralne*, from 1885 *Echo muzyczne, teatralne i artystyczne* (1883/4–1907), which made an important contribution to Polish musical life. In addition to general publications specialist ones arose in the 1880s, for example on church music and hymnology (*Muzyka*

kościelna, 1881–1902), Polish folksongs and national songs (the supplement to the song collection *Lutnia polska*, 1885, connected with the earliest Polish choral society) and to answer the needs of organists (*Muzyka i śpiew*, 1912–31). The development of musicology in Poland and the creation of professorial chairs led to the publication of the first Polish musicological journal, *Kwartalnik muzyczny* (1911/13–1913/14, continued 1928/9–1933 and 1948–1950), devoted to the history of Polish music, aesthetics and theory of music; in 1928 it became the organ of the musicological school of Lwów and from 1948 of the musicological section of the Union of Polish Composers. The most important periodicals between the wars were the monthly *Muzyka* (1924–38) edited by Mateusz Gliński and the quarterly *Muzyka polska* (1934–9) brought out by a group of young Polish composers. Just after World War II Polish musical life experienced a resurgence which eventually gave rise to a multiplicity of journals. In addition to general periodicals such as *Ruch muzyczny* (1945–9, continued 1957–) and *Muzyka* (1950–56), in which current controversies were aired, specialist publications appeared concerned for example with national folk music (*Poradnik muzyczny*, 1947–91), with music in schools (*Śpiew w szkole*, 1957–), with national opera (*Opera viva*, 1961–3) and with jazz. Mention should also be made of the significant musicological periodicals *Studia muzykologiczne* (1953–6) and *Muzyka* (1956–96), dealing with the history and theory of music as well as criticism, and *Annales Chopin* (1956–). *Res facta* (1967–) is devoted to contemporary music in Poland and abroad. *Polish Musicological Studies* (1977–1986) contains scholarly articles already published, representing Polish musicological thinking, to give foreign readers insight into the methods and areas of research of Polish musicology. Regarding the music holdings of the libraries of Poland, the *Biuletyn muzyczny* (1974–8), continued by *Biblioteka muzyczna* (1979–1983/4), represent the Polish section of IAML. As regards Chopin Societies and similar organizations, from all over the world, a *Bulletin of the Council of Agreement* (1984–5), continued by *Chopin in the World* (1986), published by the International Federation of Chopin Societies, was published. Modern sound reproduction (recording, phonography, audio equipment) is covered in *Studio* (1992–).

(h) Romania. The earliest Romanian music journal, *Eco musicale* (1869–71), was followed by the periodical of the Romanian Music Society in Sibiu, *Raportul general al Comitetului reuniunei române de musică din Sibiiu* (1878/9–1905/6), which provided a significant stimulus to Romanian musical life. Numerous short-lived music periodicals appeared in the following years dealing partly with the other arts as well as music, such as *Lyra românа* (1879–80). Of far-reaching significance for national musical life towards the end of the 19th century was *România musicală* (1890–1904); in the first half of the 20th, *Muzica* (1916–25) also played an important role, encouraging the independence of Romanian composers by fostering the national heritage of folk music. In 1951 *Muzica*, the organ of the Composers' Union, was founded; it contains articles and discussions, mainly on new works, and reports on musical life. Scholarship on recent musical history and contemporary Romanian music are to be found in *Studii şi cercetări de istoria artei* (1954–) published by the Romanian Academy of Sciences, which has also appeared in French since 1964. Since 1965 there have been published *Studii de muzicologie*, issued by the Composers' Union, and *Lucrări de muzicologie*, issued by the Conservatorul de Muzică G. Dima in Cluj, both dedicated primarily to research in Romanian music, past and present, as well as general problems of musical scholarship, teaching, style analysis and interpretation.

(i) Slovakia. The first Slovak periodical containing studies and miscellanies on music was *Hudba – spev – tanec* (1949/50–1950/51), serving amateur musical life. It was followed by the important organ of the Union of Slovak Composers, *Slovesnká hudba* (1957–71), which commented on musical life. The function of musicology as a university discipline initiated *Musicologica slovaca* (from 1990 *et europaea*), founded in 1969 by the Slovak Academy of Sciences. The importance should also be stressed of *Hudobný život* (1969–) and *Slowakische Musik* (1969–90). The 1990s gave rise to a intensifying of musicology in certain specific fields, including ethnomusicology, with *EthnoMusicologicum* (1993–), systematic musicology, with *Systematische Musikwissenschaft/Systematic Musicology* (1993–) and the musicology of today, in *Musicologica actualia* (1997–).

(j) Slovenia. The first Slovenian music periodical, *Cäcilia/Cecilija* (1958–9), devoted mainly to music in the rural areas and aimed at country organists and teachers, was published in Ljubljana; it appeared in both German and Slovenian, in monthly parts. It was followed by the monthly *Cerkveni glasbenik* (1878–1945, 1976–) of the Cecilian Society of Ljubljana, devoted to church music and musical culture. More specialist music periodicals followed during the 1920s, such as *Nova muzika* (1928–9), dealing with new music. After World War II the situation of Slovenian periodicals improved still further, especially as regards general periodicals concerned with the musical life of their regions, such as *Slovenska glasbena revija* (1951–60). A specialist musicological review, founded and edited by Dragotin Cvetko, was published at Ljubljana University from 1965, the *Muzikološki zbornik/Musicological Annual*; its main emphasis is on the connection between Slovenia and the European music of the past. The *Bilten* (1993–) of the Slovenian Musicological Society provides news about musicological events in the country, reports on research projects and news of conferences. Mention should be also made of the *Jahresbibliographie der Volksballadenforschung/Annual Bibliography of Folk Ballad Research* (1971–90) of the Institute for Slovenian Folklore at the Slovenian Academy of Sciences and Arts. There are also periodicals dealing with music education, such as *Glasbeno-pedagoški zbornik Akademije za glasbo v Ljubljani* (1995–) and *Glazba v šoli* (1995–).

(k) Ukraine. Ukrainian cultural periodicals contained reports on musical events, for example the *Journal d'Odessa* (1821–9), published in French and from 1827 also in Russian, on opera productions. In the field of musicology the first autochthone yearbook *Ukraïns'ke muzykoznavstvo* (1964–) was founded in Russian, from 1967 with a Ukrainian title. In 1970 Ukraine achieved also its own general music periodical, *Muzyka*, in its own language, dealing almost exclusively with Ukrainian music and musical life.

(l) Yugoslavia. The first music periodical in Yugoslavia, *Glasnik Pevačke družine 'Kornelije'* (1883), of which

only one issue appeared, was mainly devoted to the founder of Serbian national music, the composer Kornelije Stanković (1831–65). *Srpski muzički list* (1903), produced in Novi Sad, contained news of local musical life for Serbian readers in the south-eastern Austro-Hungarian empire. After World War I, numerous general musical periodicals appeared, such as *Muzika* (1928–9), the organ of the Union of Yugoslav Musicians, *Muzički glasnik* (1931–4, 1938–41) and the most important journal, *Zvuk* (1932–6), which contained scholarly articles on all aspects of music history and folk music, analyses of new works, concert critiques and book reviews of Yugoslav authors. After World War II, the short-lived but important journals *Muzika* (1948–51) and *Savremeni akordi* (1954–61) should be mentioned. Other periodicals were published by societies, such as the contiuation of *Zvuk* (1955–66, 1967–86) by the Union of Yugoslav Composers and *Pro musica* (1964–) by the Society of Music Artists of Serbia. Since 1987, Matica Srpska in Novi Sad has published two specialized scholarly periodicals, in the area of folkloristic research (*Folklor u Voivodini*) and on theatre and music (*Zbornik Matice srpske za scenske umetnosti in muziku*). Newly founded periodicals include a further continuation of *Zvuk* on an international basis, *Novi zvuk* (1993–), and *MT/Muzički talas* (1994–).

(x) Scandinavia.

(a) Denmark. The first music periodical in Denmark was C.F. Cramer's *Musik* (1788/9), the Copenhagen continuation of his *Magazin der Musik* (1783–1784/6) published in Hamburg. It contained mainly news about orchestras and concert institutions at home and abroad and material about musicians and their works, as well as a history of the Berlin Opera, with a commentary on Salieri's *Les Danaïdes*, and the libretto of Kunzen's opera *Holger Danske*, performed in 1789 in Copenhagen. The first music periodicals to be published by Danes followed in the 1830s, for example the 20 issues of the *Musikalsk tidende* (1836), edited by A.P. Berggreen, and the entertaining journal *Figaro vom Auslande* (1838). Of higher value as regards music history was the *Tidsskrift for music* (1857–9), edited by Immanuel Rée. In the later 19th century other general musical periodicals were founded, some including sections on theatre or literature and art, e.g. in *Nordisk tidsskrift for musik (og theater)* (1871/2–1872/3), *Musikbladet: ugerevue for musik og theater* (1884–1893/5) and *Mignon: ugeblad for musik, literatur og kunst* (1897–8). There were also journals of singing or choral societies, such as *Heimdal* (1845), edited by Berggreen, the organ of the Nordisk Sanger-Forening; some were on a denominational basis. In the 19th century and the early 20th musical societies played a decisive part in national musical life, and this was reflected in the periodicals and news sheets of institutions, such as societies of organists (like the *Medlemsblad for Dansk organistforening*, 1904–; from 1920 *Dansk kirkemusiker-tidende*), orchestral associations (like the *Orkesterforeningens medlemsblad*, of the Københavns Orkesterforening, 1902/3–1911) or music clubs (like the *Dansk musiker-tidende*, from 1991 *Musikeren*, the organ of the Danske Musikeres Lands-Forbund (Dansk Musiker Forbund), 1911–, and the *Dansk musik tidsskrift*, the organ of Unge Tonekunstnerselskab, 1925/6–1971). The last is the most important Danish general music periodical, containing seminal musicological and bibliographical material, but it was also the organ for new musical directions with composers as authors, including Berg, Bartók and Zemlinsky. Its continuation *DMT* (1972/3–) is devoted to contemporary music, mainly by Danish and other Scandinavian composers, and to music aesthetics. In the years 1942–6 there was *Levende musik*, a news sheet for the Musikpaedagogisk Forening; as a general periodical it mainly covered topical events, with a national tendency, but it also published scholarly work. The first purely scholarly music periodical was the *Aarbog for musik* (1922–4), published by the Musikologisk Samfund which also brought out the *Musikhistorisk arkiv* (1931–9). With the *Dansk aarbog for musikforskning* (1961–) of the Dansk Selskab for Musikforskning (founded in 1954), Denmark achieved a specialist musicological journal; it contained essays on Danish music and also embraced a wide variety of research topics, from Greek antiquity to Webern. In 1967–72 it was joined by *Information om nordisk musikforskning* and in 1975 by the yearbook *Musik & forskning*, both published by the musicological institute of the University of Copenhagen, the latter containing articles primarily by members of that institute. Similar periodicals followed in 1991, the yearbook *Caecilia* and the working papers *Da capo*, both published by the musicological institute of the University of Århus. In a more specific area, the Danish Organ Society (founded in 1970) has published since 1971 the journal *Orglet*, devoted to organ building, past and present, the *Dansk orgelårbog* (1981/2–) and since 1984 *Orglet: B*.

A wide range of topics are covered by specialist periodicals: ethnomusicology, in *Acta ethnomusicologica* (1969–); new methods in electro-acoustics, in *Electronic Music and Musical Acoustics* (1975–7), of the Department of Musical Acoustics of the University of Århus; music education, in *Opus* (1981–92) and *Modus* (1987–), the organ of the Dansk Musik paedagogisk Forening; in traditional music, such as *Folkemusikhusringen*, from 1990 *Dansk Folkemusik*, from 1995 *Folkemusik i Danmark* (1980–1, 1989–), and *Folkemusik scenen* (1995–); and in music of the past, such as the newsletter of the Centre of Historical Music (1977–80) and the *Båndjournalen* (1983/4–1984/5) of that institution, which consists of cassettes with texts and music. There are also periodicals that concentrate on particular composers, such as *Vivaldi informations* (1971/2–1973), published by the International Antonio Vivaldi Society, and *Espansiva* (1994–), the journal of the Carl Nielsen Society.

(b) Finland. Regular reviews of music appeared in Finalnd in Helsinki newspapers from the end of the 1820s. The country's first music periodical was *Säveleitä* (1887–90), consisting for two years of two separate parts, one with articles on the history of Finnish music, the other with music. The first Finnish journal in Swedish, carrying articles on music as well as on other arts, was *Euterpe* (1901–5) (like others, of short duration) that appeared in the first two decades of the 20th century. The 1920s and 30s saw the establishment of longer-lasting periodicals, such as *Suomen musiikkilehti* (1923–46) and *Musiikkitieto* (1933–46); these were amalgamated as *Musiikki* (1947–51). This was followed by the admirably edited *Uusi musiikkilehti* (1954–7). Since 1958 the Suomen Säveltaiteilijain Liito and the Suomen Musiikkitieteellinen Seura have produced a joint yearbook, *Suomen musiikin vuosikirja*, with essays, discussions of cultural questions and reports, critiques of books and records and statistical

information, while the results of scholarly research are published in *Musiikki* (1971–), the organ of Suomen Musiikkitieteellinen Seura. It was joined by the yearbook *Musiikkitiede* (1989–94), of the Musicological Institute of the University of Helsinki. Further tendencies to specialization gave rise to new music periodicals: in ethnomusicology, *Musiikin suunta* (1983–) and *Etnomusikologian vuosikirja* (1986–); in composition and music theory, *Sävellys ja musiikinteoria* (1991–), published by the Sibelius Academy; in folk music, *Kansanmusiikki* (1973–90); and in music education, *Musiikkikasvatus-/Finnish Journal of Music Education* (1996–). The *Finnish Music Quarterly* (1985–) is a representative journal of the country's musical culture, mainly for foreign readers.

(c) Norway. The first Norwegian periodicals, in the 1820s, were serial publications of music, consisting solely of songs or piano pieces, for example *Norske lyra* (1825). The first steps towards a music periodical were taken in *Cecilia* (1838/9), the literary part of the periodical music edition *Musikjournal*, which contained rudimentary theory and essays. The first true Norwegian music periodical was *Musikalsk søndagsblad* (1839/40), which consisted primarily of translations of articles from central European journals such as the *Neue Zeitschrift für Musik* (1834–), soon followed by other music periodicals, notably the monthly *Nordisk musik-tidende* (1880–92), an invaluable source of information about Norwegian music and musicians in the 1880s and 90s. Many of the following music journals were short-lived. The first periodical published by an institution was *Musikbladet* (1908–21), the organ of the Music Conservatory of Oslo, then combined with *Sangerposten* (1910–21), which represented a group of choral associations, and continued in 1927 as *Tonekunst*, supported by five organizations, among them the Society of Norwegian Composers and the Norwegian Organists' Association. With the *Norsk musikerblad* (1914–) Norway achieved its first general music periodical, devoted mainly to the nation's music and musical life. The importance of the choral movement in Norway led to a series of periodicals related to singing, the first of which was *Sanger-tidende* (1864/5), which appeared as a supplement to the third year of the *Norsk skytter- og jagt-tidende* (the shooting and male choral societies were important in the national independence movement that led to the divorce from Sweden in 1905). Mention should also be made, as important periodicals in this context, of *Sangertidende* (1884–95), *Tonens makt* (1909–), the news sheet for members of the Norsk Arbeidersangerforbund, and *Norsk sang* (1946–84), published by the Norges Landssangerforbund established in 1921. As a musicological forum Norway had *Norsk musikkgranskning* (1937–1962/71), a yearbook published by the Norsk Samfund for Musikkgranskning, and since 1968 *Studia musicologica norvegica*, of the musicological society Norsk Musikkforskerlag (founded in 1964).

The jazz movement started during World War II with *Rytme* (1941–61). In 1966 the Norwegian Jazz Association published its journal, *Jazznytt*. Exclusively devoted to folk music are *Spelemannsbladet* (1941–) and *Årbok for norsk folkemusikk* (1991–). Besides the musicological yearbook mentioned above, the most important Norwegian music periodicals of today are *Norsk kirkemusikk* (1947/8–), devoted to church music, *Musikk i skolen*, 1956–, and *Norsk musikktidsskrift*, 1964–, dealing with pedagogical aspects of music teaching as well as *Ballade*, 1977, which is devoted to contemporary music.

(d) Sweden. In Sweden the earliest periodical publication of music was *Musikaliskt tidsfördrif* (1789–1834), edited by the composer Olof Åhlström, containing music by Swedish and other composers; its 46-year run constitutes one of the longest to be found in this genre. The first true Swedish music periodical was *Euterpe* (1823), which was followed by a series of other general music periodicals, such as *Läsning uti musikaliska ämnen* (1827–9), *Stockholms musik-tidning* (1843–4) and its successor *Ny tidning för musik* (1853–7), both published by Abraham Hirsch, the latter giving a most colourful picture of Stockholm musical life in the 1850s in its reviews. The most important and comprehensive music periodical of the 19th century was *Svensk musik-tidning* (1881–1913), rich in material, mainly in the field of biography and to some extent scholarly essays. There were also numerous periodicals dealing with theatre and music, e.g. *Tidning för teater och musik* (1835–6) and above all the *Svenska scenen* (from 1919 *Scenen*; 1914/15–1941) of the Svenska Teaterförbundet. With the increasingly developing musical life of Sweden in the late 19th century and especially the early 20th, there emerged many specialized journals, beginning with those devoted to church music and musicians, which also took account of the interest of teachers, e.g. *Musikalisk kyrkotidning* (1847–50). In addition choral societies brought out their own journals, such as *Svenska sångarförbundet* (from 1922 *Sångartidningen*; 1915–95); these were sometimes denominational, e.g. *Sången* (1921–69), the organ of the Svenska Baptisternas Sångarförbund. Periodicals published by professional musical organizations also affected the development of music in Sweden, e.g. *Musikern* (1908–9), continued as *Svenska musikerförbundets tidning* (from 1920 *Musikern*; 1910–) and the *Auktorn* (1928–30), the organ of the performing rights society, Svenska Tonsättares Internationella Musikbyrå, which later issued *Ord och ton*, from 1986 *STIM-nytt* (1970–) and as *Svensk musik* (1986–). Musicological research is catered for by the Svenska Samfundet för Musikforskning and its organ the *Svensk tidskrift för musikforskning* (1919–), which contains musicological studies and is central in the development of Swedish musical scholarship; the society also published the monthly *Ur nutidens musikliv* (1920–25), dealing with contemporary music. More recently the cause of modern music in Sweden has been advanced by *Nutida musik* (1957/8–), published by Swedish radio; this periodical has contributed significant links between Swedish music and international musical life, especially as regards recent compositional techniques.

In more recent times, periodicals devoted to church music have played an important role, such as the *Svensk kyrkomusik* (1967–83), published by Kyrkomusikernas Riksförbund, then incorporated into *Kyrkomusikernas tidning* (1936), and *Kyrkokör-journalen* (1990–) of Sveriges Kyrkosångsförbund. Several journals deal with musical instruments, including conservation and technology, as in the *News* (1977–) and *Journal* (1978–) of the Musikhistoriska Museet Stockholm, particular instruments, such as *Gitarr och luta* (1968–) and *Orgelforum* (1979–), and folk music instruments, as the *Newsletter* of the Study Group of Folk Musical Instruments (1977–) of the International Folk Music Council. Other special areas are opera and ballet, as in *På operan* (1978/9–1995/6),

published by the royal theatres, and *Musikdramatik* (1978–); particular composers, as in *ILC Quarterly* (1971–), from 1979 *Liszt Saeculum* of the International Liszt Centre, with research on original material; and traditional music – research in the yearbook *Sumlen* (1976–), traditional music festivals in the ethnic journal *Lira* (1994–) and combined with jazz in *Musik* (1994–8).

(xi) Spain and Portugal. The first Spanish music periodicals appeared in the 1840s. *La Iberia musical y literaria* (1842–5), founded by M. Soriano Fuertes and edited by J. Espín y Guillén, was the first significant one; it contained articles on various topics – instrumentation, the activities of performers, and Spanish and foreign music. Most of the periodicals that followed lasted only a short time, but among them the locally orientated *Gaceta musical de Madrid* (1855–6), issued by H. Eslava, strove to elevate the level of Spanish musical life. Among the periodicals of the 1860s, *La España musical* (1866–74) contains essays on Wagner's operas and Liszt's symphonic poems, and the *Almanaque musical* (1868) includes articles by Felipe Pedrell, the founder of Spanish musicology, on Wagner. Later in the century there appeared Pedrell's weekly *Notas musicales y literarias* (1882–3) and two periodicals concerned with Latin American music: *Ilustración musical hispana-americana* (1888–96) and *La música ilustrada hispano-americana* (1898–1902). Church music periodicals are specially significant for Spain: the monthly *La música religiosa en España* (1896–9), edited by Pedrell, and the quarterly *Tesoro sacro musical* (1917–78), which included music and dealt with both past and present. At the beginning of the 20th century was founded the fundamental periodical devoted to research on Catalan music, issued by the important choral association Orféo Catalá, *Revista musical catalana* (1904–36). All music periodicals ceased publication in July 1936 because of the beginning of the Spanish Civil War; only a few resumed afterwards. Other notable 20th-century periodicals include *Ritmo* (1929–90). Since 1946 the Instituto Español de Musicología has issued the *Anuario musical*, which gives extensive treatment to Spanish musical history and to archival studies, more recently also on ethnomusicological topics; several volumes have served as Festschriften, either dealing with composers of the past (Morales, 1953; Cabezón, 1966), or dedicated to eminent Spanish musicologists (Subirá, 1963; Pedrell, 1972). The Sociedad Española de Musicología, in Madrid, founded the semi-annual *Revista de musicología* in 1978 with contributions, partly by well-known Spanish musicologists, mainly dealing with early Spanish music history, in the Middle Ages, the Renaissance and Baroque, emphasizing church music and liturgical questions; some articles are also devoted to music instruments, primarily organs, and ethnomusicological topics. The volume of 1982 functioned as a Festschrift for Samuel Rubio, the society's founder and first president and first editor of its organ. It was joined in 1979 by *Butlletí de la Societat catalana de musicológia* and in 1981 by *Recerca musicológica*, published by the Universidad Autónoma de Barcelona. The *Revista musical catalana*, from 1990 *Catalunya música* (1984–), is not a revival of the earlier periodical of the same title but is more devoted to Catalan music life. Among other specialized journals, *Apromur*, from 1985 *Musicae* (1984–), of the Asociación para la Promoción de la Música Religiosa, sacred music in general and *Nassarre: revista aragonesa de musicología* (1985–) published by the Institución Fernando el Católico, Sección de Música Antigua, with early religious music; *Nueva música* (1990–) is concerned with contemporary music, *Música y educación* (1988–) with music pedagogical research, and, *Música y tecnologia*, from 1989 *Keyboard* (1986–) deals with the technology of musical instruments. Bibliographical studies are covered by the *Anuario de la prensa musical española* (1980/81–) of the Instituto de Bibliografía Musical in Madrid, and musical documentation by *AEDOM* (1994–), the newletter of the Asociación Española de Documentación Musical.

In 18th-century Portugal, articles on music appeared occasionally in general cultural periodicals, like the critical descriptions of operatic practice in the *Gazeta literária* (1762). The *Jornal do Conservatório* (1839/40), founded by the composer J.D. Bomtempo (1775–1842), may be considered the earliest Portuguese music periodical; it was issued weekly and consisted mainly of critical writings and accounts of the activities of the Lisbon Royal Conservatory. In the later 19th century there followed locally orientated publications such as the *Gazeta musical de Lisboa* (1872/3–1874/6) and the *Gazeta musical* (1884–6), and periodicals dealing with music and the other arts, such as *Amphion* (1884–98). Another important periodical of high repute was M.A. Lambertini's *A arte musical* (1899–1915). *A arte musical: revista de doutrina, noticiário e crítica* (1930/31–73), the country's general musical periodical, contains short articles, accounts of Portuguese and foreign music and critical notices; it was published from 1945 by the Juventude Musical Portuguesa. The quarterly *Canto gregoriano* (1956/7–1984), published by the Centro de Estudos Gregorianos (Lisbon) dealt with the promotion of Gregorian chant in highly specialized articles, some by musicologists from Paris and Solesmes. It was joined by the *Nova revista de música sacra* (1971–), planned along the lines of its forerunner *Música sacra* (1927–8) with articles on religious music and liturgy. Guided by the principles of Vatican Council II, priority is given to Gregorian chant. Music and liturgy are also dealt with in the *Boletím de música liturgica* (1973–86) and specially on Gregorian chant in *Modus* (1987–92). Other periodicals are devoted to music education, such as *APEM: boletim informativo* (1972–), published by the Associação Portuguesa de Educação Musical, the national branch of ISME, to new ideas on music aesthetics, in *Informação musical* (1981–3), founded by the Sector de Animação, and to the history of performances of opera and ballet in Lisbon in the opera house organ *S. Carlos revista* (1986–).

(xii) Switzerland. The growth of Swiss musical life at the beginning of the 19th century led to the widespread foundation of music societies; the first annual periodical was the *Protokoll der Schweizerischen Musik-Gesellschaft*, which from 1808 to 1856 testifies to the society's activities. But the Swiss periodical with the oldest tradition is the *Neujahrsgeschenk an die Zürcherische Jugend von der Allgemeinen Musikgesellschaft in Zürich* (1813–), which evolved from the New Year bulletins of the music society Ab dem Musiksaal (1685–1812) and of the Musikgesellschaft zur Deutschen Schule in Zürich (1713–1812), and contained quotations from the Bible and from poetry with vocal and instrumental compositions. Since 1830 the bulletins have consisted of musical biographies with material on the activities of composers (such as

Wagner and Busoni in Zürich) and essays on Swiss musicians; they offer a rich source for Zürich music history, and bear witness to a gradual change of attitude among the authors, from the serious amateur to the cultured and also the professional music historian. The first true Swiss musical periodical, the highly respected *Schweizerische Musikzeitung/Revue musicale suisse*, was founded by J.R. Weber in 1861 as the *Sängerblatt* of the Bernischer Kantonalgesangverein. By its second year, when it was called the *Schweizerisches Sängerblatt*, it began to expand its subject matter, and by 1879, now the *Schweizerische Musikzeitung und Sängerblatt*, it had developed into a general periodical. In 1901 it became the organ of the Schweizerischer Tonkünstlerverein and thus a forum for Swiss music, exerting much influence, even beyond the country. It ceased publication in 1983.

The importance attached to choral singing and above all the male-voice choir in 19th-century Switzerland, in the tradition of H.G. Nägeli, led to the establishment of journals of individual choirs such as *Der Konkordianer* (1883–?1952/3) of the Männerchor Konkordia Bern, as well as bulletins of cantonal choral societies, e.g. *L'écho musical* (1865–81) of the Société Cantonale des Chanteurs Vaudois. Some such periodicals were partly directed towards national cultural aims, e.g. *Der Volksgesang* (in 1897/8 *Schweizerische Zeitschrift für Gesang und Musik*; 1893/4–1904/5). There later appeared the *Schweizer Musikerblatt* (1915–97) of the Schweizerischer Musikerverband, specially concerned with the professional interests of Swiss musicians, as well as publications of a more popular kind, e.g. *Musikzeitung: Zeitschrift für Harmonie- und Blechmusik* (1908–11), the official organ of the Nordwestschweizerische Musikverbände, and others on a denominational basis, e.g. *Der Organist* (1923–47), the journal of the Schweizerische Reformierte Organisten-Verbände. Among other music periodicals were several dealing with the restoration of Protestant congregational and choir singing, such as *Der evangelische Kirchenchor* (1895/6–1974), from 1897 the journal of the Schweizerischer Kirchengesangsbund, and others devoted to the revival of Gregorian chant and associated with the new Cecilian associations, whether on a broad basis, such as *Der Chorwächter* (from 1960 *Katholische Kirchenmusik*; 1876–), the journal of the Schweizerische Cäcilien-Vereine, and *Caecilia* (1879–97), from 1887 the journal of the Sociétés de Sainte-Cécile de la Suisse Romande, or more specific. Music education journals include the annual reports of conservatories, e.g. that of Zürich (1876–), and periodicals designed to propagate Jaques-Dalcroze's eurhythmic methods, such as *Le rythme* (1916–74). The leading education organ was the *Schweizerische musikpädagogische Blätter* (1912–59) of the Schweizerischer Musikpädagogischer Verband, which was absorbed into the *Schweizerische Musikzeitung* in 1960.

The new directions of music in the 1920s led to the appearance of *Dissonances* (1923/4–1946), which mainly contained essays on modern music. The development of musicology and the founding of the Schweizerische Musikforschende Gesellschaft gave rise to the publication of the *Schweizerisches Jahrbuch für Musikwissenschaft* (1924–38), which published contributions on Swiss and other music history. The *Mitteilungen* (from 1937 *Mitteilungsblatt*; 1934–80) of the society, on the other hand, contain miscellaneous material mainly on Swiss musical history with, since 1948, a bibliography of newly published Swiss musical literature. From 1981 it was continued by the *Schweizer Jahrbuch für Musikwissenschaft*, including the *Schweizer musikbibliographie*, as the leading musicological periodical of the country. The *Schweizerische Musikzeitung* (1861–1983) was continued after 1984 by *Dissonanz*, published by the Schweizerischer Tonkünstlerverein, including a list of new Swiss compositions by members. The Schweizerischer Musikpädagogischer Verband resumed independent publication of its organ in 1984, as *Schweizer musikpädagogische Blätter/Cahiers suisses de pédagogie musicale*. Regarding contemporary music, the important *Mitteilungen der Paul Sacher Stiftung* (1988–) should be mentioned. There is a wide variety of musical periodicals, reflecting a picture of growing specialization, with a large number of choir and brass band association papers or organs of folkloric music as well as journals devoted to various branches of popular music (rock, pop, country etc.) and jazz.

IMOGEN FELLINGER

Perissone, Francesco Bonardo. *See* BONARDO PERISSONE, FRANCESCO.

Perissone [Pierreson, Pyrison] **Cambio** (*b* ?*c*1520; *d c*1562). Singer and composer of South Netherlandish origin, active in Italy. In Doni's *Dialogo della musica* (Venice, 1544), he is described as a 'valente giovane' and as the possessor of a fine voice and a perfect technique. 'Perissone fiamengo' was granted a privilege by the Venetian senate (2 June 1545) to print a volume of madrigal settings of Petrarch's sonnets. On 14 July 1548 he was named a provisional, unsalaried member of the chapel at S Marco. Shortly after this, through a personal intervention by the doge, he became a regular member; he remained in the ducal chapel for at least ten years after that.

Perissone belonged to a circle of well-known Venetian musicians, including Parabosco and Donato, all pupils of Willaert. Two sonnets by Girolamo Fenaruolo (printed in 1546) mention Perissone next to Parabosco and Rore, as composers and friends of the printer Antonio Gardane. A connection with Rore is suggested by the presence of his pieces (including the first appearance of *Anchor che col partire*, a text also set by Perissone) in the *Primo libro a quattro voci* (1547^{14}), and of works by Perissone in Rore's second and third books of five-voice madrigals. Perissone also wrote the dedicatory letter for Gardane's first edition of Rore's *Vergine bella* (1548) (present in the alto partbook only).

During the years 1545 to 1550 Perissone published four volumes of secular music. If he also wrote sacred music most of it must be lost; a single motet survives in print, and although a 'Pyrison', resident in Venice, is said in a letter of 25 November 1549 to have written a mass at the behest of a German merchant, the work is not known to survive. (Eitner's identification of a mass in *D-Bsb* 40091 as this work is mistaken.)

In 1552 Ortensio Lando (*Sette libri di cataloghi*) described him as living, singing and playing in Venice. During the 1550s Perissone was a member of the Compagnia di S Marco, a group of ducal singers who performed elsewhere in Venice, especially in the *scuole grandi*. He became a brother in the Scuola di S Marco in 1557.

When Perissone died, sometime in the 1560s, he was still considered a young man: Domenico Veniero in a sonnet lamented the musician as one who had been granted to his friends for but a brief time. The composer's names are here the subject of word-play: 'Ben *perì suon*, quel suona il nome stesso'; 'Quand egual *Cambio* in *Cambio* a noi fia dato/Di sì gran *Cambio*?'. To this sonnet Veniero's friend Fenaruolo answered in a similar vein: 'In un punto *perì suon* sì pregiato/E 'n sua vece mandò tristi lamenti/(*Duro Cambio*) il mar d'Adria in ogni lato.'

Perissone was indebted to Rore and Willaert, modelling his four-voice madrigals on those of Rore, and his villanellas and five-voice madrigals on those of Willaert. Particularly striking is Perissone's choice of four dialogue texts (published in *Il secondo libro*, 1550) and of two Petrarch sonnets (*Cantai hor piango* and *I piansi hor canto*, published in *Madrigali a cinque voci*, 1545) also set by Willaert in the *Musica nova* (1559). There are some explicit musical relationships between the sonnet settings by the two men. Since Willaert is unlikely to have modelled his pieces on the work of a young singer, Perissone probably had access to his teacher's madrigals in the *Musica nova* before its publication.

WORKS

Canzoni villanesche alla napolitana, 4vv (Venice, 1545); 1 piece in *BurneyH*, iii, 215; 1 ed. in Cw, viii (n.d.), 20; 2 ed. in *EinsteinIM*
Madrigali, 5vv (Venice, 1545); ed. in SCMad, ii (1987)
Primo libro di madrigali, 4vv (Venice, 1547^{14}); ed. in SCMad, iii (1989)
Il segondo libro di madregali, 5vv (Venice, 1550)
Ad te Domine, 5vv, 1549^{7}
Secular pieces in 1544^{6}, 1544^{16}, 1548^{11}, 1549^{31}, *c*1550^{19}, 1554^{28}, 1557^{25}, 1560^{22}, 1561^{15}, 1562^{8}, 1569^{20}

JAMES HAAR

Perkholtz, Lucas. *See* BERGHOLZ, LUCAS.

Perkins, Carl (*b* Tiptonville, TN, 9 April 1932; *d* Nashville, TN, 19 Jan 1998). American rock and roll singer, guitarist and songwriter. A rural upbringing exposed him to the blues music of his negro sharecropper neighbours which profoundly marked his later, highly influential, guitar style. In the mid-1950s Perkins became one of the principal recording artists for Sam Phillips's Sun label in Memphis. Through compositions such as *Blue Suede Shoes*, *Put your Cat Clothes On* and *Boppin the Blues*, he made a major contribution to the foundation of rock and roll and rockabilly music.

Like Chuck Berry, Perkins had an ear attuned to the argot and fashions of young Americans in the 1950s and the ability to distill these in a pithy lyric. Another Sun artist, Elvis Presley, made *Blue Suede Shoes* into a global rock and roll anthem in 1956. Perkins's own version of the song was a big hit in the United States but other recordings met with less commercial success. During the 1960s Perkins alternated between rock and country music, and for several years he toured with Johnny Cash for whom he wrote the hit song *Daddy Sang Bass*. His final recordings were issued posthumously on the album *Go Cat Go!* (Dinosaur, 1996) and featured duets with such admirers as George Harrison and Paul McCartney, Paul Simon and Willie Nelson. See also D. McGee: *Go, Cat, Go* (New York, 1995).

DAVE LAING

Perkins, Leeman L(loyd) (*b* Salina, UT, 27 March 1932). American musicologist. He took the BFA at the University of Utah in 1954 and the PhD at Yale in 1965 and began teaching at Boston University during summer 1964. In autumn 1964 he joined the music department of Yale University, where he taught until moving to the University of Texas at Austin in 1971. In autumn 1975 he was visiting associate professor at Columbia University, where he was appointed professor of music history in 1976; he chaired the department from 1985 to 1990. His principal area of research has been the music and theoretical writings of the late 15th and early 16th centuries. His investigations of manuscripts of sacred and secular vocal polyphony have led to several scholarly editions and show a concern for the editorial practices involved in presenting this music in modern transcriptions.

PAULA MORGAN

Perkowski, Piotr (*b* Oweczacze, 17 March 1901; *d* Otwock, nr Warsaw, 12 Aug 1990). Polish composer and teacher. He studied composition with Statkowski at the Warsaw Conservatory and privately with Szymanowski in Warsaw and Roussel in Paris (1926–8), where he also attended the Ecole des Sciences Politiques. Between the wars he organized the Association of Young Polish Musicians in Paris. He was director of the Toruń Conservatory (1938–9), president of the Polish Composers' Union (1945–9) and a professor at the conservatories of Warsaw (1946–51, 1954–73) and Wrocław (1951–4); his pupils included Baird, Kotoński and Rudziński. Among the awards he received are the Kraków Music Award and a prize from the Polish Ministry of Culture (1966).

The main influences present in Perkowski's work are Szymanowski and post-Impressionist French music; his style is traditional, faithful to the primacy of melody. In earlier works there are qualities of emotional restraint and subtle, poetic atmosphere; his later music is often modelled on the rhythms and melodies of Polish folk music. Such pieces as the orchestral *Nokturn* and the Violin Concerto no.2 blend a specifically Polish emotional depth with programmatic intentions. Several of his compositions were lost during World War II.

WORKS
(selective list)

Ballets: Swantewit (3, Perkowski and J. Kapliński, after old Slavonic legend), 1930, rev. 1945–7, Poznań, 1948; Balladyna (2, after J. Słowacki), 1960–64, Warsaw, 1965; Klementyna (3, O. Obarska), 1963, Bytom, 1969
Orch: Pf Conc., lost; Fantasia, pf, orch, lost; Szkice toruńskie [Toruń Sketches], 1938 [only 2nd of 3 movts survives]; Vn Conc. no.1, 1938, lost, reconstructed 1947–8; Fantasia, 1939; Taniec rosyjski [Russian Dance], 1949; Sym. no.2, 1952–5; Uwertura warszawska, 1954; Nokturn, 1955; 3 tańce lubelskie [3 Lublin Dances], 1956; Vn Conc. no.2, 1959–60; Sinfonia drammatica, 1963; Vc Conc., 1973, rev. 1978; W stronę Atmy [In the Direction of Atma], str, pf, perc, 1978
Vocal-orch, choral: Sym. no.1, solo vv, chorus, org, orch, 1925, lost; Epitafium na śmierć Nikosa Belojanisa (cant., J. Hordyński), Bar, chorus, orch, 1952; Suita weselna [Wedding Suite], S, T, chorus, orch, 1952 [after Mazurian folk music]; Poematy Aben-Azama, Bar, small orch, 1975; choral songs and cants. on folk themes
Chbr: Krakowiak, vn, pf, 1926; Fantasia, fl, va, pf, 1926, lost; Sextet, cl, hn, tpt, pf trio, 1926, lost; Str Qt, 1930; Elegia, vc, org/pf, 1945; Karolowi Szymanowskiemu [To Szymanowski], vn, pf, 1952; Poemat, fl, pf, 1954; Sonatina, tpt, pf, 1954; Sonata, ob, pf, 1955; Str Qt no.2, 1978

BOGUSŁAW SCHÄFFER/R

Perle, George (*b* Bayonne, NJ, 6 May 1915). American composer and theorist. He studied composition with Wesley La Violette (1934–8) and Krenek (early 1940s), and was awarded the BA at DePaul University (1938) and the PhD at New York University (1956). A member of the faculty at the University of Louisville (1949–57), the University of California, Davis (1957–61), and Queens College, CUNY (1961–84), he has also held visiting professorships at Yale University (1965–6), the University of Southern California (summer 1965), SUNY, Buffalo (1971–2), the University of Pennsylvania (1976, 1980), Columbia University (1979, 1983), the University of California, Berkeley (Ernest Bloch Professor, 1989) and New York University (1994). He was elected to the American Academy of Arts and Letters (1978) and the National Academy of Arts and Sciences (1985); awards include the Pulitzer Prize (1986) in music (for Wind Quintet no.4), the MacArthur Fellowship (1986) and two Guggenheim Fellowships (1966, 1974). His book *The Operas of Alban Berg* (1980) won the Otto Kinkeldey Award of the American Musicological Society and the ASCAP Deems Taylor Award (1981). The articles 'Webern's 12-Tone Sketches' and 'The Secret Program of the *Lyric Suite*' also won the ASCAP Deems Taylor Award in, respectively, 1975 and 1978. He has been composer-in-residence at Tanglewood Music Center (1967, 1980, 1987), at the Marlboro Music Festival (1993) and with the San Francisco SO (1989–91). He was elected to the Institute of the American Academy and Institute of Arts and Letters in 1978.

In the 1930s Perle was among the first American composers to be attracted by the music and thought of Schoenberg, Berg and Webern. His interest, however, was not so much in the 12-note system itself as in the idea of a generalized systematic approach to dodecaphonic composition. Using some of the fundamental concepts of the 12-note system, such as set and inversion, he developed an approach to composition which attempts to incorporate

George Perle, 1984

such 12-note ideas with some of the basic kinds of hierarchical distinction found in tonal practice, such as the concept of a 'key' as a primary point of reference. His system of '12-note tonality' (originally referred to as 'the 12-tone modal system'), developed continuously from 1939 (and in collaboration with Paul Lansky from 1969–73), is in simplest terms an attempt to create useful distinctions and differentiations in a 12-tone context by defining functional characteristics of pitch-class collections, in terms of the intervals formed by component pairs of notes, on the one hand, and the properties of these same pairs with respect to axes of symmetry, points about which they are symmetrically disposed, on the other. (In an abstract sense these two concepts are roughly analogous to familiar notions of 'mode' and 'key' in tonal music.)

The harmonic vocabulary of 12-note tonality is exclusively derived from 'cycle sets', ordered 12-note statements of complete collections of symmetrically related dyads (*see* TWELVE-NOTE COMPOSITION). The cyclic set differs from the general 12-note series not only in its structure but also in its use: akin to a scale in diatonic tonality, its function is referential, not literally determining note-to-note motion on the compositional surface. Paired forms of the cyclic sets generate arrays of chords which are related to one another by different types of symmetry. This approach was anticipated in some works by Berg (the first movement of the *Lyric Suite* and Act 2 scene i of *Lulu*) and Bartók (the fourth and fifth quartets) in their use of symmetrical relations as a basis for their harmonic language. Perle's approach does not define explicit procedures for composition but rather outlines a large and highly structured network of pitch-class and formal relations which can then serve as points of reference for compositional development. (In this sense, too, it is like tonal composition in that the composer's 'system' is a general guide to a musical language and a given composition constructs a unique interpretation of that language.)

Though most of Perle's compositions to 1967 and all since then are based on this approach, Perle has also written works that he described as

> 'freely' or 'intuitively' conceived, combining various serial procedures with melodically generated tone centers, intervallic cells, symmetrical formations, etc. A rhythmic concept, or rather ideal, toward which I progressed in these and other works was that of a beat, variable in duration but at the same time as tangible and coherent as the beat in classical music, and of an integration between the larger rhythmic dimensions and the minimal metric units.

These works include the Quintet for Strings (1958), three wind quintets (1959, 1960, 1967), and a series of monophonic works for solo instruments (1942–65). A consistent thread which runs through these pieces, as well as later works, is the construction of rhythmic relations through inter-tempo equivalences: e.g. triplet quavers in one tempo might equal crotchets in another. While this is a widely used technique, Perle uses it in a highly personal way, which has the effect of creating a general feeling of continuous rubato, adding a subtle flexibility to the underlying rhythmic sense. Interrelations of metre, rhythm, tempo, phrase structure and formal design are basic to his compositional thinking.

In comparison with much music of the time, the 'sound' of Perle's music and the manner in which he unfolds his musical ideas are usually straightforward and relatively uncomplicated. His music eschews the veneer of the avant garde and what he considers the wrong-headed association of musical complexity with perceptual difficulty. The complexities that concern him are those arising from the many levels on which his pitch, pitch-class and motivic relations interact and interrelate, and for him difficulties are only in making these relations as interesting and understandable as possible. In many of his compositions a few relatively simple musical ideas will appear in different ways and contexts so that the character and quality of these ideas become richer in the process.

Perle's writings on 20th-century music, particularly that of Schoenberg, Berg and Webern, Bartók and

Skryabin, have contributed much to a wider and deeper understanding of it. His work on Skryabin has made an important contribution in showing how analytical insights may be derived from idiosyncratic features of a composer's notation, while his book *Serial Composition and Atonality* has become a standard text. His most extensive work has been on the music of Berg and has revealed in great depth and detail the richness and subtlety of Berg's work, dispelling popular notions that Berg's music, in contrast with that of Schoenberg and Webern, is arbitrary in its use of 12-note and serial procedures; the two-volume *The Operas of Alban Berg* is also a detailed study of his life and complete works. After studying the materials for the incomplete third act of *Lulu*, in 1963, he published a series of articles which conclusively demonstrated that the opera could be accurately completed, and prepared the way for the publication of the complete opera in 1985. In January 1977 Perle discovered a score of Berg's *Lyric Suite*, annotated by the composer. The annotations unfold a secret programme inspired by Berg's love for Hanna Fuchs-Robettin, the wife of a Prague industrialist and sister of Franz Werfel. Her initials combine with Berg's to give the basic cell of the work, B–F–A–B♭ (in German, H–F–A–B). This discovery, together with Berg's letters to Hanna Fuchs-Robettin, uncovered by Perle at the same time and spanning the period from 1925 to Berg's death in 1935, refuted the description of Berg's life and character that had been authorized by his widow and accepted by every biographer of the composer.

Perle's work is deeply conservative in that his main effort has been to build a musical world whose logic and power is as consistent as that of traditional tonal practice. While this was also Schoenberg's aim in constructing the 12-note system, for Perle there was an intolerable contradiction in Schoenberg's concept of the 12-note series as 'invented to substitute for some of the unifying and formative advantages of scale and tonality' at the same time as it 'functions in the manner of a motive'. Perle's cyclic sets act solely as the basis of the harmonic and contrapuntal syntax of his music: they do not function as motifs. Though initially inspired by the Vienna school, his later writings (*The Listening Composer*) reveal a close connection with Skryabin, Bartók, and Stravinsky as well. He argues that the seemingly disparate aspects of post-tonal music share structural elements that derive from a common source – inversional and cyclic symmetry inherent in the 12-note scale – and that this implies a system of relations as coherent as that of diatonic tonality.

WORKS

(*selective list*)

ORCHESTRAL

Solemn Procession, band, 1947; 3 Movts for Orch, 1960; Serenade no.1, va, chbr orch, 1962; 6 Bagatelles, 1965; Vc Conc., 1966; Serenade no.2, 11 insts, 1968; Concertino, pf, wind, timp, 1979; A Short Sym., 1980; Serenade no.3, pf, chbr orch, 1983; Dance Fantasy, 1986; New Fanfares, brass ens, 1987; Lyric Intermezzo, 15 players, 1987; Sinfonietta I, 1987; Pf Conc., no.1, 1990; Sinfonietta II, 1990; Adagio, 1992; Pf Conc. no.2, 1992; Transcendental Modulations, 1993

CHAMBER

For 6 insts: For Pf and Wind, fl, eng hn, cl, hn, bn, pf, 1988; Critical Moments, fl + pic, B♭ cl + E♭ cl + b cl, vn, vc, pf, perc, 1996

5 insts: Qnt for Str, 2 vn, 2 va, vc, 1958; 4 Wind Qnts no.1, 1959; no.2, 1960; no.3, 1967; no.4, 1984; Sonata a cinque, b trbn, A cl + E♭ cl + b cl, vn, vc, pf, 1986; Nightsong, fl, cl, vn, vc, pf, 1988; Duos, hn, str qt, 1995

4 insts: Str Qt no.2, 1942, unpubd; Str Qt no.5, 1960, rev. 1967; Str Qt no.7, 1973; Sonata a quattro, fl, cl, vn, vc, 1982; Windows of Order (Str Qt no.8), 1988; Brief Encounters (Str Qt no.9), 1998

2 insts: Lyric Piece, vc, pf, 1946; Sonata quasi una fantasia, cl, pf, 1972; Sonata, vc, pf, 1985

SOLO INSTRUMENT

Str: Sonata, va, 1942; Hebrew Melodies, vc, 1945; Sonata, vc, 1947; Sonata no.1, vn, 1959; Monody II, db, 1962; Sonata no.2, vn, 1963; Solo Partita, vn, va, 1965

Winds: 3 Sonatas, cl, 1943; Monody I, fl, 1960; 3 Inventions, bn, 1962

Pf: Pantomime, Interlude, and Fugue, 1937; Little Suite, 1939, unpubd; Modal Suite, 1940; 6 Preludes, 1946; Sonata, 1950; Short Sonata, 1964; Toccata, 1969; Suite in C, 1970; Fantasy-Variations, 1971; 6 Etudes, 1976; Ballade, 1981; 6 New Etudes, 1984; Sonatina, 1986; Lyric Intermezzo, 1987; Phantasyplay, 1995; 6 Celebratory Inventions, 1995; Chansons cachées, 1997; Musical Offerings, left hand, 1998; 9 Bagatelles, 1999

VOCAL

2 Rilke Songs, Mez, pf, 1941; 'And so the Swans ...', a cappella chorus, 1961; Sonnets to Orpheus, a cappella chorus, 1974; Songs of Praise and Lamentation, chorus, orch, 1974; 13 Dickinson Songs, S, pf, 1977–8

INCIDENTAL MUSIC

The Birds (Aristophanes, trans. W. Arrowsmith), solo vv, chorus, fl + pic, E♭ cl + bar sax, tpt, trbn, va, cel + hpd + hmn + pf, perc, 1961

PAUL LANSKY

Perlea, Jonel (*b* Ograda, Romania, 13 Dec 1900; *d* New York, 29 July 1970). Romanian conductor and composer, active also in the USA. He studied in Munich and Leipzig and, except for a year at Rostock (1924–5), conducted mostly in Bucharest, becoming musical director at the Romanian Opera in 1934. He spent the last year of the war in a German internment camp. Afterwards, he conducted opera in Italy, and went to the Metropolitan, New York, in 1949, making his début with *Tristan und Isolde*. The urgency, clarity and beautiful orchestral sonority of that performance were remarkable, and he made an equally strong impression that season in *Carmen*, *La traviata* and *Rigoletto*. He became the victim of internal intrigues and stayed at the Metropolitan for only one season (the new general manager in 1950 offered him only *Die Fledermaus*).

Perlea continued to conduct opera in Italy (giving the première of Nino Rota's *Il capello di paglio di Firenze* in Palermo in 1955), but his American career was unsuccessful. Weakened by a heart attack in 1957, then crippled by a stroke, he learnt to conduct with his left arm alone. In his later years, having become a naturalized American, he taught and conducted at the Manhattan School of Music, was musical director of the Connecticut SO (from 1955) and once more made a stirring impression with his performances of *Tosca* for Sarah Caldwell's American National Opera Company in 1967. His compositions, somewhat in the style of Hindemith, include works for orchestra, a string quartet, a piano quintet and songs.

MICHAEL STEINBERG

Perlemuter, Vlado [Vladislas] (*b* Kowno [now Kaunas], 26 May 1904). French pianist of Polish birth. He moved to Paris at an early age and studied privately with Moszkowski, from whom he received his grounding as a virtuoso. He then studied with Cortot at the Paris Conservatoire, where he won a *premier prix* in 1919, the *prix d'honneur* in 1920 and the Prix Diémer in 1921. He also worked with Robert Lortat and privately with Ravel, whose complete works he was among the first to perform in public. Numerous concerts and recordings established his international reputation after 1945. His recordings of Ravel's works reveal a wide range of sonorities and, in such works as *Gaspard de la nuit*, strong evocations of orchestral instruments. His Chopin playing is also outstanding: in the Etudes, the Ballades and the Mazurkas in

particular he achieves a wonderful range of tone-colour, a rhythmic subtlety, and a balance between line and detail that would be difficult to surpass. That he is less renowned than others whose readings of Chopin cannot compare with his own is perhaps due, on the one hand, to an occasional lapse of memory, and on the other to a temperament that is self-effacing – and no doubt to a conception of the music that is very grand and simple, and neither fastidious nor showy. From 1951 to 1976 he was a leading professor at the Paris Conservatoire, where his students included Michel Dalberto, Jean-François Heisser and Jacques Rouvier. He has also given master-classes in Canada, Japan and Great Britain. Perlemuter described his work with Ravel in a book written with Hélène Jourdan-Morhange, *Ravel d'après Ravel* (Lausanne, 1953; Eng. trans., 1988).

WILLIAM GLOCK/CHARLES TIMBRELL

Perli, Lisa. *See* LABBETTE, DORA.

Perlis, Vivian (*b* Brooklyn, NY, 26 April 1928). American musicologist. She was educated at the University of Michigan (BM 1949, MM 1952), where she studied the history of music and also the piano and harp. A graduate student in musicology at Columbia University (1962–4), she taught the history of music at several colleges in New England before becoming a reference librarian at Yale University in 1967. In 1972 Perlis founded Oral History, American Music, also based at Yale, and has continued as its director. The project is an extensive repository on tape and videotape of source material on composers and other major figures in American music. Her other activities have included lecturing and teaching for the American Studies programme and the School of Music at Yale. She has collaborated on several recordings and television documentaries, the latter including *Memories of Eubie* (1980), on the jazz pianist Eubie Blake. Her work represents an imaginative and timely contribution to the investigation of the recent history of American music.

PAULA MORGAN

Perlman, Itzhak (*b* Tel-Aviv, 31 Aug 1945). Israeli violinist. He initially taught himself to play, first on a toy fiddle and then on a child's violin. At four he was stricken with poliomyelitis which left him permanently disabled. During a year's convalescence he continued to practise and he then entered the Tel-Aviv Academy of Music to study with Rivka Goldgart. By the time he gave his first solo recital, at ten, he had already made a number of appearances with the Ramat-Gan and Broadcasting Orchestras. In 1958 he played twice on the 'Ed Sullivan Show' on television in New York and decided to remain there, making a nationwide US tour and entering the Juilliard School of Music to study with Dorothy Delay and Ivan Galamian. He made his Carnegie Hall début in 1963 and the following year won the Leventritt Memorial Award. In 1965 he toured his native country and in the 1965–6 and 1966–7 seasons he visited most of the major North American cities. In the 1967–8 season he made major débuts in Europe, including London and Paris, and since then he has been recognized not just as the finest violinist of his generation but as one of the greatest musical talents to emerge since World War II.

Although he has to play sitting down, Perlman is an immensely strong violinist with no discernible flaws in his technique, producing a big tone of great beauty and phrasing with immense breadth when the music demands it. An outgoing, genial character, he is able to call on deep reserves of emotion and humanity; and he has dominated the last quarter of the 20th century with performances ranging from the scintillating to the Olympian. When he is on his best form he can match any player of the past in the major concertos, from Bach onwards, although his approach to Baroque and Classical works is unashamedly Romantic. His numerous recordings include the Bach solo sonatas and partitas, the Paganini *Caprices* and much of the virtuoso repertory, as well as profound interpretations of Bach's Double Concerto and Mozart's Sinfonia concertante with Zukerman; the Mozart sonatas with Barenboim; the Beethoven and Brahms concertos with Barenboim conducting; the Beethoven sonatas with Ashkenazy; and the Berg and Stravinsky concertos with Ozawa. In chamber music he has often been heard, in the concert hall or on recordings, with such colleagues as Barenboim, Zukerman, Ashkenazy, Martha Argerich, Bruno Canino and Lynn Harrell. For many years Perlman has been associated with the Aspen Music Festival in Colorado, and he teaches at Brooklyn College, New York. In 1996 he was awarded the Royal Philharmonic Society's gold medal. Although he has generally made light of his disability, he has on occasion been a trenchant spokesman for the disabled. Works have been written for him by Robert Mann, Earl Kim and Robert Starer. He plays the 1714 'Soil' Stradivari.

TULLY POTTER

Perm′. Russian city, on the western slopes of the Urals. From 1940 to 1957 it was known as Molotov. The musical life of the city has traditionally centred on the opera house built in 1878. Perm′'s first opera season took place the following year, when *A Life for the Tsar*, *Ruslan and Lyudmila*, *Faust* and *Aida* were performed. Amateur music-making existed at a high level in the late 19th

century, and the city's amateur orchestra performed symphonies and piano concertos by such composers as Beethoven and Liszt. The works of Mozart, Schubert, Glinka and Tchaikovsky were heard at chamber and orchestral concerts under the aegis of the Philharmonic Society (1908–12). Concerts of sacred music were organized by church choirs, and featured works by Arkhangel′sky, Grechaninov, Haydn and others. Between 1890 to 1917 there was a remarkable growth in the number of folk choirs in Perm′. Village and factory choirs (in 1913 there were a total of 290) performed folksongs and works by major Russian composers; between 1911 and 1913 scenes from *A Life for the Tsar*, in a production by A.D. Gorodtsov, were performed by peasants in numerous locations in and around the city.

After the upheavals of the Revolution the city's musical life was resumed in the 1920s. Much of the opera house's repertory consisted of now forgotten works with an ideological slant. A powerful impulse was given to the opera house's development by the evacuation to Perm′ during World War II of the troupe of the Leningrad Opera and Ballet Theatre and of a number of leading Russian musicians. All the operas and ballets of Tchaikovsky have been performed in Perm′'s opera house, which was renamed after that composer in 1965. In 1969 it became the Permskiy Gosudarstvenniy Akademicheskiy Teatr Operï i Baleta imeni P.I. Chaikovskogo (Tchaikovsky State Academic Theatre of Opera and Ballet). In the 1980s a Tchaikovsky festival and a Prokofiev festival were held in the city. For several decades after World War II there was a tradition of Monday symphony concerts in Perm′. The Urals State Chamber Choir, founded in 1975, tours frequently and has established a reputation as one of the best choirs in Russia; its repertory consists mainly of Russian sacred music.

Political changes in the late 1980s brought increased artistic freedom, and led to the creation of a number of new musical organizations: chamber, vocal and folk ensembles, and secular and church choirs. A composers' union was formed in Perm′ by ten local composers. Under its auspices major operatic, orchestral, choral and chamber works have been composed and performed. In 1991 a children's school of composition, the only such institution in Russia, was founded in the city. The annual Perm′ Festival, inaugurated in 1992, features well-known Russian performers; artists to have appeared at the festival include the pianist Nikolay Petrov, the violinist Sergey Stadler and the conductors Vladimir Fedoseyev, Vladimir Spivakov, Pavel Kogan and Mikhail Pletnev.

Musical education in Perm′ is provided by 15 children's music schools, a music college (founded in 1924) and the Institute for Culture and the Arts (1975). The development of recording is a recent feature of musical life in the city, and the two leading studios have released CDs and cassettes of both classical and variety music.

IGOR′ VLADIMIROVICH ANUFRIYEV

Permont, Haim (*b* Vilnius, 1950). Israeli composer of Lithuanian birth. He studied at the Rubin Academy in Jerusalem with Kopytman among others and at the University of Pennsylvania (PhD 1985), where his teachers included George Crumb, Richard Wernick and Jay Reese. After accepting a lectureship at the Rubin Academy in 1985, he became dean of theory and composition (from 1995). In 1996 he was appointed composer-in-residence of the Haifa SO. His honours include prizes from CBS and ASCAP, Israeli ACUM prizes (1993–4) and the Israeli Prime Minister's Prize (1995).

Believing that music emanates from realignments with tradition, Permont has endorsed a pluralistic compositional attitude. *Elegy*, a meditative work for piano and orchestra, exemplifies this view: bitonal harmonies produce a rich modality, while octatonic patterns and structures derived from major 3rds and tritones are also characteristic. His vocal settings project a romantic aesthetic. *Like the Leaden Sky Before It Rains*, written in commemoration of the victims of Terezín, illustrates his imaginative use of a range of compositional idioms, from traditional tonality to dense atonal counterpoint. (R. Fleisher: *Twenty Israeli Composers*, Detroit, 1997).

JEHOASH HIRSHBERG

Permutation fugue. A type of composition that brings together certain characteristics of fugue and of canon, namely: (1) The voices enter successively, as in fugue, each waiting until the preceding voice has stated the opening theme. (2) Entries alternate between tonic and dominant. (3) Each voice, once it has completed its statement of the opening theme, continues by stating two or three additional themes of the same length, all voices stating these themes in the same order. (4) There is almost no non-thematic material; that is, when a voice has completely stated all themes, it begins the series over again, either immediately or after a rest, and restates all themes, again in the same order. A classic example of a permutation fugue is the opening chorus of Bach's cantata *Himmelskönig, sei willkommen* BWV182. The German term *Permutationsfuge* was coined in 1938 by Werner Neumann to describe the most common way in which Bach's vocal fugues, especially those in his early works such as BWV182, were constructed. The word reflects the manner in which the themes appear in myriad vertical permutations, for which reason the composer must be sure that the themes function properly in INVERTIBLE COUNTERPOINT. Permutation fugue grew out of an interest in combining fugue with invertible counterpoint manifested among a circle of German composers working in Hamburg and Lübeck in the 1660s and 70s that included Reincken, Weckmann, Bernhard, Buxtehude and Theile. Although the sonatas of Reincken's *Hortus musicus* include several fugues with most of the above characteristics, Theile wrote what is probably the first true permutation fugue for his *Musicalisches Kunst-Buch*, and it was probably from this treatise, which circulated widely in central Germany, that Bach acquired the idea. Because certain elements of the 'classic' fugue are not present, such as the use of episodes or thematic statements in

related keys, there is some disagreement among present-day scholars on whether permutation fugues should be thought of in the same category as fugue. There is no questioning, however, that musicians of Bach's time would have so classified them. (P. Walker: 'The Origin of the Permutation Fugue', *The Creative Process*, Studies in the History of Music, iii (New York, 1992), 51–91)

PAUL WALKER

Pernambuco. State in north-east Brazil. It had one of the earliest musical establishments in the Portuguese colony. The city of Olinda, founded in the mid-16th century, became during that century the seat of a bishopric, and remained the seat of the diocese until 1833. The first known *mestre de capela* at Olinda was Gomes Correia, appointed in 1564 and succeeded by the end of the century by Paulo Serrão. Several names of 17th-century *mestres de capela* survive in church documents, but not a single composition has been discovered. In the city of Recife (the capital of Pernambuco) musical institutions developed, especially during the 17th and 18th centuries. A large number of documents reveal some 600 musicians (instrumentalists, singers, composers and organ builders) working in the area at that period. A frequently praised musician of the 17th century is João de Lima, whose works were considered worthy of publication even 50 years after his death 'for the instruction of music professors'. Another musician of excellent reputation as a composer and performer was Inácio Ribeiro Noya, born in Recife in 1688; however none of his works is extant. The mulatto Manoel de Almeida Botelho (*b* 1721) was described in a contemporary account as 'one of the most famous composers of the present age'. His works (e.g. a four-part mass with two violins, a *Lauda Jerusalem*, three *Tantum ergo* settings and various sonatas and toccatas for keyboard and for guitar) were eagerly sought in Lisbon by professional musicians. The composer to have gained most attention, however, is Luiz Álvares Pinto (1719–?1789), who was *mestre de capela* at S Pedro dos Clérigos in Recife (1782–9) and who founded the Irmandade de Cecília dos Músicos in the same city in about 1787. A setting of the *Te Deum* by him was discovered by Jaime Diniz in 1967. The main organ builder of 18th-century Brazil, Agostinho Rodrigues Leite (1722–86), was also a native of Recife; he built organs for Recife and Olinda and also for Salvador (Bahia) and Rio de Janeiro. Other musicians or *mestres de capela* of colonial Pernambuco to have been studied are Manoel da Cunha, Jerônimo de Souza Pereira, Máximo Pereira Garros, Jerônimo Coelho de Carvalho and Salvador Francisco Leite (son of the organ builder). Secular musical activities during the colonial period in Pernambuco were apparently limited.

During the 19th century performances of art music were concentrated in Recife and focussed principally on sacred music and opera and, later, amateur salon music, from which much of the local piano repertory developed. A number of European musicians, such as the Italian Joseph Fachinetti (*c*1810–*c*1870), settled in the city, greatly contributing to operatic and concert life and to music education. Several concert organizations were founded during the century, including the Sociedade Teatral, the Sociedade Filarmônica and the Ateneu Musical do Recife, as well as several theatres, such as the Teatro de Apolo, Casa da Ópera, Teatro da Rua da Praia and Teatro S Isabel. In the latter part of the century several native composers emerged, notably Euclides Aquino da Fonseca (1854–1929) and Marcelino Cleto (1842–1922).

Although 20th-century musical life in Recife developed steadily, it did not offer the same opportunities as the other major Brazilian cities of Rio de Janeiro, São Paulo and Salvador. Thus renowned native Pernambucan composers, such as Marlos Nobre, made their careers elsewhere in Brazil. However, Recife contains a number of organizations that have helped to sustain musical life in the city; these include a symphony orchestra and the music departments of the Federal University of Pernambuco and of several private schools. In addition, the city has been a major centre of regional popular music, with famous Carnival parades, *maracatus*, and some of the most celebrated figures in contemporary Brazilian popular music, notably Chico Science.

GERARD BÉHAGUE

Perne, François-Louis (*b* Paris, 4 Oct 1772; *d* Laon, 26 May 1832). French music historian, composer, singer and double bass player. He sang in the parish church choir of St Jacques-de-la-Boucherie in Paris, taking music lessons from the choirmaster, the Abbé d'Haudimont. He sang in the chorus of the Opéra from 1792 until 1799, then played the double bass in the Opéra orchestra until 1816. He was appointed professor of harmony at the Conservatoire in 1813, having worked as Catel's assistant from 1811. In 1815 he was entrusted with the administration of the Conservatoire, serving as inspector general from 1816 to 1822 and succeeding the Abbé Roze as librarian in 1819. He also played the double bass in the orchestra of the Tuileries chapel from its reopening in 1802. He retired in 1822 to the département of Aisne, where he continued private studies until his death.

Perne is best known for his writings on the history of music. He took an early interest in both Greek and medieval music and, as a tireless researcher, brought together an impressive number of documents. In an age in which composers and theorists alike tackled their problems uncritically and were indiscriminate in repeating or commenting on the opinions of others, Perne insisted on going back to the ancient and medieval texts and studying them in their original languages. He lacked the time – and perhaps the talent – needed to put them into proper form and to construct informed theories from them. He took a particular interest in the problems of the notation of Greek music and read a paper on this subject at the Institut de France in 1815.

Most of his historical writings were not published; a few extracts appeared in the early volumes of Fétis's *Revue musicale* (1828–30). Fétis, who acquired Perne's library after his death, catalogued 23 writings on music left in manuscript, some of which had been completed, others of which had only been sketched. A collaborative project of 1815 focussing upon Machaut's poetic and musical works was never completed. His most important edition of early music, the only one to be published, is his

transcription of the works of the Chastelain de Couci, with piano accompaniment, in Francisque Michel's *Chansons du Châtelain de Coucy* (Paris, 1830). There is as yet no comprehensive study of his scholarly work.

He wrote few compositions, of which none has enjoyed a high reputation. Besides two masses and a few smaller sacred choral works, he composed incidental music for Racine's *Esther*, an Andante for oboe and orchestra and some piano music, of which the *Six sonates faciles* are noteworthy. A number of Perne's musical manuscripts and letters are in the Bibliothèque Nationale in Paris; his library, which was given to Fétis and eventually acquired by the Bibliothèque Royale in Brussels, includes manuscript transcriptions of polyphonic music and theoretical treatises.

JEAN MONGRÉDIEN/KATHARINE ELLIS

Pernet, André (*b* Rambervillers, Vosges, 6 Jan 1894; *d* Paris, 23 June 1966). French bass. He studied at the Paris Conservatoire with André Gresse and made his début at Nice in 1921. After seven years in the French provinces he was engaged in 1928 by the Paris Opéra and became their leading bass; from 1931 he also appeared at the Opéra-Comique. At the Opéra he was much admired as Boris Godunov, Don Quichotte, Méphistophélès and Don Giovanni. He created, among other parts, the title roles in Milhaud's *Maximilien* (1932) and Enescu's *Oedipe* (1936) and Shylock in Hahn's *Le marchand de Venise* (1935). He made guest appearances throughout Europe and appeared in the film version of Charpentier's *Louise*. His many recordings reveal a firm, supple voice of ample range and a notable feeling for words.

HAROLD ROSENTHAL/R

Perneth. *See* PERRINET.

Pernye, András (*b* Újpest, 19 Nov 1928; *d* Budapest, 4 April 1980). Hungarian musicologist and music critic. He studied the clarinet and recorder and was a pupil of Kodály, Szabolcsi, Bartha, Bárdos and Kókai at the Budapest Academy of Music (diploma in musicology 1958). Subsequently he was music critic of the newspaper *Magyar nemzet* (1959–75) and the periodicals *New Hungarian Quarterly*, *Muzsika* and *Kritika*, and from 1964 a lecturer in music theory and history at the Budapest Academy of Music. He also gave 250 lectures on jazz on Hungarian Radio (1962–9). In 1975 he was awarded the Erkel Prize. His writings include studies of Berg and Puccini and the scenario of István Láng's ballet based on Thomas Mann's *Mario und der Zauberer*. He has edited Dunstaple's *Magnificat secundi toni* (1974), one of Byrd's *Salve regina* settings (1975) and, in a series of 16th- and 17th-century keyboard pieces, Daniel Croner's *Tabulature* (1987).

MÁRIA ECKHARDT

Peroni, Giovanni. *See* PERRONI, GIOVANNI.

Perosi, Lorenzo (*b* Tortona, 20 Dec 1872; *d* Rome, 12 Dec 1956). Italian composer and church musician. After attending the conservatories of Rome and Milan, he went to Regensburg in 1893 to study church music with Haberl. He was made choirmaster of S Marco, Venice (1894), ordained priest (1895) and appointed music director of the Cappella Sistina (1898); meanwhile he was becoming widely known as a conductor of his own oratorios. But an acute spiritual crisis, the culmination of eight years of growing psychological disturbance, forced him to abandon his Rome post in 1915, and in 1922 he entered a mental hospital. In 1923 he was sufficiently cured to resume his position, which officially he held until his death. His recovery, however, was incomplete, his relapses frequent: later intermittent musical activities were a mere appendix to his career. In 1930 he was honoured with membership of the Reale Accademia d'Italia.

Around the turn of the century Perosi's oratorios had an extraordinary international success: Rolland wrote enthusiastically in the composer's praise. Though his reputation waned quickly, the embers of his early fame persist, and it is not only Vatican interest that keeps his music in the Italian repertory. For, naive and eclectic though it was, Perosi's talent was genuine, and his best pieces retain an appealing freshness and gentle spirituality. These qualities found their most durable expression not in the oratorios but in the best of the many smaller religious works, often strongly influenced by Gregorian chant and 16th-century polyphony. (Perosi was the first modern Italian composer to be significantly influenced by pre-Classical music.) The once famous oratorios have lasted less well, and their eclecticism – drawing, for example, on plainsong, Renaissance polyphony, Bach, the Wagner of *Lohengrin*, and even Mascagni – has often

been ridiculed. Yet they contain passages which are persuasive in their lyrical sincerity and their sense of the numinous, and others which graphically illustrate the drama, whether the pursuit of the Israelites by the Egyptians in *Mosè* or the sufferings of the soul on the threshold of death in *Transitus animae*. Such moments do much to compensate for passages where the music seems facile and improvised.

WORKS
(*selective list*)

ORATORIOS

La passione di Cristo secondo San Marco, 1897; La trasfigurazione di Cristo (Bible, etc.), 1898; La risurrezione di Lazzaro (Bible: *John*), 1898; La risurrezione di Cristo (Bible: *Matthew*), 1898; Il natale del Redentore (*Matthew*, *Luke*), 1899; L'entrata di Cristo in Gerusalemme (*Matthew*, *Luke*), 1900; La strage degli innocenti (mainly *Matthew*), 1900; Mosè (A. Cameroni, P. Croce, after Exodus), 1900; Stabat mater, 1904; Il giudizio universale (G. Salvadori, P. Miscatelli, Perosi), 1904; Dies iste, 1904

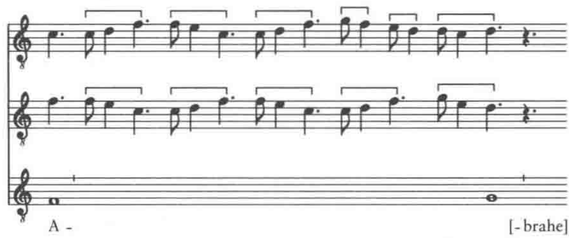
JOHN C.G. WATERHOUSE

Perotinus [Perrotinus, Perotinus Magnus, Magister Perotinus, Pérotin] (*fl* Paris, *c*1200). Composer of organa, conductus and, probably, motets. He was almost certainly active at the cathedral of Notre Dame, Paris, and was the most important of the musicians involved in the revision and updating of the *Magnus liber organi* attributed to Leoninus. His achievements are mentioned in two documents from the late 13th century, the treatises of Johannes de Garlandia (Hieromymus de Moravia's compilation) and Anonymus 4. No works are ascribed to Perotinus in musical sources, but Anonymus 4 mentions seven of his compositions, all of which can be identified in manuscripts of the 13th and 14th centuries with reasonable certainty. Other compositions have been attributed to him on stylistic grounds by modern scholars.

1. Biography. 2. Works.

1. BIOGRAPHY. The identity of Perotinus is largely a matter of speculation. Circumstantial evidence points to his being at Notre Dame at the end of the 12th century and beginning of the 13th. Edicts reforming the celebration of the Circumcision Office (1 January) and the Feast of St Stephen (26 December) issued in 1199 by the Bishop of Paris, Eudes de Sully, mention performance of the Vespers responsory, the third and sixth Matins responsories, the gradual and alleluia of the Mass and the Benedicamus Domino 'in triplo vel quadruplo vel organo'. Perotinus's four-voice settings of the graduals *Viderunt omnes* (for Christmas and Circumcision) and *Sederunt principes* (for St Stephen) are often dated on the basis of these edicts, although it is not improbable that they were in the repertory before Eudes' reforms, or even that one or both were composed in response to the edicts (if so, they would probably date from 1201 or later, owing to the papal interdict of 1200). *Triplum* and *organum* (*duplum*) versions of the other items on Eudes' list also appear in the *Magnus liber*, but these cannot be ascribed to Perotinus. However, one of Perotinus's conductus, *Salvatoris hodie*, is assigned to Mass on the Feast of the Circumcision in *GB-Lbl* Egerton 2615, and it is possible that this work stems from Eudes' reform. Perotinus appears to have worked with the poet Philip the Chancellor (*d c*1237); his conductus *Beata viscera* is a setting of Philip's poem, and some of his organa are found with motet texts that are also attributed to Philip.

The title 'magister', employed by both Johannes de Garlandia and Anonymus 4, indicates that Perotinus, like Leoninus, earned the *magister artium*, undoubtedly in Paris, and that he was licensed to teach. The diminutive form of his name, 'Perotinus' (for 'Petrus', a Latinization of the French 'Pérotin'), was probably a mark of respect bestowed by his colleagues; the appellation 'magnus', used by Anonymus 4, testifies to the esteem in which he was held, even long after his death. If Perotinus's career was similar to those of other Parisian ecclesiastics involved with music, such as Adam of St Victor, Albertus Cantor, Leoninus and Philip the Chancellor, he could have held a prominent position within the cathedral hierarchy. In fact, Perotinus has been identified with two important members of the Notre Dame administration, the theologian Petrus Cantor (*d* 1197) and Petrus, Succentor of Notre Dame from 1207 or earlier until *c*1238. The first of these identifications is improbable from a chronological standpoint, but Petrus Succentor is a possible candidate, not least because of the role played by the succentor in overseeing the celebration of the liturgy in the cathedral. Husmann's hypothesis that Perotinus was associated with the parish church of St Germain-l'Auxerrois and that he was something of a court composer to the French king Philippe-Auguste is no longer accepted.



2. WORKS. Virtually everything known about Perotinus's musical activity is extrapolated from a passage in the treatise of Anonymus 4 (ed. Reckow, 1967, i, 46). Noting that Leoninus, the *optimus organista* ('best man

with organum'), 'made' the *Magnus liber* to embellish the liturgy, he remarks:

[This *liber*] was in use up to the time of the great Perotinus, who made a redaction of it ['abbreviavit eundem'] and made many better clausulas, that is, *puncta*, he being the best *discantor*, and better [at discant] than Leoninus was. . . . This Magister Perotinus made the best *quadrupla*, such as *Viderunt* and *Sederunt*, with an abundance of striking musical embellishments [colores armonicae artis]; likewise, the noblest *tripla*, such as *Alleluia, Posui adiutorium* and [*Alleluia*], *Nativitas* etc. He also made three-voice conductus, such as *Salvatoris hodie*, and two-voice conductus, such as *Dum sigillum summi Patris*, and also, among many others, monophonic conductus, such as *Beata viscera* etc. The book, that is, the books of Magister Perotinus, were in use in the choir of the Paris cathedral of the Blessed Virgin up to the time of Magister Robertus de Sabilone, and from his time up to the present day.

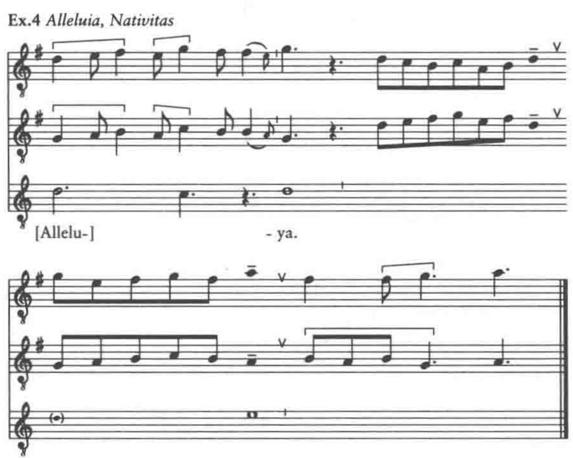
Crucial to an understanding of Perotinus's work is the meaning of the verb 'abbreviare' as used in the above passage. It could mean 'to shorten', and Anonymus 4's remark is often taken in that sense, as indicating that Perotinus shortened Leoninus's *liber* by curtailing the size of individual organa, replacing *organum purum* with discant clausulas and substituting one clausula for another. A group of 154 clausulas in *I-Fl* plut.29.1 (ff.178–83*v*, clausulas 289–442; ed. R.A. Baltzer, Le magnus liber organi de Notre-Dame de Paris, v, Monaco, 1995) could have been used to achieve this result; these clausulas have been ascribed to Perotinus by some modern scholars (see Ludwig, 1910; Waite, 1961; Sanders, 1967). However, most of the other clausulas in this manuscript (ff.147–84 *v*) are ambitious compositions, and their use in the organa would, if anything, expand the size of the original settings. A number of these clausulas bear a stylistic resemblance to the known works of Perotinus, which are also conceived on a large scale in comparison with the organa generally supposed to belong to the Leoninian corpus, and do not suggest a 'reduction' in any sense. 'Abbreviare' is probably better understood as meaning 'to write down' or 'to make a redaction'; this reading is consistent with Anonymus 4's use of the word elsewhere in his treatise. If Perotinus 'made a redaction of [Leoninus's *liber*]', in effect he prepared a new 'edition' of it, a process that could have involved both 'abbreviation' and the introduction of 'many better clausulas, that is, *puncta*', as well as the addition of wholly new compositions. The idea of a redaction, or edition, accords with Anonymus 4's suggestion that Perotinus used a more developed system of rhythmic notation than Leoninus had, one in which the full system of rhythmic modes was operative, and in which some elements of mensural notation were present ('These principles [of notation] are used in many books of the *antiqui*, and this from the time of the great Perotinus, and during his time, . . . and similarly from the time of Leo, to some extent [*pro parte*!]'; ed. Reckow, 1967, i, 46). It also fits with his allusion to 'the book, that is, the books of Magister Perotinus', following immediately upon what is in effect a description of the *Magnus liber* as we know it from such manuscripts as *D-W* 628 and *I-Fl* plut.29.1. Ludwig (1910) suggested that the former manuscript transmitted the two-voice organa more or less as Leoninus had created them, and that (for the most part) its two clausula cycles date from the time of Perotinus, while the latter manuscript preserved the *organa dupla* in Perotinus's revision, in addition to much else by him. This formulation is undoubtedly too simple; the collections in both sources

Ex.1 *Alleluia, Nativitas*

were certainly culled from several layers of the Notre Dame repertory, so that they reflect less the input of one specific composer or 'editor' than what was available to the scribe at the time of copying. But the Parisian origins of *I-Fl* plut.29.1, its close ties to Notre Dame and the fact that it was copied only a decade or two after Perotinus is likely to have been active, all suggest that this manuscript may indeed by the prime witness to his work.

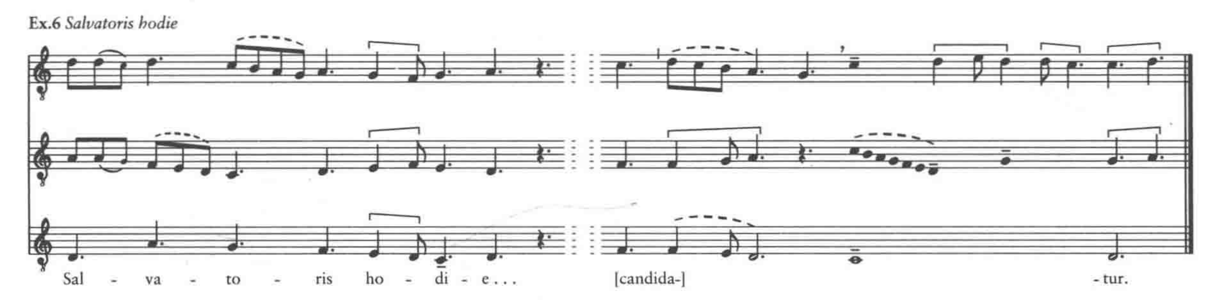
We know from Anonymus 4 that Perotinus wrote organa for three and four voices, as well as conductus for one to three voices, and that he 'made' numerous 'better' clausulas, most of them presumably in two voices, for use in Leoninus's *Magnus liber*. Although Anonymus 4 refers to him as 'optimus discantor', implying that he was known in particular for his work in the various genres of discant, there is no reason to suppose that he did not compose *organa dupla* with passages in *organum purum* as well; indeed *organum purum* is a striking feature of his two four-voice organa. In any event, it is not possible to identify any *organa dupla* (or any sustained-note passages in such pieces) as his work. Perotinus probably also played a role in the early development of the motet. If, as seems likely, he was active through much of the first quarter of the 13th century or beyond, it is unlikely that he did not have direct contact with the new genre. Although Anonymus 4 does not ascribe any motets as such to Perotinus, this may be insignificant since although the theorist evidently knew the genre, he seems not to

Ex.2 *Viderunt omnes*



Ex.3 *Sederunt principes*

Ex.4 *Alleluia, Nativitas*



Ex.5 *Viderunt omnes*

have taken it much into account in his treatise. Motet versions of Perotinus's two four-voice organa were included in *E-Mn* 20486 (and in reduced form in two other manuscripts, including the Parisian *Magnus liber* source *D-W* 1099); these texts are attributed elsewhere to Perotinus's collaborator and likely colleague at Notre Dame, Philip the Chancellor. In addition, several other organa and clausulas ascribed to Perotinus by modern scholars are also transmitted with motet texts written by Philip. Many early motets, including those that may be by Perotinus and Philip, were probably understood to be clausulas of sorts, and thus they may number among Perotinus's 'many better clausulas, that is, *puncta*' mentioned by Anonymus 4.

Perotinus's compositions for three and four voices are milestones in the history of Western music. With the possible exception of the three-voice conductus *Congaudeant catholici* ascribed to the Notre Dame cantor Albertus Parisiensis in the Codex Calixtinus, these are the first known pieces conceived for more than two independent parts. The upper voices often lie in a similar range and move in a similar style, frequently in phrases of identical length. This suggests that the polyphonic fabric may initially have been conceived in two parts, with additional voices being written in imitation of the second part or contrived from it. As ex.1 from *Alleluia, Nativitas* shows, each upper voice is written as a separate 'duet' with the tenor line, without much regard for the harmonic effect that these upper voices produce when combined. The polyphonic fabric is rooted in stable blocks of consonance, here based on *f* and, later, *g*, ordinarily built out of perfect

Ex.6 *Salvatoris hodie*

concords, within which the upper voices intertwine to produce relatively frequent dissonant clashes. The use of dissonance within a consonant framework is cultivated with striking effect in the opening of *Viderunt omnes* (ex.2), where, after an intonation establishes the underlying consonant sonority, each phrase begins with a major 7th against the tenor in two or all three of the upper voices and then projects this discord forward in rhythmically energized polyphony before resolving it to a form of the initial concord. The tension generated by the prolongation of this dissonance significantly enhances the strength and formative power of the underlying consonance, allowing Perotinus to extend it over a very large span. Through the use of this and other stylistic elements Perotinus was able to create works on an unprecedented scale. This is doubtless one of the devices Anonymus 4 had in mind when he mentioned the *quadrupla*'s 'abundance of striking musical embellishments'. Another of the colores employed by Perotinus to enhance and extend his work was rondellus, or voice exchange; elements of this can be seen in exx.1 and 2, but in ex.3, from *Sederunt principes*, rondelli dominate the texture, yielding an extended variation design as the melodic ideas are passed from voice to voice. Still other colores are deployed to articulate the end of a clausula or larger work: in *Alleluia, Nativitas* a commonly used *copula non ligata* formula is inserted as a brief cadenza-like flourish to bring its setting of 'alleluia' to a close (ex.4).

All of these devices reveal a composer keenly interested in clearly articulated structure and balanced design. The voice exchange in ex.3 shows a sensitivity to the possibilities inherent in the manipulation of multi-voice texture that belies the somewhat mechanical process that might seem to have been at work in creating the polyphonic fabric of ex.1. Perotinus often achieved formal shaping by balancing passages with differing textures. Above a sustained-note tenor, he sometimes deployed the upper voices in note-against-note fashion, but other times he differentiated them with individual rhythmic patterns in overlapping phrases, which generated a discant of sorts above the tenor in which one voice might move in the 5th rhythmic mode while another moves in 1st (ex.5, from *Viderunt omnes*). The systematic overlapping of rhythmic *ordines* in combination with the use of different rhythmic modes seen here is typical of many of the more 'advanced' two-voice clausulas. The developing sense of tonal balance which these examples display can be seen also on a much larger level in the formal design of entire settings (see Reckow, 1973; Flotzinger, 1984).

Unlike the *organum purum* in the two-voice settings in the *Magnus liber*, which usually flow in rhapsodic, wide-ranging, rhythmically 'free' melismas, the melodic idiom used by Perotinus in his sustained-note writing is highly disciplined, moving in balanced phrases with clearly defined, patterned rhythms of the sort codified in the system of rhythmic modes. Some works (e.g. the two four-voice organa) limit their rhythmic designs to the 1st, 5th and 6th modes, and to variations of them such as the so-called alternative form of the 3rd mode. Others, such as *Alleluia, Nativitas* and *Alleluia, Posui adiutorium*, however, draw upon the full range of temporal relationships inherent in the six modal patterns. Since the three 'trochaic' modes (1, 5 and 6) are probably earlier than the others, it is sometimes thought that these distinctions in rhythm usage reflect different stages in the evolution of Perotinus's style. But in fact all of his organa were conceived against the background of the fully developed modal system. Thus *Viderunt omnes* and *Sederunt principes* include hocketing passages in the 'imperfect' 1st mode, while the most 'advanced' of his organa (with the greatest degree of rhythmic variety), *Alleluia, Posui adiutorium*, is cited by Anonymus 4 for a passage in the 1st 'irregular' mode (ed. Reckow, 1967, i, 84). In their rhythmic clarity and precision these *organum purum* lines are similar to Perotinus's discant writing, and may be one of the factors prompting Anonymus 4's characterization of him as 'optimus discantor'. The rhythmic patterning reduces the stylistic disparity between *organum purum* and discant clausulas within a larger setting, and thereby heightens the unity of the work as a whole. Nonetheless, something of the florid quality of Leoninus's lines can be detected in the cadential gesture in ex.5, and, using a slightly different vocabulary, in the melodic embellishments applied to individual syllables in Perotinus's conductus and the flourishes that conclude the melismatic *caudae* placed at important structural points in the text (ex.6, the beginning and end of the first strophe of *Salvatoris hodie*).

As the opening of *Beata viscera* shows (x.7), the strong sense of tonal order and the balanced melodic phrases to

Ex.7 *Beata viscera*

which it contributes, manifest throughout Perotinus's works for two or more voices, also inform his monophony, despite the absence of the formative constraints of a polyphonic texture and clearly perceptible modal rhythm. This tendency towards lucidity, order and balance, equally evident in the melodic profile, the phrase structure, the rhythmic planning or the harmonic idiom of the music, would become an important feature not only of much later French music, but also of 13th-century English polyphony, most strikingly in the Summer Canon and the repertory in the Worcester Fragments.

FOUR-VOICE ORGANA

†Viderunt omnes V̸. Notum fecit dominus, T, E (gradual for Christmas and Circumcision; motet versions: Vide prophecie and Homo cum mandato dato; texts have medieval attrib. Philip the Chancellor)

†Sederunt principes V̸. Adiuva, T, E (gradual for St Stephen; motet versions: De Stephani roseo sanguine and Adesse festina; texts have medieval attrib. Philip the Chancellor)

THREE-VOICE ORGANA

Sancte Germane V̸. O sancte Germane, R (resp for St Germanus and other confessor bishops; motet version: Associa tecum in patria; text has medieval attrib. Philip the Chancellor)

Terribilis V̸. Cumque (resp for Dedication of a Church)

Virgo V̸. Sponsus, R (resp for St Catherine)

Exiit sermo V̸. Sed siceum (gradual for St John the Evangelist)

Alleluia, Pascha nostrum (Easter)

†Alleluia, Nativitas, R, T, E (Nativity of BVM motet version of the clausula on Ex semine: Ex semine rosa prodit spina/Ex semine Abrahe divino; text attrib. Philip the Chancellor by modern scholars)

Alleluia, Dilexit Andream (St Andrew)

†Alleluia, Posui adiutorium, R, T (*commune sanctorum* for Confessor-Bishops)

Benedicamus Domino (i)

Benedicamus Domino (ii)

Benedicamus Domino (iii)

CLAUSULAS

Mors, 4vv, E (for Alleluia, Christus resurgens; motet version: Mors que stimulo/Mors morsu nata venenato/Mors a primi patris; text attrib. Philip the Chancellor by modern scholars)

In odorem, 3vv, E (for Alleluia, Dilexit Andream; motet version: Mens fidem seminat/In odorem; text attrib. Philip the Chancellor by modern scholars)

Et illuminare, 3vv, E (for gradual Omnes de Saba V̸. Surge; motet versions)

Et gaudebit, 3vv, E (for Alleluia, Non vos relinquam; motet version: Homo qui vigeas/Et gaudebit; text attrib. Philip the Chancellor by modern scholars)

Et exaltavi, 3vv, E (for Alleluia, Posui adiutorium; motet version: Et exaltavi plebis humilem/Et exaltavi; text attrib. Philip the Chancellor by modern scholars)

Numerous 2-voice clausulas (attrib. by Ludwig, 1910; Waite, 1961; Sanders, 1967)

CONDUCTUS

†Salvatoris hodie, 2vv and 3vv, K, T, A, C

†Dum sigillum summi Patris, 2vv, K, T, A

†Beata viscera, 1v, T, A, C (text has medieval attrib. Philip the Chancellor)

EDWARD H. ROESNER

Perotti, Giovanni Agostino [Giannagostino] (*b* Vercelli, 12 April 1769/70; *d* Venice, 28 June 1855). Italian composer, teacher and writer on music. He received his first musical training from his older brother Giovanni Domenico Perotti. About 1790 he went to Bologna to study under Mattei. His setting of Metastasio's oratorio *Abele* was performed in Bologna in 1794 and a one-act comic opera, *La contadina nobile*, in Pisa in 1795. That year he went to Vienna as a keyboard player at court and from 1798 was in London. About 1801 he returned to Italy and settled in Venice. Here he was associated with the neo-classical academies such as the Corpo Accademico dei Sofronimi, the Accademia Veneta Latteraria, the Accademia Veneta della Bella Lettere and, in 1812, the Ateneo Veneto, which the leading figures in the city's artistic and cultural life were involved in during the Napoleonic period. In 1811 he won a prize in Livorno for his *Dissertazione … [sullo] stato attuale della musica in Italia*, which was translated into French in its entirety and in part into German and English, and widely discussed. This *Dissertazione*, Perotti's most important theoretical work, is a treatise on musical aesthetics, uniting the tradition of Padre Martini and the Bologna school with 18th-century rationalist opera criticism (Algarotti and Arteaga) and Venetian neo-classical ideals (Cicognara and Diedo). In 1811 Perotti was appointed *maestro primo* at S Marco in Venice, but it was only in 1817, on the death of Bonaventura Furlanetto, that he could properly assume the post, which he held until 1855. As the *maestro di cappella* of S Marco, Perotti promoted several reforms concerning the re-ordering and expansion of the chapel's music archive, the use of women's voices in performances of old sacred music, the singing school for young choristers and the re-creation of the Società di S Cecilia (1832).

Perotti was essentially a composer of sacred music. In the context of music written for S Marco his work constitutes a period of transition between the old Venetian practice of the 18th century and the more modern one of the 19th, represented by his successor Antonio Buzzolla. His masses are still dominated by the concertante structure of soloists and tutti, the survival of the traditional *a cappella* style and of mixed style. Sometimes in his psalm settings and requiem masses Perotti seems consciously to be imitating the style of Marcello and Lotti. His theoretical and musical works became increasingly traditional and dogmatic – as can be seen from his criticism of Rossini's *Stabat mater* (1842). Nevertheless, they made a lasting impact on cultural and musical life in 19th-century Venice.

An understanding of Perotti as an intellectual and musician can be gained from the correspondence he had with important figures and artists of his time, such as Emanuele Cicogna, Stanislao Mattei, Marco Santucci (all *I-Vmc*), Simon Mayr (*Vmc*, *BGc*), Gaetano Gaspari (*MOe*), Saverio Mercadante (*Nc*), Giovanni P. Schulthesius and his friend Donizetti, who dedicated his opera *Belisario* to him.

WORKS

Abele (orat, P. Metastasio), Bologna, 1794, *D-Dl*, *I-Bc* (inc.)

HOWARD BROFSKY/LICIA SIRCH

Perotti, Giovanni Domenico (*b* Vercelli, 20 Jan 1761; *d* Vercelli, 24 March 1825). Italian composer. He studied with Fioroni in Milan before 1779 and with Martini and Mattei in Bologna in late 1780 and early 1781. In March 1781 he was admitted to the Accademia Filarmonica there and from sometime later that year until his death was *maestro di cappella* at Vercelli Cathedral. Despite

this rather insular career he had several operas performed, two at important theatres: *Agesilao re di Sparta* at the Teatro Argentina, Rome (1789), and *La vittima della propria vendetta* at La Fenice, Venice (1808). Two other opera scores are in the Dresden Landesbibliothek: *Zemira e Gandarte* (Alessandria, 1787) and *Bianca di Melfi*. 15 sacred works, an aria and sketches are also in Dresden; 22 sacred works, sketches and letters in the Bologna Conservatory library; and a symphony and two quartets in that of Genoa (other works in *I-Mc*, *Rc*, *Td*, *Tn*). Perotti was the first teacher of his more famous younger brother, Giovanni Agostino Perotti.

HOWARD BROFSKY

Perpessas, Harilaos (*b* Leipzig, 10 May 1907; *d* Sharon, MA, 19 Oct 1995). Greek composer. He was a pupil of Schoenberg for a year in Berlin, where he met Skalkottas, but he remained opposed to Schoenberg's compositional methods. He went to Greece for the first time in January 1934, attracting notice there as a composer. In 1948 he moved to New York, where he lived in virtual seclusion, reportedly declining commissions for film scores from Spyros Skouras, the president of Twentieth Century-Fox. In 1992 he moved to a residential home in Sharon, Massachusetts.

Together with Mitropoulos, who admired and conducted his music, and Skalkottas, he is generally considered one of the first Greek composers to have turned aside from musical nationalism. His orchestral frescoes, influenced by Strauss and Mahler, Debussy and Ravel, abound in rich, chromatic polyphony driven to powerful and dramatic climaxes, with wide-leaping melodies. In the mid-1970s he wrote a large mystical treatise, *The Opening of the Seventh Seal*, which remained in manuscript. An ever-revising perfectionist, he kept his scores from publication.

WORKS

Orch: Dionysos Dithyramben, pf, orch, before 1934; 3-movt orch piece (?Sym. no.1), 1934; Prelude and Fugue, c, orch, 1935, rev. ?1970s; Sym. no.2, ?1936–7, completed as Sym. 'Christus', 1948–50; Sym. Perra [Perras], **Margarita** [Margherita] (*b* Monastir [now Bitola, Macedonia] or Salonica, 15 Jan 1908; *d* Zürich, 2 Feb 1984). Greek soprano. She studied at the Salonica State Conservatory and then at the Berlin Hochschule für Musik; there, in 1927 as Norina, she caught the attention of Bruno Walter, who engaged her for the Städtische Oper. She appeared as Nuri in d'Albert's *Tiefland* and as Cupid in Gluck's *Orfeo ed Euridice* (1927) and sang the title role in the Berlin première of Paul Graener's *Hanneles Himmelfahrt* (1928). She later moved to the Berlin Staatsoper, having toured in Spain, Argentina and Brazil. In 1935 she was engaged by the Vienna Staatsoper and was highly praised as Mozart's Konstanze under Felix Weingartner. She repeated the role in Salzburg (1935) and at Glyndebourne (1937), and had further successes as the Queen of Night, Susanna, Pamina and other Mozart roles. In 1936 she sang Gilda at Covent Garden. Having married in 1937, she settled in Zürich and until 1944 appeared only in recitals, but returned to the operatic stage for a season in Vienna (1946–7). Her firm, well-schooled voice possessed a gently glowing tone colour.

GEORGE LEOTSAKOS

Perrachio, Luigi (*b* Turin, 28 May 1883; *d* Turin, 6 Sept 1966). Italian composer, pianist and writer on music. He studied the piano in his native city and later in Vienna, and also read law at Turin University. As a composer he was largely self-taught, though eventually (1913) he gained a diploma in composition as well as piano at the Liceo Musicale, Bologna. He taught the piano at the Turin Liceo Musicale (1925–40), and then composition in the same institution until 1955. A keen propagandist for contemporary music through his activities as conductor, pianist and writer, he also fought ardently for the reform of Italian musical education. Extreme modesty kept him from publishing more than a very little of his music: only a few piano works, songs and harp pieces were ever printed. Most of these derive in some way from the Debussy-Ravel tradition, sometimes with notable sensitivity. The *Nove poemetti*, for example, show an excellent command of a wide variety of Debussian techniques, ranging from the intricate, evanescent arabesques of no.4 ('Libellule') to the brooding, shadowy chord progressions of no.3 ('La notte dei morti', perhaps the finest of the set). The striking 25 Preludes (Perrachio's best-known work) are more architectonic in conception, and sometimes show a truly modern toughness; yet here too Debussy and Ravel are rarely lost sight of for long. Perrachio's unpublished large-scale compositions are sometimes even bolder harmonically: the opening of the Piano Concerto, marked *aspro e rabbioso*, is violent to the point of uncouthness. Neither in this nor in other unpublished works, however, do the manuscripts quite bear out the high claims made for Perrachio by some Italian writers.

JOHN C.G. WATERHOUSE

Perrault, Charles (*b* Paris, 12 Jan 1628: *d* Paris, 15/16 May 1703). French author and lawyer, younger brother of CLAUDE PERRAULT. After studying for several years at the Collège de Beauvais in Paris and then at the Sorbonne he undertook private study and in collaboration with his brothers Nicolas and Claude made a burlesque verse translation of the sixth book of Virgil's *Aeneid*. In 1651 he became a lawyer, but his literary activities gradually took up more of his time. In 1654 he wrote his first light verses and got to know a number of Parisian writers, in particular Philippe Quinault, whom he welcomed to his house at Viry-sur-Orge. In 1663 he became secretary to Colbert. He was a member of the Conseil des Bâtiments and the Petite Académie, and in 1671 he was elected to the Académie Française, where he attracted attention through his innovations. In 1673 Colbert appointed him *contrôleur général des bâtiments, jardins, arts et manufactures du roi*, a post that he resigned in 1682. In 1683 he was excluded from the Petite Académie. From 1696 he devoted much of his time to writing his *Mémoires*.

In 1659 Perrault had attended the first performance of the *Pastorale d'Issy* (words by Perrin and music by Cambert), after which he was concerned with Lully's manoeuvres to obtain his monopoly of opera production, which finally succeeded in 1669. It was then that Perrault obtained from Louis XIV the use of the theatre in the royal palace for the performance of Lully's works. Although librettos were submitted to the Petite Académie for approval, the production of Lully's *Alceste* in 1674 was the occasion for violent attacks by Racine and Boileau. Charles Perrault, with the aid of his brother Pierre, defended Quinault by publishing a *Critique de l'opéra, ou Examen de la tragédie intitulée 'Alceste, ou Le triomphe d'Alcide'* (1674) and *Lettre à monsieur Charpentier … sur la préface de l'Iphigénie' de monsieur Racine* (?1680). These pamphlets emphasized the specific nature of *tragédie en musique* and put forward the foundations of a poetics for this new French operatic genre. The *Alceste* controversy also foreshadowed the quarrel that broke out in 1687 when Perrault read his poem *Le siècle de Louis le grand* to the Académie Française. This text started the quarrel between the supporters of the old and the new in French art in which he was in conflict with Boileau and Racine. Thoroughly modern in outlook, he defended the age of Louis XIV and expressed his preference for the new genre of opera, compared with Greek music with its lack of harmony: he shared these views with his brother Claude. In his *Parallèle … des anciens et des modernes* (1688–97) and in his appreciations of Quinault's librettos he praised Quinault for writing 'simple verse, well suited to musical setting' and in *Les hommes illustres qui ont paru en France pendant le XVIIème siècle* (1696–1700) defended Lully as 'a French and Italian genius'.

In 1682 Perrault wrote *Le banquet des dieux pour la naissance de Monseigneur le Duc de Bourgogne*, a libretto that shows that he fully understood the nature of Lullian opera; he provided a *galant* theme, simple verses for the recitatives, *airs* and choruses, and detailed instructions for the instrumental movements. The music was composed by Claude Oudot, but it is lost, as also is *Titon et l'Aurore* (1677), an earlier operatic collaboration between Perrault and Oudot. The works that principally made Perrault's reputation, however, and by which he is best remembered are the dozen or so *Contes*, which he wrote over a period of several years and collected for publication in Paris in 1697. The *Histoires, ou Contes du temps passé* include such familiar tales as *La belle au bois dormant*, *Cendrillon* and *La barbe bleue*, which, like most of the others, have inspired a wide range of music up to the 20th century, notably operas and ballets by, among others, Rossini, Tchaikovsky, Offenbach, Massenet, Dukas, Ravel and Bartók.

LAURENCE DE LAUBADÈRE/MANUEL COUVREUR

Perrault, Claude (*b* Paris, 25 Sept 1613; *d* Paris, 9 Oct 1688). French polymath, elder brother of CHARLES PERRAULT. He studied medicine and qualified as a doctor in Paris in 1641. Boileau was one of his patients before becoming one of his detractors. His medical practice was soon confined to his immediate circle of acquaintances; but he had many other interests. He concerned himself with physics and anatomy and in 1666, on its foundation, was admitted to the Académie des Sciences, where he directed studies in natural history, a field in which he also published new and penetrating observations. His abilities extended to music and architecture as well. When it was decided that the Louvre should be given a façade befitting its monumental grandeur, Perrault entered the competition. He probably benefited from the influential position of his brother Charles, who gave him steadfast support throughout his life. The result was the colonnade of the Louvre built under the supervision of François d'Orbay between 1666 and 1670. If this work cannot be attributed to him with absolute certainty, it is said that as an

architect he was responsible for many technical innovations adopted on the building site. His most notable architectural achievements include the Paris Observatory and the Arc de Triomphe of the Porte Saint-Antoine (demolished in 1716). In 1673 Colbert entrusted him with the task of translating Vitruvius's ten volumes on architecture: he was thus the first man of his time to make a study of this remarkable work.

Perrault's work relative to music appears in his *Essais de physique, ou Recueil de plusieurs traités touchant les choses naturelles* (Paris, 1680–88, 2/1721). He formulated a remarkable theory about the ear and studied the phenomenon of sound vibration. He learnt about Aristoxenus's theories and was familiar with the acoustics of the theatres of antiquity and of the buildings of his own day, just as he also knew about the qualities of ancient instruments as well as of 17th-century ones. He was a committed 'moderne', as witness his *Mythologie des murs de Troye* (1653), intended to lend support to the epic *Les murs de Troye, ou L'origine du burlesque*, written in collaboration with his younger brothers Nicolas and Charles. Like Mersenne, he considered modern polyphonic music superior to the purely monodic music of classical antiquity. These views find polemical expression in the unpublished dialogue *Savoir si la musique à plusieurs parties a été connue et mise en usage par les anciens*, which was intended as preface to the treatise *De la musique des anciens*, published in the second volume of the *Essais de physique*. In it he defended continuo and the French opera, which he had seen taking its first steps in 1672 with Gilbert and Cambert's *Les peines et les plaisirs de l'amour*. When the *Alceste* quarrel broke out in 1674 he wrote to Colbert in support of Lully, who like Chambonnières and Hotteterre was a friend of his. He died of an infection which he caught while dissecting a camel's body in the royal gardens.

LAURENCE DE LAUBADÈRE/MANUEL COUVREUR

Perrichon, Julien [Jean] (*b* Paris, 6 Nov 1566; *d* ?Paris, *c*1600). French lutenist and composer. He was the son of Jehan Perrichon, court viol and shawm player. His early lute studies were probably with the famous Vaumesnil, *valet de chambre* and lutenist to the king from 1560 to 1574. Perrichon may have continued his training with Vaumesnil's successors, Jean de La Fontaine and Samuel de La Roche; the 'young Perrichon' is mentioned in court records from 1576 to 1578 as a student of the lute. By 1595 he was *valet de chambre* and lute player to King Henri IV. Apparently he died a few years later: Antoine Francisque, in his *Trésor d'Orphée* of 1600, spoke of him in the past tense.

Perrichon was accorded unusual recognition in his own day. Praetorius described him as an excellent master. Mary Burwell also mentioned him in her lutebook (1652, *GB-BEcr*), and in 1636 Mersenne listed Perrichon among half a dozen great masters of the previous generation. His works were widely reprinted in a variety of important collections, including those of Francisque, Besard, Dowland, Praetorius and Fuhrmann. Here and there, notably in the collections of Besard, Dowland and Fuhrmann, works by Julien Perrichon are incorrectly ascribed to his father Jehan.

RUTH K. INGLEFIELD

Perrin, Jean (*b* Lausanne, 17 Sept 1920; *d* Lausanne, 24 Sept 1989). Swiss composer and pianist. After studying in Lausanne, he continued his piano studies with Franz-Joseph Hirt in Berne, Edwin Fischer in Lucerne and Yves Nat in Paris, where he also had the opportunity to study composition with Nadia Boulanger and Darius Milhaud (1947–8).

During his active career, Perrin taught piano at the conservatories in Lausanne and Sion; he also wrote about music and for more than 20 years he edited programme notes for the Lausanne Chamber Orchestra. The list of his compositions includes over 50 works. Perrin was a man of erudition but also of great modesty which did not always serve the promotion of his works. On the eve of the live broadcast of the première of his string quartet on French speaking radio stations worldwide, he died unexpectedly in his sleep.

His music, always fundamentally tonal, was the fruit of long and rigorous work. He explored various means of achieving a language of extreme harmonic complexity, which came close to a kind of polytonality, whereby the composer could give free rein to his sense of mystery and wonder.

JEAN-PIERRE AMANN

Perrin, Pierre ['L'abbé'] (*b* Lyons, *c*1620; *d* Paris, bur. 26 April 1675). French poet, librettist and co-creator, with ROBERT CAMBERT, of French opera. He was active in Paris from about 1645. In 1653 he married Mme La

Barroire, a 61-year-old widow who borrowed heavily to help him buy the post of *Introducteur des ambassadeurs* at the court of Gaston d'Orléans. The marriage was annulled and she died shortly afterwards, leaving Perrin to face debts during much of his remaining life.

Perrin's earliest lyric poetry dates from the mid-1650s, when he began supplying court composers with texts for songs, dialogues, motets and other works. In 1659 he collaborated with Cambert on the *Pastorale*, a simple, five-act stage work, first given at Issy and subsequently performed before the king, queen and Cardinal Mazarin. Perrin, in gaol at the time, recounted the events and essayed his theories on vernacular opera in a letter to Cardinal della Rovere (1659; published in *Les oeuvres de poésie*, Paris, 1661; Eng. trans in Auld), whom he had met at Gaston's court. At Mazarin's suggestion, a second *pastorale* followed: *Ariane, ou Le mariage de Bacchus*, the libretto for which Perrin fashioned to the wedding of Louis XIV and the Infanta of Spain. The work was rehearsed in public (*c*1660–61), but was overshadowed by the imported Italian operas and never formally performed. A third libretto (*La mort d'Adonis*), set to music by J.-B. Boësset, also remained unstaged, though excerpts were sung before the king. After the deaths of Gaston (1660) and Mazarin (1661), Perrin turned away from lyric drama and began writing motets and Elevations for the royal chapel. Several of his Latin texts were set by *sous-maîtres de la chapelle*, in particular Du Mont, Expilly and Gobert, and four volumes of his sacred verse were published. He also provided Boësset with secular texts for the queen's *concert de chambre*.

Perrin, however, still harboured aspirations to establish a national opera, and in about 1666 he sent Jean Baptiste Colbert, the king's minister, a large manuscript collection of his lyric works, the *Recueil de paroles de musique* (*F-Pn*, transcr. in Auld), in the preface of which he exposed his operatic theories and, cleverly exploiting national vanities, suggested that the king should foster a French form of opera. He was rewarded on 28 June 1669, when Louis XIV accorded him a 12-year privilege to establish 'Académies d'Opéra' in France. Perrin and Cambert renewed their association, and took on the machinist the Marquis de Sourdéac and the rich financier the Sieur de Champeron as their business managers. The company's inaugural production, *Pomone*, opened on 3 March 1671. Later considered the first true French opera, it involved much ballet, spectacle and machinery; it ran for 146 performances and would have made a healthy profit for Perrin and Cambert but for the unscrupulous actions of Sourdéac and Champeron, who pocketed most of the takings. In June 1671 Perrin again found himself in prison for insolvency and soon afterwards started to sell off rights to his privilege. By early 1672 most rights had passed to the composer Sablières and his librettist Guichard; even so, a second opera by Cambert was in production at the Académies and plans were afoot for a third work, most probably a revised version of *Ariane*. Lully visited Perrin in gaol on 13 March 1672 and persuaded him to surrender the entire privilege; in return, Perrin was assured a pension and enough money to repay his outstanding debts. Squabbling broke out over the ownership of the privilege, but Lully, backed by Louis XIV, eventually gained control of the monopoly. Although Perrin was freed from financial problems, his theatrical career was over.

Perrin's conception of opera was strongly linked to the pastoral play and, in contrast to Italian opera, relied on a simple plot, being more concerned with communicating emotions through the union of words and music than with developing dramatic intrigues. In true French theatrical tradition his librettos incorporated ballets, spectacle and elaborate machine effects; he also provided panegyrical prologues in honour of Louis XIV. Nevertheless his poetry was harshly criticized, even ridiculed, causing him to defend his theatrical style in a preface to the libretto of *Pomone* (Paris, 1671/*R*) and his sacred style in the foreword to the *Cantica pro Capella Regis* (Paris, 1665; foreword repr. in Auld). Passages in *Pomone*, in particular, attracted adverse comment; his un-classical use of comic episodes, facile rhymes, earthy language and workaday visual imagery seem to have offended many listeners and may have led to the criticism relayed by Saint-Evremond that 'people listened to the music with delight, the words with disgust'. Such opinions, along with Perrin's poor judgment of character and lack of business acumen, have tended to overshadow both the importance of his contribution to the development of French opera and the scholarly value of his theoretical writings.

CHRISTINA BASHFORD

Perrin d'Angicourt (*fl* 1245–70). French trouvère. The fact that his name appears twice as a partner of Jehan Bretel in the jeux-partis *Perrin d'Angicourt, respondés* and *Prince del pui*, and (probably as judge) in other jeux-partis involving Bretel, Gaidifer d'Avion, Lambert Ferri, Jehan de Grieviler and Audefroi (?Louchart) – R.295, 546, 664, 978, 1121, 1838 and 1925 – indicates a close association with Arras. Moreover, *J'ai un joli souvenir*, *Quant partis sui* and perhaps *Quant li cincenis s'escrie* are designated as *chansons couronnées*, presumably by the Arras *puy*. Among the nine towns that might be considered as Perrin's possible birthplace, the most likely is Achicourt, less than 5 km to the south of Arras. Gillebert de Berneville sent a song (R.138) to Perrin, while

the latter dedicated *Quant voi en la fin* to Henri III, Duke of Brabant, and *Lors quant je voi* to Gui de Dampierre, Count of Flanders. Of greater importance is the dedication of *Quant li biaus estés repaire* to Charles of France, the youngest brother of Louis IX (St Louis). Charles, who became Count of Anjou in 1246 and King of Sicily in 1266, is known as the patron of Adam de la Halle and Rutebeuf. He was a partner of Perrin in the jeu-parti *Quens d'Anjou*, a judge with Perrin in *Encor sui cil* (R.644), and in *Perrin d'Angicourt, respondés*, in which Perrin appears as respondent. The Petrus de Angicuria who appears as *rector capellae* in the service of Charles in a Naples document of 1269 may be identifiable with the trouvère.

Perrin was one of the more prolific trouvères, and some of his 35 songs survive in as many as 11 sources. Strophes employing different line lengths are in the majority, a peak of complexity being reached with *Quant partis sui* (five different line lengths), *Quant voi en la fin* and *Helas, or ai je trop duré* (four each). There are five isometric decasyllabic strophes, and decasyllables appear in two heterometric strophes, but Perrin clearly preferred shorter verses, particularly those of seven syllables. Six poems employ fixed refrains and another six have variable refrains. Five, or possibly six, served as models for later contrafacta.

The *chansons couronnées J'ai un joli souvenir* and *Quant partis sui* are in an authentic C mode, with a clear sense of tonal direction. The former leaps vigorously from the final to the 5th at the opening, while the latter begins at the octave and descends gradually over the first two phrases. Perrin clearly had a preference for modes with a major 3rd above the final. (In eight of his works, the modal structures vary among different manuscript readings.) All of the original melodies are in bar form except that for *Il convient qu'en la chandele*, which ends an otherwise non-repetitive structure with variants of the first and third phrases. *J'ai un joli souvenir* and *Quant partis sui* show the composer's ability at employing techniques of development in the cauda; both also display heightened rhythmic activity at cadential areas, a trait to be found in several other chansons by Perrin. Only three works (*Onques por esloignement*, *Quant li biaus estés repaire* and the doubtful *Je ne sui pas esbahis*) survive in mensural notation (in *F-Pn* fr.846), all three being in the 2nd mode. The very regular disposition of ligatures in *Haute esperance* also seems to hint at the 2nd mode, but in most chansons ligature patterns are more irregular. *Au tens novel* and *Il ne me chaut* are among the plainer of the melodies, while *Il convient qu'en la chandele*, *J'ai un joli souvenir*, *Lors quant je voi* and *On voit souvent* are among the more florid.

THEODORE KARP

Perrine (*d* probably Paris, after 1698). French theorist and lute teacher. His surname alone is known. His two publications were designed to revive the declining fashion for the lute by abandoning the traditional tablature for staff notation. The *Livre* deals with continuo playing, where the tablature was an obstacle to playing in ensembles. The *Table* (the second part of the *Livre*) has useful realizations of cadence formulas in *style brisé*. The *Pieces* has an important *Advertissement* on the operation of *brisure*. It also contains 31 lute pieces by Ennemond and Denis Gaultier transcribed into staff notation. Although Perrine's transcriptions are ingenious, and shed light on many aspects of performance, they are complicated in comparison with tablature and must have been expensive to print.

DAVID LEDBETTER

Perrinet [Perinetus, Perneth, Prunet] (*fl* late 14th or early 15th century). French composer. He has been tentatively identified with Perrinet Rino, an instrumentalist active in the court of King Alfonso the Magnanimous in Barcelona in 1417, although Pierre Fontaine was also known as Perrinet and was at Rouen in the late 14th century before moving to the Burgundian court. A certain Perrinet d'Acx is also known to have been in the service of the King of Navarre from 1374 to 1386. Perrinet's compositions comprise a three-part Kyrie and a four-part Credo (ed. in CMM, xxix, 1962 and in PMFC, xxiii, 1989–91). In the Apt Manuscript (*F-APT*), the Credo is attributed to 'Bonbarde'; the composer may thus have been a shawm player. Two otherwise unknown works, a Gloria and a Credo (unless the latter is the above Credo), were mentioned by the Anonymus 5 of Coussemaker (*CoussemakerS*, iii, 379–98 esp. 396*a*).

GILBERT REANEY

Perron [Pergamenter], **Karl** (*b* Frankenthal, Pfalz, 3 June 1858; *d* Dresden, 15 July 1928). German bass-baritone. He studied with Julius Hey in Berlin and Julius von Stockhausen in Frankfurt, making his début in 1884 at Leipzig as Wolfram. In 1892 he moved to Dresden, where he was engaged at the Hofoper until 1913. There he created John the Baptist in *Salome* (1905), Orestes in *Elektra* (1909) and Ochs in *Der Rosenkavalier* (1911). In addition to his Strauss roles he sang Don Giovanni, Count Almaviva (*Le nozze di Figaro*), Hans Heiling, Nélusko (*L'Africaine*), Thomas' Hamlet, Escamillo and Yevgeny Onegin. At Bayreuth between 1889 and 1904 he sang Amfortas, Wotan, King Mark and Daland. A powerful actor, he sang with great authority.

ELIZABETH FORBES

Perroni, Anna. Italian singer, sister of Rosa Borosini. *See* BOROSINI family, (3).

Perroni [Peroni], **Giovanni** (*b* Oleggio, Novara, 1688; *d* Vienna, 10 March 1748). Italian cellist and composer. He probably received his training in his native city or at the provincial capital, Novara, an active musical centre, where in 1711 he took part in celebrations connected with the translation of the relics of S Gaudenzio. His first position was at the ducal court of Parma, where he served between 1704 and 1714. In 1718 he was *maestro di cappella* of S Maria delle Grazie, Milan, and a member of the court orchestra there. He left in 1720 to seek employment at the imperial court in Vienna, where he was appointed a cellist on 1 April 1721. Payment records at the imperial court indicate a quick rise to fame, for by the end of the decade he was the highest paid cellist, with an annual salary of 1800 florins. He served in this capacity until his death, having been retained by the Empress Maria Theresa in spite of the substantial reduction of musical forces at court during the early years of her reign. In 1726 Perroni married Anna d'Ambreville, an Italian singer of French descent, who sang major roles in northern Italy before 1721 and was thereafter employed at the imperial court in Vienna.

Except for a cello concerto, Perroni's extant compositions are all dramatic music. His early works were composed in collaboration with his brother Giuseppe Maria, a violinist active in Novara, Milan and Vienna. His later, independent compositions consist of stereotyped alternations of short recitatives with extended da capo arias and lack either dramatic or musical interest. His cello concerto, however, is of some significance, showing his talent and knowledge of the capabilities of his instrument.

WORKS

lost unless otherwise stated

ORATORIOS

La costanza della pietà trionfante nel glorioso S Gaudenzio, Novara, 1711, collab. G.M. Perroni

Perroquette. A type of bird organ. *See* BIRD INSTRUMENTS.

Perrot, Jules (Joseph) (*b* Lyons, 18 Aug 1810; *d* Paramé, 24 Aug 1892). French dancer and choreographer. *See* BALLET, §2(ii).

Perrot [Peron, Peros, Pierrot] **de Neele** (*fl* Arras, mid- to late 13th century). French trouvère. His period of activity may be deduced from the works attributed to him: the partner for the jeux-partis was Jehan Bretel, a prominent

and prolific trouvère of Arras who flourished in the mid-13th century, and who died in 1272; furthermore, Perrot identified himself at the end of the 'Sommaires en vers de poèmes' that introduces a collection of narrative verse (characterized by Jordan as a collection of 'classic literary works') contained in a source dated 1288. The ascription reads: 'Ce fist Peros de Neele, qui en trover tos s'escrevele' ('Peros de Neele made this, who nearly broke down in tears while writing'). The one song by Perrot that is not a jeu-parti is a Marian song in bar form.

ROBERT FALCK

Perry, George Frederick (*b* Norwich, 1793; *d* London, 4 March 1862). English composer. He was a member of Norwich Cathedral choir under Beckwith. After leaving the choir he studied the piano, the violin, harmony and composition, all with local musicians, and in about 1818 he succeeded Binfield as leader of the orchestra at the Theatre Royal, Norwich. While still resident in Norwich he composed two oratorios, both performed there, and the overture to *The Persian Hunters* (of which the rest of the music was by C.E. Horn) for the Lyceum Theatre, London.

In 1822 he moved to London, where he was appointed musical director of the Haymarket Theatre; there he provided music in whole or in part for several dramatic pieces. A few years later he became organist of the Quebec Chapel, St Marylebone. When the Sacred Harmonic Society was formed in 1832, Perry was chosen to be leader of the orchestra, and at its first concert on 15 January 1833 extracts from two of his oratorios were performed. Perry was an assiduous supporter of this society, never missing a concert for 16 years. When Joseph Surman was dismissed as conductor in 1848, Perry acted as conductor for a time, but when he was not appointed permanent conductor he resigned from the society. During his membership his oratorio *The Death of Abel* was performed several times, despite the fact that it generally resulted in a loss to the society. In 1846 he resigned his post at Quebec Chapel and became organist of Trinity Church, Gray's Inn Road.

Perry is notable chiefly for his persistence in composing oratorios, and his relative success in having them performed, at a time when the works of English composers were little regarded in oratorio circles. The music of these works lacks originality, being based mainly on the style of Haydn's *Creation*, with occasional reminiscences of Handel and Mozart. He also wrote additional accompaniments to a number of Handel's oratorios for use by the Sacred Harmonic Society, and several anthems, including *The queen shall rejoice* in honour of the birth of the Princess Royal (1840), which was performed by the Sacred Harmonic Society with a choir of 500.

NICHOLAS TEMPERLEY

Perry, Julia (Amanda) (*b* Lexington, KY, 25 March 1924; *d* Akron, OH, 24 April 1979). American composer. She studied at Akron University and Westminster Choir College (BM 1947, MM 1948), and took a conducting course at the Juilliard School of Music (1950–51). She spent two summers at the Berkshire Music Center, studying choral singing with Hugh Ross (1949) and composition with Luigi Dallapiccola (1951). She went on to study with Dallapiccola in Florence and briefly with Boulanger in France (1952), winning the Boulanger Grand Prize for her Viola Sonata. Other honours included Guggenheim fellowships (1954, 1956) and a National Institute of Arts and Letters Award (1964). *Stabat mater* (1951), which launched her career, was performed in both the USA and Europe; her *Study for Orchestra* was performed by the New York PO in 1965. Her career was curtailed because of physical health problems in the early 1970s.

Perry's early works, mostly songs and choral music, show a strong influence of spirituals. *Prelude for Piano* (1946, rev. 1962) draws on the blues, using an extended harmonic vocabulary of major 7ths, 9ths and 11ths, blue notes, chord substitutions and the common blues poetic form *AAB*. While living in Europe, her music became increasingly instrumental and abstract, focussing on the concise treatment of small motivic cells. Overt references to her native black culture are absent in these restrained, neo-classical works. Pitch centres are established through reiteration, the melodic-harmonic language is often dissonant, and rhythmic complexity emerges in shifting subdivisions and syncopation. *Homunculus C.F.*, written shortly after her return to the USA, is among her most innovative works, gradually unfolding pitches in a chord of the 15th. With the civil rights struggles of the 1960s, she renewed her use of black American musical idioms, but shifted her references to contemporary, urban genres. *A Suite Symphony* draws on rock and roll and rhythm and blues. *Bicentennial Reflections* offers a cautionary tale of American race relations, developing a racial dynamic with the aid of visual and textual elements.

J. MICHELE EDWARDS

Perry, Lee [Perry, Rainford Hugh; 'Scratch'] (*b* Kendal, Hanover Parish, 20 March 1936). Jamaican reggae producer. He moved to Kingston in the mid-1950s and began to work with the producer Clement 'Sir Coxone' Dodd on his mobile sound system. Moving into studio production and working as Coxone's talent scout, in 1965 Perry helped to produce some of the early recordings made by Bob Marley's vocal group, the Wailers. That same year he began recording under his own name; his first hit record *Chicken Scratch* earned him the nickname Scratch, by which he became popularly known. In 1967 he formed a band, the Upsetters, around the brothers Carlton (drums) and Aston 'Family Man' Barrett (bass guitar). The following year, as the rock steady beat slowed into a new rhythmic format, Perry's innovatory hit record *People Funny Boy* helped to create what became known as reggae. In 1969 Perry teamed the Upsetters' instrumentalists with the Wailers' vocal trio and began to make the group recordings that launched Bob Marley's international career, including *Small Axe*, *My Cup*, *Mr Brown* and *Duppy Conqueror*. Perry effectively co-wrote some of Marley's mid-period songs, and their close collaboration continued sporadically until Marley's death in 1981.

Perry opened his Kingston recording studio, the Black Ark, in 1974, where for Island Records he produced some of the most important works of the reggae movement: Max Romeo's *War Inna Babylon* (1976), Junior Murvin's *Police and Thieves* (1977), the Upsetters' *Super Ape* dub album and the Congos' *Heart of the Congos* (1978). During this time he also worked with several European rock musicians. Since 1980 he has continued to record and distribute his work in Europe.

Perry's eccentric and avante-garde productions, conceived and recorded under notoriously primitive conditions, are best known for their odd effects including heavy repeating echo, spacey tape rewind, distortion, sudden noises, animal sounds and disorientating instrumental absences. He pioneered the technique of scratching records which was later an important part of the hip hop sound.

STEPHEN DAVIS

Perse, Edward. *See* PEARCE, EDWARD.

Persen, John (*b* Porsanger, 9 Nov 1941). Norwegian composer. He was educated from 1968 at the Oslo Conservatory, studying with Finn Mortensen. In addition to his work as a composer, he has been active in different organizations – as chairman of Ny Musikk, the Norwegian branch of the ISCM (1974–6) and as director of the Ultima-Oslo Contemporary Music Festival.

His musical style is neo-Expressionist, and he has characterized his *Orkesterverk II*, written for a television ballet, as 'naked and brutal'. He also uses electronic means in his music, in which sound planes and structures are predominant; he sometimes exploits limited musical material to the utmost, and on occasion the influence of jazz is detectable. He has mainly written chamber music and orchestral works, in addition to an opera *Under kors og krone* ('Beneath Cross and Crown', M. Mikkelsen,

1985). His chamber work *Et cetera* was named Work of the Year in Norway in 1988, and the orchestral *ČSV* (the title is Sami, and means 'dare to show that you are Sami') won a competition in connection with the opening of the new Oslo concert hall in 1976.

Persiani, Fanny. *See* TACCHINARDI-PERSIANI, FANNY.

Persiani, Giuseppe (*b* Recanati, *c*1799–1805; *d* Paris, 13 Aug 1869). Italian composer. He was taught the violin by his father, but was left an orphan in 1814. He played in the Teatro Valle orchestra in Rome and from 1820 at the S Carlo in Naples, where he also studied at the conservatory under Zingarelli and Tritto. He was *maestro di cappella* in Cerignola, but by late 1824 he had settled in Rome, where he composed oratorios. The first of his 11 operas, *Piglia il mondo come viene* (1825, Florence), was an instant success; his subsequent stage works, in the Bellinian mould, were sought by impresarios at home and abroad. All but three were produced between 1825 and 1829. He owed much of his subsequent fame to the soprano Fanny Tacchinardi, whom he married in 1830. She sang in many of his operas, but Persiani's most famous opera, *Ines de Castro* (1835, Naples), was a vehicle for Malibran. His last opera, *L'orfana savoiarda* (1846, Madrid), was a fiasco. In 1847 he was named impresario of the Royal Italian Opera in Covent Garden, London, but because of competition with Verdi's *I masnadieri* at the Haymarket, his season was a failure. The couple moved to Paris; he ended his career as a singing teacher.

The music of *Ines de Castro* is structured in the Donizetti style, with four-part arias ending in virtuoso cabalettas. The vocal style is very difficult; the role of Ines has a range of over two octaves. Like many of its contemporaries, the opera ends with a mad scene and death.

MARVIN TARTAK

Persichetti, Vincent (*b* Philadelphia, 6 June 1915; *d* Philadelphia, 14 Aug 1987). American composer, educator and pianist. At the age of five he enrolled in the Combs Conservatory (Philadelphia), where he studied the piano, organ and double bass; he also studied theory and composition with Russell King Miller, his most influential teacher. While in high school, he acquired professional experience performing on the radio, in churches and in recital. After graduating from Combs (BMus 1935), he served as head of its theory and composition departments while studying the piano with Samaroff and composition with Nordoff at the Philadelphia Conservatory (MMus 1941, DMus 1945), and conducting with Fritz Reiner at the Curtis Institute. In 1941 he was appointed head of the theory and composition departments at the Philadelphia Conservatory. He joined the faculty of the Juilliard School in 1947, where he became chairman of the composition department (1963) and of the literature and materials department (1970). From 1952 he also served as director of publications for Elkan-Vogel.

Persichetti's prodigious musical output exemplifies a principle that was also fundamental to his teaching and theoretical writing: the integration into a fluent working vocabulary of the wealth of materials placed at a composer's disposal by the expansion of musical language over the course of the 20th century. Drawing on a wide range of expressive possibilities, from simple diatonicism to complex atonal polyphony, Persichetti produced an array of works whose varied moods, styles and levels of difficulty bewildered those who sought an easily identifiable musical personality or a conventional chronological pattern of development.

Despite Persichetti's precocious attainment of compositional fluency, his early works show the influence of Stravinsky, Bartók, Hindemith and Copland; not until the 1950s did he truly achieve his own distinctive voice. Within that decade alone, however, he produced nearly 50 compositions, among them some of his finest and most frequently performed works. During this period he also developed a formal design particularly well suited to his creative temperament. This formal concept, in which a series of short sections, usually based on a single theme, is integrated into a large formal structure, underlies the Concerto for Piano–Four Hands, the Symphony no.5, the Piano Quintet, the Piano Sonata no.10 and the String Quartet no.3, all of which are among Persichetti's most important compositions.

Persichetti himself identified two main currents within his creative disposition: one 'graceful' and the other 'gritty'. Beyond this, his music is characterized by lucid textures, sparse gestures, epigrammatic forms, a fondness for pandiatonic and polytonal harmony, a playful rhythmic vitality and a pervasive geniality of spirit. Like that of Mozart and Ravel, Persichetti's music often suggests the innocence and childlike joy of pure musical creativity. Hence many works for beginners stand, with neither condescension nor apology, alongside more difficult compositions. The importance with which he regarded

his pieces for children is indicated by the fact that one of his most ambitious works, the opera *The Sibyl*, a harsh allegory based on the folktale *Chicken Little*, draws most of its thematic material from the *Little Piano Book*. *The Sibyl* was the 20th work in a series Persichetti called 'Parables', which he defined as 'non-programmatic musical essays about a single germinal idea'. He began the series in 1965, completing the 25th addition in 1986. Many of the 'Parables' are written for monophonic instruments and are based on motifs from other compositions.

Persichetti often 'cross-referenced' his own works explicitly, regarding his output as a sort of bibliography from which he could draw at any time. Perhaps the most important of his 'bibliographical' works is the collection *Hymns and Responses for the Church Year*, a contemporary hymnal with texts drawn from a variety of poetic sources, both traditional and modern. He returned to this collection frequently to borrow thematic material for compositions of many types and dimensions. His last complete work is a second volume of such hymns. Another quasi-religious work, which Persichetti often described as his most significant opus, is *The Creation*, a large oratorio on his own text, drawn from mythological, scientific, poetic and biblical sources.

Although Persichetti made substantial contributions to many musical genres, his piano works are worthy of particular mention. Comprising a sizable portion of his output, these provide a microcosmic representation of his work as a whole, while offering a comprehensive survey of contemporary piano techniques. Also important are his works for wind band, which reveal a natural affinity for the medium. The Symphony no.6 has become a staple of the band repertoire.

Persichetti's many works of intermediate difficulty, his ecumenical attitude regarding contemporary compositional techniques and his warm, engaging and witty personal manner made him a favourite on American college campuses, where he was frequently invited as a guest lecturer. Among his many honours and awards are three Guggenheim Fellowships, two grants from the National Foundation on the Arts and Humanities and a grant from the National Institute of Arts and Letters, of which he was a member from 1965. Many of his works were commissioned by the country's leading orchestras and institutions. His writings include the monograph *William Schuman* (with F.R. Schreiber, New York, 1954) and *Twentieth Century Harmony* (New York, 1961).

Persimfans [Pervïy Simfonicheskiy Ansambl' bez Dirizhyora] (Russ.: 'First Conductorless Symphony Ensemble'). Moscow orchestra active from 1922 to 1932. *See* MOSCOW, §3.

Persinger, Louis (*b* Rochester, IL, 11 Feb 1887; *d* New York, 31 Dec 1966). American violinist, pianist and teacher. He had early lessons in Colorado, appearing in public at the age of 12. His main studies were at the Leipzig Conservatory (1900–04) under Hans Becker (violin), Carl Beving (piano) and Nikisch (conducting), who described him as 'one of the most talented pupils the Leipzig Conservatory ever had'. He then settled in Brussels for three years, combining studies under Ysaÿe with concerts in Belgium and Germany and two summers' coaching from Thibaud. Returning to the USA, he made his début on 1 November 1912 with the Philadelphia Orchestra under Stokowski, followed by many engagements with orchestras. In 1914 Nikisch invited him to become leader of the Berlin PO and in 1915 he became leader of the San Francisco SO. Two years later he resigned to form his own string quartet and to direct the Chamber Music Society of San Francisco (1916–28), where he began his teaching career. One of his earliest pupils was Yehudi Menuhin, whose family followed Persinger to New York in 1925. An accomplished pianist, he was the accompanist for Menuhin's first New York recital in 1926 and on his American tour in 1928–9. On his 75th birthday Persinger gave a recital at the Juilliard School, playing half the programme on the piano and half on the violin.

Persinger taught at the Cleveland Institute of Music (1929–30), and in 1930 succeeded Auer at the Juilliard School, where he taught the violin and chamber music until his death. Among his pupils were Isaac Stern, Ruggiero Ricci, Guila Bustabo and Camilla Wicks. He said that his unorthodox teaching method was 'based on keeping a child's interest, in sensing what might be amusing or arresting to him, and in using as few pedantic words as possible. I teach through the sound of the instrument'. Menuhin wrote that Persinger 'has done perhaps more than anyone else to establish a genuine American school of violin playing'. He served as a member of the jury in the Queen Elisabeth and Wieniawski competitions, and published transcriptions and editions of violin music.

BORIS SCHWARZ

Persoens [Persones], **Josquino** (*fl* 1563–8). Flemish composer, active in Austria and Italy. He entered the service in Brussels of Margaret of Austria, Regent of the Low Countries and wife of Ottavio Farnese, Duke of Piacenza and Parma, on 5 August 1563 at a monthly salary of 3 scudi. He was summoned to Italy to the court of Ottavio at Parma and was a member of the musical establishment there from 23 September 1563 until the end of March 1568. During this time he studied with Cipriano de Rore whose influence is reflected in stylistic and expressive aspects of Persoens's madrigals. It is worth noting that Rore was also at the court of Margaret at Brussels before going to Parma. Persoens's *Libro primo de' madrigali a quattro voci* (Parma, 1570[28]) consists of 23 pieces, including two ascribed to Jean d'Arras, another Fleming in the service of the Parma court from 1566. The dedication to the Duke of Parma states that the compositions are 'the first fruits of a plant which has grown with the nourishment of the sweet dew of the immortal Cipriano Rore'. A manuscript copy of a mass for six voices has been attributed to him by Vander Straeten and Eitner.

FRANCESCO BUSSI/ LAVERN J. WAGNER

Persoit [Persois], **Jean Pierre Marie** (*b* ?Mirecourt, 1782–3; *d* after 1854). French bowmaker. He was one of the first bowmakers (if not the first) to be hired by the young J.B. Vuillaume; he seems to have worked in this studio for at least 15 years (1823–41 according to Millant; 1828–43 according to Vatelot). It nevertheless remains difficult to recognize his work under the Vuillaume stamp. His best bows, especially those with octagonal sticks, are remarkably close to the Tourte style, though there are small but telling differences: the octagonals are not so sharply planed; the heads are rather more squared; the frogs are more solid and with shallower throats; and the distinctive buttons have unequally wide bands which cover most of the ebony. Persoit's round-shafted bows are more personal and generally bulkier than the Tourte ideal. Most are also slightly short. His work is only rarely seen today but much appreciated. His brand PRS is stamped on the stick under the frog and under the lapping, occasionally as

many as three times, although sometimes not at all. It is possible that Persoit left Paris after 1854 either to retire or to be cared for.

JAAK LIIVOJA-LORIUS

Person, Gobelinus [Persona] (*b* Paderborn, 1358; *d* monastery of Böddeken, nr Paderborn, 17 Nov 1421). German historian, theorist, cleric and reformer. He was first educated at Paderborn. In 1384 he travelled to Italy, where he studied theology and canon law and held several posts at the papal court under Urban VI. In 1386 he was ordained priest at Genoa and in 1389 he returned to Paderborn. In 1405 he was pastor in Warburg, and in 1410 court chaplain to Bishop Wilhelm von Berg of Paderborn; he was made canon in 1411, and in 1416 he became deacon of St Marien, Bielefeld. In 1418, because of poor health, he retired to the Augustinian monastery of Böddeken and attempted to reform its greatly declining discipline.

Person is known principally as a historian. His *Cosmodromius*, a history of the world, is valuable as a chronicle of Paderborn, particularly for the years 1347–1418; his life of St Meinolf, canon of Paderborn Cathedral and founder of the Böddeken monastery in the first half of the 9th century, is also valuable as a historical document. Person is said to have prepared in March 1417 a book 'for the Ordinary of the Divine Office and Ceremonials', now lost. In his treatise *Tractatus musicae scientiae* (formerly *D-Hs* Realkat. ND VI 4582, lost in World War II), completed in 1417, he presented in nine chapters a conventional treatment of the terminology and the use of modes in plainchant (he also complained about irregularities in the church's musical tradition). He defined music as 'an art that proportionally judges the intervals and consonances of voices' (Müller, 180; see also Yudkin, 66) and, following Isidore of Seville (*Etymologiae* iii.19), divided music into three parts: harmonic, organic and rhythmic. Person also discussed tone-syllables, solmization and mutation, and compositional techniques within the modes (tones). The treatise does not contain musical examples, but in the source it was followed by a tonary in a different hand illustrating part of its contents.

GORDON A. ANDERSON/C. MATTHEW BALENSUELA

Persones, Josquino. *See* PERSOENS, JOSQUINO.

Persuis, Louis-Luc Loiseau de (*b* Metz, 4 July 1769; *d* Paris, 20 Dec 1819). French composer and conductor. He spent his early childhood in the provinces, where he was educated by his father, himself a composer and choirmaster at the cathedrals of Angers and Metz. As a young man Louis-Luc was a violinist in the Metz orchestra and then tried his luck in Paris, arriving there in 1787 on the eve of the Revolution. He played in theatre orchestras, first at the Montansier and then at the Opéra. In 1805 he became chorus master, stage director and, in 1810, conductor of the Opéra; at the same time he was principal assistant conductor in the emperor's orchestra. He had also been appointed professor of singing at the Conservatoire when it was founded in 1795, but he left in 1802 when reform measures involved the abolition of a number of posts. In 1818, while acting as administrator at the Opéra, he also helped to build up the company at the Théâtre Italien, under the direction of Paer.

Persuis's works were mainly for the stage and included operas, *opéras comiques*, ballets and occasional dramatic works. He often wrote in collaboration with other composers; with Jean-François Le Sueur he composed *L'inauguration du temple de la Victoire* and *Le triomphe de Trajan* (both 1807). The latter, a propagandist piece written to glorify Napoleon, was well attuned to the neoclassical tastes of contemporary audiences and was a huge success. Two of his other music dramas are notable examples of their time: *Fanny Morna, ou L'écossaise*, with its setting of landscaped gardens and weeping willows, marks a unique point in the history of the pre-Romantic sensibility; and *La Jérusalem délivrée* exemplifies the tendency of contemporary French opera to look back to medieval subjects. The work is weak in itself but opens with a remarkable overture which was to feature prominently in anthologies of French symphonic music under the Empire; it displays a force and originality for which the rest of Persuis's compositions does not prepare us. He was also prominent in the 19th-century revival of religious music, and from 1802 was a member of the Chapelle Royale, first as a director, then as *compositeur de la musique*. When the Bourbons returned to power Persuis was replaced by Plantade.

WORKS

STAGE

first performed in Paris unless otherwise stated

La nuit espagnole (oc, J. Fiévée), Feydeau, 14 June 1791

Estelle (oc, 3, Villebrune), National, 17 Dec 1793

Phanor et Angéla (oc, 3, Faur), Feydeau, July 1798

Léonidas, ou Les Spartiates (opéra, R.C.G. de Pixérécourt), Opéra, 15 Aug 1799, *F-Po*, collab. A.-F. Gresnick

Fanny Morna, ou L'écossaise (drame lyrique, 3, E. Favières), OC (Favart), 22 Aug 1799

Le fruit défendu (opéra, 1, E. Gosse), OC (Favart), 7 March 1800

Marcel, ou L'héritier supposé (oc, 1, Pixérécourt), OC (Favart), 12 Feb 1801

L'inauguration du Temple de la victoire (tragédie lyrique, 1, Baour-Lormain), Opéra, 2 Jan 1807, collab. J.-F. Le Sueur

Le retour d'Ulysse (ballet, 3, Milon), Opéra, 24 Feb 1807

JEAN MONGRÉDIEN/LAURINE QUETIN

Perth. City in Australia. Situated on the western seaboard, Perth, the capital of Western Australia, is one of the most isolated cities of its size in the world (its population was over one million in the late 1990s). Before the days of rapid communications its isolation hindered the development of a flourishing musical life. During the middle years of the 19th century, vocal music was the staple diet of what was then a British colony, there being little in the way of instrumental music because of the dearth of competent musicians.

In 1887 the colony's first orchestra, the Fremantle Orchestral Society, was established. It was not, however, until 1936 that the first firm foundations for the future development of professional orchestral music in Perth were laid when the Perth SO became the Australian Broadcasting Commission SO, later the West Australian SO. This has now grown to an 89-player orchestra which presents the state's principal orchestral series in the Perth Concert Hall, the leading music auditorium in Western Australia. The orchestra also plays in the pit of His Majesty's Theatre for the seasons of the Western Australian Opera Company (founded 1967) and the West Australian Ballet Company (founded 1952). The West Australian SO is funded by both the federal government and the West Australian state government.

Concerts in Perth range from large orchestral and choral concerts presented by the West Australian SO, usually with visiting international conductors and artists, through chamber music seasons promoted by Musica Viva, to numerous smaller events ranging from performances of Baroque music on original instruments to avant-garde or multi-arts productions of music written by Western Australian composers. The University of Western Australia figures strongly in the performances of 18th- and 20th-century music, while the Western Australian Conservatorium of Music has a national reputation for the quality of its jazz and music theatre productions. Since 1953 the University of Western Australia, together with the state government of Western Australia, has organized the annual Festival of Perth, in which music plays an important role. It is the longest established festival of its kind in Australia and balances the presentation of Western Australian musicians and ensembles with that of eminent international visitors.

Of growing significance in the musical life of Perth are performances by musicians who have recently migrated to Australia and who still practise the musical arts of their home country. In 1982 the Ethnic Music Centre (now the Kulcha) was established to support and promote the work of these musicians. More recently the organization Ab Music was established to provide support for the training of Australian aboriginal musicians and the dissemination of their work.

Music education in Perth during the 19th and early 20th centuries remained largely in the hands of private teachers. During the 1950s music as a class subject came to be accepted into the school system, and it is currently one of the listed subjects for the annual tertiary entrance examinations. Tertiary-level studies are available at the University of Western Australia, where students can elect to specialize in performance, musicology, composition or music education, or at Edith Cowan University, which offers performance and music education.

MARGARET SEARES

Perti, Giacomo Antonio (*b* Bologna, 6 June 1661; *d* Bologna, 10 April 1756). Italian composer. During his 60 years as *maestro di cappella* of S Petronio, Bologna, he achieved fame both as a composer of sacred music, opera and oratorio and as a teacher: such illustrious musicians as Giuseppe Torelli and G.B. Martini were among his pupils.

1. Life. At the age of nine he began to study music in Bologna with his uncle Lorenzo Perti and with Rocco Laurenti, from whom he learnt the rudiments of organ playing. He started to study singing in 1670 and the year after he took up humanistic studies with the Jesuits at S Lucia. In 1675 he began the study of counterpoint with his uncle and he later studied with Petronio Franceschini. In 1678 his first music to be performed, a mass, was given in S Tomaso al Mercato; two other works, a motet and a *Magnificat* (both for eight voices), date from that year. In 1679 he wrote his first operatic music – the third act of *Atide* – and the oratorio *S Serafia*. In 1680 he wrote a Mass in D with two trumpets (claimed by Martini to be the first of its kind), which was performed in S Sigismondo. In 1681 he was admitted as composer to the Accademia Filarmonica, where he was *principe* in 1687, 1693, 1697, 1705 and 1719, when he was made 'diffinitore perpetuo'. Several months later he went to Parma for further

contrapuntal studies with Giuseppe Corso (called Celano). Here, as is clear from a six-year correspondence with Celano, he decisively formed his church music style, especially that of the concerted masses and psalms of the 1680s and 90s. In 1688 he published his first opus, *Cantate morali e spirituali*, dedicating it to the Emperor Leopold I, who eventually rewarded him with a precious chain of gold. In the following year he was in Venice, probably for the production of his opera *La Rosaura*, and from there he applied for the vacant position of *vicemaestro di cappella* of S Petronio. He was unsuccessful, possibly because of the influence of G.P. Colonna, the *maestro di cappella* (during the famous dispute over the consecutive 5ths of Corelli, Perti had sided with Corelli against Colonna).

Perti was chosen to succeed his uncle Lorenzo as *maestro di cappella* of the cathedral of S Pietro in 1690. In 1696 he was called from there to be *maestro di cappella* of S Petronio, where he spent the rest of his life, except for a few short journeys to Florence, Rome (1703 and 1747) and Naples (1703). Simultaneously he held similar posts at S Domenico (1704–55, G.M. Alberti deputizing for him from 1734) and the Madonna di Galliera (1706–50). According to Martini he was offered a position at the court of the Emperor Leopold I in 1697 in succession to Antonio Draghi, but there is no other record of this. Because of financial difficulties at S Petronio, Perti began his career there without a fixed group of musicians. Until February 1701 musicians were hired only for the required festive occasions. With the restoration of the *cappella musicale*, however, the group was re-established with 24 regular musicians. It was enlarged for festive occasions (especially the patronal feast on 4 October) to as many as 153 in 1718 and 1719. In 1723 the regular group numbered 36, the highest number during Perti's term.

Perti enjoyed considerable fame and favour with several important personages, including Ferdinando III de' Medici, for whom he wrote church music and operas, which were staged at Pratolino, and the Emperor Charles VI, to whom he dedicated his op.2. In 1740 the emperor made him a royal councillor. His correspondence reveals a long-standing rapport with the Duchess Aurora Sanseverino of Piedimonte d'Alife, who was a member of a Bolognese family; he regularly sent compositions to her for use at her court. His correspondence also indicates that he was held in high regard by Fux, Caldara, Pasquini, Corelli and other influential musicians. Padre Martini held him in the highest esteem and included six examples of his contrapuntal music in his *Esemplare ossia Saggio fondamentale pratico di contrappunto* (1774–5). Among Perti's students were Torelli, Gabrielli, Pistocchi, Aldrovandini, P.P. Laurenti, G.B. Martini and F.O. Manfredini.

2. Works. For the musicians at S Petronio (discussed above) Perti wrote masses (consisting of Kyrie and Gloria only, with a few separate Credo settings), motets, psalms, hymns, antiphons and *Magnificat* settings, as well as instrumental music intended for the liturgy. Most of these are festive works in Bolognese-style counterpoint calling for strings and occasionally trumpets and other obbligato instruments, in addition to solo voices and choruses. There are also works in strict *a cappella* style or with simple basso continuo accompaniment. According to Gaspari, Martini divided Perti's sacred works into two halves: one was left to S Petronio, most of which is still extant, and one to S Lucia, most of which is lost. Many of the extant works are in Perti's own hand or in manuscripts that he carefully corrected. In many cases there survive not only scores but also parts, which reveal interesting continuo practices and revisions by Perti himself and others. A large group of separate *versetti* intended as substitutes for sections of the masses show the adaptability of the masses to occasions of varying degrees of splendour. They and especially the motets and psalms reveal Perti as a vocal composer of considerable skill, in complete command of his craft. He himself acknowledged that Luigi Rossi, Carissimi and Cesti inspired his melodic style. Similar qualities are obvious in his operas, oratorios and solo cantatas, which are characterized by melodic inventiveness, variety of form, the use of concerted solo instruments (especially trumpet and cello) and dialogues between voices and instruments with independent melodic material. He projected a treatise on counterpoint as his op.3, but it was never completed. His purpose as stated in the preface was 'to demonstrate with the greatest brevity and clarity possible the manner of applying all the principles of music to the modern style': this statement indicates his characteristic ability to adapt his well-founded musical skills to the changes of style that occurred during his long creative life.

ANNE SCHNOEBELEN (with MARC VANSCHEEUWIJCK)

Pertile, Aureliano (*b* Montagnana, nr Padua, 9 Nov 1885; *d* Milan, 11 Jan 1952). Italian tenor. He studied with Orefice in Padua and made his début at Vicenza in *Martha* in 1911. After further studies in Milan with Manlio Bavagnoli he began to attract notice in 1913–14 at the S Carlo, Naples, singing in *Madama Butterfly* and *Carmen*, and then at the Costanzi, Rome (1915–16), La Scala (1916) and at the Colón, Buenos Aires (1918). He achieved fame in 1922 for his performance in *Mefistofele* at La Scala under Toscanini, whose favourite tenor he then became. Still at La Scala, where he appeared every year until 1937, he scored notable successes as Lohengrin, Puccini's Des Grieux, Edgardo, Andrea Chénier, Canio, Radames, Riccardo, Don Alvaro and Manrico, and took the title roles in the premières of Boito's *Nerone* (1924) and Mascagni's *Nerone* (1935). He sang until 1946, in the later years appearing frequently as Otello. From 1945 he taught at the Milan Conservatory. His voice was not particularly powerful and the tone, rather thick in the middle register, took on nasal and guttural inflections. It became smooth and mellifluous, however, in lyrical moments as well as vibrant and incisive in dramatic ones.

Pertile stood out because of his fine enunciation, variety of expression and unusual interpretative gifts, as can be heard in recordings from his best years (1922–32), including solos from *Andrea Chénier* and *Adriana Lecouvreur*, and Radames in a complete *Aida* from La Scala. At his peak Pertile was widely held, in Italy and Argentina, the equal of the most famous tenors of the period. Less fortunate in the USA (he sang at the Metropolitan only during the 1921–2 season), he was very popular at Covent Garden (1927–31), especially as Manrico, Radames and Canio.

Peru, Republic of (Sp. República del Perú). Country in South America. It is situated on the Pacific western seaboard and covers an area of 1,285,216 km², bordered by Ecuador, Colombia, Brazil, Bolivia and Chile. The country declared independence from Spain in 1821 and achieved full independence in 1824. The legal existence of Amerindian communities was recognized in the constitution after 1920. The population of 25·66 million (2000 estimate) is predominantly Amerindian and mestizo, and the original Inca language of Quechua is spoken by *c*16·5% as the second official language, Spanish being the first. Aymara is spoken by some 3%, mainly in the Southern Andes.

I. Art music. II. Traditional and popular music.

I. Art music

1. Colonial period. 2. After independence.

1. COLONIAL PERIOD. Peru, the administrative centre of practically all Spanish South America from the Spanish conquest (1526) until the 18th century, occupied with Mexico the most important place in the Spanish colonial empire. During the colonial period Lima (the 'City of Kings') and Cuzco, the city of the Incas, developed an active cultural life. At Cuzco music was cultivated at the cathedral and the Seminario de S Antonio Abad (founded 1598), where polyphonic music and instrument playing were taught. The music archive of the seminary contains a rich collection of post-1600 colonial manuscripts of Spanish and Peruvian works, including a large number of polyphonic *villancicos*, *tonadas*, *jácaras*, liturgical works with and without ascription, and dramatic works such as *loas*, *comedias* and *sainetes*. There is evidence that as early as 1553 the first and second books of Morales's masses (Rome, 1544) were in use at Cuzco, with other volumes of motets and *Magnificat* settings. Gutierre Fernández Hidalgo (*c*1547–1623), the most substantial composer in 16th-century South America, held the post of *maestro de capilla* at Cuzco for a few years before moving permanently to Sucre in Bolivia.

Missionary work was keenly pursued in Peru, as in the other Spanish colonies. The Franciscan Juan Pérez Bocanegra included in his *Ritual formulario e institución de curas* (Lima, 1631) a four-part polyphonic piece titled *Hanacpachap cussicuinin*, to a text in the Quechua language, to be sung 'in processions when entering the church'; it is the earliest example of polyphony printed in the New World. Fray Gregorio Dezuola (de Zuola) (*d* 1709), active at the convent of S Francisco in Cuzco, left a book known as the Dezuola Manuscript, which contains 17 songs, mostly polyphonic, with Spanish texts (with the exception of a 'Credo romano'). Only two items of the collection have been ascribed; one to Francisco Correa de Arauxo, the other to Tomás de Herrera, who was appointed organist of Cuzco Cathedral in 1611. Herrera's piece is a short song, *Hijos de Eva tributarios*, for two altos and tenor, and is the earliest known example of vernacular polyphony in Peru.

Lima, the capital of the viceroyalty of Peru, developed a musical life unequalled by any other South American city. The cathedral (consecrated 1572) employed many well-paid singers and instrumentalists and attracted several famous *maestros de capilla*. The post was created in 1612 and its responsibilities included conducting the orchestra and the choir, the composition of works for all occasions, the teaching of polyphony, financial administration and acting as intermediary between the archbishop, the chapter and the musicians. Tomás de Torrejón y Velasco was *maestro de capilla* from 1676 to 1728, and his works (extant at Lima and Cuzco) were performed throughout Spanish America. His fame also rests on his opera *La púrpura de la rosa* (1701, libretto by Calderón de la Barca), the first produced in the New World, which indicates the extent of the *maestro de capilla*'s involvement in the whole musical life of the city. His successor, the Italian-born Roque Ceruti, who went to Peru primarily as the director and conductor of the viceroy's private chapel and orchestra, exerted a decisive influence by introducing the bel canto style. Another Italian musician associated with Lima Cathedral, Andrés Bolognesi, active at the turn of the 19th century, was responsible for organizing and developing local opera.

The first native Peruvian composer of church music was José de Orejón y Aparicio, considered the most talented Peruvian musician of his time. He was appointed organist of the cathedral in 1742, and in 1760 he succeeded Ceruti as the acting choirmaster. Among his many works his *Passion for Good Friday* for double chorus and orchestra and a solo cantata *Mariposa de sus rayos* reveal his inventive treatment of melody and harmony. Extant works of Juan Beltrán, Melchor Tapia and Bonifacio Llaque, all cathedral musicians, indicate that church music declined at Lima during the early 19th century.

2. AFTER INDEPENDENCE. The splendour of colonial musical life had no counterpart in the years of the struggle for independence (1820–80), during which operas and salon music predominated. Church music continued to be written in a secularized Romantic style, as can be seen in some works by José Bernardo Alcedo (1788–1878), composer of the Peruvian national anthem.

At the end of the 19th century Peruvian composers, who had become more technically competent, began to turn to Peruvian folklore for inspiration. Immigrant musicians were the first to treat Peruvian subjects in works written within the Romantic tradition, such as the successful opera *Atahualpa* (1875) by the Italian Carlo Enrico Pasta (1817–98) and the *Rapsodia peruana* by

Claudio Rebagliati (1843–1909). This Romantic nationalism was adopted by José María Valle Riestra (1859–1925), educated in London, Paris and Berlin, in his opera *Ollanta* (1900), and by Luis Duncker Lavalle (1874–1922), who wrote piano pieces in a semi-popular style inspired by the most characteristic mestizo folk-music genres. The various generations of early 20th-century composers developed musical nationalism within concurrent European styles. Music of the Quechua-speaking Indians, which is pentatonic and displays distinctive rhythmic features, became a source of national identity. The Amerindian style is found in varying degrees in the works of Daniel Alomía Robles (1871–1942), Manuel Aguirre (1863–1951), Luis Pacheco de Céspedes (*b* 1895), Carlos Sánchez Málaga (1904–95) and many others. Theodoro Valcárcel (1900–42), the most prolific and imaginative Peruvian composer of his generation, at first adopted an impressionistic style and later evolved a refined form of nationalism.

With the arrival in Peru in the 1920s and 30s of the European composers and musicologists Andrés Sas (1900–67) and Rudolf Holzmann (1910–92), Peruvian art music was revitalized. Sas and Holzmann taught practically all the Peruvian musicians of that generation, and made available in Peru a much-needed solid academic training. Holzmann promoted the study of contemporary composition techniques and aesthetic attitudes, particularly the music of the Second Viennese School and of Hindemith. As the head of the musicological service of the National School of Folk Music and Dance in Lima, Holzmann encouraged research into colonial music and was active in the study of Peruvian folk and traditional music. Sas concentrated his studies on the indigenous music of his adopted country and specialized in Peruvian pre-Columbian and colonial music.

An awareness of contemporary international currents appears in the works of younger composers such as Enrique Iturriaga (*b* 1918), Celso Garrido-Lecca (*b* 1926), Francisco Bernado Pulgar Vidal (*b* 1929), Enrique Pinilla (1927–89) and Alejandro Núñez Allauca (*b* 1931) in their use of atonal expressionism, neo-classicism or serialism. Iturriaga has become a leading figure in modern Peruvian composition; he has gradually turned from large nationalist works to dodecaphony. The outstanding figures of the Peruvian avant garde include César Bolaños (*b* 1931), Edgar Valcárcel (*b* 1932), José Malsio (*b* 1924), Leopoldo La Rosa (*b* 1931) and Pozzi Escot (*b* 1931). Most of those named have had links with foreign music institutions: Bolaños and Valcárcel have been Fellows of the Di Tella Institute of Buenos Aires; Garrido-Lecca spent two years at the Columbia–Princeton Electronic Music Center, USA; Pozzi Escot has taught for several years at the New England Conservatory of Music and at Wheaton College, USA; Pinilla studied at the Hochschule für Musik in Berlin, and Iturriaga received lessons in Paris from Arthur Honegger. In the late 1970s and 80s a number of younger composers emerged on the Peruvian scene revealing a dynamic, eclectic production. The most notable figures at that time were Walter Casas Napán (*b* 1939), Pedro Seiji Asato (*b* 1940), Teófilo Alvarez (*b* 1944), Douglas Tarnawiecki (*b* 1948), Luis David Aguilar (*b* 1950) and José Carols Campos (*b* 1957).

II. Traditional and popular music

The varieties of traditional and popular music in Peru correlate with different social groups and regions. The musics of indigenous communities and of mestizos of the Andean highlands represent the two most prominent style complexes. *Criollos* (creoles, i.e. American-born of Spanish descent, generally of European heritage), Afro-Peruvians on the Pacific coast and lowland indigenous groups in the Amazonian rain forest perform different styles. The audiences for recent urban-popular genres tend to cross regional boundaries but are still often delineated by ethnicity and class.

1. DOCUMENTATION AND COLLECTIONS. Information about pre-Columbian Peruvian music comes from 16th- and 17th-century chronicles, church documents and archaeological instruments and iconography (*see* INCA MUSIC). The archaeological record is strongest for pre-Columbian coastal cultures. Museum collections in Lima (e.g. Museo Nacional de la Cultura Peruana), North America and Europe house instruments and ceramics that depict instruments or musical activities. The most important sources for highland music and dance in the pre-conquest and early colonial periods include the chronicles of Felipe Guaman Poma de Ayala who discusses indigenous music, dances and festivals and provides illustrations and song texts; Guaman Poma also makes mention of, or illustrates, early colonial musical practices and instruments.

Don Baltasar Jaime Martínez Campañón y Bujanda documented and provided illustrations of costumed dances, harp and violin in Trujillo on the north coast for the second half of the 18th century. There are a few scattered references to highland and coastal music in travellers' accounts during the 18th and 19th centuries, but indigenous and mestizo music is poorly documented for this period. Victor Guzmán Cáceres and Daniel Alomía Robles collected *criollo*, mestizo and indigenous

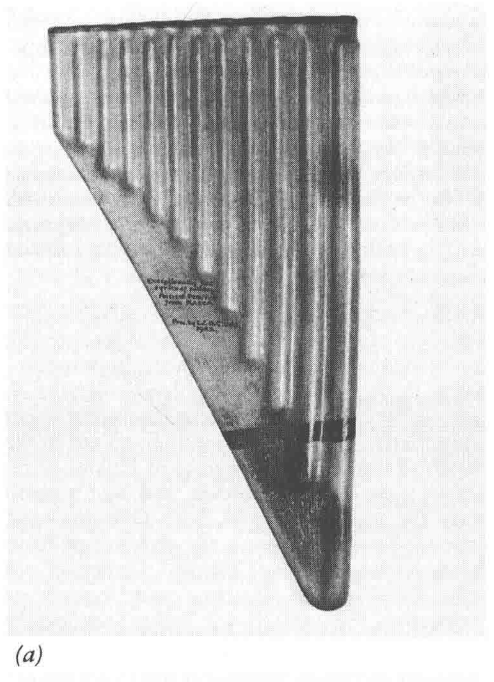
music in the early 20th century but their material remains largely unpublished. The Harcourts worked in Peru, Ecuador and Bolivia between 1912 and 1924 and produced the first major study of Andean music and instruments (1925). In more recent years a number of substantial general studies and printed collections of pre-Columbian, indigenous, mestizo, and *criollo* music and song texts have been published (e.g. *see* STEVENSON, ROBERT MURRELL).

The Harcourts made early cylinder recordings, 168 of which were published in transcription (1925). 190 field recordings made by Isabel Aretz in 1942 are housed in the Instituto Interamericano de Etnomusicología y Folklore (Caracas). There is a collection of Andean music in the Archives of Traditional Music at Indiana University. Sound, photo and video documentation of traditional Peruvian music and dance is now centred at the Archivo de Música Tradicional Andina at the Pontificia Universidad Católica del Perú in Lima (catalogue, 1995); archive recordings are being reissued on the US based Smithsonian Folkways label.

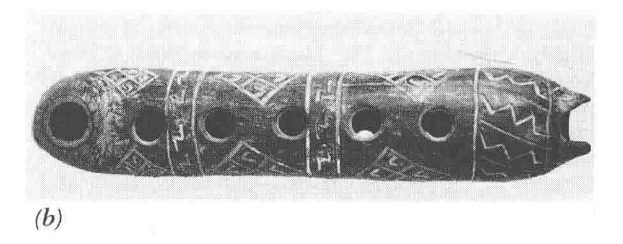
2. PRE-COLUMBIAN MUSIC. Wind, drums, and ideophones were the only instruments used in the Peruvian highlands and on the coast before the arrival of the Spanish in 1532 (fig.1); there is little information about pre-Columbian music of the Peruvian Amazon. Many of the prominent types of pre-Columbian instruments were still used in performance in the late 20th century, although terminology, tunings and materials of construction have sometimes changed.

There is archaeological evidence for vertical notched flutes for the coast and highlands (fig.1*b*). Now known as KENA, as well as by other local names, end-blown notched flutes were known in the highlands as *pinkullu* (also *pincollo*, *pingollo*) in the pre-Columbian period. Archaeological ceramic whistles, ocarinas and whistle jars indicate that the technology for duct flutes existed before the Spanish conquest, yet there is no early evidence for pre-Columbian vertical duct flutes. One of the most common indigenous instruments, end-blown duct flutes (often called *pinkullu* or *pinkillu*) may have been modelled on the European recorder during the colonial period. An extant example of a transverse flute with two finger-holes from coastal Moche culture has been found.

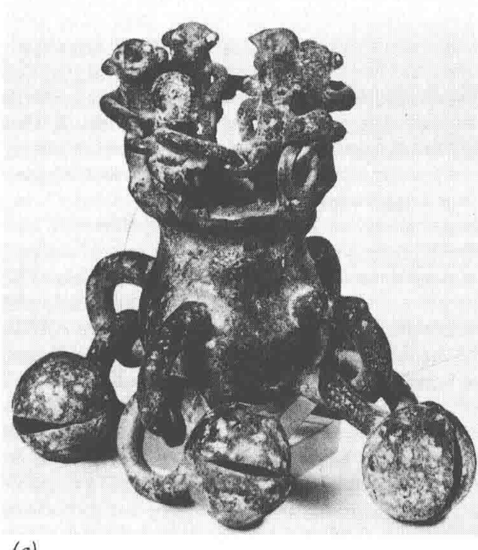
Archaeological panpipes from the coast, especially from Nasca culture (see fig.1*a*), have been studied by a number of scholars. Findings indicate that high-pitched tunings were favoured, that single-row instruments were predominant, that intervals both smaller and larger than European semitones were included, and that panpipes were sometimes played in consort with two sizes tuned in octaves. The 16th-century chronicler Garcilaso describes panpipe performance in the southern Peruvian-Bolivian highlands involving double-row interlocking practice, with different parts (*tiple*, tenor, contralto, *contrabajo*) suggesting that different sized panpipes may have been played in consort to create parallel polyphony as in the late 20th century. PANPIPES were called *antara*, and *siku* (or *sico*).



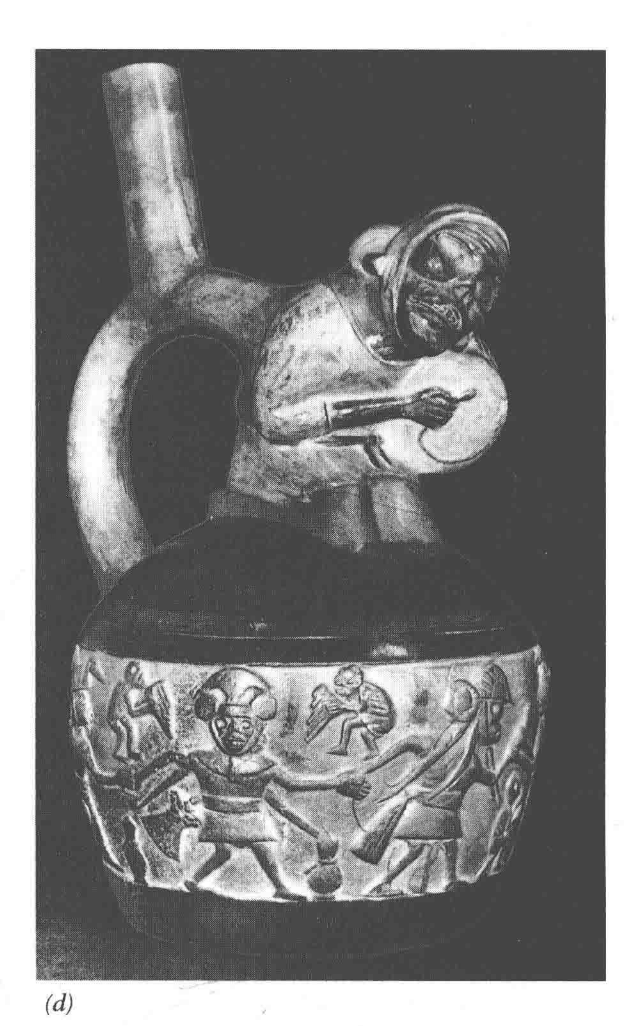
Trumpets were the other main pre-Columbian wind instruments. Curved and straight trumpets without stops were made of ceramic, metal and conch shells, while conch-shell trumpets are depicted as important in Inca culture by Guaman Poma. Ceramic single-headed drums have been found on the coast. Drawings by Guaman Poma show a variety of different sized double-headed drums. Interestingly, he shows women playing both large and small double-headed drums. In the late 1990s the small double-headed *tinya* is the only instrument played by indigenous women in the Peruvian Andes. Leg rattles are also depicted by Guaman Poma.



From chroniclers' and early missionaries' accounts it is clear that in Inca society music was associated with monthly festivals, and was closely bound to indigenous religion and agriculture. Garcilaso suggests that masked dances were indigenous to Cuzco.



3. HIGHLAND INDIGENOUS MUSIC. Quechua, the language of the Inca empire and a lingua franca favoured by early colonial missionaries, is spoken throughout most of the Peruvian sierra and among highland migrants in coastal cities. In Peru, Aymara (the second most prominent Andean Amerindian language) is largely restricted to the *departamento* of Puno: in the province of Huancané on the northwest side of Lake Titicaca and in Chucuito province on the south side, with both Quechua- and Amyara-speaking communities in the province of Puno located between Huancané and Chucuito. Academics and state institutions have used 'Quechua' and 'Aymara' as cultural categories for convenience; indigenous groups have sometimes strategically used these concepts as the basis of political ethnic groupings. Notions of a Quechua or Aymara culture or 'nation', however, tend to be alien to the discourse of rural villagers who more frequently define their identities in specific community and regional terms. The main generalizable musical difference between Quechua- and Aymara-speaking communities is that vocal music is usually central in the former and relatively unimportant in the latter. Otherwise, indigenous Andean music is best understood in regional terms.



Spanning regional and ethnolinguistic differences, certain aesthetic preferences, musical practices and stylistic features are common to indigenous Andean music. The music tends to involve short sections of between two and four phrases which are repeated in various ways: *AABB*, *AABBCC*, *ABAB*. There is often a good deal of motivic repetition between sections and a single, short piece will often be repeated for a long time during festivals. Scales vary from three to seven notes according to region, and to genre within the same region, but often include an initial minor 3rd. Melodic shape tends to be either undulating or descending, or both. There is a preference for dense timbres involving complex overtone structures and for relatively wide intonational variation for any given pitch. There is also a preference for dense, overlapping textures within the overall approaches of wide unison, heterophony and parallel polyphony for group performance. High tessitura in vocal, wind and string music is favoured, with all flutes except panpipes being overblown and young women being the preferred singers. Most indigenous music is in duple metre and involves syncopated rhythms. A prototypical Andean rhythmic feel, basic to genres such as the HUAYNO, *carnavale*, *hyalas*, *kh'ajelo* and others, subtly fluctuates between a quaver and two semi-quavers figure and a quaver triplet. With the exception of the small double-headed *tinya* drum, indigenous instrumental performance is restricted to males.

In the Lake Titicaca region of Puno, various panpipe styles are heard during the dry season (April to October). The double-row *sikuri* style is prominently performed by

(a)

(b)

(c)

(d)

1. *Pre-Columbian instruments: (a) clay panpipes (Nazca period, 400–1000* CE), Pitt Rivers Museum, Oxford; (b) notched flute of clay (Chancay period, 1300–1438 CE), Museum für Völkerkunde, Leipzig; (c) copper bells surmounted by dancing figures (Mochica period, 400–1000 CE), private collection; (d) whistling pot in the form of a dead man beating a drum above a group of dancing figures accompanied by panpipes (Mochica period), Linden-Museum, Stuttgart

community ensembles ranging from 12 to over 50 players for public festival dancing and weddings. As with most panpipe traditions in this region, *sikuri* performances involve paired musicians performing their individual panpipe rows in interlocking fashion. Communities and micro-regions in the Lake Titicaca area use specific types of consorts with panpipes cut to different sizes to render parallel polyphony. A common style diffused from the Aymara district of Conima after the 1920s involves nine panpipe sizes (three groups of three) tuned in parallel 3rds, 5ths and octaves. Other consort styles render parallel 4ths, 5ths, and octaves or simply parallel octaves. A variable number of panpipe players accompany the group with large double-headed drums (*bombos* or *wankara*); the rhythms played are modelled on the rhythms of a given melody. As common for much of the music in the southern area, *sikuri* music is standardly in *AABBCC* form in duple metre and involves a good deal of syncopation. Several scales are used; six- and seven-note series with a minor 3rd and flattened 7th are common. Among Aymara communities on the north shore of Lake Titicaca, several single-row panpipe styles are still occasionally performed, as are the huge double-row *chiriguano* panpipes in three parallel octaves without

2. *(a) Baile de la Honda dancers accompanied by pinkullo (fipple flute) players, Mariangani, Cuzco; (b) close-up of a pinkullo player*

drums during May in Huancané. In the province of Lampa, Quechua communities perform double-row *ayarachis* panpipes in parallel octaves accompanied by thin *caja* drums. Both Aymara and Quechua communities south of the lake in Puno, Monquegua and Tacna perform the *sikumoreno* style. The double-row *sikumoreno* panpipes are cut to produce two or three parallel octaves. With their faster tempos, Western snare and base drum accompaniment, and more staccato blowing technique, *sikumoreno* ensembles have a more sprightly quality than most other panpipe styles. In the same region, notched end-blown flutes are also played to accompany specific festival dances during the dry season. Known by a variety of dance-specific names such as *chokela* or *pulipuli*, these cane flutes are approximately 55 cm in length and have six top finger-holes and a thumb-hole. They are played in unison in large ensembles with or without drum accompaniment, with the flutes typically overblown to produce the high ranges preferred by indigenous Andeans.

The *pinkillu* (or *pinkullu*) and *tarka*, two end-blown duct flutes, are the primary indigenous instruments played during rainy season festivals in the Titicaca region. Performed in unison to accompany circle dances, *pinkillu* music is in *AABBCC* form with a six- or seven-note scale. Some six to 20 *pinkullu* players are accompanied by almost an equal number of large, deep sounding, indigenous snare drums (*cajas*). *Tarkas* are carved wooden duct flutes with six finger-holes and a mouthpiece fashioned to split the octave partially and produce a reedy sound. Performed in consorts of between two and four different sizes in parallel 4ths, 5ths, and octaves, they are accompanied by Western snare and bass drums which play syncopated patterns mirroring the given melody. *Tarka* music in *AABBCC* form is typically pentatonic.

The other instrumental ensembles of the southern region include 10 to 15 transverse cane or wooden flutes cut for parallel 4ths, 5ths and octaves. The transverse flutes are supported by snare and bass drums to accompany specific costumed dances at any time of year. Valveless animal horn or metal trumpets (*pututus*) are played during the Carnival season in Puno, usually as drones within a flute ensemble or as noise makers during celebration. CHARANGO, a small guitar variant with five duple or triple courses, are used by young indigenous men to perform the *kh'ajelo* genre for courting in the Titicaca area. A number of *charangos* will be performed in unison for dancing, the young men forming half a circle facing the young women who sing in responsorial fashion to the men. Beginning in the 19th century, brass bands have become increasingly important in indigenous communities throughout Peru.

The non-specialized, communal-participatory character of music-making in the Titicaca region has influenced musical form. Music is primarily learnt by playing within public festival performance. There may be a 'rehearsal' the night before a festival but this is usually a session for composing new pieces and is attended only by the most dedicated community musicians. Many community members only join the group during the festival. Motivic repetition, long repetition of any given piece (a piece lasting a minute is typically repeated 20 to 30 times), and stock genre formulae help people to rapidly learn the new compositions during performance. An ensemble's new compositions are stressed in Aymara communities in Puno as well as in Quechua communites in other regions such as Ayacucho. Elsewhere, the same music may be used annually as an index of a particular event.

Indigenous music in northern Puno and the departments of Cuzco, Apurimac, north-eastern Arequipa, Ayacucho, Huancavelica and parts of Junín form another musical area. Here panpipe performance is rare. Several large end-blown notched or duct flutes are played solo or in unison for agricultural ceremonies with or without drum accompaniment during the rainy season. A long wooden *pinkullu* (a duct flute approximately 1·5 metres long) is played for agricultural and livestock rituals in Arequipa with *tinya* (small drum) and in southern Cuzco without drum accompaniment. In southern Cuzco this same large *pinkullu* is played during the ritual battles that take place between communities during the rainy season. Smaller *pinkullo* and *tinya* are played in pipe-and-tabor fashion to accompany communal agriculture work in Junín (fig.2). Informal, solo performance of the smaller *kena* (notched flute, approximately 36 cm long) is common in this region and in northern Peru, and *kenas* have been incorporated into festival dance ensembles comprising violins or mandolins, harp, accordion and drums for performance at any time of year. Ensembles comprising one to three transverse wooden or cane flutes playing six- or seven-note descending melodies in unison with snare and bass drums are common for festival dancing throughout the year in Cuzco and Apurimac. In Cuzco village headmen

play conch-shell trumpets to herald their presence to district authorities during festivals. Long valveless, side-blown wooden or cane trumpets (1·5 to 3 metres in length or more, e.g. *clarín*, *llungur*) are played for agricultural ceremonies in Junín and Huancavelica as well as in locations in northern Peru such as Cajamarca. In Apurimac, Ayacucho, Huancavelica and Junín, circular cow-horn trumpets (*wakrapuku*) are performed during village bullfights. In Junín, one or two *wakrapuku* are used in combination with *tinya*, violin and female singing in tritones for the marking of cattle during the feast of St James (25 July).

Music for strings is highly developed and more widespread than music for indigenous wind instruments in this musical area. Diffused to Andean peoples early in the colonial period by missionaries, the diatonic harp and violin are primary instruments performed solo, used together in duos, or as parts of larger ensembles to accompany singing and dance (fig.3). In keeping with indigenous aesthetics, the violin is heavily bowed, creating a dense sound, and often played in its higher ranges with slides and other ornaments. In Ayacucho and Huancavelica harp-violin duos are used to accompany the famous scissors dance (*danzaq*), a highly-specialized, esoteric tradition. Solo and group *charango* performance, primarily by young indigenous men for courting, is found in pockets throughout this musical area. Indigenous *charango* performance involves the strumming of single-line melodies, sometimes punctuated by two-finger chords, against the backdrop of open thin metal strings, producing the dense buzzy sound favoured by indigenous Andeans.

From the departments of Ancash and Huanuco to the north, string and brass bands are prominent. Pipe-and-tabor performance with *pinkullu* or a single-row panpipe (e.g. *antara*) is more common than in southern Peru. In Cajamarca, the *antara* is a single-row panpipe tuned to pentatonic scale for the solo performance of mestizo genres like the *huayno* and *triste* in informal contexts. Several *kenas* performed with snare drum and cymbals are a typical festival dance ensemble in the northern department of Lambayeque. *Pinkullus* or side-blown flutes performed with drums or other instruments are also used for dancing in the north, and various types of indigenous trumpets are played in festivals and work-related rituals and parties. In general, however, mestizo ensembles and genres, or urban-popular styles like salsa and *chicha*, are the mainstay in northern Peru.

3. Quena (notched flute) and harp players in procession at an Inca sun-worshipping festival, Cuzco

Quechua songs are sung within, and in reference to, a wide variety of occasions including agricultural labour and rituals for livestock, the building of homes and roof-raising parties, for life-cycle events including 'first hair-cutting' for children, courting, child-rearing, weddings, funerals and wakes and for the whole gamut of festival religious and dance occasions. Like the music itself, Quechua song texts tend to involve relatively short lines and a high degree of repetition within and across strophes, often with only subtle paradigmatic substitutions made from one line to another. Depending on context, the length of strophes can be quite flexible within a single song performance. The texts are often highly metaphoric using nature imagery, or will include concrete mention of specific activities and social roles for the given context. While both men and women sing, women, and especially young women, are the favoured vocalists because of the preference for high vocal ranges. Singing style typically involves forceful nasal-throat singing, although in private contexts women also sing in a soft, high, delicate style. Women often use ornamental falsetto glides, especially to punctuate the end of lines and sections. Unison and heterophonic singing among groups of women or men is typical; responsorial singing between men and women also commonly takes place in courting and on festival occasions such as Carnival where sexual relations are paramount. In such contexts male-female song duels, including playful taunts and insults, emerge.

4. LOWLAND INDIGENOUS MUSIC. There are several small indigenous societies in the Amazon region of Peru who speak languages related to the Tupi-Carib, Panoan, Arawakan and Jívaro families: to date relatively little detailed ethnomusicological research has been done among these groups. Extant information suggests that, like Amazonian societies elsewhere, communal singing and dancing represent central musical activities with instrumental accompaniment varying between specific societies, and purely instrumental music being less common. Drums, panpipes, vertical flutes, trumpets and rattles have been reported for a number of groups. Within the same small-scale society there is often a wide variety of vocal genres and styles ranging from the soft, non-metred, melismatic singing of laments to forceful group chanting with regular, repetitive rhythms. Among the societies studied, unison and heterophonic singing are most common. Scales tend to vary widely. In contrast to highland peoples, songs often play an important role in curing procedures among indigenous Amazonian groups. Songs are vehicles for the telling of myths and history as well as being related to life-cycle events and subsistence activities. Music is also commonly used by shamans in

combination with hallucinogens to transcend mundane experience.

5. HIGHLAND MESTIZO MUSIC. The music is associated with Peruvians who are identified or self-identify as mestizo may be characterized as incorporating more Iberian elements relative to highland indigenous performers. This situation is obscured by the facts that indigenous music, dance and ceremony also variously incorporate European elements, and that ethnic identities in Peru are highly context-sensitive and fluid. A few mestizo musical traits may be generalized for highland Peru. These include strophic song forms, the use of parallel 3rds and 6ths, an emphasis on European string and wind instruments and in certain genres the use of hemiola moving between 3/4 and 6/8 metres. While intensive and extensive repetition is favoured by indigenous musicians, mestizos tend to favour a higher level of musical contrast, e.g. juxtaposing pieces in different metres within a medley. As compared with indigenous performers, mestizos also typically prefer more moderate pitch ranges and greater textural-timbral clarity. As in indigenous communities, mestizo song texts may be in the indigenous language or Spanish, or both, although there will be a higher percentage of Spanish texts among mestizos relative to the indigenous population. Whereas indigenous genres are highly context-specific, major mestizo genres such as the *huayno* (*wayno*, *wayño*), the *marinera*, the *yaraví*, marches and hymns are widely diffused and musically identifiable across regions.

The *huayno* is the most important highland mestizo song-dance genre. *Huaynos* are in a moderate-to-quick simple duple metre, often with an extra beat at major cadences. The rhythmic underpinning, a subtle yet constant shifting between a quaver and two semiquaver movement and a quaver triplet, is a hallmark feature. Musical forms such as *AABB* and *ABAB* are common. Within sections, antecedent phrases typically end on a cadence in the relative major and the final section on a cadence in the relative minor chord with rather static harmonies, involving III, VI, V and i chords, accompanying four-, six-, seven-, or most commonly five-note melodies. *Huaynos* often end with a musically distinct and more animated *fuga* section. According to mestizo composers such as Julio Benavente Díaz from Cuzco, the *huayno* is the genre of choice for expressing deeply-felt sentiments and important ideas. The strophic texts cover an extremely wide range of topics including humorous or joking themes, topical and overtly political songs, happy and sad love songs, songs about work, songs of leave-taking or celebrating specific locations, songs about death or the loss of one's parents. Text lines frequently do not rhyme.

The *huayno* is a couple or group dance which, depending on the region, involves fast rhythmic footwork (e.g. Cuzco to Junín) or a softer forward shuffle step (Puno). The upper body position is relatively erect and static; couples and groups in line or circle formations may hold hands or dance independently holding handkerchiefs or yarn cords with pompoms. The dancing typically becomes more animated in the *fuga* section. The genre is performed in the full range of mestizo musical contexts from family celebrations and drinking parties to public Catholic festivals and stage presentations. Indigenous people in southern Peru often use the term *huayno* generically for song; indigenous people also perform the specific *huayno* genre described here. Within specific regions other terms such as *carnavales*, *kh'ajelo* (Puno), *huayllachas* (Arequipa), *huaylas* (Junín), and *kashua* (Cajamarca) are used both by mestizo and indigenous musicians to refer to what are closely allied musical variants of the *huayno*.

The MARINERA is the second most prominent mestizo song-dance genre in Peru. It is related stylistically to the *cueca* of Chile and Bolivia, and the *zamba* of Argentina; it was known in Lima as the *zamacueca* in the early 19th century. While some historians have suggested Hispanic roots for the dance, others suggest Afro-Peruvian derivation; 19th-century commentators often associated it with Afro-Peruvians. Performed in moderate tempo, *marineras* are in 6/8 metre and feature hemiola rhythms. The entire form (e.g. *AABBCCBB*) is usually repeated twice (called *la primera* (the first) and *la segunda* (the second)) with a quick break in between. Like the *huayno*, the *marinera* typically juxtaposes phrases in the relative major and minor keys with the final cadence on the minor. The texts are typically restricted to light romantic themes. The *marinera* is a graceful couple dance in which the dancers wave a *pañuelo* (handkerchief) in one hand. Three regional choreographic variants, from the highlands, Lima and the north coast, are distinguished by Peruvians. As with the *huayno*, the *marinera* is danced in the full range of public festivals and private social gatherings in the north and in the southern sierra. In northern regions such as Lambayeque, the *marinera* is a particularly prominent genre.

During the 18th century the *yaraví* was a widespread popular genre with a relatively broad thematic-emotional scope and lyrics occasionally in Quechua. In the contemporary period, *yaraví* refers to a slow, lyrical, romantic song genre with strophic Spanish texts treating sad or sombre topics such as unrequited love, and separation from home and family. The term *yaraví* was perhaps derived from a pre-Columbian generic designation for song and poetry, *harawi*, but by 1754 it had already come to signify *cancion triste* (sad song). Typically written in 3/4 metre, the music alternates between 3/4 and 6/8 rhythms (*sesquialtera*) but sometimes also includes dramatic *retardandos* at cadences such that the sense of pulse and metre become obscured. Like other mestizo genres the *yaraví* juxtaposes the relative major and minor keys. *Yaravís* are performed at serious moments on social occasions, and may be performed instrumentally in religious contexts (e.g. in religious processions).

Unlike these widespread genres and the ubiquitous brass bands, mestizo ensemble types are often region-specific, as are solo instrumental styles. Large string ensembles, known as *estudiantinas*, are closely associated with Puno but historically have had a presence in urban Cuzco, Ayacucho and elsewhere. They comprise a guitar section (between two and five) that supplies a prominent bass line as well as harmonic accompaniment; one or two *charangos* providing strummed chordal accompaniment; and several mandolins, violins and often *kenas* as the principal melody instruments. In addition to performing the generalized mestizo song types, in Puno *estudiantinas* also play arranged versions of local indigenous panpipe and flute music. Popularized within the romantic-nationalist *indigenista* movement in the early 20th century, *estudiantinas* typically perform in theatre and other stage settings. In Cuzco, a local style of *orquesta* providing music for public festival dancing comprises harp, accordion, between one and three violins, two *kenas* and bass

drum. In the Apurimac, Ayacucho, Huancavelica area, ensembles comprising guitars and mandolins, or harps and violins, are common as are other string combinations and the inclusion of *kenas*. The festival dance *orquesta* of Junín combines numerous saxophones and clarinets with the ensemble core of harp and violin. A 'typical' festival dance orchestra of Lanbayeque comprises several *kenas*, snare and bass drums and cymbals. In Cajamarca, ensembles combining violins, snare and bass drums, or guitars, violins, *kenas* and percussion are frequently heard. A plethora of ad hoc instrumental combinations is found throughout Peru.

In Cuzco, Apurimac, Ayacucho and to the north, regionalized solo harp traditions are important: in northern Peru, as in Ecuador, a second musician will sometimes beat percussion parts on the harp. Prominent solo mestizo *charango* styles, which juxtapose strummed-chordal and plucked-melodic sections, are regionally centred on Ayacucho, Cuzco, Arequipa and Puno. A solo guitar style combining classical guitar technique with local musical elements is associated with Ayacucho. Important practitioners of this style, such as Raúl García Zarate, play bass lines derived from Ayacuchan harp performance, the melody in parallel 3rds on the higher strings with prominent vibrato and extended bass runs between musical phrases and sections.

Large public festivals to celebrate the feast day of a town's patron saint are the single most important type of occasion for mestizo music and dance throughout most of highland Peru. Locally specific as well as widely diffused dance-drama traditions are a central component of most patronal fiestas. Derived from colonial *autos sacramentales* (religious conversion plays), European Carnival dances and perhaps pre-existing indigenous dances, dance–dramas involve a troupe of masked and often costumed performers whose festival presentation enacts or alludes to historical, topical or mythical characters and happenings. Widespread dance–dramas often parody or characterize 'outsiders' such as jungle Indians, Spaniards, blacks or supernatural beings such as devils. Central and southern Peru remain a stronghold for spirited dance drama performance.

6. Coastal 'criollo' and Afro-Peruvian music. In Peru, the term *criollo* implies Iberian–Peruvian cultural orientation and heritage; *criollo* culture is most strongly associated with Lima and the coast, as well as sometimes with élites in provincial cities. From the colonial period through to the late 20th century, the music associated with *criollo* culture was largely derived from cosmopolitan and European sources, including European classical and urban-popular styles and military band music. Theatre music, especially the *zarzuela* (music drama), was important for diffusing European styles. The *marinera Limeña* was an early distinctive *criollo* popular form and at the end of the 19th century this genre, along with the waltz and the polka, was the mainstay of popular *criollo* music. Among these, the *vals criollo* (waltz) emerged as the most important in the early 20th century, and came to be almost synonymous with *música criolla* after the mid-20th century.

The *vals criollo* was influenced by the jota and the mazurka, the three genres becoming popular in Lima in the mid-19th century. Largely rejected by the upper classes, during the first three decades of the 20th century the *vals criollo* was the primary genre among the *criollo* working class and poor. Used for dancing, waltzes were common to drinking parties and family celebrations. They were performed variably with guitar, *laúd* or *bandúrria* (fig.4) to support the singing of texts which commented on working-class life and personal experience, often involving themes of conflict, suffering, loneliness and unrequited love. According to Stein (1982), they projected the world view of pessimism and fatalism of their proletariat composers. The grass roots performance of the *vals* declined in the mid-1920s due to the new influence of the mass media and foreign styles such as the tango, Mexican *rancheras* and North American forms such as the fox-trot. After the 1950s the *vals criollo* shed its working-class associations and was nostalgically adopted as the musical emblem for Limeña *criollo* culture in general. An important style change was the addition of the Afro-Peruvian *cajón* (wooden-box drum played with the hands) (Romero, 1985). Although of particular significance in the Lima context, the *vals criollo* is also performed throughout Peru.

While *música criolla* has incorporated Afro-Peruvian elements such as the *cajón* and certain rhythmic features, Romero (1985) suggests that the small Afro-Peruvian minority was basically assimilated into *criollo* culture. Afro-Peruvian and white *criollo* musicians had been mutually influencing each other for some time; the black performance of the coastal *marinera* in the 19th century is one example. After the turn of the 20th century, Afro-Peruvian communities ceased to perform distinct black genres such as the *alcatraz*, the *penalivio*, the *ingá* and the *agua'e nieve*, among others. Beginning in the 1950s, however, an Afro-Peruvian revivalist movement inspired the formation of folkloric troupes that performed styles presented as black traditions.

7. Music of highland migrants in cities. Once considered the bastion of *criollo* culture, Lima underwent a major transformation in the decades following World War II, due to highland migration. Waves of highlanders from different states created a market for commercial recordings and shows featuring various regional styles;

4. Harp and bandurria (guitar) players in the courtyard of a colonial home, Lima, early 20th century

the *huayno* was the primary genre within this phenomenon. Live performances were held on weekends in *coliseos* (stadiums or large tents), and radio programmes dedicated to regional *huayno* music emerged in the 1950s. A star system of highland performers was created with the emphasis on specific styles mirroring the size of the migrant population from that region at given points in time. Music from Junín, Ancash, Huancavelica, Cuzco and Ayacucho was the first to be recorded. Stars such as El Picaflor de los Andes from Junín and La Pastorita Huaracina from Ancash dressed in stylized regional costumes, sang songs from and about home and were backed by 'typical orchestras' of their area to appeal to these specific migrant populations. Their performances blended indices of regional identity with elements of 'urban sophistication' such as singing with wide vocal vibrato and tight instrumental arrangements.

The commercial sphere of Andean music was paralleled and supported by regional migrant clubs in the capital. Regional clubs existed in Lima from the early 20th century but increased tremendously in number after the 1950s. They organized patronal fiestas in the city, often including the dance groups and ensemble types that performed in their home towns. The clubs also held smaller parties and dances, engaging recording artists from their regions or playing commercial recordings of *huaynos* as well as other popular international styles such as Colombian *cumbia*. The clubs from certain regions became the basis for organizing highland-style ensembles: e.g. Puno regional clubs formed panpipe groups in the city. By the early 1980s the last of the commercial *coliseos* had disappeared and the clubs had effectively taken over the organization of highland musical events in Lima. These trends were reproduced in other Peruvian cities.

In the 1960s a new form of pan-highland migrant music known as *chicha* or *cumbia Andina* began to emerge in Lima. At first appealing to the teenage and young adult children of highland migrants, *chicha* is a fusion of the melodic structure of *huaynos* with the rhythm of Colombian *cumbia* performed with electric instruments (guitars, bass and keyboards), trap set, and Caribbean percussion (*timbales*, *güiro*, cow-bell). Actual *huaynos* are sometimes set to *cumbia* rhythm; more often *chicha* songs are new compositions. The majority of texts are about romantic love, often unrequited, but *chicha* songs also speak to the struggles and aspirations of the working- and lower-class children of highland migrants in cities. Major national *chicha* stars such as Los Shapis and Grupo Alegría had great mass appeal in the 1980s. The style remained vital in the 1990s as the emblem for a new Peruvian identity fusing images of Andean roots, modernity and urbanity.

Traditional Music of Peru, v: *Andean Music of Peru*, SF 40470 (1997) [incl. notes by R. Romero]

GERARD BÉHAGUE (I), THOMAS TURINO (II).

Perugia. City in the Umbria region of Italy. In the 13th century Perugia was the leading centre of the devotional societies that practised the singing of *laude*. The first such confraternity, the Compagnia dei Disciplinati or Flagellanti, was founded in 1260 by Raniero Fasani. From the 14th century until about the mid-16th the city's government engaged several minstrels (*canterini*), who provided musical and poetic entertainment twice daily for the magistrates, and at least twice monthly for the populace, at concerts held in public squares. In the last quarter of the 14th century the *canterino* Ercolano di Gilio (Gigli) da Perugia won wide recognition for his abilities as an improviser.

The earliest documentation of the practice of sacred polyphony in the cathedral of S Lorenzo is provided by three manuscript versions of the versicle *Benedicamus Domino* dating from the end of the 14th century (*I-PEd* Cod.15). From 1433 musical activity is regularly documented in the *Libri contabili* and in 1521 the chapel was officially established with a papal brief from Leo X. The *maestri di cappella* include the papal singer Ivo Barry (1535–6), Giorgio Mirreo di Cambrai (1551–75), Vincenzo Cossa (1591–1620), Francesco Marcorelli (1635–41), Francesco Bagaglia (1694–1740), Baldassarre Angelini (1740–62), Francesco Zannetti (1762–88), Luigi Caruso (1788–1823), Giuseppe Rossi Bonaccorsi (1823–33), Ulisse Corticelli (1845–80), Agostino Mercuri (1880–92), Giuseppe Scudellari (1892–1901) and Raffaele Casimiri (1905–8). Among the most representative of the second generation of trecento composers was Niccolò da Perugia, author of madrigals, and cacce on texts by Sacchetti and Soldanieri, among others. An important Perugian figure, responsible for the diffusion in Italy of French musical style in the early 15th century, was Matteo da Perugia, first *maestro di cappella* at Milan Cathedral.

The construction of organs in the city's various churches began in the mid-15th century. Perugia's principal organ builders were Bevenate di Francesco (S Agostino, 1494, S Simone del Carmine, 1504), Luca Biagi (S Maria Nuova, 1584), Pietro Fedeli (S Lorenzo, 1785) and Angelo Morettini (19th century). Several makers of string instruments settled in Perugia in the 16th and 17th centuries, including Martino and Lorenzo di Pietro, Lutio di Lorenzo Mucetti, who introduced lyre making into the city, and Pietro Pavolo di Gerolamo.

After the founding of a university in 1275 humanistic studies and activities gained ground in Perugia. A collection of frottola texts, *Il libro de amore chiamato Ardelia* by Baldassare Olympo delli Alexandri, was printed in 1520, and was important for the dissemination of humanism. In 1561 Raffaele Sozi instituted the Accademia degli Unisoni, whose principal aim was the theory and practice of music. Following the will of Bishop Napoleone Comitoli a public school of plainchant was instituted in 1621 at the church of S Bartolomeo, and was first directed by Nicolò Magnanini. In the late 16th century and early 17th the printer Pietroiacomo Petrucci was active in Perugia; in 1577 he published Malvezzi's *Ricercari a quattro* and in 1603 Arcadelt's first book of four-part madrigals. Other music publishers working in the city in the 16th and 17th centuries included Eredi del Bartoli, Angelo Laurenzi and Girolamo Costanti.

The reorganization of the Accademia degli Unisoni under the protection of S Cecilia in 1604 prompted the construction of an oratory next to the church of S Maria Nuova. The building was used exclusively by the *accademici* throughout the 17th century for performances of sacred musical dramas; similar performances took place in the church of S Filippo Neri, built in 1649. From 1690 to 1705 the singer, composer and historiographer G.A. Bontempi lived in Perugia, publishing his *Historia musica* there in 1695.

The first opera known to have been performed in Perugia was Cavalli's *Giasone* (1663). In March 1717 a group of 60 noblemen arranged to give the city its first public theatre, the Teatro del Pavone. Constructed under the direction of Costantino Ranieri and Alessandro Baglioni, it was completed in 1723, and in 1726 the promoters of the enterprise formally constituted the Nobile Accademia del Casino to supervise it. In 1765 the original wooden theatre, known as the Teatro della Nobile Accademia del Casino, or Teatro del Pavone (after the peacock depicted on the curtain), was rebuilt in stone to a design by Pietro Carattoli, who used the Teatro Argentina in Rome as a model; it was in a horseshoe shape, with four tiers comprising 82 boxes. A group of affluent citizens, in competition with the Accademia del Casino, which was patronized exclusively by the nobility, subsidized the construction of a new theatre, the Nuovo Teatro Civico del Verzaro, inaugurated in 1781 with Francesco Zannetti's *La Didone abbandonata* and Giacomo Rust's *Artaserse*. The Italian première of Rossini's *Moïse et Pharaon* was given at the Verzaro in 1829. In 1874 it was renamed Teatro Francesco Morlacchi; in 1942, having been donated to the city's administration, it became the Teatro Comunale Morlacchi. Another theatre, the Teatro Turreno, was erected mainly to present spectacles for the less affluent social classes; it was inaugurated in 1891 with Pedrotti's *Tutti in maschera*.

The Congregazione dell'Oratorio di S Filippo Neri, established in 1615, was the centre of oratorio performance in Perugia. From 1689 the Accademia degli Unisoni celebrated the feast of St Cecilia in the oratory of the same name adjoining the Chiesa Nuova. Many oratorios, particularly cantatas for Christmas Eve, were sponsored by the Compagnia dei Nobili del Gesù. In the late 17th century and the early 18th there was a flourish ing local school of oratorio, with composers such as Pietro Giacomo Bacci, Francesco Bagaglia and Giovanni Bernardino

Serafini, and subsequently Baldassarre Angelini, Francesco Zannetti and Luigi Caruso.

A musical institute was founded in 1790 by Luigi Caruso; in 1873 it was named after Francesco Morlacchi, and in 1967 it became a state conservatory. The history of music has been taught at the university since 1957. The annual Sagra Musicale Umbra, founded in 1937, is a festival devoted mainly to choral and symphonic religious works. The Associazione Amici della Musica, founded in 1946 and presided over by A.B. Gatteschi, sponsors concerts throughout the year, presenting renowned virtuosos and many contemporary works. In 1983 the Centro di Studi Musicali in Umbria was founded with the aim of promoting research into the region's musical heritage.

Perugia, Matteo da [Perusiis, Perusio, Perusinus, Matheus de]. *See* MATTEO DA PERUGIA.

Perusso, Mario (*b* Buenos Aires, 16 Sept 1936). Argentine conductor and composer. He studied at the Di Tella Institute of Buenos Aires and began his musical career as a singer in the opera chorus of the Teatro Colón. He was appointed opera conductor at the Teatro Argentino in La Plata (1967) and was appointed to several conducting posts throughout Argentina. He became deputy conductor and (since 1998) artistic director of the Teatro Colón in Buenos Aires.

Between 1966 and 1968 he wrote a one-act opera in Spanish, *La voz del silencio*, based on an idea of his own with a libretto by Leónidas Barrera Oro. Without being set at any particular time or place, the work deals with human conflict in the aftermath of a devastating catastrophe, such as a nuclear explosion. It was first performed at the Colón on 27 November 1969 and was recorded in 1971. Musically it belongs to the avant garde of the 1960s, with free atonality and no adherence to conventional forms. The orchestra plays the most important part and generates considerable dramatic tension.

Perusso's second opera is the one-act *Escorial*, completed in 1987 (though the first sketches date back to 1973). He wrote his own libretto (in Spanish), an adaptation of the play of the same name by Michel de Ghelderode set in the Escorial palace in Spain and dealing with a role-change between the king and his clown. Also atonal, it includes some elements drawn from Renaissance music. Its first performance was at the Colón in December 1989, conducted by Perusso himself.

In 1992 he wrote *Guayaquil*, a lyric drama in seven scenes, on a libretto by Agustín Pérez Pardella. This atonal work deals with an interview between José de San Martín and Simón Bolívar. The composer conducted the première in the Teatro Colón on 8 June 1993. In 1991 he began work on an opera based on the play by Octavio Paz, *Sor Juana Inés de la Cruz*.

Perusso's orchestral works include the *Tres movimientos sinfónicos* (1956), the *Elegía* (1964) and *La eternidad y el viento*. He has also written the *Cantos de guerra* for soprano and orchestra (1965), the *Partita* (1967) for solo cello and the *Invenzioni* (1967) for string quartet.

JUAN MARÍA VENIARD

Perwer, Şivan (*b* Sori, Urfa province, Turkey, 23 Dec 1955). Kurdish singer and composer. He was born into a poor peasant family and struggled to attend school in a nearby village; he began singing while in primary school. While Kurdish music was banned in Turkey, he learnt many songs by listening to Kurdish radio broadcasts from Armenia, Iraq and Iran, and his music contributed to the upsurge of nationalist and leftist cultural and political movements in the 1970s. Facing persecution for his singing, he took refuge in Germany in 1976 and resettled in Sweden, continuing to perform and compose songs in the steadily growing Kurdish diaspora. He is well known for his political songs, which emphasize the struggle of workers and peasants and the national liberation movements of the Kurds. His recordings included four tapes and two records before his exile and 25 cassettes by 1991, totalling about 500 pieces by the late 1990s. He usually accompanies his songs on the *ṭanbūr* and often sings duets with his wife Gulistan. Since 1995 his performances have been broadcast by the Kurdish satellite channel Med-TV, based in Europe.

AMIR HASSANPOUR, STEPHEN BLUM

Perz, Mirosław (*b* Zielonagóra, nr Szamotuły, 25 Jan 1933). Polish musicologist. He studied musicology with Chybiński at Poznań University (1951–4) and with Feicht at Warsaw University (1954–6); he also studied the organ at the Poznań Music School (1952–4). He continued his musical training in Warsaw, where he studied the organ (1954–9), conducting with Bohdan Wodiczko (1960–64) and composition with Tadeusz Szeligowski (1959–63). From 1956 to 1959 he was conductor of the Chamber Choir of the National PO in Warsaw. In 1957 he began

working in the musicology institute at Warsaw University, where in 1966 he obtained the doctorate with a dissertation on Mikołaj Gomółka. In 1971 he was appointed reader and head of the department of Polish music history in the musicology institute at Warsaw University; from 1977–93 he was reader at the University of Poznań. He was visiting professor at the universities of Calgary (1986) and Kansas (1986–7).

Perz has concentrated mainly on the music of the Middle Ages and the Renaissance; working from both Polish and foreign sources, he is responsible for the discovery of many important early Polish works and other archival material. Notable achievements include his reconstruction of the Stary Sącz fragments, his monograph on Gomółka and editions of sources of polyphony in Poland.

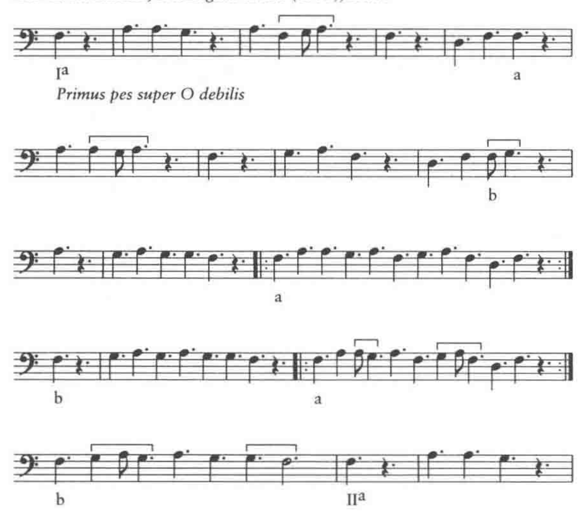
ZOFIA HELMAN

Pes (i) (Lat.: 'foot', 'fundament', 'ground'). In some English sources of polyphony dating from the second half of the 13th century (mostly the so-called Worcester Fragments, now in the Bodleian Library and Worcester Cathedral: *see* WORCESTER POLYPHONY) *pes* is the usual designation for the untexted non-Gregorian tenor of certain motets; it was freely invented or, more rarely, borrowed from a song or a dance-tune. The term generally denotes a strict or varied melodic ostinato, in contrast to the purely rhythmic ostinatos into which continental motet composers fashioned their cantus firmi. While the cantus firmus motets written in England follow continental precepts, the *pes* motets are an English speciality.

Ex.1 L. A. Dittmer, ed.: *The Worcester Fragments* (1957), no.17



At first *pes* seems to have designated the supporting voice of motets whose upper two voices engage in voice-exchange (the commonly accepted term for a 13th-century technique that more precisely would be called phrase-exchange). In such motets the phrase elements of the *pes* are fairly short (ex.1), typically producing the polyphonic design:

CBED
BCDE
AAA'A'

(The same compositional procedure, but without the designation of the tenor as *pes*, occurs in some passages of English CONDUCTUS, both *cum littera* and *sine littera*.) SUMER IS ICUMEN IN (see also for facsimile) can appropriately be included in this group of compositions, especially in view of its alternative Latin text. Some of the motets

Ex.2 E. H. Sanders, ed.: *English Music* (1979), no.44

without voice-exchange have *pedes* with rather long repeated elements, which are, however, generally subdivisible into variant segments (ex.2).

In addition to the Summer Canon, there are two cases in which the *pes*, not so designated in the manuscript, carries an ostinato text (*English Music*, no.45, and *US-PRu* Garrett 119, no.B1). A few compositions in which only one upper voice, supported by two *pedes* (e.g. *primus pes* and *secundus pes*), has text constitute a special kind of accompanied solo song. (A similar, though much later specimen – early 15th-century – of probable English origin is a Latin song, supported by a slow italianate tenor which is designated as a rondellus (*I-TRmp* 87, ff.252*v*–253); cf also Cornysh's *A robyn, gentyl robyn*.) The term *pes* evidently became common enough in the 'Worcester school' to be applied to the lowest voice of three motets actually based on plainchant cantus firmi (*English Music*, nos.67, 73, 80). The following compositions have a bottom voice specifically and properly labelled *pes*: *English Music*, nos.47–51, 53–4; the Summer Canon; the Worcester Fragments, nos.7, 17, 30, 74, 75. No medieval writer on music reported the use or meaning of the term in the English polyphony of the time.

ERNEST H. SANDERS

Pes (ii) [podatus] (Lat.: 'foot'). In Western chant notations a neume signifying two notes, the second higher than the first. It is so called because its shape often resembles that of a foot. (For illustration *see* NOTATION, Table 1; see also M. Huglo: 'Les noms des neumes et leur origine', *EG*, i, 1954, pp.53–67.)

Pesamment (Fr.: 'heavily'). *See* PESANTE.

Pesante (It.: 'heavy', 'weighty'). A direction usually applying to a whole passage or a whole piece rather than to individual notes or phrases. It was used frequently by Schoenberg but can be found as far back as the early 18th century, also in the French adverbial form *pesamment*.

Pesanterin. Instrument mentioned in *Daniel*. *See* BIBLICAL INSTRUMENTS, §3(xiii).

Pesarino, Il. Nickname of BARTOLOMEO BARBARINO.

Pesaro. City in Italy, in the Marches region. At the peak of the Malatesta family's splendour in the early 15th century, Du Fay, on his first visit to Italy, probably stayed in Pesaro and Rimini (1420–26), writing the motets *Vasilissa*

ergo gaude (1420) for Cleofe Malatesta, *Apostolo glorioso* (1426) for Pandolfo Malatesta and the chanson *Resveilles vous* for the wedding of Carlo Malatesta and Vittoria Colonna (July 1423). During the same period Hugo de Lantins was also probably in the service of the Malatestas. Later in the century an anonymous contemporary chronicler reported spectacular musical events in Pesaro for the wedding of Costanzo Sforza and Camilla of Aragon, referring to polychoral singing heard during the ceremony in the cathedral (28 May 1475). The Mass was celebrated with the concurrence 'of numerous organs, pipes and trumpets, and drums, accompanying two separate groups of many singers, the one alternating with the other, and there were about 16 singers in each' (De Marinis, 1946, p.11).

From the time of Duke Francesco Maria I the Urbino court began to gravitate towards Pesaro. Under Guidobaldo II (duke from 1538) the court's musical activity received a boost with the presence of Paolo Animuccia, Leonardo Meldert, Dominique Phinot and the singer and instrumentalist Virginia Vagnoli. Phinot's five-voice *Mottetti* were the first music book published by Bartolomeo Cesano (active in Pesaro 1554–9), who also published one of Vincenzo Ruffo's books of *Madrigali* (1555) and G.B. Corvo's *Divina et sacra hebdomadae sancte* (1556).

In the 16th century a family of harpsichord makers maintained a workshop in Pesaro; 14 of their instruments built between 1533 and 1600 have survived. Zarlino, in his *Istitutioni harmoniche* (Venice, 1558, p.164), remarked that in 1548 he commissioned 'Maestro Dominico Pesarese raro et eccellente fabricattore di simili instrumenti' to construct a harpsichord that could give the temperament and modulation of the three genera, the diatonic, chromatic and enharmonic. The instrument, which has not yet been located, provided 19 divisions to the octave, with extra keys for all the sharps as well as between E and F and B and C. Other instrument makers were Tibaldo Fattorini (16th century) for lutes, Carlo Cortesi (*fl* 1612), Carlo Brandini, Antonio Mariani (*d* 1680), Sabatino Sacchini (*fl* 1686) for bowed instruments, and Antonio Pace (17th century) and Vincenzo and Francesco Polinori (18th century) for organs.

In the second half of the 16th century the Augustinian monk Paolo Lucchini (*c*1535–1598) was a music teacher in Pesaro, as his treatise *Della musica* shows. This work, of which a contemporary manuscript copy exists (*I-PESo* 2004), covers many aspects of 16th-century music theory and practice and is subdivided into three main sections: 'Della theorica', 'Del valore delle note e delle proporzioni', and 'Della pratica del contrapunto e del comporre'. The theorist Ludovico Zacconi (1555–1627), a native of Pesaro, began his musical studies in 1575 with Lucchini before settling in Venice about 1577. He returned to Pesaro in 1596 to be prior of the Augustinian monastery until his retirement in 1612; he remained in Pesaro until his death, writing the second part of his *Prattica di musica* (Venice, 1622).

Vincenzo Pellegrini (1594) and Pietro Pace (1597) are mentioned in cathedral documents. In the 17th century numerous musical performances took place at the homes of the nobility, and in the premises of academies such as the Accademia dei Disinvolti (founded 1645).

The event that helped to link musical life in Pesaro with that of other Italian centres was the establishment of the Teatro del Sole, designed and decorated by Niccolò Sabbatini (1574–1654), a native of Pesaro. It was inaugurated during Carnival 1637 with Hondedei's *Asmondo*, and throughout the century staged works that had already appeared mainly in Rome and Venice. It was semicircular and the stage was relatively small (about 8 metres square), but it had elaborate scenery and machinery. The first part of Sabbatini's *Pratica di fabricar scene e machine ne' teatri* (Pesaro, 1637–8) is a description of the new theatre. Major improvements in its structure were made by the construction of one box for dignitaries in 1678 and the erection of three tiers of boxes between 1682 and 1694, when performances were suspended. In the 18th century works that appeared in Naples, Venice and Rome were performed there as well as works by local composers, including the premières of G.M. Ruggeri's *Armida abbandonata* (1715) and G. De Sanctis's *La serva scaltra* (1762). In 1723 and 1790 additional improvements were made in the boxes and ceiling of the theatre.

On 6 March 1816 the city council decided to build a new theatre on the same site, to provide employment for needy workmen. It was designed by the architect Pietro Ghinelli, completed on 30 January 1817 and named Teatro Nuovo. During the period of construction the Teatrino della Pallacorda was used for opera performances, and continued to be until the end of the century. Rossini was the city's most illustrious native composer, and the Teatro Nuovo opened on 10 June 1818 with his opera *La gazza ladra*, under his direction: throughout the century Rossini's works were the most often performed. In 1854 the theatre was closed for a year for renovations; it reopened as the Teatro Rossini. After Rossini's death a series of performances, which included *Semiramide*, *Otello* and the *Stabat mater* (with Teresa Stolz), were organized in August 1869 and called 'Pompe Funebri Rossiniane'. At the end of the 19th century and the beginning of the 20th works by Leoncavallo, Puccini and Mascagni (with a première of his *Zanetto* on 2 March 1896) dominated the seasons.

The Biblioteca Oliveriana, founded in 1756, holds musical sources, librettos and stage-setting documents. In accordance with Rossini's will, a Liceo Musicale was founded in 1882 (a conservatory from 1940); it has been directed by renowned figures including Pedrotti, Mascagni, Zanella, Zandonai, Alfano and Liviabella. A workshop for electronic music was established in 1971. The library contains manuscript and printed sources (*c*20,000 volumes) and a collection of portraits of musicians. The conservatory has published *Cronaca musicale* (1896–1917) and an *Annuario*. It houses the Tempietto Rossiniano, which has an extensive collection of the composer's autographs, including some operas, the *Petite messe solennelle* and the chamber compositions of his Paris period.

In 1955 the Fondazione Rossini (established 1940) set up the Centro Rossiniano di Studi; it publishes a *Bollettino*, has edited chamber compositions in the series Quaderni Rossiniani and in 1979 began the critical edition of Rossini's complete works. Since 1980 the Rossini Opera Festival has been held annually during August. The house where Rossini was born is now a small museum.

ELVIDIO SURIAN/MARCO SALVARANI

Pescetti, Giovanni Battista (*b* Venice, *c*1704; *d* Venice, 20 March 1766). Italian composer. He studied with Antonio Lotti, organist at S Marco, Venice, and opera composer. He became friendly with his fellow student Baldassare Galuppi with whom he collaborated in writing and revising operas. An early mass by Pescetti impressed J.A. Hasse. From 1725 to 1732 he supplied operas to various Venetian theatres. In April 1736 he appeared as a harpsichordist in London where, the following autumn, he replaced Porpora as director of the Opera of the Nobility, the rival company to Handel's. After its collapse Pescetti remained in London, contributing operas or arias in pasticcios; he also published (1739) a set of keyboard sonatas, which include arrangements of the overture and arias in his opera *La conquista del velo d'oro*. It is likely that Pescetti left London around 1745, when the rebellion of Prince Charles and the Highland clans made the city inhospitable to Catholic Italians. In 1747 he returned to providing operas in Venice. On 27 August 1752 he applied for the position of second organist at S Marco, and finally obtained the appointment on 16 May 1762.

Pescetti's opera arias are notable for their easily singable lines, simple accompaniments, short, clearly articulated phrases and restricted harmonic vocabulary. He was nevertheless capable of fugal writing, as in his overture to *La conquista del velo d'oro*, in several of his sonatas and in his church music. Burney faulted him for a lack of fire and of fertility of invention.

WORKS

OPERAS AND OTHER DRAMATIC

music lost unless otherwise stated

LKH - *London, King's Theatre in the Haymarket* VS - *Venice, Teatro S Samuele*

Nerone detronato (G. Pimbaloni), Venice, S Salvatore, carn. 1725, arias *GB-Lbl*, Favourite Songs (London, 1740)
Il prototipo (D. Lalli), VS, aut. 1726
La cantatrice (Lalli), VS, Ascension 1727
Gli odii delusi dal sangue (A.M. Lucchini), Venice, S Angelo, 1728, acts 1 and 3 by B. Galuppi
Dorinda (pastorale, Lalli), VS, Ascension 1729, collab. Galuppi
I tre difensori della patria (A. Morselli), Venice, S Angelo, aut. 1729; as Tullio Ostilio, wint. 1740
Costantino Pio, Rome, palace of Cardinal Ottoboni, 1730, for the birth of the Dauphin, *F-Pn*
Siroe re di Persia (P. Metastasio), Venice, 1731, collab. Galuppi [rev. of Vinci]
Alessandro nelle Indie (Metastasio), Venice, S Angelo, carn. 1732, arias *I-Bas*
Demetrio (Metastasio), Florence, Pergola, carn. 1732; rev., LKH, 12 Feb 1737, Favourite Songs (London, 1737)
La conquista del velo d'oro (A.M. Cori), LKH, 28 Jan 1738, *GB-Lbl*, arias in Le delizie dell'opere, ii (London, 1740)
L'asilo d'amore (int, Metastasio), LKH, spr. 1738
Diana e Endimione (serenata, Metastasio), London, New, 1 Dec 1739, arias in Le delizie dell'opere, ii (London, 1740), Favourite Songs (London, *c*1740)
Olimpia in Ebuda (P.A. Rolli, after L. Ariosto: *Orlando furioso*), LKH, 15 March 1740, doubtful, formerly attrib. J.A. Hasse
Busiri, ovvero Il trionfo d'amore (Rolli), London, New, 10 May 1740
Ezio (Metastasio), Venice, Grimani, carn. 1747
Farnace (Lucchini), Florence, Pergola, carn. 1749
Fra i due litiganti il terzo gode (ob, G. Lorenzi), Venice, S Cassiano, spr. 1749, aria *I-Vc*
Arianna e Teseo (P. Pariati), Florence, Pergola, carn. 1750
Il Farnaspe (Metastasio), Siena, Rinnovati, 1750; as Adriano in Siria, Reggio nell'Emilia, Moderno, 1750
Artaserse (Metastasio), Milan, Regio, 26 Dec 1751, *Fc*
Tamerlano (A. Piovene), VS, carn. 1754, collab. G. Cocchi
Solimano (G.A. Migliavacca), Reggio nell'Emilia, Moderno, 1756, Favourite Songs (London, 1765)
Zenobia (Metastasio), Padua, Nuovo, June 1761, *P-La*
Andimione, *D-Hs*
Contribs. to the following pasticcios: Sabrina (Rolli), LKH, 26 April 1737, Favourite Songs (London, 1737); Arsaces (A. Salvi, Rolli), LKH, 29 Oct 1737; Angelica e Medoro (C. Vedova), London, Covent Garden, 10 March 1739, Favourite Songs (London, 1739); Merode e Olympia, 1740, Favourite Songs (London, 1740); Alessandro in Persia (F. Vanneschi), LKH, 31 Oct 1741, Favourite Songs (London, 1741); Aristodemo, tiranno di Cuma (Rolli), LKH, 3 April 1744; Ezio (Metastasio), LKH, 24 November 1764; Lionel and Clarissa (London, n.d.)

JOHN WALTER HILL

Pesch, Gregor. *See* PESCHIN, GREGOR.

Pescheur [Lepescheur]. French family of organ builders. They worked in Paris during the 17th century. Nicolas Pescheur (*b* Paris, 1555; *d* Paris, 1616) was the son of a merchant from the quarter of St Germain-des-Prés. He probably trained at first with the organ builder Raoul Bourdet, and then with Jan Langhedul during their stay in Paris (1585–90). In partnership with Claude Danyon, he worked at Chaource in Burgundy. After returning to Paris, he pursued a modest career combining organ building with the post of organist at St Sulpice. From 1610, enriched by the teaching of Carlier, he entrusted this work to his sons. Of his four sons from his marriage to Catherine Henry, a musician's daughter, two became organ builders. Pierre Pescheur (*b* Paris *c*1590; *d* Paris, 1637) was taught by his father Nicolas and then by Paul Maillard. He learnt organ building in the Titelouze style

with Valéran De Héman in 1610–12, and built organs to commissions his father had obtained, eventually succeeding him. After some smaller projects, he built the organ in Amiens Cathedral (1620–24), and in Paris at St Paul (1623) and St Gervais (1628), where pipework survives. The organs at Aubervilliers (*c*1630; pipework survives) and St Etienne-du-Mont, Paris (1631–6), were his greatest instruments. He married a mason's daughter, and they had one son, Charles, who became a painter. With his master, De Héman, he founded the classical Parisian school of organ building. His most prominent pupil was Pierre Desenclos. Aubin Pescheur (*b* *c*1595; *d* after 1630), another son of Nicolas Pescheur, is only known as an employee of Maillard (Rennes, 1628).

PIERRE HARDOUIN

Peschin [Pechin, Pečin, Pesch, Pesthin, Pitschner, Posthinus], **Gregor** (*b* ?Prague, *c*1500; *d* ?Heidelberg, after 1547). Bohemian composer. He received his musical training in the court chapel of Lajos II in Budapest, serving there until 1526. From 1527 to 1539 he was a member of the court chapel of Matthäus Lang, Prince-Bishop of Salzburg, where he and Paul Hofhaimer were colleagues as organists. His skill in playing the organ won him the high opinion of his musical patron. In 1539 he went to Neuburg an der Donau in the service of Count Palatine Ottheinrich, subsequently Elector of Heidelberg (1556–9); this move was probably connected with the building of a large organ for the castle in Neuburg by Hans Schachinger of Munich (the work was commissioned on 26 June 1537). When Count Palatine Ottheinrich had to leave the duchy of Pfalz-Neuburg in 1544 after his bankruptcy, Peschin followed him and his retinue into exile, going first to Heidelberg. He is mentioned, along with the lutenist Sebastian Ochsenkun, in Elector Friedrich II's accounts books for 1546. The last extant document concerning Peschin is a letter he wrote to his friend, the composer and printer Hans Kilian of Neuburg, on 18 November 1547, attached to the so-called 'Heidelberg chapel inventory' of 1544 (*D-HEu* Cod.Pal.Germ.318). Peschin probably wrote part of the inventory as well. Drawn up before Ottheinrich went into exile, it lists 105 compositions by Peschin (including five masses, four epitaphs on members of the ducal family, about 30 motets and over 50 German songs), mentioning some of them several times. 12 of his song settings are included in Sebastian Ochsenkun's lute tablature, compiled in 1558 at the request of the elector of the time, Ottheinrich of the Palatinate (RISM 1558[20]). Those few of Peschin's songs that survive owe much to the compositional tradition of Hofhaimer, and the classical perfection to which Hofhaimer brought the Tenorlied is continued in his work.

JUTTA LAMBRECHT

Pesciolini, Biagio (*b* Prato; *d* after 1609). Italian composer. When he published his first volume of music, in 1563, he was *maestro di cappella* of Volterra Cathedral. He was canon and *maestro di cappella* to the provostry of Prato at least for the period 1571–81 and is again recorded at Prato in 1599, but only as a canon. Brunelli implied that he was still alive in 1610. The influence of the directives of the Council of Trent concerning the composition of church music is evident in his works, especially in the masses of 1599. Brunelli praised him highly for his skill in double counterpoint, especially when improvising.

PIER PAOLO SCATTOLIN

Pešek, Libor (*b* Prague, 22 June 1933). Czech conductor. He studied with Karel Ančerl, Václav Neumann and Václav Smetáček at the Prague Academy and worked as a répétiteur, first at the Plzeň Opera and then at the Prague National Theatre. He gained his early conducting reputation with the Prague Chamber Harmony, a wind band he founded and directed (1958–64), and the Sebastian Orchestra, Prague. He was chief conductor of the Czech Chamber Orchestra, 1970–77, and the Slovak PO, 1980–81, and in 1982 was appointed conductor-in-residence of the Czech PO. During the 1970s he worked frequently in the Netherlands, and in 1987 he became music director of the Royal Liverpool PO, which he brought to greater international prominence with a USA tour in 1992 and through an impressive series of recordings; in 1993 the Liverpool orchestra also became the first non-Czech orchestra to open the Prague Spring Festival. Pešek appears frequently with other major orchestras in Europe and North America, and is principal guest conductor of the Prague SO. He has conducted a number of stage works for films and television, including Dvořák's *Rusalka*, Benda's *Medea* and Stravinsky's *Pulcinella* and *The Soldier's Tale*. He is a fervent advocate of Suk, whose *Asrael* and other works he has recorded; his discography also includes a fresh, idiomatic cycle of Dvořák symphonies, Smetana's *Má vlast*, and works by Britten, Janáček, Skryabin, Linek, Krommer and Ryba. In 1996 in Britain he was appointed an honorary KBE.

NOËL GOODWIN

Pesenti, Benedetto (*b* Venice, *c*1545; *d* after 1591). Italian composer. He was a priest. According to his nephew Giovanni Battista, who wrote the dedication, dated 15 October 1591, to his *Primo libro de madrigali a cinque voci* (Venice, 1591), the compositions published in it, as well as some others, had been left with him while Benedetto, here referred to as an abbot, was away from Venice on ecclesiastical business some months earlier. His madrigals, according to his nephew, are 'composed according to the science of the most excellent musicians Adrian Willaert and Cipriano de Rore, teachers of the above mentioned [Pesenti]'. If indeed he studied with Willaert (*d* 1562), then he must have been born no later than about 1545. However, his madrigals, which include a setting of a canzone in nine parts and several *madrigali spirituali*, show none of the mastery of either of his alleged teachers, and he is best considered a competent amateur. One motet for five voices was published by Phalèse (in RISM 1609[1]).

DAVID NUTTER

Pesenti, Martino (*b* Venice, *c*1600; *d* Venice, *c*1648). Italian harpsichordist and composer. He appears to have spent all his life in Venice, where he was a pupil of G.B. Grillo. He was blind from birth, so he was unable to participate in the large-scale productions cultivated in Venetian churches and theatres. Devoting himself instead almost entirely to chamber music, he had a large following in the private sector of society; his patrons included local noblemen, the Habsburg Archduke Leopold and successive Viennese ambassadors to Venice.

Pesenti's published works include at least seven volumes of madrigals and canzonettas, three of arias and five of dances, but only one of church music. His style is simple, almost austere, and is thus similar to that of much of the sacred music of Venetian and provincial parish churches in the 1610s and 20s, when several decrees prohibiting florid writing and elaborate accompaniment were issued. The duet textures of most of his works are uncluttered and usually homophonic; apart from canon at the unison he admits little counterpoint, there are few melismas in his vocal works, and his solo arias are very short. He is best remembered for his instrumental music, but it is remarkably similar in idiom to his vocal works: indeed the suites (ballettos) and passamezzos in some of his volumes are dance-songs, and the correntes of his op.10 can be performed vocally or instrumentally.

In Pesenti's madrigals the bass becomes progressively more important. Notably stationary basses characterize several works in op.11, while another, *Cieco viato*, is built on a strophic bass. He used a variety of chaconne, passacaglia and simple ostinato basses in op.16. The bulk of his dances are short and simple correntes and galliards. They are conceived essentially for harpsichord, which may be supplemented by string instruments (lutes and *viole* are mentioned in the preface to op.15). The dances of op.15 have attracted special attention because Pesenti intended them for performance on a keyboard instrument with separate keys for enharmonic notes (e.g. *a*♯ and *b*♭). Most are presented in two versions – 'diatonic' and 'chromatic' or 'enharmonic'; the latter two amount only to transpositions, but often to keys with numerous sharps or flats. The intrinsic musical value of these works is far below that of the op.15 passamezzos in which the bass is emphasized by long, flowing divisions. Pesenti acknowledged his use of tritones, sevenths, ninths and other dissonances in a note to performers in his first book of correntes, and recommended them for their beauty (*vaghezza*) provided that the tempo was taken presto. Typically these dissonances occur as passing notes in the quaver figurations in the treble of the first half and the bass of the second half of each work. Conversely, Pesenti recommends a very long beat (*battuta longhissima*) in his ballettos. The three-voice example in the first book of correntes contains several strophes in duple metre but concludes with a fast movement in triple metre.

WORKS

MADRIGALS

Il primo libro de madrigali, 2–4vv, bc (Venice, *c*1619, 2/1628)

Il secondo libro de madrigali, lost

Il terzo libro de madrigali, 2–5vv, bc (hpd/other insts) (Venice, 1628, 2/1639)

Il quarto libro de madrigali, 2–6vv, alcuni concertati con violini, con alcune canzonette et un ballo sopra la gagliarda di 5 passi con bc, op.9 (Venice, 1638); Ardo ma non ardisco in Whenham, ii, 311–21

Madrigali concertati, 2–3vv, bc, libro quinto, op.11 (Venice, 1641)

Capricci stravaganti e musicali pensieri, passi e mezi da cantar, canzoni, et alcuni madrigali, 2–3vv, bc, [libro sesto], op.16 (Venice, 1647)

Ultime musicali e canore fatiche, 2–3vv (Venice, 1648)

ARIAS ETC.

Arie, libro primo, lost

Arie, 1v ... gui, libro secondo (Venice, 1633); Così Nilio cantò, ed. K. Jeppesen, *La flora*, ii (Copenhagen, 1949), 16

Arie, 1v, hpd/chit/other inst, gui, con una cantata in fine ... libro terzo (Venice, 1636); O biondetta lascivetta ed. in *La flora*, ii, 18

Correnti alla francese, gagliarde, e balletti da cantarsi, 1v, hpd/other inst, con un brando ... libro primo, op.10 (Venice, 1639)

INSTRUMENTAL MUSIC

Il primo libro delle correnti alla francese, hpd, other insts (Venice, *c*1619, 2/1635/*R*, 'con una aggionta di alcune correnti et un balletto a 3')

Il secondo libro delle correnti alla francese … con alcune correnti spezzate a tre, hpd, other insts (Venice, 1630)

Correnti alla francese, balletti, gagliarde, pass' e mezi … libro terzo, hpd, other insts, op.12 (Venice, 1641)

Correnti, gagliarde, e balletti diatonici, trasportati parte cromatici, e parte henarmonici, con un balletto a 3, passi e mezi a 2 & a 3 … libro quarto, hpd, other insts, op.15 (Venice, 1645/6); 4 correntes, 5 galliards, 5 ballettos and the 2-part passamezzo in DM, xxxvi (1964); selections in AMI, vii (1897) [including a balletto and passamezzo (no.20) incorrectly attrib. G.B. Fontana]

14 correntes in *I-Tn* Foà vi; 1 galliard in Foà vii

Suites and dances in *PL-Kj*

SACRED MUSIC

Missae … con sacris cantionibus, 1–3vv, bc (Venice, 1643)

1 motet, 2vv, bc, in 1642[4]

ELEANOR SELFRIDGE-FIELD

Pesenti [Vicentino], **Michele** (*b* Verona, *c*1470; *d* May, 1528). Italian priest, composer, singer and lutenist. With Tromboncino and Cara, he was one of the most important frottola composers. He was born in Verona in about 1470, the son of Alberto and Umilia Pesenti. Since he was a priest, he must have studied at the Scuola degli Accoliti in his native city, an institution founded by Pope Eugene IV that produced other cleric-composers, among them Marchetto Cara. Pesenti's first known position was in Ferrara, where he served Cardinal Ippolito I d'Este, acting as a procurer of music and instruments as well as a lutenist, singer and composer. Already in 1504 he wrote to the cardinal from Venice promising to come to Ferrara as soon as an unnamed gentleman returned his lute. From 1506 his name appears in Ippolito's payment registers, and it remains there, except for a probably illusory break in 1510, up to 1514. In this capacity he was resident with Ippolito in Rome in 1513 and 1514, where he thrice petitioned Pope Leo X for benefices. He apparently left Rome in 1515, when Ippolito wrote to his brother Alfonso in Ferrara asking him to put the musician in prison.

At some point after this Pesenti entered the services of Leo himself: on 30 August 1521 the pope, calling him 'musicus, cubicularius et familiaris continuus comensalis noster', granted him a benefice in the church of SS Fermo e Rustico in his native Verona. By late 1522 he was in Mantua as a member of the staff of Marchese Federico Gonzaga. He was still in Mantua on 13 July 1524, when Federico gave 'Pre Michele da Verona, nostro musico' 25 lire for one of the musician's servants, but he left the city by early 1525, going first to Rome, where Clement VII granted him minor Veronese benefices on 21 February. He had returned to his native city by May of the same year, when he became rector of SS Fermo e Rustico. Here he apparently had extensive restoration done to the church, since there remains a stone tablet with the following words: 'SANCTORUM / FIRMI ET / RUSITICI ECCLESIAM / DOMUMQ. MICHAEL / MUSICUS / RESTAURAVIT / MDXXV'. Pesenti died, probably after a long illness, in May 1528; he was replaced as rector of the church on 5 June of this year.

As a frottolist, Pesenti ranks with Lurano and just after Tromboncino and Cara in historical importance. His works are characterized by a remarkable freedom and variety of formal solutions, ingenious twists of melody, and a light, popular flavour. Pesenti often wrote his own poetry: in Petrucci's editions, eight pieces are marked 'C[antus] et V[erba]', signifying that he also wrote the text as well as the music. He is important for the early period of the frottola rather than for the later, more subtle period. Nearly all his 36 surviving frottolas (16 *barzellete*, 7 *ode*, 5 villotta-like settings, 2 *strambotti*, 2 *canzonette*, 1 *capitolo*, 1 *madrigal*, and 2 Latin odes) were in print by 1514. Only one, *Alma gentil, sein voi fusse* (1521[6]), appeared after Petrucci's last book of frottolas. This is also his only setting of a madrigal text, although it still has the typical non-imitative contrapuntal style of the frottola. *So ben che lei non sa* (1513[1]) stands at the border between madrigal and villotta. Unlike the other leading frottolists, Pesenti wrote no *laude*.

Pesenti is particularly significant for his early adoption of popular tunes into his works. Two frottolas, *Spenta m'hai del pecto amore* (1507[3]) and *Io voria esser cholu* (1509[2]), incorporate the text and tunes of 'Bel alboro, ch'è nato nella via' and 'Turluru, la capra è mozza' respectively. Even more notable are several early villotta-like compositions, which adopt the popular tune throughout the piece. *Dal lecto me levava* (1504[4]), which imitates the sounds of the stork, resembles the later villotta in its textures, its all-vocal scoring, and the bawdy undercurrent to its text. Indeed, Pesenti was one of the earliest Italian Renaissance composers to write secular compositions in which all parts were intended to be sung. In Petrucci's first book of frottolas (1504[4]) two of his pieces have texts in all voices throughout and two others have texts in all voices in the refrain. Pesenti also seems to have delighted in musical and textual repartee with his contemporaries: his *Io son de gabbia* forms a part of a complex of 'bird-song' *strambotti*; his *Io son l'ocel che con le debil ali* includes as its fully texted tenor the cantus of Cara's *Io son l'ocel che sopra i rami d'oro*, and is also a part of the complex; and his *L'acqua vale al mio gran focho* is a *risposta* to Tromboncino's *Non val acqua al mio gran foco*, adopting Tromboncino's cantus as its bassus. Pesenti's *S'io son stato a ritornare* is answered by Antico's *Questo tuo lento tornare*, which bears the rubric 'Risposta de "S'io son stato a ritornare"' in Petrucci's seventh book of frottolas. Pesenti is included among other frottolists, including Tromboncino and Cara, in Filippo Oriolo's poem *Monte Parnassus* of about 1520.

Pesenti's name appears in many different forms. Two pieces in the 1520 reprint of Antico's *Frottole, libro tertio* (1517[1]) are ascribed to Michele Vicentino. Once thought to be another composer, this is now thought to be Pesenti (see Rubsamen, 1961). In the first two editions of Antico's

collection (1513 and 1518) two works are ascribed to 'D. Michael V.', but Petrucci, in his *Frottole, libro undecimo* (1514²), attributed one of them to 'D[on] M[ichael]'. Petrucci ascribed several of Pesenti's pieces in this way, and it seems almost certain that the editor of the 1520 reprint erred in the resolution of the earlier abbreviation and that the correct attribution should be to "D[on] Michael V[eronensis]", that is, Pesenti, who was both a priest and a native of Verona.

Pesenti also composed two secular compositions with Latin texts: *Inhospitas per Alpes* and *Integer vitae*, the latter a treatment of a Sapphic ode by Horace. Both are carefully set so that the melody mirrors the natural accents of the words. The latter was also set by Tromboncino, perhaps while he was in Ferrara, since the two works show marked similarities. Two four-voice motets survive, both in printed collections. One of these, *Tulerunt dominum meum*, is also included in Glarean's *Dodecachordon* (1547). Glarean writes glowingly of the motet, commenting on the music's 'great emotion and innate sweetness and tremendous power' in its depiction of Mary Madgalene weeping at the tomb of Christ. It is a large motet in three parts that demonstrates fully Pesenti's ability to compose in the formal Franco-Flemish style. Glarean, in fact, originally thought that the motet was by Josquin and writes that some people attribute it to Isaac, though in the copy of the treatise he sent to his pupil Johannes Aal he added a handwritten note assigning the piece correctly to 'Pre Michel de Verona'.

Pesenti's music seems to have been widely known, even after his death. Marguerite of Navarre translated into French his *Che faralla, che diralla* (1513¹), which deals with a lover exacting his revenge on his beloved by becoming a friar; she described the music as 'rather pedestrian'. Verdelot set the cantus of his *O dio, che la brunetta mia* (1504⁴) for six voices (1541¹⁶), and Pesenti's work itself appeared, without the altus and ascribed to Costanzo Festa, in *Il vero libro di madrigali a tre voci di Costanzo Festa* (1539).

WILLIAM F. PRIZER

Pes flexus. *See* TORCULUS.

Pesindhèn [pasindhèn, pesinden]. Female singer in Central Javanese gamelan. Commonly several *pesindhèn* participate in a performance, singing in alternation or in unison depending on context. They are prominent in shadow plays (*wayang kulit*), interacting with the puppeteer (*dhalang*). They sing *sindhènan*, as a featured solo or as one of many melodic strands in the gamelan texture (*sindhènan* also refers to mixed-gender choral song for court dances).

Sindhènan is fixed for some pieces, but for most pieces the *pesindhèn* draws on stock texts and melodic phrases, parsing *wangsalan*, richly allusive couplets of 12-syllable lines, into eight- and four-syllable units, sung (with various interjections) to melodic formulae that lead to principal pitches in the composition according to modal constraints, incorporating substantial individual variation. Usually

sindhènan is rhythmically free, unlike male choral melodies (*gérongan*), and is closely related to the *rebab* melody.

Recently the voice of the *pesindhèn* has been heavily amplified. She is often visually prominent in performance and on cassette covers, while other performers are anonymous. Paid more than male singers and instrumentalists, *pesindhèn* confer status on their patrons: the more famous and numerous the singers hired, the richer the patron appears. Despite this star status, allegations of immorality, based on singers' close associations with men, have led some singers to prefer the euphemistic label *waranggana* ('nymph').

In West Java the *pasindén* is a recent addition (mid-20th century onwards) to the *gamelan saléndro* ensemble. The *pasindén* plays a prominent role in *wayang golék* (rod puppet theatre, accompanied by *gamelan saléndro*), where the increasing focus on her melody has resulted in changes to the musical texture of the ensemble.

BENJAMIN BRINNER

Peskó. Hungarian family of musicians.

(1) Zoltán Peskó (i) (*b* Zsolna, 24 Aug 1903; *d* Budapest, 12 April 1967). Organist. He studied with Dezső Antalffy-Zsiross and Aladár Zalánfy at the National Hungarian Royal Academy of Music, obtaining his diploma in 1927, and in Berlin with Heitmann and Jöde (1928–9). For many years he was organist and choirmaster of the Lutheran church in Budapest, and was involved in many Hungarian church music reforms. He was one of the most eminent Hungarian organists of the 1930s and 1940s. His interests included school music, and he was responsible for the introduction of recorders into Hungarian schools.

(2) György Peskó (*b* Budapest, 16 April 1933). Organist and pianist, son of (1) Zoltán Peskó (i). He studied at the Liszt Academy under Sebestyén Pécsi (organ) and Zoltán Horusitzky (piano), obtaining his diplomas in 1959 and 1961 respectively. He became organist of the Lutheran church in Buda Castle, and in 1969 joined the teaching staff of the Budapest Conservatory. He has given concerts in Germany, Austria, Switzerland, Yugoslavia, Finland, Poland and elsewhere and is the first Hungarian organist to have performed the complete cycle of Bach's organ works. An excellent Bach interpreter, he keeps his virtuoso technique rigorously within the appropriate stylistic framework. His robust temperament makes his performances colourful and dramatic, in a repertory ranging from Bach to Liszt and Reger.

(3) Zoltán Peskó (ii) (*b* Budapest, 15 Feb 1937). Conductor and composer, son of (1) Zoltán Peskó (i). He graduated from the Liszt Academy in 1962, having made his début conducting the Hungarian Radio and Television SO in 1960; between 1963 and 1966 he studied composition under Petrassi and Ferrara in Italy, and conducting under Boulez in Switzerland. He was assistant conductor (to Maazel) of the Deutsche Oper and Berlin Radio SO (1966–9), and conductor at the Deutsche Oper (1969–73), also teaching at the Berlin Hochschule für Musik (1969–72). He made his début at La Scala in 1970, and four years later was appointed principal conductor at the Teatro Comunale, Bologna, where he presented a repertory ranging from *Carmen* and *Le nozze di Figaro* to *Billy Budd* and *The Fiery Angel*. He was principal conductor at the Teatro La Fenice, Venice, 1976–7, and of the RAI SO, Milan, 1978–82. He is a notable interpreter of contemporary music, and has given the premières of several of Dallapiccola's works and works by Xenakis, Bussotti, Donatoni, Jolivet, Kurtág and Rihm. He gave the first performance of the German version of Liebermann's *La forêt* at Schwetzingen in 1988, and the première of Azio Corghi's *Blimunda* in Milan in 1990. His orchestration of Musorgsky's *Salammbô* was first performed and recorded in Milan in 1980. Peskó's own compositions are in an avant-garde idiom, and include a string quartet *Tensions*, *Trasformazione* for orchestra, *Bildnis einer Heiligen* for soprano, children's choir and chamber ensemble, and *Jelek* for keyboard instruments.

PÉTER P. VÁRNAI/NOËL GOODWIN

Pesori, Stefano (*b* Mantua; *fl* 1648–75). Italian guitarist, guitar teacher and composer. He served various members of the Italian nobility including the marquises M.A. Sagramosi, B. Gherardini and G. Pozzo. He published five books for the guitar, with pieces in the *battute*, pizzicato and combination *battute*-pizzicato styles, and including songs. The books contain lengthy prose passages and letters, often up to half of the book's length, which are unfortunately of little pedagogical value. Several contain lists of his students, arranged according to social status. The style is tailored to amateurs, rarely exceeding the lower positions, avoiding complex textures and rhythms, as well as *campanelas*, and rather archaic by post-1650 standards, especially when compared to the works of contemporary guitarists such as Corbetta, Bartolotti and Granata.

GARY R. BOYE

Pessard, Emile (Louis-Fortuné) (*b* Paris, 29 May 1843; *d* Paris, 10 Feb 1917). French composer and teacher. His father was a flautist, his mother a pianist, and his brother became a distinguished political journalist. At the age of 13 he composed a miniature comic opera for three characters, *La lettre de faire-part*, to words by his brother, which played 23 times in the puppet theatre in the passage Jouffroy in 1857. He then studied at the Ecole Niedermeyer for 3 months before enrolling at the Conservatoire to learn piano (with Laurent), organ (with Benoist), harmony (with Bazin) and composition (with Carafa). He won a *premier prix* in harmony there in 1862 and the Prix de Rome in 1866 with his cantata *Dalila*, which was performed at the Opéra-Comique on 21 Feb 1868. After leaving the Conservatoire, he played the flute, double bass and timpani in various Parisian orchestras, and then in 1878 was appointed inspector of vocal teaching in the Paris municipal schools. The following year he was admitted to the Légion d'Honneur, and in 1890 he became director of vocal teaching at that institution's establishment in St Denis. From 1881 until his death he was a professor of harmony at the Conservatoire, where his pupils included Ravel, and from 1891 to 1899 he wrote music criticism for *L'événement*.

Pessard's operas, of which contemporary biographers list quite a few more than seem to have been published or even performed, were genially received, and *Les folies amoureuses* in particular was quite successful. His songs, too, attracted praise: Debussy, for example, copied out 'Chanson d'un fou', and the resulting manuscript was published as Debussy's composition in 1932.

WORKS

all printed works published in Paris

STAGE

all first performed in Paris

La lettre de faire-part (miniature oc, H. Pessard), Marionettes, passage Jouffroy, 1857
La cruche cassée (oc, 1, H. Lucas and E. Abraham), OC (Favart), Feb 1870, vs (1872)
Don Quichotte (opérette-bouffe, 1, A. Deschamps, after M. de Cervantes), Salle Erard, 13 Feb 1874 (1873)
Le char (oc, 1, P. Arène and A. Daudet), OC (Favart), 18 Jan 1878, vs (1878)
Le capitaine Fracasse (oc, 3, C. Mendès, after T. Gautier), Lyrique, 2 July 1878, vs (1878)
Tabarin (opéra, 2, P. Ferrier), Opéra, 12 Jan 1885, vs (1885)
Tartarin sur les Alpes (?incid music, 4, C. de Courcy and P. Bocage, after Daudet), Gaîté, 17 Nov 1888
Les folies amoureuses (oc, 3, A. Lénéka and E. Matrat, after J.-F. Regnard), OC (Lyrique), 15 April 1891, vs (1891)
Une nuit de Noël (M. Lefèvre and Roddaz), Ambigu, 1893
Mam'zelle Carabin (opérette, 3, F. Carré), Bouffes-Parisiens, 3 Nov 1893
La dame de trêfle (oc, 3, C. Clairville and M. Froyez), Bouffes-Parisiens, 13 May 1898
L'armée de vierges (opérette, 3, E. Depré and L. Héral), Bouffes-Parisiens, 15 Oct 1902
L'épave (opérette, 1, Depré), Bouffes-Parisiens, 17 Feb 1903
Castor et Pollux (fantaisie-bouffonne, Deschamps), 2vv, orch/pf (1880)
La fiancée du trombone à coulisse (symphonologue en vers, P. Bilhaud)
La grande batelière (oc, 3, M. Boucheron and Xanrof)
Jeanne Hachette (drame lyrique, 3 acts and 6 tableaux, E. Dubreuil)
Le muet (opérettomime, Galipaux)
Les plaideurs (oc, 3, Adenis and Harthmann, after Racine)
3 one-act ocs: Gifles et baisers (P. Barbier), Huguette (G. Prévost), Laridon (Morel-Retz)
Excerpts from Pessard's operas pubd in *Fleurs mélodiques*, ed. H. Cramer (1878–85)
Arrs. by Pessard and others of opera excerpts for chbr groups and pf

OTHER WORKS

Choral: at least 17 pieces, incl. Dalila (cant., E. Vierne), 1866; Ave Maria, chorus, org, vn/vc, pf/hp (1873); Petite messe solennelle, 2vv, org (1878); some sacred works pubd in *Lyra sacra*, no.1 (1875); many secular works pubd in *L'orphéon des écoles* (1880–89)
Songs: over 50 pubd separately, many repr. in 20 mélodies, i (n.d.), 20 mélodies, ii (?1895), Joyeusetés de bonne compagnie (1873); at least 6 duets
Orch: 2 suites, 1 march, other works
Chbr: at least 9 pieces, incl. Wind Qnt, op.6 (1882); Pf Trio, op.19 (1877); 3 pièces, fl, pf, op.28 (1886)
Pf: *c*20 publications, incl. 4 mazurkas; 4 romances sans paroles; 3 sonatines; 2 nocturnes; 25 pièces, op.20 (1878); 10 pièces, pf 4 hands, op.22 (1878); 20 pièces nouvelles, op.26 (1885); arrs. of orch works of Pessard
Harmonization and arrs. of La marseillaise for orch; band; 1v, pf; 2vv; 3vv; male chorus

Pest. Hungarian town, united in 1873 with Buda and Óbuda to form BUDAPEST.

Pestelli, Giorgio (*b* Turin, 26 May 1938). Italian musicologist. He was first taught music by his great-uncle, the composer Luigi Perrachio, and then studied the piano with Lodovico Lessona at the Turin Conservatory (diploma 1961), and took an arts degree at the University of Turin under Mila in 1964. In the same year he became an assistant lecturer in music at Turin, where he later became lecturer (1969) and professor (1976). Pestelli's main interests lie in the relationship between music and literature, the history of criticism, and 18th- and 19th-century music. His first work, a study of the sonatas of Domenico Scarlatti, proposed a new chronological ordering of the sonatas based on stylistic evidence; and he has edited two volumes of sonatas by Platti (1978, 1986). He was a member of the editorial board of the *Rivista italiana di musicologia* (1977–85), artistic director of the orchestra and chorus of the Turin RAI (1982–5) and joint editor of *Storia dell'opera italiana* (Turin, 1987). He is on the editorial boards of the complete critical edition of Verdi's works (by the University of Chicago Press and Ricordi) and the journals *Nuova rivista musicale italiana* (from 1990) and *Il saggiatore musicale*. He is a music critic for the Turin newspaper *La stampa*.

Peter [Petraeus], **Christoph** (*b* Weida, Vogtland, 1626; *d* Guben, 4 Dec 1669). German composer and music editor. His first appointment was as schoolmaster and Kantor at Grossenhain, Saxony. He moved in 1655 to Guben, where he was Kantor until his death. He worked closely there with the poet and civic official Johann Franck. 40 melodies in the latter's *Geistliches Sion* (1672), the first part of his *Teutsche Gedichte*, are by Peter, and he referred to Peter's skills in the second part, *Irdischer Helicon* (1674). Peter's *Andachts-Zymbeln* is an anthology of chorales by various composers which also contains preliminary instructional matter, a letter of 1524 from Luther to Spalatin, and testimonials to Peter from Franck and others. It may well be significant that he inscribed it to the mayor and corporation of Guben in the year in which he arrived at Guben and that he received rights of citizenship there early the following year. *Precationis thuribulum* (RISM 1669[1]) consists of masses by Saxon composers based on familiar chorales and set for various combinations of voices and instruments with continuo. The *Geistliche Arien* includes settings of poems by, among others, Franck, Johann Rist and Paul Gerhardt, and Peter explained that they are for solo voice (with instruments) 'so that the words can be better understood'.

WORKS

Andachts-Zymbeln oder andächtige ... Lider und ... Arien, 4, 5vv (Freiburg, 1655); 19 ed. in *ZahnM*
Letzte Segens-Wort ... durch Johann Francken auffgesetzet, 5vv (Frankfurt an der Oder, 1655)
Brautlied aus dem 1. Capitel des hohen Liedes Salomonis, 8vv (Frankfurt an der Oder, 1661)
Geistliche Arien ... auf die hohen Jahres Feste und Psalmen Davids, 1v, 5 viols/other insts, bc (Guben, 1667); 2 ed. in *WinterfeldEK*; 4 ed. in *ZahnM*
40 lieder in J. Franck: Geistliches Sion (Guben, 1672); 1 ed. in *WinterfeldEK*; 13 ed. in *ZahnM*

PERCY M. YOUNG

Peter, Henry. *See* PETYR, HENRY.

Peter, Johann Friedrich [John Frederik] (*b* Heerendijk, the Netherlands, 19 May 1746; *d* Bethlehem, PA, 13 July 1813). German composer, organist and minister. He was educated at the Moravian schools in the Netherlands and Germany, finally entering the theological seminary of the church at Barby, Saxony. After his graduation in 1769, he was sent to America in 1770. From 1770 to 1780 he served the northern Moravian communities of Nazareth, Bethlehem and Lititz, Pennsylvania. In 1780 he was transferred to the southern community of Salem, North Carolina, where he spent the next ten years in various church positions, including that of musical director to the Salem congregation. In 1790 he was again transferred to the north, serving successively at Graceham (Maryland), Hope (New Jersey) and Bethlehem again. Although his official position was often that of schoolteacher, clerical assistant or diarist, unofficially he was always concerned with music. While a student at the seminary he copied much of the music that came his way. When he went to America he took with him an extensive library of instrumental works in manuscript, including several works by J.C.F. Bach which survive only in Peter's copies. Although he must have studied with such Moravian composers as Johann Daniel Grimm (1719–60) and C.F. Gregor, it is thought that he gained more from his studies of the works he copied than from formal instruction.

Peter composed six quintets for two violins, two violas and cello, and about 105 concerted anthems and solo songs. The musical style of the quintets is close to that of the early Classical masters, such as Stamitz, Vanhal and early Haydn. They were completed in Salem in 1789 and are the earliest known chamber music composed in America. Peter's anthems and solo songs feature graceful vocal writing and a considerable depth of musical expression. The orchestral accompaniment of these works, for strings and organ with occasional woodwind and brass, is always well worked out and often elaborate. His sacred vocal music is the finest body of concerted church music written in America at the time and compares well with that of European Moravian composers of his era. Manuscripts of his music are in *US-BETm* and *WS*.

Peter, Simon (*b* 1743; *d* 1819). American Moravian composer, brother of JOHANN FRIEDRICH PETER. *See also* MORAVIANS, MUSIC OF THE, §3.

Peterborough. American town in New Hampshire. It is the location of the MACDOWELL COLONY.

Peterlein, Johann. *See* PETREIUS, JOHANN.

Peter of Blois (*b* Blois, *c*1135; *d* ?France or ?London, 1211/12). French writer of Latin lyric poetry. He studied at Tours, Bologna and Paris, tutored William II of Sicily in Palermo 1166–8 and served the archbishops of Rouen (*c*1172–4), Canterbury (*c*1174–*c*1209) and York (1201–2) as well as King Henry II of England (*c*1184–9). He was chaplain and secretary to Eleanor of Aquitaine (1191–5) and gained among other posts a canonry at Chartres (between 1176–9) and archdeaconries at Bath (1182) and London (*c*1200). Though known primarily from and for his voluminous collection of about 300 letters (assembled 1184–1202), Peter also wrote rhetorical and religious treatises, and was renowned as a poet, earning the praise of his contemporary Walter of Châtillon. As many as 53 songs have been ascribed to him (see Dronke, 1984), several of which (given below) have musical settings in the Notre Dame conductus repertory, only nine (one with a surviving melody) are supported by contemporaneous evidence. Two different Peters have been proposed (see Southern, 1992), both poets with similar careers, which complicates the questions of authorship and attribution of the songs.

THOMAS B. PAYNE

Peter of Cambrai [Petrus Cameracensis] (*fl* mid-13th century). French composer. He was an Augustinian canon of the abbey of St Aubert in Cambrai; a catalogue of ecclesiastical authors names him as a composer of conductus and of neumas to an office of St Elizabeth of Hungary with texts by Gerard of Saint-Quentin-en-Isle. The office is most likely that in *F-CA* 38, beginning 'Gaudeat Hungaria'; the neuma to its fifth Matins responsory is the tenor of the anonymous motet *Un chant renvoisie* (*F-Pa* 3517–18, f.14*r*). An undated life of St Dympna, probably dating from the mid-13th century, is ascribed to a certain Petrus Cameracensis, who may be the same individual.

BARBARA H. HAGGH

Peters. German firm of music publishers. Originally founded in Leipzig, it is now an international group of independent companies in Germany, Great Britain and the USA. On 1 December 1800 the Viennese composer and Kapellmeister FRANZ ANTON HOFFMEISTER (1754–1812) and the Leipzig organist Ambrosius Kühnel (1770–1813) opened a 'Bureau de Musique' in Leipzig. Attached to this publishing house were an engraving works, a printing works and a shop selling printed music and instruments. The first publications included chamber

music by Haydn and Mozart, as well as almost forgotten keyboard works by J.S. Bach, of which the firm published a complete edition in 14 volumes. J.N. Forkel entrusted his monograph on Bach to the publishers in 1802, and they also acquired several compositions by Beethoven (opp.19–22, 39–42). Hoffmeister moved back to Vienna in 1805, while Kühnel, continuing alone, increased the collaboration with Forkel, and promoted the publication of Ernst Ludwig Gerber's *Neues historisch-biographisches Lexikon der Tonkünstler* (1812–14). By 1813 the firm had published works by J.F. Reichardt, Dotzauer, Johann Andreas Streicher, Türk, Lauska, Tomášek and Vincenc Mašek; the first works by Louis Spohr were published, and Spohr collaborated with Kühnel's successors for decades.

In 1814 the publishing business was bought by Carl Friedrich Peters (*b* Leipzig, 30 March 1779; *d* Sonnenstein, Bavaria, 20 Nov 1827), a bookseller of Leipzig, and it became known as 'Bureau de Musique C.F. Peters'. The Battle of Leipzig (1813) had a deleterious effect on the sale of printed music, and Peters's business difficulties were aggravated by the fact that he suffered from bouts of severe depression; he was subsequently committed to an asylum. Besides Spohr and Weber, Peters published works by Hummel, Field, Grosheim, Klengel, Ries and other lesser-known composers.

The manufacturer Carl Gotthelf Siegmund Böhme (1785–1855) bought the firm in 1828 and played an active role in the formation of the first confederation of music publishers for the purpose of securing legal copyright protection. In collaboration with Czerny, Siegfried Dehn, F.C. Griepenkerl and Moritz Hauptmann he brought out many works by J.S. Bach. After Böhme's death the firm became a charity foundation under the supervision of the town council of Leipzig. On 21 April 1860 it was bought by Julius Friedländer, a book- and music seller of Berlin, who invented a speed printing press for producing sheet music. In 1863 Max Abraham (1831–1900), a doctor at law, became a partner in the business and in 1880 sole owner. Under Abraham's purposeful direction C.F. Peters won a worldwide reputation. Together with Carl Gottlieb Röder, Abraham recognized the importance of the mechanical press for printing music, and used it to advantage with the Edition Peters series, begun in 1867. It was produced well and cheaply, with light green jackets (for earlier composers' works not affected by copyright restrictions), or pink (for original works acquired by the publisher). Abraham acquired the complete works of Grieg and from the business relationship grew a life-long friendship. First editions of Wagner, Brahms, Bruch, Köhler, Moszkowski and Sinding appeared, edited by noted musicologists and interpreters. In 1894 the Musikbibliothek Peters, founded by Abraham, was donated to the city of Leipzig and made available free of charge to the general public. Since 1953 this comprehensive collection has been in the Leipziger Städtische Bibliotheken, which has made it accessible by producing bibliographies. In 1895 the *Jahrbuch der Musikbibliothek Peters* appeared, which in 1956 became the *Deutsches Jahrbuch der Musikwissenschaft*.

After Abraham's death in 1900 the business was inherited and managed by his nephew Henri Hinrichsen (*b* Hamburg, 5 Feb 1868; *d* Auschwitz [Oświęcim], 1942), who had been head clerk from 1891 and a partner from 1894. Hinrichsen developed into a far-sighted and circumspect businessman, who was also a patron of the arts. He acquired songs by Wolf, as well as works by Mahler, Reger, Pfitzner and Schoenberg, and seven symphonic poems by Richard Strauss (acquired from Aibl, 1932). In 1907 the *Volksliederbuch für Männerchor* first appeared. In 1917 Hinrichsen bought the Swiss firm of Rieter-Biedermann, and in 1926 he made possible the purchase of the Heyer collection of musical instruments in Cologne, which formed the basis for the museum of musical instruments in the University of Leipzig. The honorary degree of doctor of philosophy was conferred on Hinrichsen by Leipzig University in 1929. In 1931, the year of the death of his assistant Paul Ollendorff, Henri Hinrichsen's eldest son Max (*b* Leipzig, 6 July 1901; *d* London, 17 Dec 1965) joined the firm as a partner. His second son, Walter (*b* Leipzig, 23 Sept 1907; *d* New York, 21 July 1969), also joined the firm that year, followed in 1933 by the third son, Hans-Joachim (1909–40). The composer Wilhelm Weismann (1900–80), who had worked for the firm from 1929, had considerable influence upon its development and output until his retirement in 1966.

Walter Hinrichsen left Germany in 1936, and in 1948 founded the C.F. Peters Corporation in New York. Max Hinrichsen left the parent firm in 1937, and in 1938 created Hinrichsen Edition in London. In 1939 Henri and Hans-Joachim Hinrichsen, who had become co-partner with his father in 1937, were forced to yield to sanctions of the Nazi regime and Johannes Petschull (*b* 1901) took over the management of the firm. In 1940 he acquired the firm of Litolff, founded in Brunswick in 1828.

After World War II the original Leipzig firm was restored to the Hinrichsen family and received a licence to continue publishing in March 1947. In 1949–50 it was again confiscated, this time by the East German government, and became a state-owned business (VEB). As such it was subject to new cultural, political and editorial development. In addition to its attention to the humanist musical heritage and the support of important national and international traditions it was soon concerned with the promotion of the work of contemporary composers in eastern Europe (Eisler, E.H. Meyer, Butting, Dessau, Ottmar Gerster, Geissler, Khachaturian, Schnittke, Shostakovich). The firm produced revised editions as well as comprehensive new editions (Skryabin, Chopin, Debussy, Fauré, Satie, Mahler and Vivaldi). From 1949 to 1969 the firm was under the direction of the book- and music seller Georg Hillner. In 1969 the musicologist Bernd Pachnicke took over its direction; he was succeeded by Norbert Molkenbur in 1983.

In 1950 Walter and Max Hinrichsen took Petschull to West Germany and formed a partnership with him, creating the new firm of C.F. Peters Musikverlag in Frankfurt with Petschull as managing partner. After the reunification of Germany in 1989, C.F. Peters Frankfurt took over the former communist-supervised Leipzig firm and transferred most of its publishing activities to Frankfurt. In 1993, after having twice been confiscated, the publishing house was finally restored to its rightful owners.

Each of the three Western companies has published a substantial share of the original Peters catalogue as well as developing its own independent publishing programme. The Frankfurt firm, whose managers in 1999 were Johannes Petschull and Karl Rarichs, acquired the music

publishing firm of M.P. Belaieff in 1971 and in 1974 Edition Schwann. The C.F. Kahnt catalogue was purchased in 1989. In addition to the original Peters, Belaieff, Schwann and Kahnt catalogues, the Frankfurt firm publishes much contemporary music, including works by Genzmer, Globokar, Goldmann, Heider, Kagel, Ligeti, Sheriff and Tüür. Another main area of activity is the publication of Urtext editions based on the latest research into sources, especially of large-scale choral repertory of the 18th and 19th centuries.

Hinrichsen Edition Ltd in London (renamed Peters Edition Ltd in 1975) initially focussed on English music, notably choral and organ repertory, together with pedagogic works and music for amateur performers (including brass bands); it published the periodical *Music Book* (formerly *Hinrichsen's Musical Year Book*) until 1961. Following Max Hinrichsen's death, his widow Carla took over the direction of the firm until 1976 when Jonson Dyer was appointed managing director. He was succeeded in 1995 by Nicholas Riddle. As Peters Edition, the firm has prioritized Urtext editions, including the piano works of Debussy and Ravel, and contemporary music (by James Dillon, Ferneyhough, Rebecca Saunders and Jonathan Dove).

One of the first priorities of the New York branch of the firm was to reissue the Edition Peters publications. It also publishes the American Music Awards sponsored by Sigma Alpha Iota, the American Wind Symphony Editions, the New York Public Library Music Publications, and the Walter Hinrichsen Award (under the auspices of the American Academy of Arts and Letters). Another major commitment is to the publication of contemporary music; since 1948 close to 3000 works (of which 90% are contemporary) have been introduced. The Peters catalogue lists among its composers Babbitt, Cage, Cowell, Crumb, Davidovsky, Morton Feldman, Lou Harrison, Hovhaness, Ives, Schoenberg, Christian Wolff and Wuorinen. The firm has also become the American agent for a number of European publishers. After Walter Hinrichsen's death, his widow Evelyn continued to maintain the high standards of the firm as well as expanding the catalogue. His son Henry Hans Hinrichsen became president of the firm in 1978, and was succeeded by Stephen Fisher (a staff member since 1964) in 1983. On 19 December 1983 Evelyn Hinrichsen and C.F. Peters were awarded the American Music Center's Letter of Distinction for their continued commitment to the advancement of new music. At the beginning of 1998 Nicholas Riddle was appointed president and chief executive officer, combining these roles with management of the London company.

HANS-MARTIN PLESSKE, FRANCES BARULICH

Peters [Lazzaro], **Bernadette** (*b* Queens, NY, 28 Feb 1948). American actress and singer. One of the most distinctive of Broadway performers, she made her stage début at the age of 10 in a revival of *The Most Happy Fella* in 1958. She played a supporting role in *George M!* (1968) and scored her first major success with the off-Broadway *Dames at Sea* (1968). She played Mabel in *Mack and Mabel* (1974), Dot in *Sunday in the Park with George* (1983), Emma in *Song and Dance* (1985), the Witch in *Into the Woods* (1987), Marsha in *The Goodbye Girl* (1993) and Annie Oakley in the revival of *Annie Get Your Gun* (1999). She has won two Tony awards, the first for *Song and Dance* and the second for *Annie Get Your Gun*. Her musical film credits include *Pennies from Heaven* (1981), for which she won a Golden Globe Award, and *Annie* (1982). She has also appeared in numerous non-singing films, including Mel Brook's *Silent Movie* (1976) and *Impromptu* (1991). She provided singing voices for the animated *Beauty and the Beast 2: the Enchanted Christmas* (1997) and *Anastasia* (1997).

Her voice is as distinctive as her classical beauty. She does not have the typical Broadway belt voice, but rather adapts her versatile instrument to the particular needs of each character. The voice can be either as beautiful or as grotesque as she decides it should be, depending on the role. Her tremendous talent, vocal ability and professional attitude have earned her the well-deserved reputation as one of the finest musical theatre performers of her time.

WILLIAM A. EVERETT, LEE SNOOK

Peters, Reinhard (*b* Magdeburg, 2 April 1926). German conductor. He was a pupil of Thibaud and Cortot, and on one occasion performed as the soloist in a violin concerto and a piano concerto in the same concert. In 1952, after he had received first prize in conducting at the Besançon Festival, he began his career at the Städtische Oper in Berlin. He was principal Kapellmeister in Düsseldorf from 1957 to 1960 and Generalmusikdirektor director in Münster from 1961 to 1970, and in 1970 became permanent guest conductor of the Deutsche Oper, Berlin. From 1975 to 1979 he was music director of the Philharmonic Hungaria, with whom he made several recordings. He often conducts without a baton, and commands a wide repertory; his guest appearances have been in Japan, and North and South America. In 1966 he conducted the première of Blacher's *Zwischenfälle bei einer Notlandung* at the Hamburg Staatsoper, and in 1970 he conducted *Die Zauberflöte* at Glyndebourne.

Other premières he has conducted include Reimann's *Melusine* (1971), Sutermeister's *Madame Bovary* (1967) and the first symphonies of Yun (1984) and Detlev Glanert (1985).

HANS CHRISTOPH WORBS/R

Peters, Roberta (*b* New York, 4 May 1930). American soprano. She studied with William Hermann and was engaged by the Metropolitan at 19, without previous stage experience. She made her début in 1950 as Zerlina, a last-minute replacement for Nadine Conner; her official début was to have been as the Queen of Night, two months later. By her 25th anniversary with the company she had given 303 performances of 20 roles in 19 operas, notably Gilda, Despina, Norma, Rosina, Oscar, Zerbinetta and Lucia. Later she attempted to broaden her repertory in lyric soprano roles, playing Violetta, Mimì and Massenet's Manon outside New York and performing in musical comedy. She performed at Covent Garden (*The Bohemian Girl* under Beecham, 1951), in Salzburg (*Die Zauberflöte*, 1963), Vienna (1963), Munich (1964) and Berlin (1971), and with the Kirov and Bol'shoy companies (1972). A singer of considerable charm and flute-like accuracy, Peters maintained the Pons and Galli-Curci tradition of coloratura singing at a time when the more dramatic attitudes of Callas and, later, Sutherland were in vogue. She recorded several of her most successful roles, including Zerbinetta and Rosina with Leinsdorf and the Queen of Night with Böhm.

MARTIN BERNHEIMER/R

Peters, W(illiam) C(umming) (*b* Woodbury, Devon, 10 March 1805; *d* Cincinnati, OH, 20 April 1866). American music publisher. He emigrated to the USA from England in about 1820. In 1827 he was active in Pittsburgh as a clarinettist, music teacher and proprietor of one of the city's first music shops. Between 1828 and 1831 he composed a Symphony in D in two movements, numerous marches and dances, and arranged opera overtures for the Harmonist orchestra. He was also organist at Trinity Episcopal Church in Pittsburgh. In 1830 Peters's Musical Repository was located at 19 Market Street; in 1831 he was in partnership with W.C. Smith and J.H. Mellor at 9 Fifth Avenue. He sold his business interests to his partners in 1832 and moved to Louisville, establishing himself as a teacher and dealer in pianos and operating a school and circulating music library.

In the three decades before the Civil War about 200 of Peters's arrangements and compositions were published. Between 1838 and 1866 W.C. Peters owned or had an interest in no fewer than ten publishing companies in Louisville, Baltimore, Cincinnati, New York and St Louis. His earliest publications were his own songs and keyboard pieces that were first published by Hewitt & Jaques.

Peters, Browning & Co., Louisville, was formed in about 1840 by W.C. Peters, his brother-in-law Samuel Browning (*d* Texas, 1844) and probably his brother Henry J. Peters (*d* Texas, 1877). This was followed around 1841 by Peters & Co., Louisville, and Peters & Co., Cincinnati (W.C. Peters and Henry J. Peters). Peters & Webster, Louisville, was formed in 1845 at about the same time as Peters & Field, Cincinnati, and Peters & Field, St Louis, with Joel Field. Popular composers in their catalogue were Stephen Collins Foster, Henry Russell, E.W. Gunter and William Striby. The inventory was increased with sheets acquired from John F. Nunns and Kretchmar & Nunns, Philadelphia.

In 1849 W.C. Peters established the firm W.C. Peters, Baltimore. Some sheets have the imprint W.C. Peters & Co., Baltimore, but no source has been found to identify a partner or partners. While in Baltimore, W.C. Peters stated that he 'still had an interest' in the Louisville and Cincinnati companies, and for a time tried to unite them with interlocking plate numbers.

W.C. Peters's sons, William M. Peters, Alfred C. Peters and John L. Peters, became active in the companies in the late 1840s and early 1850s. In 1848 William M. Peters joined Peters & Field which then became Peters, Field & Co. A new plate number series was begun by this company. One or more of the sons may have been part of W.C. Peters & Co., Baltimore, which published the *Baltimore Olio and Musical Gazette* (12 Numbers). This contained music, excerpts from pedagogical works, biographical sketches, reviews and notices of concerts and other topics of current musical interest, some of the latter written by pianist-composer Charles Grobe.

In 1851 W.C. Peters moved to Cincinnati and with his sons William and Alfred formed W.C. Peters & Sons, 'successors to Peters, Field & Co.'. W.C. Peters & Sons issued piano methods and exercises by Hünten, Burgmüller, Czerny and Henri Herz, and teaching manuals for other instruments. They also published masses, motets, antiphons, hymns and responses for the Roman Catholic Church, most of which were adapted and arranged or composed by W.C. Peters. Among the European composers represented are Giuseppe Baini, Diabelli, Pietro Terziani, Gaspare Spontini, Louis Lambillotte, Michael Haydn, J.N. Hummel and Vincent Novello. The Americans include Raynor Taylor, Benjamin Carr, Benjamin Carr Cross, H.D. Sofge, Henry Bollmann and W.C. Peters.

In 1857 William M. Peters was replaced by his brother John L. Peters, and William appears to have established his own business. John L. Peters also opened stores in New York and St Louis. Under the names W.C. Peters & Sons, A.C. Peters & Brother and J.L. Peters & Brother they continued to publish popular songs, many with texts about the Civil War, and by 1862 the plate numbers on new sheets issued were above the number 4000. Popular composers in their inventory were Henri Herz, Vincent Wallace, William Iucho, Stephen Glover and Charles Grobe.

In March 1866 the company premises were destroyed by fire and the Peters company lost its entire stock of music and all the plates acquired by W.C. Peters over a period of more than forty years. On 20 April 1866, one month after the fire, W.C. Peters died of heart failure. John L. Peters then began to expand his New York and St Louis businesses, buying the stock of H.M. Higgins, Chicago (1867), A.E. Blackmar, New York, J.J. Dobmeyer & Co., St Louis and DeMotte Brothers, Chicago (all 1869). J.L. Peters sold the Cincinnati firm to J.J. Dobmeyer & Co. in 1868 and the New York firm to C.H. Ditson & Co. in 1877. J.L. Peters, St Louis, published until 1885 and was an active music store until 1892. Meanwhile, in Louisville Henry Peters and his partners had bought back the business from D.P. Faulds in 1855 (sold to them in 1851) and resumed business as Peters, Webb & Co. until

1861, when the company was named Webb, Peters & Co. Henry J. Peters dissolved his Louisville partnership in 1877 and moved to Texas where he died soon afterwards.

RICHARD D. WETZEL

Petersen [Pietersen], **David** (*b* Lübeck, *c*1650; *d* before 5 May 1737). Dutch composer and violinist of German extraction. He went to Lund (Sweden) with Gregor Zuber (*fl* 1633–73), possibly his tutor and almost certainly his mentor; both were employed as university musicians there during the early 1670s. From shortly before 1680 onwards Petersen was in Amsterdam; it is not clear whether he worked as a professional musician. Considering his *Speelstukken* of 1683 (a set of violin sonatas modelled after J.J. Walther's *Scherzi* of 1676) and a possible connection between Walther and Amsterdam (as expressed in Walther's *Hortulus chelicus*), it is possible that Walther taught Petersen. Petersen dedicated the *Speelstukken* to an Amsterdam burgomaster and subsequently received a few small city appointments, which he held until his death. He died somewhere outside Amsterdam.

The *Speelstukken* are by far his most important compositions; they are in a virtuoso style with many polyphonic passages, rapid scales and other figures, and the use of high positions. He also wrote numerous continuo songs to Dutch poems mostly by Abraham Alewijn, a close friend. Alewijn dedicated his play *Amarillis* (1693) to Petersen with the suggestion that he set it to music, but the extent to which Petersen fulfilled this wish is not known; some of his songs are on texts derived from the play.

Petersen belongs to the generation of Dutch composers that includes Johannes Schenk, Carolus Hacquart, Servaas de Konink and Hendrik Anders, all of whom were influenced by German, French and Italian music. Their work, however, was superseded by the Italian-orientated music that dominated the Dutch Republic from about 1710 onwards.

WORKS

Speelstukken (12 sonatas), vn, bc (Amsterdam, 1683/*R*)
Zede- en harpgezangen (24 songs) (A. Alewijn), 1v, bc (Amsterdam, 1694)
8 Cont songs, Boertige en ernstige minnezangen, 1v, bc (Amsterdam, 3/1705, 4/1705, 5/1709)
Incid music in Andromeda (play, F. Rijk, after P. Corneille), Amsterdam, 1730, lost

RUDOLPH A. RASCH

Petersen, Lauritz Peter Corneliys. *See* CORNELIUS, PETER (ii).

Petersen Quartet. German string quartet. It was founded in 1979 at the Hanns Eisler Hochschule für Musik, Berlin, by Ulrike Petersen, Uta Fiedler, Friedemann Weigle and Hans-Jakob Eschenburg. Its mentor was Wolf Dieter Batzdorf of the Berlin Quartet and its members took part in masterclasses by Thomas Brandis, Rudolf Koeckert, Siegmund Nissel and Sándor Végh. In 1983 Fiedler was replaced by Gernot Süssmuth. The ensemble won prizes at a number of competitions – Prague in 1984, Evian in 1985, Florence in 1986 and Munich in 1987 – and from 1988 to 1992 it was quartet-in-residence at East German Radio, although it also began to tour widely. At first its members played in East German orchestras but in 1989 it became a full-time ensemble. In 1992 Petersen was replaced as leader by Conrad Muck, a pupil of Rudolf Ulbrich and Wolfgang Marschner. During the 1990s the quartet established a position among the top German ensembles, notable for its technical polish and its intellectual grasp of a repertory ranging from Haydn and Boccherini to contemporary music. Its recordings, including on the one hand penetrating accounts of late Beethoven quartets and the Schubert C major Quintet and on the other hand works by Ervín Schulhoff, Pavel Haas and Boris Blacher, have won praise from the critics. In 1997 the group gave the first performance of Siegfried Matthus's *Das Mädchen und der Tod*. In 2000 Daniel Bell became second violinist and Eschenburg was replaced as cellist by Jonáš Krejčí, formerly of the Škampa Quartet.

TULLY POTTER

Peterson, John Willard (*b* Lindsburg, KS, 1 Nov 1921). American composer of gospel hymns and cantatas. *See* GOSPEL MUSIC, §I, 1(v).

Peterson, Oscar (Emmanuel) (*b* Montreal, 15 Aug 1925). Canadian jazz pianist. He studied classical piano from the age of eight, and when he was 14 won a local talent contest. During his late teens he played on a weekly Montreal radio show and throughout the mid-1940s was heard with Canada's Johnny Holmes Orchestra, playing in a style that blended elements from the styles of Teddy Wilson, Art Tatum, Nat 'King' Cole, Erroll Garner and others. Norman Granz invited him to appear at Carnegie Hall in 1949 in a Jazz at the Philharmonic concert and from that time onwards managed his career. Peterson toured regularly with Jazz at the Philharmonic during the early 1950s and formed his own trio using the combination, popularized by Cole, of piano, guitar and double bass. His most popular trio, the other members of which were fellow black musicians Herb Ellis (guitar) and Ray

Brown (double bass), remained together from 1953 until 1958, when the guitarist was replaced by a drummer, Ed Thigpen. In this form the group, considered by many to have been the ideal vehicle for Peterson's unique talents, remained intact from 1959 until 1965, when Sam Jones (double bass) and Louis Hayes (drums) replaced Brown and Thigpen. In 1964 they recorded *The Oscar Peterson Trio Plus One* (Mer.) with Clark Terry.

In the early 1970s Peterson began concentrating on unaccompanied performances, proving incontestably that he was one of the greatest solo pianists in the history of jazz – though he had already recorded as an unaccompanied soloist (*My Favorite Instrument*, 1967, Saba). From the mid-1970s he played with symphony orchestras throughout North America and joined established jazz musicians such as Dizzy Gillespie, Clark Terry, Joe Pass and Niels-Henning Ørsted Pedersen for a number of memorable performances. Ill-health, including a severe stroke, kept him inactive for much of the early 1990s, though he gave a concert in Carnegie Hall in June 1995.

Because of his extraordinary technique and his comprehensive grasp of jazz piano history, Peterson is often compared with Art Tatum, with whom he shares an exceptional gift for inspiring awe from musicians, critics and listeners alike. Unlike Tatum, however, who often played in an arhythmic or rhythmically irregular manner, Peterson is devoted to maintaining a sense of hard-driving swing.

BILL DOBBINS

Peterson, Wayne T. (*b* Albert Lea, MN, 8 March 1927). American composer. He studied at the University of Minnesota (BA 1951, MA 1953, PhD 1960) where his teachers included Paul Fetler, Earl George and James Aliferis. A Fulbright Scholarship (1953–4) enabled him to spend a year at the RAM where he studied with Lennox Berkeley and Howard Ferguson. He has held teaching appointments at San Francisco State University (from 1960), Indiana University (1992) and Stanford University (1992–4), and fulfilled commissions for the San Francisco SO, Louisville Orchestra and Freiberg SO, the American Composer's Orchestra and the Fromm and Koussevitzky foundations. He has received awards from the Minnesota Centennial Composition Contest (1958), the American Society of Harpists (1985) and the American Academy and Institute of Arts and Letters (1986). In 1990 he was a visiting artist at the American Academy in Rome and in 1992 won a Pulitzer Prize for *The Face of the Night, The Heart of the Dark*.

Peterson is an open-minded enthusiastic listener and a self-confessed eclectic. His music is characterized by strikingly intricate and intensely active rhythms, profuse and inventive melodic and contrapuntal lines and secure, if at times elusive, formal structures. His works range in mood from driving and devilishly playful to sensuous. Later compositions employ an increasingly tonal idiom. Originally a jazz pianist, he began composing under the influence of Copland and Stravinsky before becoming absorbed by the music of Schoenberg and Sessions. He has also acknowledged Boulez, Carter and Wuorinen as important influences.

ROBERT P. COMMANDAY

Peterson-Berger, Wilhelm (*b* Ullånger, Ångermanland, 27 Feb 1867; *d* Östersund, 3 Dec 1942). Swedish composer and writer. After matriculating in Umeå he studied the organ and composition at the Stockholm Conservatory (1886–9); he then went to Dresden (1889–90), where his teachers included Kretzschmar (orchestration). He returned to Umeå to teach music and languages (1890–92), and went again to Dresden as a music educationist (1892–4). In 1895 he settled in Stockholm, where he was music critic of the *Dagens nyheter* from 1896 to 1930, except for a period when he was stage manager at the Stockholm Opera (1908–10) and for an Italian visit in 1920–21. From 1930 he lived at his villa on Frösön in Jämtland, northern Sweden.

Peterson-Berger's criticism immediately aroused great interest, and in 1896 he became well known as the composer of the piano pieces *Frösöblomster* and the song collection *Svensk lyrik*. In both fields he made a major contribution to the Swedish national-Romantic movement. His Wagnerian aesthetic standpoint was expressed in a series of music dramas, for which he wrote the texts, creating a Swedish Gesamtkunstwerk. *Arnljot*, based on the story of the warrior Arnljot Gelline from Sturlasson's *Saga of St Olav*, has often been viewed as the Swedish national opera. Each summer from 1936 it has been performed, as a spoken drama with incidental music, at Frösön. The comedy *Domedagsprofeterna*, concerning a wager as to the date of the Last Judgment, presents a

charming blend of lyrical freshness with textual and musical 17th-century pastiche. *Adils och Elisiv* combines the restraint of a saga with a yearning for peace and reconciliation determined by the period at which it was composed (after World War I); there are melodic features of Italian opera.

The most successful of Peterson-Berger's symphonies is the third, a work permeated by Scandinavian nature mysticism and drawing on the Sami *jojkar* music notated by Karl Tirén. The other symphonies are also more or less programmatic, and the Violin Concerto is a work of nature lyricism. Peterson-Berger's lyrical gift appears to greatest advantage in the piano miniatures and songs, among which the Karlfeldt songs, highly varied in mood, hold a special position. While still at school he had directed and sung in choirs, and his early compositions include some notable choruses, often suggested by nature and outdoor life. His material progress was hindered by the many enemies he made through his criticism; he attacked showy virtuosity and dry academicism with satire, but also with profound conscientiousness. Although his attitudes became increasingly negative, particularly with regard to new music, his writing was marked by idealism and, by reason of its breadth and colour, it had an enormous influence on Swedish cultural life. A Peterson-Berger Society has been founded within the Royal Musical Academy, Stockholm.

WORKS

MUSIC DRAMAS

all texts by Peterson-Berger

Ran, 1899–1900; Stockholm, 20 May 1903 [text pubd Stockholm, 1898]

Lyckan [The Happiness], 1903; Stockholm, 27 March 1903 [text pubd Stockholm, 1903]

Arnljot, 1907–9; Stockholm, 13 April 1910 [text pubd Stockholm, 1906, rev. 2/1910, 3/1956; Ger. trans. 2/1914]

Domedagsprofeterna, 1912–17; Stockholm, 21 Feb 1919 [text pubd Stockholm, 1912]

Adils och Elisiv, 1921–4; Stockholm, 27 Feb 1927 [text pubd Stockholm, 1919]

ORCHESTRAL

Orientalisk dans, 1890; Majkarneval i Stockholm, ov., 1892–3; Förspel till Sveagaldrar, ov., 1897; Sym. no.1 'Baneret' [The Banner], B♭, sketched 1889–90, composed 1903, rev. 1932–3; I somras [Last Summer], suite, pf/orch, 1903; Sym. no.2 'Sunnanfärd' [The Journey to the South], E♭, 1910; Sym. no.3 'Same-Ätnam' [Lappland], f, 1913–15; Romans, d, vn, pf/orch, 1915; Koral och fuga ur Domedagsprofeterna, concert arr., 1915; Earina [Spring], suite, 1917; Italiana, suite, 1922; Conc., f♯, vn, pf/orch, 1928; Sym. no.4 'Holmia' [Stockholm], A, 1929

ROLF HAGLUND

Peterszoon, Dirk. Dutch musician, son of PETER JANSZOON DE SWART.

Pétillement (Fr.: 'crackling'). A kind of staccato bowing. *See* BOW, §II, 2(iv).

Petipa, (Victor) Marius (Alphonse) [Marius Ivanovich] (*b* Marseilles, 11 March 1818; *d* Gurzuf, Crimea, 2/15 July 1910). French ballet-master and choreographer. *See* BALLET, §2(iv).

Petit [first name unknown] (*b* early 18th century; *d* ?Paris, after 1752). French violinist and composer. Although various 18th-century writers attested Petit's reputation, his career is obscure. He was one of Tartini's four French pupils, along with Pagin, La Houssaye and de Tremais, whose violin playing pleased the Parisian public during the middle of the century. When Petit made his début at the Concert Spirituel on Christmas Day 1738, playing a concerto of his own, he was in the service of the Polish King Stanislaus at the latter's court-in-exile at Lunéville. At subsequent appearances in 1741 and 1742 Petit played a sonata by Leclair and concertos by Leclair and Tartini. He was living in Paris in 1753.

According to Marpurg and Gerber, Petit's compositions are in the style of Tartini, but little can be judged from the few small pieces published in anthologies, which are all that have survived. Titon du Tillet considered Petit the equal of the best Italian violinists of the day, while to d'Aquin Tartini's stature could be discerned merely from his having produced students of the calibre of Pagin and Petit. According to Pincherle, Petit also studied with Leclair *l'aîné*. Pincherle incorrectly assigned Petit the initials J.C.; in fact J.C. Petit was music director to the Duke of Saxe-Eisenach and the Margrave of Baden-Durlach before 1730, and published *Apologie de l'exellence de la musique* (London, *c*1740). The books of violin duets (Paris, 1788–9) attributed by Gerber and Vidal to Tartini's pupil Petit are the work of a younger Petit who in 1788 and 1789 was a violin teacher and

member of the orchestra of the Théâtre Italien in Paris and was subsequently a violinist at the Opéra-Comique for 30 years. According to Fétis, this man had among his children a horn player Charles (*b* Paris, 1783) and a pianist-composer Camille (*b* Paris, 27 April 1800). It is not known whether the two violinists named Petit were related, or whether they were related to various other French musicians of that name active in the 17th and 18th centuries.

NEAL ZASLAW

Petite reprise (Fr.). *See* REPRISE.

Petit Jehan [Petitjean], **Claude** ['L'Abbé'] (*d* ?Metz, before 1604). French composer and singer. Documents in the archives of Meurthe-et-Moselle indicate that in August 1562 a 'Petit Jehan' received a payment from the chapter of the collegiate church of St George in Nancy for the education of a young choirboy; 'Claude Petit Jan' was mentioned as 'maistre des enffans de choeur' of the same church in February 1565 and in September of that year as 'maistre des chantres'. In June 1571 his name appeared as choirmaster of Metz Cathedral, but by April 1575 he was master of the choristers at Verdun Cathedral. In the same year he directed a group of singers brought from Verdun and Toul to Nancy for the funeral service of Claude de France, Duchess of Lorraine. They may have performed a Requiem Mass that he is reported to have written: a document of 1603 orders the binding of a book 'composed by the late M Petitjean'. In 1567 the choirmaster of Verdun won a prize at the annual music competition at Evreux with his four-voice setting of Ronsard's sonnet *Ce riz plus doux*. He seems likely to be the composer of the four-voice chanson *Je suis devenu amoureux* published in RISM 1569[9] with an attribution to 'Petit Jan' and reissued in RISM 1578[13] with the more specific ascription to 'Cl. Petit Jehan' (this chanson is ed. in SCC, xix, 1991). In April 1592 'Claude Petit Jehan de Metz' was paid by the chapter of Toul Cathedral for composing 'quelques pièces de musicque'. A number of singers at Metz had the name 'Petitjean', among them Henry (*d* 1550), his nephew Jean (*d* 1552), and Jacques Petitjean, who like Claude was sometimes called 'L'Abbé'. The earlier confusion with PETIT JEAN DE LATRE was resolved by Lesure.

Petit jeu. An organ registration on the *Positif* department of the Classical French organ, analogous to the GRAND JEU, with which it was often played in alternation. *See also* REGISTRATION, §I, 5.

Petkov, Dimitar (*b* Raykovo, 4 May 1919). Bulgarian composer. He studied chemistry in Sofia (1938–42) and subsequently graduated from the State Academy of Music. From 1946 to 1952 he directed the folksong and dance ensemble of the Ministry of the Interior; during the period 1958–60 he taught theory at the Sofia Music Academy, studying at the Moscow Conservatory between these periods. He was director of the Sofia National Opera (1954–62, 1975–8) and adviser in the Bulgarian Embassy, Prague (1962–7). Between 1969 and 1972 he was one of the vice-presidents of the committee for arts and culture in Sofia. From 1972 he was president of the Bulgarian Composers' Union. Most of his works are songs, often serving as examples of Bulgarian socialist realism.

WORKS
(*selective list*)

5 cantatas, incl. Septemvriyska legenda, 1954, Komunisti, 1966; Rekviyem za matrosa [Requiem for a Sailor], 1968; 3 polifonichni piesi, fl, cl, bn, 1954; Krivata pateka [The Crooked Path] (children's operetta), 1956; Rozhen sliza ot Rodopa [Rozhen Descends from Rhodope] (orat), 1967; Nespokoyni sartsa [Restless Hearts] (operetta), 1976; Zamlaknalite kambani [Silenced Bells] (op), 1988; Zlatna esen [Golden Autumn] (songs and arias), 1900–92; 2 suites, solo vv, children's chorus, orch; 25 solo songs, 50 choral songs, *c*300 children's/mass songs, film scores

LADA BRASHOVANOVA

Petra-Basacopol, Carmen (*b* Sibiu, 5 Sept 1926). Romanian composer. After attending the philosophy faculty at Bucharest University (1945–9), she studied composition with Jora and Leon Klepper and orchestration with Rogalski at the Bucharest Academy (1949–56), where in 1962 she became a lecturer. Petra-Basacopol took the doctorate at the Sorbonne under the supervision of Chailley with a thesis entitled *L'originalité de la musique roumaine à travers les oeuvres d'Enescu, Jora et Constantinescu* (Bucharest, 1968). In 1968 she attended the summer courses in Darmstadt. Her essentially neoromantic music remains within the framework of the Romanian national style, though she has experimented with harmonic and textural elements including clusters and new instrumental techniques. Petra-Basacopol has composed prolifically for the harp. In her theatrical works she has gained inspiration particularly from Romanian subject matter. Her many awards include the 1980 Enescu Prize.

WORKS
(*selective list*)

Stage: Mioriţa (ballet, 1, choreog. O. Danovski), 1980, Constanţa, Fantasio, 15 May 1981; Coeur d'enfant (children's op, 2, E. D'Amicis), 1983, Bucharest, Română, 18 Aug 1985; Ciuleandra (ballet, 2, L. Rebreanu), 1985–6, Cluj-Napoca, Română, 28 June 1987; Apostol Bologa (op, prol, 2, epilogue, after Rebreanu), 1990; Les sept corbeaux (ballet, 2, after J.L.C. and W.C. Grimm), 1996

Vocal: Crengile [The Branches] (M. Dumitrescu), chorus, orch, 1966

Orch: Sym. no.1, 1955; Ţara de piatră [The Country of Stone] 1959; Pf Conc., 1961; Triptic simfonic, 1962; Vn Conc. no.1, 1963; Vn Conc. no.2, 1965; Conc., hp, str, timp, 1975; Conc., str, 1981; Vc Conc., 1982; Fl Conc., 1994

Chbr and solo inst: Studii, hp, 1958; Pf Trio, 1959; 6 preludii, hp, 1960; Impresiuni din Muzeul Satului [Impressions from the Village Museum], pf, 1960; Sonata, fl, hp, 1961; Octet, ww, db, xyl,

1969; Trio, fl, cl, bn, 1974; Qt, fl, pf trio, 1978; Trio, fl, cl, hp, 1980; The Jungle Book, hp, 1990; Wind Qnt, 1992

OCTAVIAN COSMA

Petracchi, Francesco [Franco] (*b* Pistoia, 22 Sept 1937). Italian double bass player. He studied the double bass, conducting and composition at the Accademia di S Cecilia in Rome and made his solo début in 1961 at La Fenice in Venice. He has appeared extensively throughout Europe as a soloist and has also worked as a conductor. Several works have been dedicated to him, including Mortari's *Concerto per Franco Petracchi* (1966), Bucchi's *Concerto grottesco* (1967) and Rota's *Divertimento concertante* (1968–9). An influential teacher, he has been a professor at conservatories in Bari, Rome and Geneva, and his masterclasses at the Accademia Musicale Chigiana in Siena have attracted students from around the world. Among his recordings is an acclaimed account of Bottesini's Gran Duo with Ruggiero Ricci and the RPO. He plays a double bass by Gaetano Rossi, an unusually large instrument for a soloist.

RODNEY SLATFORD

Petraeus, Christoph. *See* PETER, CHRISTOPH.

Petrarch [Petrarca, Francesco] (*b* Arezzo, 20 July 1304; *d* Arquà, 18 July 1374). Italian poet and humanist man of letters. The son and grandson of notaries active in Florence, Petrarch himself never lived in Florence and only rarely visited it; his family had been exiled from the city and their confiscated property was not returned. In 1312 Petrarch's family moved to Avignon, where the papal court had recently settled. Francesco was educated in nearby Carpentras, then (1316) sent to study law at Montpellier. In 1320 he went to Bologna to continue his studies, beginning a pattern of alternate periods of residence in Italy and Provence that was to last until 1353, when he moved to Italy for good.

Petrarch returned to Avignon at the time of his father's death in 1326. He and his brother lived for a short time on their patrimony, but in 1330 Petrarch entered the service of two ecclesiastical members of the Roman Colonna family. About this time he received the tonsure; he may or may not have taken minor orders, and he never married. Over his life he accumulated canonries and other ecclesiastical benefits from the income on which he lived; but he rarely assumed canonical duties, and lived as far as possible the life of an independent man of letters.

The famous Laura was first seen by the poet in Avignon in 1327; the sonnets celebrating his love for her were written over a long period, the first redaction of the *Canzoniere* being undertaken in 1342. More poems were written after Laura's death in 1348, and the final text and arrangement of the *Canzoniere* occupied Petrarch intermittently throughout his life. The sonnets and canzoni of the *Canzoniere*, the *Trionfi* and scattered lighter poems in Italian represented for Petrarch, who was not sanguine about the state of vernacular literature, only a small part of his literary activity, most of which was devoted to biographies of classical figures, reflective essays and dialogues, epic poetry, and above all letter-writing, all in Latin.

During the 1330s Petrarch travelled in northern Europe; in 1336, the year of his celebrated climb of Mt Ventoux, he visited Rome for the first time. He settled in the country in Vaucluse in 1337, near to, but not in, crowded Avignon, which he detested. In 1340 he accepted the sponsorship of King Roberto of Naples as a candidate for poetic 'coronation'; the ceremony took place on the Capitol in Rome in April 1341. Petrarch's view of Rome as the proper residence for both pope and emperor, and his later support of Cola di Rienzo, were part of his humanistic reverence for Latin antiquity, as was his lifelong thirst for literary fame.

Parma and Vaucluse were Petrarch's 'Cisalpine' and 'Transalpine' homes in the next decade. He was now a great celebrity, sought after as an ambassador and orator on state occasions in Italy, France and imperial domains. The rulers of Milan, Verona, Ferrara and Mantua all paid court to him. His circle of friends, among whom the most celebrated was Boccaccio, was large and was carefully cultivated through visits and correspondence. After 1353 his residence for eight years was Milan, where he was close to the Visconti; in 1361 he moved to Padua, then to Venice, and again in 1368 to Padua. The gift of a piece of land in the Euganean hills enabled him to build his final country retreat at Arquà.

Petrarch was fond of music. Among his friends were the singer Ludovicus da Beeringhen (called 'Socrates'), a Ferrarese musician named Tommaso Bambasio to whom the poet left his lute, and a certain Confortino. Although only one poem, the madrigal *Non al suo amante*, survives in a contemporary polyphonic setting (by Jacopo da Bologna), other occasional verse may have been given by the poet to performers for their own use. Very little of Petrarch's verse belongs to the category of *poesia per musica* (ballatas and madrigals); it is not surprising that Trecento composers did not set his sonnets and canzoni, any more than they did the serious poetry of Dante.

Although Petrarchan echoes may be found in the poetry of Boiardo and Lorenzo de' Medici, the revival of Petrarchism important in the history of music begins with the work of Benedetto Gareth ('il Chariteo'), in whose verse, made for musical performance, Petrarchan metaphors were relentlessly exploited and given 'existential reality' (Wilkins). The poetry of Tebaldeo and Sasso, and above all the enormously popular *strambotti* of Serafino de' Ciminelli dall'Aquila, belong to this late 15th-century phase.

Pietro Bembo's thorough study of Petrarch resulted in an edition of the *Canzoniere* (1501) that was a model for the more than 160 editions printed in the 16th century; Bembo's theories on Tuscan Italian as a literary language depended heavily on examples provided by Petrarch; and his own poetry in Petrarchistic vein gave inspiration to at least two generations of Italian poets, including Alamanni, Ariosto, Caro, Cassola, Colonna, Della Casa, Gambara, Guidiccioni, Molza, Navagero, Sannazaro and Bernardo Tasso – all of whom provided texts for madrigalists. Petrarch's verse itself was set, at first occasionally in the later period of the frottola and among the early madrigalists, then more regularly. Whole collections, such as Matteo Rampollini's *Musica … sopra di alcuni canzoni del divin poeta M Francesco Petrarca* (*c*1545) were devoted to Petrarch, whose poetry was set with special seriousness and grandeur by Willaert and the Venetian circle around him. Settings of Petrarch became less

frequent in the later 16th-century madrigal, but they never entirely disappeared. The number of madrigals to Petrarchan texts is enormous; but it is not quite so large as lists of titles (*VogelB*) would lead one to believe. Many poems found in madrigal collections begin with a few words borrowed from Petrarch, then go their own way.

Petrarchism spread over Europe in the 16th century. In France Marot and St Gelais cultivated a poetic style influenced by the Petrarchism of Serafino; Du Bellay and Baïf began a more serious adaptation of Petrarchan themes and language to French poetry, much of which received musical setting. In England translators and imitators of Petrarch began with Wyatt, Surrey and other poets printed in Tottel's *Miscellany* (1557), which includes an anonymous sonnet beginning 'O Petrarke hed and prince of poets all'. Sidney and other Elizabethan sonneteers continued English Petrarchism in richer form, but with little influence on the madrigal of the period.

Among more recent settings of Petrarchan verse might be cited songs by James Hook (*c*1792), several Schubert songs, the celebrated Liszt songs and piano pieces, choral works by Moniuszko (1855) and Tommasini (1918), and Schoenberg's Serenade op.24.

JAMES HAAR

Petrassi, Goffredo (*b* Zagarolo, nr Palestrina, 16 July 1904). Italian composer. Along with Dallapiccola, he is the most significant Italian composer of the mid-20th century.

1. Education and earlier works. 2. The concertos for orchestra and later works.

1. EDUCATION AND EARLIER WORKS. Petrassi's birthplace, Zagarolo, is a village in the Roman countryside with no lack of musical connections: on top of a nearby hill stands the fortress of Palestrina, and in the centre of the village is the Palazzo Rospigliosi named after the family of Cardinal Giulio Rospigliosi, who was known first as an opera librettist and then as Pope Clement IX. Young Goffredo's family moved to Rome in 1911 and it was as a result of this that the seven-year-old had his first contact with music. He was sent to school in Via dei Coronari, and as the Scuola Cantorum of S Salvatore in Lauro was situated next to the school, it seemed natural to send the boy, who had shown that he had a good voice, to study at this choir school. The music which Goffredo Petrassi encountered as a chorister – that of Palestrina, Josquin, Animuccia and Anerio – demonstrates the similarity between the Scuola Cantorum and the schools which centuries before had cultivated the Roman polyphonic tradition. At the Scuola Cantorum the young Petrassi received the same sort of musical education as Palestrina and many other musicians had centuries before. Practical concerns, however, forced Petrassi at the age of 15 to find a job in a music shop. In quiet moments he played a piano in the back of the shop, and attracted the attention of Alessandro Bustini, the distinguished teacher of piano and composition at the Conservatorio di S Cecilia. He decided to teach him and thus get him into the conservatory, where he could have a first-rate musical education. In the space of a few years the young Petrassi moved from 16th century world of Palestrina to a contemporary world dominated by the figures of Bustini, Casella, Respighi and Bernardino Molinari, together with all those musicians who, in the early years of the century, were attempting to pull Italian musical life out of the operatic furrow it had ploughed almost exclusively for centuries. Petrassi experienced no conflict in the juxtaposition of these two areas of his education: according to his own words, the experience of Renaissance polyphony retreated into a sort of limbo, ready to spring forth as an adult composer tackling demanding themes. The plural nature of Petrassi's education, its all-inclusive quality a reflection of his environment, is the key to understanding his music; as will be seen, Petrassi was able not only to pursue different impulses but also to bring them together in a wide-ranging musical outlook.

The beginning of Petrassi's career is customarily marked by the success of his *Partita* for orchestra, written in 1932; his winning two competitions with it, together with receiving performances at ISMC festivals, put him on to the international stage. Although Casella and Edward J. Dent are regarded as being responsible for drawing wider attention to Petrassi, Casella had already noticed the composer some months before when he heard the *Tre cori*, Petrassi's graduation piece from the conservatory. The *Tre cori* remained unpublished, but they at once revealed Petrassi's considerable ability in dealing with the orchestral and choral material. The brilliant Partita was soon followed by other orchestral works, such as the *Ouverture da concerto* of 1931 and the first Concerto for Orchestra of 1933–4. It is not difficult to see in them the influence of the rhythmic vigour and contrapuntal complexity of Hindemith, the polytonal conflicts of Stravinsky and the rhythmic geometry of Casella, but over and above

those influences one finds an assured, virtuosic mastery of the orchestra, practically an unknown skill in Italian orchestral music of that period. His experience as a chorister was to come to the surface in *Salmo IX*, composed between 1934 and 1936. To judge from the vast forces employed and the often angular quality of the music, the work seems to convey more the impressions he may have had of the great Roman basilicas rather than of Palestrina's style. The memory of those spaces, volumes and echoes passes, however, through the filter of Stravinsky's *Symphony of Psalms* and *Oedipus rex* which were both heard in Rome in that same period. Yet Petrassi's experience of polyphony is easily recognized in the treatment of the choral part which is structured in sections that follow each other seamlessly. At this time, works for orchestral and vocal forces dominated Petrassi's output: in 1940 his *Magnificat* for soprano, chorus and orchestra showed a more lyrical and subtle approach to the re-examination of the sacred style which had given rise to *Salmo IX*. The following year produced the *Coro dei morti*, described as a 'dramatic madrigal for male voices, brass, three pianos, double-basses and percussion', a setting of a passage from Leopardi's *Operette morali* and a move, therefore, from the sacred to the philosophical. This work quickly became famous, and shows the beginnings of Petrassi's tendency to treat his relationship with musical language as a source of dramatic inspiration. Disinclined to express emotions directly, Petrassi found himself in the peculiar position of presenting his own intellectual struggle as an abstract drama: a unison, an interval, a pause, a pulsating rhythm and sometimes the vaguest of melodic reminiscences are the outward signs of this abstract drama. The *Coro dei morti* is characterized by clear-cut opposition of melodic tonal sections with highly contrapuntal and far less tonal ones. The dilemma at the heart of the work is one which Petrassi was to explore in his compositions over the following decade, and it was almost in order to make his inner struggle more explicit that at this time Petrassi moved towards theatrical music.

Petrassi's work in the theatre produced two ballets, *La follia di Orlando* and *Ritratto di Don Chisciotte*, and two operas, *Il cordovano* and *Morte dell'aria*. Through these he focussed on one of the basic tools of his style, irony,

Goffredo Petrassi

which he saw as the perfect means to disguise (with abstraction and ambiguity) his responses to events. Petrassi was not concerned as to whether he should be a tonal, neo-classical or 12-tone composer: he had no belief in the certainty of any definitive approach, but only in the certainty of the struggle and torment of life, and his musical language is the diary of these uncertainties. One of the greatest works in his whole output, *Noche oscura* (1951), a cantata for mixed chorus and orchestra, provides a lesson in the way these stylistic directions pile up, interweave and erode one another. It is a setting of the poem by St John of the Cross on the theme of the solitary path of a mystic who renounces all links with humanity to approach the Beloved, namely Christ. The desolate solitude of this interior journey is symbolized by a cell of four notes (two ascending minor seconds linked by a descending major third). For Petrassi this four-note pattern acquires the character of a mystic formula, and it reappears in later compositions – such as *Beatudines* (1968–9) and *Orationes Christi* (1974–5) – in which he developed the ideas of human responsibility and solitude. Entire compositions develop from the intervallic elaboration and transformation of this formula, moving gradually from mostly contrapuntal textures and dark timbres towards less astringent harmonies and brighter timbres. Many commentators have seen Petrassi's studied management of such material as a move towards serial procedures. But it should be realized that the composer's relationship with 12-tone technique was never one of complete conformity. Petrassi saw 12-tone technique as a way of manipulating the musical material in the most rational and economically controlled manner; although he made occasional horizontal use of the method, he was never committed to it with the fervour of many composers in the 1950s. The real objective of Petrassi's technical grapplings was the arrival at a linguistic concentration and abstraction which would act as a shield against any manner of rhetoric.

2. The concertos for orchestra and later works. Nothing reflects better Petrassi's creative exploration of questions of technique and style than his series of concertos for orchestra. 17 years separate the first, written in 1934 in the wake of the success of the *Partita*, and the second, composed in 1951 to a commission from the Basle Chamber Orchestra. Although the difference between these two works lies in a more concentrated and adroit use of the material, in both Petrassi treats it according to the rules of classical thematicism. There is an increase in rhythmic vigour and the models of Hindemith and Stravinsky are now joined by Bartók whose sublime silences and freely germinating counterpoint particularly attracted Petrassi. The prestige of the organizations which now commissioned Petrassi's works is an indication of his international reputation. After the Basle Chamber Orchestra came the Südwestfunk of Baden-Baden for whom Petrassi wrote his Third Concerto for Orchestra, subtitled 'Récréation concertante', in 1952–3. From the very beginning, the exposition of a long series with various notes repeated several times demonstrates the freedom of Petrassi's use of 12-tone technique and, given the ironic, light and elegant character of the score, it is evident that for him the series is only a device with which to escape the thematic tradition. Yet Petrassi had no hesitation in turning back to this tradition as soon as a suitably dramatic opportunity arose. In the

fourth and last movement, marked *adagio moderato*, the four-note pattern of *Noche oscura* reappears to initiate an episode of a lyrical intensity probably unequalled in Petrassi's entire output. To lend a 12-tone series a strong melodic inflection in the manner of Berg, who was unsurprisingly Petrassi's favourite of the Second Viennese School composers, seems to be his aim in the Fourth Concerto for Orchestra in which the light, agile style of writing for the string orchestra gives way in the third movement, marked *lentissimo*, to a melodic series of rare lyrical intensity. His approaches towards serial technique continued in 1955 with his Fifth Concerto for Orchestra, and in 1957 with the sixth, which were written in response to commissions from the Boston SO and the BBC. To describe these concertos for orchestra solely in terms of their greater or lesser adherence to serial techniques would be to overlook the complexity of Petrassi's struggles with his material which would be at their most productive at the end of the 1950s. It has been noted how in the Third Concerto for Orchestra one of the high points comes about through the reappearance of the four-note theme from *Noche oscura*; other concertos are also characterized by the insistent use of certain key intervals and other quotations – for example, one of three notes taken from the *Coro dei morti* appears in the Fifth Concerto for Orchestra. Although these intervals and brief thematic figures become increasingly important in the writing of the concertos, various chamber works dating from the end of the 1950s onwards demonstrate their full significance and mark the most important method used by Petrassi during his career. A string quartet composed in 1958 shows clearly how certain intervals (major third, minor sixth and tritone) have become the protagonists of the composition. The result is an abstract and athematic style in which the interval takes on a fully dramatic character. This laconic mode of expression, with its wealth of allusive possibilities, provided Petrassi with the language which best suited him, a language of gestures sculpted from the musical material with a graphic precision and simplicity. With this string quartet Petrassi showed that he was absolutely sure in his approach; other, strongly characterized elements were added, with a new focus on timbre.

The *Serenata*, also composed in 1958, is scored for flute, harpsichord, percussion, viola and double-bass, a bright array of instrumental timbres whose clear, vibrant colours are an essential element in each intervallic gesture and which are juxtaposed in a series of solo cadenzas. The precise exploration of timbre continued in 1962 with the *Seconda Serenata-Trio*, which explores only different plucked sounds (harp, guitar and mandolin). By this stage each new work marked the conquest of new territory, as in 1964 did *Tre per sette* (the title refers to the three performers, on flute, oboe and clarinet, playing seven different instruments in all) which explores varieties of intervals and timbres in the woodwind family. Petrassi explores new terrain in these scores but the music has none of the acerbity which often marks experimental works: one can hear that the composer is working in a highly congenial context, and within the supremely concise writing allusions and poetic extracts multiply as if the musical material had at last suddenly become malleable and able to reveal hidden treasures. In subsequent years there was an upsurge in the number of solo works aimed at exploiting this miraculous richness of timbre: *Souffle* for solo flute, from 1969, *Elogio per un'ombra* for violin and *Nunc* for guitar of 1971, *Ala* in 1972 for flute and harpsichord and *Alias* in 1977 for guitar and harpsichord. This was Petrassi's preferred terrain, and on it he created some of his masterpieces; his attention to it did not mean that other areas were neglected, if anything the achievements in one field were transplanted into another.

In 1964 Petrassi wrote his Seventh Concerto for Orchestra, a rather troubled score which sprang from a previous work, *Prologo e cinque invenzioni*, written in 1962 to a commission from the Portland Junior Symphony Orchestra. Unhappy with the original work, Petrassi recast it entirely as the Seventh Concerto, but its didactic origins explain why the various sections are given over to different instruments of the orchestra, with brilliant solo episodes which reflect the solo cadenzas in the chamber works. The superb cadenza for xylorimba in the third section is a perfect example of how Petrassi's chamber style had successfully been absorbed into his orchestral writing. That Petrassi's chamber writing with its virtuosity of timbres and intervals took his orchestral writing towards this point can be seen in two different but equally important examples, the Flute Concerto of 1960 and the Eighth Concerto for Orchestra of 1970–2. The structure of the Flute Concerto – determined by the numerous, extended cadenzas for the solo instrument which direct the orchestral flow like magnetic poles – reflects the spirit of his chamber music, with its alternation of cadenzas and intervallic schemes. In the Eighth Concerto for Orchestra, extreme intervallic economy and brilliant rhythmic variety across the overall orchestral framework generate a new type of musical material: instead of the nervy, precise calligraphies of the works for a few instruments, the frothing material produces music like fine swirling dust. As the signs multiply, they generate a message, a total greater than the sum of all the parts: it is the sort of experience which has become familiar over the years from abstract painting, and Petrassi is, unsurprisingly, passionate and knowledgeable about modern art. Attention to abstract forms of writing did not draw Petrassi away from the moral themes which had illuminated the choral-orchestral works of his youth. The *Beatudines* (subtitled 'A Witness to Martin Luther King') for baritone and five instruments (1969), the *Orationes Christi* for mixed choir, brass, violas and cellos (1975) and the *Poema per archi e trombe* (1977–80) continued to develop more or less explicitly the themes of solitude and human suffering, which were now explored with more unusual combinations of voices and instruments.

The chamber works which at the end of the 1960s signalled such a fertile development in Petrassi's music were also those on which he expended the greatest care. In 1967, his *Estri* for 15 players seemed in its title alone to make an utterly characteristic artistic declaration: the term *estro*, meaning both caprice and talent, has a long history in Italian instrumental music; it is difficult to translate, but should not be understood merely as the glorification of imagination. Unpredictable and possibly wayward in character, *estro* also implies the revelation of one's mystery to an observer. Undoubtedly the *estro musicale* was destined to find its perfect form in a style of composition dependent on the balancing of intervals and timbres, in the technique of which Petrassi acquired a rare mastery, and his final works are like the coming together

of various *estri* of reminiscence and different emotions. The nostalgia for a certain sort of salon virtuosity implied by the title of the *Grand septuor avec clarinette concertante* of 1977–8 is belied by the sense of irony produced by the alienating sounds of guitar and percussion. Petrassi's last great chamber work is entitled *Sestina d'autunno*, and bears the explanatory subtitle *Veni, creator Igor*. It was composed in 1981 on the tenth anniversary of the death of Stravinsky, the composer who had made such a profound mark on Petrassi's early years and the subsequent development of his music. It is written for six players: viola, cello, double-bass, guitar, mandolin and percussion instruments. The variety of colour which, as is often the case with Petrassi, tends towards darker shades, the frail and somewhat alienating sound of the plucked strings and the percussion, the graceful linearity of phrases whose simplicity is more charged with meaning than ever, and the clarity of the form, borrowed from the old Italian strophic form of six lines (a *sestina*), display to the utmost that synthesis of sobriety and intensity which Petrassi pursued tirelessly for so many years.

WORKS

DRAMATIC

La follia di Orlando (ballet, with narrative recitatives from L. Ariosto, choreog. A.M. Milloss), 1942–3, Milan, Scala, 12 April 1947

Il cordovano (op, 1, E. Montale, after M. de Cervantes: *Entremes del viejo celoso*), 1944–8, Milan, Scala, 12 May 1949; rev. 1958, Milan, Piccola Scala, 18 Feb 1959

Ritratto di Don Chisciotte (ballet, 1, Milloss), 1945, Paris, Champs-Elysées, 21 Nov 1947

Morte dell'aria (op, 1. T. Scialoja), 1949–50, Rome, Eliseo, 24 Oct 1950

4 incid scores, 1930–54, unpubd; 9 film scores, 1948–65, unpubd

ENZO RESTAGNO

Petratti, Francesco (*b* Cremona; *fl* *c*1620). Italian composer and string player. He was in the service of Paolo Giordano II, Duke of Bracciano, before 1620 and of Marquis Ludovico Barbone in the early 1620s. He published *Il primo libro d'arie a una et due voci con un dialogo in fine* (Venice, 1620; one piece for 2vv transcr. in Stevens, 291); Monteverdi, a fellow Cremonese, saw it through the press at the request of the Duke of Bracciano.

□

Petre, Henry. *See* PETYR, HENRY.

Petreius [Petrejus, Petri, Peterlein], **Johann** (*b* Langendorf, nr Würzburg, 1497; *d* Nuremberg, 18 March 1550). German printer. He began his studies at the University of Basle in 1512, receiving the baccalaureate there in 1515 and the MA two years later. In 1519 he was employed as proofreader by his relative, Adam Petri, in Basle. He became a citizen of Nuremberg in 1523. Although Petreius was not officially entered as printer in the city records until 1526, publications survive from as early as 1524 and he appears to have established his own type foundry by 1525. After his death the business was taken over by his son-in-law, Gabriel Hayn, who continued printing until 1561.

An extremely prolific printer (about 800 publications are known) and a well-educated man, Petreius devoted his professional efforts to a variety of subjects, notably theology, science, law and the classics. Although music forms but a small part of his output, he was known for the superior quality of his work in this field, using the single-impression technique developed by Attaingnant. In addition to printing the first of Forster's collections, Petreius apparently functioned as his own editor in selecting the works for other collections. Unfortunately this tradition was not continued by Hayn, whose music publications are limited to a handful of religious books.

MARIE LOUISE GÖLLNER

Petrella, Errico (*b* Palermo, 10 Dec 1813; *d* Genoa, 7 April 1877). Italian composer. His father was a Neapolitan naval officer stationed in Palermo, so his Sicilian birth was accidental. In 1815 the family returned to Naples, where Petrella began his musical studies at the age of eight with the violinist Del Giudice. Soon afterwards he started attending classes at the Naples Conservatory, where in 1825 he won a free place as a boarder. Among his first instructors there was the young Bellini, though he studied mainly with Furno and Francesco Ruggi and later with the director Zingarelli. When only 14 years old, he was invited by the impresario Sangiovanni to write an *opera buffa* for the local Teatro La Fenice. It is said that up to this time he had never attended a public opera performance; yet, in spite of opposition from his teachers, he accepted, and in August 1829 produced *Il diavolo color di rosa* with great success. For this audacity he was expelled from the conservatory before he had finished the full course, though he continued to study privately with Ruggi. Four more works in the Neapolitan tradition (with spoken dialogue and local dialect for the *buffo*) followed at the more important Teatro Nuovo over the next thirteen years, though his first attempt at a serious subject was turned down by the Teatro S Carlo in 1835, on the grounds that the composer was too young and not sufficiently well known. In 1843 as the result of a quarrel over fees he stopped composing and supported himself by giving singing lessons and was later appointed (at least temporarily) music director at the Teatro Nuovo. In 1851 he made a brilliant return to composition with *Le precauzioni*, which received 40 performances, and in the following year *Elena di Tolosa* met with such enthusiasm at the Teatro del Fondo that it was transferred after nine days to the S Carlo. It was at this time that Petrella was taken up by the Milanese publisher Lucca. In 1854 he produced his first serious opera at the S Carlo, *Marco Visconti*, with such success that from this moment on he concentrated almost entirely on serious works.

Marco Visconti made Petrella known throughout Italy, where he became the most performed composer of his generation after Verdi. A commission followed from La Scala, Milan (*L'assedio di Leida*, 1856), and in 1858 he produced there the best-known of all his serious operas, *Jone*. The next operas had little success, but with *La contessa d'Amalfi* (Turin, 1864) Petrella produced another work that was to remain in the repertory for many years, later providing the background for a novel by Gabriele D'Annunzio.

The operas from *Celinda* (Naples, 1865) onwards show a strong influence of French *grand opéra*, which had become very popular in Italy at that time. In 1869 Petrella embarked on a setting of Manzoni's famous novel *I promessi sposi* with Ghislanzoni (the librettist of *Aida*), a project that prevented him from accepting the invitation to contribute to the *Messa per Rossini*, a composite setting designed to mark the anniversary of that composer's death the previous year. The opera was performed amid much publicity at Lecco, where the action of the novel begins, but Manzoni himself did not attend the première, as was widely believed. The great success of *I promessi sposi* stimulated Ponchielli to revise his older setting of the same subject, which later eclipsed Petrella's opera.

Petrella was one of the last composers of the old Neapolitan tradition. His first works earned him comparisons with Paisiello and Cimarosa – to the indignation of Verdi, who wrote in 1871: 'Let's have the honest truth. ... Petrella is a poor musician; his masterpiece, *Le precauzioni*, may please the amateurs with a few attractive violin tunes, but as a work of art it can't stand up, not only to the great works, but even to operas like [the Riccis'] *Crispino*, *Follia in Roma*, etc.' (Abbiati, 1959). This view was not shared by other contemporary musicians, who saw in *Le precauzioni* a spirited and full-blooded (if not very refined) example of late *opera buffa*.

Petrella was vigorous but unequal in his work: the vitality and exuberance that stood him in good stead in the comic vein were not sufficient for his serious operas, in which the melodic inspiration (central to his conception of opera) does not sustain the passion which his subjects demand; in face of the formal problems of dramatic music he was too easily content with commonplace solutions. Nevertheless, there is a real advance in dramatic consistency from *Marco Visconti* to *Jone* (particularly in the last act) and, side by side with curious ineptitudes, there are genuine beauties in the operas. The works of his last few years show a new refinement of style: in *I promessi sposi* there is more imagination in the accompaniments, and the theme of simple life is treated with a sensitivity unusual amid the thunder of contemporary Italian opera, recalling Bellini's lyrical approach.

Though sometimes despised by the critics, Petrella's most successful operas remained in the repertory of smaller Italian opera houses up to the time of World War I. As one of the most performed composers of the generation between Donizetti and Puccini, Petrella has a distinctive place in the history of Italian opera.

Petreo, Magno. *See* PEDERSØN, MOGENS.

Petrescu, Ioan D(umitru) (*b* Podu-Bărbierului, Dîmboviţa district, 28 Nov 1884; *d* Bucharest, 9 May 1970). Romanian musicologist. He studied music at the Nifon Seminary, Bucharest (1895–1902), the Bucharest Conservatory (1924–8) and the Schola Cantorum in Paris under Amédée Gastoué (1928–31). He studied theology at Bucharest University (1902–7), and served as a priest in Bucharest and Paris before being appointed to teach Byzantine musical palaeography and Gregorian chant at the Bucharest Academy of Religious Music (1934–40) and the Bucharest Royal Academy of Music (1941–8). He was noted for his studies in Byzantine music, for his transcriptions and choral arrangements of early Romanian church music and for his authoritative research into medieval manuscripts from Paris, Grottaferrata and Bucharest. He established the study in Romania of comparative Byzantine musical palaeography and of the theories of psalm music transcription, making notable contributions to the study of the Byzantine modes, repertory (Christmas carols, antiphons, imperial masses) and representative composers of liturgical music.

VIOREL COSMA

Petri. German family of church musicians and composers.

(1) Balthasar Abraham Petri (*b* Sorau [now Żary, Poland], 3 Dec 1704; *d* Behnau [now Bieniów], 8 July 1793). Kantor. He was Kantor in Sorau and later a pastor in Behnau. He is said to have composed the motets *Musica laeta sonet* and *Decantabat populus* (both for 12 voices) and *Unser Herr Jesus Christus in der Nacht* (eight voices).

(2) Georg Gottfried Petri (*b* Sorau, 9 Dec 1715; *d* Görlitz, 6 July 1795). Kantor and composer, brother of (1) Balthasar Abraham Petri. After studying law for four years in Halle he practised that profession for a short time in several places; he was appointed lecturer in law in Halle in 1740, and then served as a private tutor for government officials. From 1748 he was the music director in Guben, and was assistant headmaster there from 1763 (in 1755 he had applied unsuccessfully for the post of Thomaskantor in Leipzig). When he became Kantor in Görlitz in 1764 his well-known teaching abilities as well as his knowledge of music and foreign languages were cited. He continued in that office, also directing the music at the church of St Peter und St Paul, until his death.

Petri was a prolific composer, especially of church music, but his only proven extant work is the second part of the two-volume *Musikalische Gemüths-Belustigungen* (Pförten [Brody], 1761–2), consisting of songs, keyboard pieces and violin pieces. He composed at least three yearly cycles of church cantatas and other occasional sacred works (some of the texts were published in the *Lausitzisches Magazin* from 1768); for the 200th anniversary of the Gymnasium at Görlitz in 1765 he composed *Gesang der drei Männer im Feuerofen*, a *drama musicum*, and published the essay *Oratio saecularis, qua confirmatur coniunctionem studii musici cum reliquis litterarum studiis erudito non tantum utilem esse, sed et necessariam videri* (Görlitz, 1765). According to an advertisement in the *Oberlausitzer Monatsschrift* of 1796, Petri's library at his death contained about 1000 musical works. He himself had written more than any other composer, but there were 102 works by Telemann and others by

Agricola, Bach, Doles, Graun, Hasse and Homilius. The two masses marked 'Petri' in the Luckau church archives may be by him (Biehle attributed them to (3) Johann Samuel Petri).

(3) **Johann Samuel Petri** (*b* Sorau, 1 Nov 1738; *d* Bautzen, 12 April 1808). Kantor, teacher and writer on music, son of (1) Balthasar Abraham Petri. Although at first kept away from musical activities by his father, he taught himself to play keyboard instruments and ultimately secured permission to have regular instruction from an organist (according to an autobiographical sketch in his *Anleitung*). He also taught himself to play the violin, flute, cello and harp. In 1762 he became a music teacher at the Pädagogium in Halle; there he met W.F. Bach and there was a fruitful exchange of musical ideas. From 1763 to 1770 he was Kantor and school teacher in Lauban (now Lubań), and from 1770 he held a similar post at Bautzen.

Petri's most important work was his pedagogical treatise *Anleitung zur practischen Musik, vor neuangehende Sänger und Instrumentspieler* (Lauban, 1767, enlarged 2/1782/*R*); the second edition had nearly three times as many pages as the first and included a new essay on music history. As he hoped to produce a book that could serve as a complete musical library for poor musicians, he included a wide variety of subjects: thoroughbass, playing keyboard instruments, strings and the flute, and organ building and playing (all with practical examples), as well as hints for the performance of church music. The work breaks the traditional mould for 18th-century music manuals (C.P.E. Bach, Quantz and Leopold Mozart) which, apart from providing a comprehensive introduction to music pedagogy and aesthetics, deal with only a single instrument. Petri's *Anleitung zur practischen Musik* is of historical importance as it provides thorough instructions on the playing of several musical instruments, as well as on singing. Gerber, who greatly respected Petri, praised the work as a good general text for amateurs, and it was closely studied by Jean Paul (see Schünemann). Petri's known compositions include 68 sacred works for chorus and orchestra (four have parts for solo voices) in the parish church at Żary, several Passion cantatas cited by Biehle (one published in vocal score, Leipzig, 1790) and a work for Easter in the library of his uncle (2) Georg Gottfried Petri; the two masses at Luckau may be by him or by his uncle.

(4) **Christopher Petri** (*b* Sorau, 1758). Kantor and composer, son of (1) Balthasar Abraham Petri. He studied in Leipzig and was Kantor in Lauban from 1782. He published a cantata, *Rinaldo und Armide* (vocal score, Leipzig, 1782), *Lieder und Rundgesänge* (Leipzig, 1784) and *Sechs kleine Klavier-Sonaten* (Leipzig and Sorau, 1786).

LOTHAR HOFFMANN-ERBRECHT

Petri, Egon (*b* Hanover, 23 March 1881; *d* Berkeley, CA, 27 May 1962). German pianist and teacher of Dutch descent, later active in the USA. At the age of five he had violin lessons with his father, Henri Petri, then leader of the Leipzig Gewandhaus Orchestra. Following the family's move to Berlin in 1889 he became a pupil of the pianist Teresa Carreño. He also learnt the organ and the horn, and as a teenager studied composition and theory with Kretschmar and Draeseke. From 1901, when he joined Busoni's masterclass at Weimar, the piano became his chosen instrument. Busoni took a deep interest in his development and later described him as being his 'most genuine pupil'. Petri corrected the manuscripts of Busoni's operas and piano works, and also collaborated with him in editing Bach's keyboard works.

He made his début in Holland in 1902, although initially failed to establish a successful career. In 1905 he became a professor at the Royal Manchester College of Music and remained there until 1911, after which he returned to Berlin as Busoni's assistant. From 1921 to 1925 Petri taught at the Hochschule für Musik and pursued a busy concert schedule, with an intensive tour of Russia in 1923. He lived at Zakopane in Poland from 1925, and this remained his base until the outbreak of the Second World War. The 1930s was the busiest decade in his career. A notable American début in January 1932 opened a new chapter in both his concert and teaching activity, and he subsequently became a naturalized American. From 1940 to 1946 he was visiting professor at Cornell University, but following a serious illness he decided to move to the West Coast, and settled in California as a teacher and lecturer at Mills College, Oakland, where he remained for a further decade. He also taught at the San Francisco Conservatory. His pupils included Carl Szreter, Franz Joseph Hirt, Gunnar Johansen, Vitya Vronsky, Earl Wild, Grant Johannsen and Ernst Lévy, as well as John Ogdon, who attended his masterclasses in Basle.

Although a large-scale player in the Busoni mould, Petri's playing differed in many respects to that of his teacher. He was considerably more dutiful in regard to both correct style and adherence to the printed text. In contrast to the tonal richness of Busoni's playing, Petri's piano sound frequently had a rough edge to it. His playing was noted for a massiveness of conception and for its dedicated interpretative insight. Particularly admired in Bach, Beethoven and Liszt, Petri was also a staunch advocate of his mentor's compositions, a number of which he recorded.

JAMES METHUEN-CAMPBELL

Petri, Johann. *See* PETREIUS, JOHANN.

Petri, Michala (*b* Copenhagen, 7 July 1958). Danish recorder player. She began recorder lessons at five and left school at 11 to be tutored privately, concentrating on music from the age of 14. In 1969 she was awarded the Jacob Gade prize, which enabled her to have regular recorder lessons with Ferdinand Conrad at the Staatliche Hochschule für Musik und Theater in Hanover while also studying the flute in Copenhagen. Until 1981 she performed mostly with her mother Hanne (harpsichord) and brother David (cello), in the Petri Trio; she then performed with Hanne alone until 1992, when she formed a duo with her husband, the Danish guitarist and lutenist Lars Hannibal. Recognized as a consummate technician, she is also known for her distinctive tone, fluidity of line and expressive phrasing. Using recorders at modern pitch, she has taken the recorder beyond the early music movement to mainstream audiences, performing with James Galway, Heinz Hollinger, Pinchas Zukerman, the Academy of St Martin-in-the-Fields, the Berlin PO and others. A recording partnership with the jazz keyboard player Keith Jarrett (1990–92) inspired greater flexibility in her playing. As a soloist Petri has expanded the recorder repertory with (mainly Romantic) virtuoso transcriptions and by commissioning new works. She has published the Michala Petri Recorder Series and editions of csakan music.

DAVID LASOCKI

Petrić, Ivo (*b* Ljubljana, 16 June 1931). Slovene composer and conductor. He studied composition at the Ljubljana Academy of Music (1950–58) with Škerjanc and conducting with Švara. In 1962 he founded the Slavko Osterc Ensemble, a flexible group of about 20 players. He has directed this ensemble in outstanding recordings and performances of much adventurous contemporary music, including his own, in Slovenia and across Europe. The group ceased to operate regularly after the early 1980s. Petrić was editor-in-chief of Edicije Društva slovenskih skladateljev, the publishing section of the Association of Slovenian Composers, from 1972 to 1979. From 1979 to 1995 he was the artisitic director of the Slovenian PO. During this period he also produced a large number of recordings with the orchestra with numerous guest conductors from Slovenia and abroad. The music chosen included, as well as the standard repertory, many modern Slovenian works.

Under the influences of his teacher Škerjanc and of the music of Slavko Osterc, Petrić's music developed a refined and economical style of great melodic appeal. His early works were neo-classical, somewhat indebted to Hindemith, with a lively rhythmic subtlety and restrained melodic lines; the Clarinet Concerto (1958) is an excellent example. A change of style followed at about the time when the Slavko Osterc Ensemble was founded, and Petrić discovered the potentiality of freer expression and more advanced instrumental techniques, particularly for the harp. *Elégie* and, above all, the prizewinning *Croquis sonores* mark this change decisively. The latter work shows Petrić's propensity for clean textures and beautifully scaled forms within its short duration. Further pieces written for the ensemble – *Sept mouvements* (Radio-Televizija Belgrade Award 1963), *Mozaïki*, *Nuances en couleurs* and the Divertimento of 1970 – show complete mastery of new techniques; *Mozaïki* is outstanding for its lucid thinking and imaginative solo clarinet writing. Although Petrić had written three moderately conventional symphonies, he rarely wrote large orchestral works in the early 1960s, with *Symphonic Mutations* standing on its own as a boldly conceived piece in the new style. *Epitaph* and *Integrali v barvi* ('Integrals in Colours'), on the other hand, are clearly an extension of his chamber miniatures, with their fastidious attention to detail and their refined textures. *Epitaph* integrates a small concertante chamber group with orchestra, while the second work, sub-titled 'Sonorous reflections on Kosovel's poetry', neatly summarizes the composer's approach. Petrić has a feeling for the sensuous and telling, but always restrains it by a natural instinct for the right scale and manner; the greatest strength of his music is in its lack of pretence and artifice.

Petrić's music during the 1970s included many outstanding orchestral works which used freely coordinated lines with a system of conductors' cues. Notable is the violin concerto *Trois Images*, a large-scale lyrical work of 25 minutes' duration. The concentration on melodic lines and orchestral colours is particularly clear in this work and *Nocturnes et jeux*. There was also a complementary development in a series of well-crafted chamber pieces, written often for his friends. During the early 1980s Petrić began to feel the need to return to barred notation, partly for the practical reason of simplifying performance, but also to enhance the corporate rhythmic characteristics that he felt needed strengthening. Nevertheless, there was no return, except in the occasional recreational piece, to any form of traditional tonality.

WORKS

NIALL O'LOUGHLIN

Petridis, Petros (John) (*b* Nigde, Turkey, 23 July 1892; *d* Athens, 20 Aug 1977). Greek composer. During his education in Istanbul at the Zografeion High School (*c*1902–6) and at the American Robert College (until 1911) he studied the piano with Hegey, reputedly a pupil of Liszt, and harmony with Italo Selvelli. From 1911 to 1914 he read law at the Sorbonne and political science at the Ecole Libre des Sciences Politiques. In Paris he met Riadis, Varvoglis and Theodoros Spathis and abandoned his planned career for music. He took Greek nationality in 1913. For brief periods he was a pupil of Albert Wolff (1914) and of Roussel (1919) but considered himself self-taught. He contributed music reviews to the *Musical Times* (1915–31) and to the *Christian Science Monitor*; for more than 50 years he was a music critic for such prominent Greek newspapers as *Vima* and *Kathimerini*. In this capacity he replaced the superficial style current in Greece by assessments based on technical study. During 1918–19 he directed the information office of the Greek Embassy in London, at the same time lecturing on Greek folklore and music at King's College. He taught modern Greek at the Sorbonne (1919–21) and after 1922 divided his time between Athens and Paris. In 1959 he was elected a member of the Athens Academy and also a corresponding member of the French Academy in succession to Sibelius.

Petridis has slowly gained recognition as a highly significant figure in Greek musical history, although his compositions are rarely perofrmed. His early works, from *Kléftikoi horoi* ('Cleftic Dances', 1922) to *Dighenis Akritas* (1933–9), a gigantic, programmatic fresco dedicated to a 10th-century Byzantine hero, include some of the finest achievements of Greek orchestral literature: based on Greek folk music, they demonastrate sound construction, solid counterpoint and a certain harmonic daring. Around the 1930s, as Petridis gravitated increasingly towards the Orthodox Church, his harmony became more conventional. More than any other composer of his generation he orientated himself towards Byzantine chant, writing in a modal or polymodal contrapuntal style that became increasingly ascetic. His melodies tend to move stepwise within a narrow compass, shunning bold modulations, while his orchestration and polyphony are sober, avoiding superficial effect and adhering to traditional forms (fugue, variations, symphony, etc.). The tension in his creativity between East and West, asceticism and sensuality, authority and individual freedom, are clearly depicted in his unperformed opera *Zefyra* or *Zemfyra*.

WORKS

STAGE

Kyra phrossyni, ballet; Theseus, ballet; Zefyra (Zemfyra) (op, 3 Petridis, after G. Drossinis), 1923–5, rev. 1958–64, concert perf., Athens, National State Opera, 30 April 1991; Iphigenia in Tauris (incid music, Euripides), 1941, Athens, Greek National, 15 Oct 1941; O pramateftis [The Pedlar] (ballet, 2, Petridis, after Y. Gryparis), 1941–3, Athens, National State Opera, 6 May 1944

GEORGE LEOTSAKOS

Petrie, George (*b* Dublin, 1 Jan 1790; *d* Dublin, 17 Jan 1866). Irish artist, antiquary, violinist and folksong collector. His father, a portrait painter and miniaturist of Scottish descent, wished him to be trained as a surgeon, but Petrie showed a much greater inclination towards landscape painting, developing a particular skill in the area of draughtsmanship. In 1828 he was elected to the Royal Irish Academy and to the Royal Hibernian Academy, becoming librarian of the latter in 1830 and president in 1857.

In his introduction to *The Ancient Music of Ireland* (1855), Petrie notes that 'from my very boy-days, whenever I heard an air which in any degree touched my feelings, or appeared to me to be either an unpublished one, or a better version of an air than what had already been printed, I never neglected to note it down'. Several of these tunes found their way to Thomas Moore (ii) and appeared in his *Selection of Irish Melodies*, which were serially published from 1808; Petrie was also a substantial contributor to a collection by his friend Francis Smollet Holden the younger. He met Edward Bunting soon after the latter published the second volume of *A General Collection of the Ancient Irish Music* in 1809, and remained his lifelong friend. Although he offered Bunting his complete collection, only 17 of the 'airs' were included in the 1840 volume, Bunting being unhappy with Petrie's requirement that his involvement be acknowledged. The founding of the Society for the Preservation and Publication of the Melodies of Ireland, with Petrie as president, and the devastating effects of the famine of 1846–7 on the musical life of the peasantry, stimulated the publication in 1855 of a small portion of the melodies as *The Ancient Music of Ireland*, with piano accompaniments written in the main by his daughter. A brief posthumous second volume was published in 1882. The complete manuscript of 2148 melodies was passed to C.V. Stanford, who removed a number of duplicates and published the remaining 1582 items in three volumes between 1902 and 1905, without song texts or piano accompaniment, with the assistance of the Irish Literary Society of London.

Petrie's importance is in the isolation of what have now come to be known as 'tune families'. He disputed Bunting's assertion that 'a strain of music, once impressed on the popular ear, never varies', and noted as many as 50 variants of a single melody. Although perhaps less of a practical musician than Bunting, he was probably the finer scholar, and *The Complete Collection* must be regarded as one of the most important 19th-century resources of Irish traditional music.

DAVID COOPER

Petrini. German family of harpists and composers, of Italian descent.

(1) **Petrini** [first name unknown] (*b* Germany, after 1660; *d* Berlin, 1750). Harpist. He was a chamber musician at the court of Frederick the Great and the Berlin opera house for many years. In 1736 he was one of 17 musicians who moved with the court of Frederick the Great from Ruppin to Rheinsberg. In 1740 C.P.E. Bach composed a harp sonata for him. Marpurg wrote that Petrini was one of the greatest virtuosos of his time, and that he played in all 24 keys with equal dexterity.

(2) **(Marie) Therese Petrini** (*b* Berlin, 1736; *d* Berlin, after 1800). Singer and harpist, daughter of (1) Petrini. She received both singing and harp lessons from her father, and after his death followed him as harpist at the court of Frederick the Great, where J.F. Agricola taught her to sing with thoroughbass. She was said to have 'the soul of her father'. In 1754 she was a singer and harpist at the chapel of Margrave Karl Albrecht of Brandenburg-Schwedt in Berlin. She often sang publicly in Berlin, including the second soprano part at the première of C.H.

Graun's *Der Tod Jesu* (1755) at Berlin Cathedral. Later she was a chamber musician in Strelitz.

(3) **Francesco** [François, Franz] **Petrini** (*b* Berlin, 1744; *d* Paris, 1819). Harpist, teacher and composer, son of (1) Petrini. He studied the harp with his father, whom he soon surpassed in virtuosity. In 1765 he became harpist and chamber musician at the court of Mecklenburg-Schwerin, where he also studied composition. In 1769 he went to Paris, and in 1770 gave his début at the Concert Spirituel and published his op.1, a set of six sonatas for harp with optional violin accompaniment, dedicated to Prince Louis of Rohan. By 1787 he had published numerous works for the harp, including sonatas with violin accompaniment, concertos, duets, collections of airs and variations and symphonies with harp. When other harpists were leaving Paris during the Revolution, Petrini remained; several of his works written after 1800 have titles inspired by contemporary political events, among them *Bataille du Wagram* (1809), commemorating the Empire's victory over the Austrians. He began the monthly journal *Glaneur lyrique* in about 1795, and published a harp method (reprinted up to the 20th century) and several books on harmony. The Fourth Concerto op.29 is remarkable for its romantic cadenza in the first movement (see Vernillat). According to Gerber, he was still active in Paris in 1813.

His son Henri Petrini (*b* Paris, 1775; *d* Paris, *c*1800), to whom he taught the harp, revealed a marked talent as a harpist. He composed two sets of sonatas as well as some other pieces for the harp; he died young.

WORKS

extant works only; published in Paris, undated unless otherwise stated

Orch: 5 concs., hp, orch, 2 as op.18 (arr. for hp of works by 'Mr Bach' and 'Mr J.-B. Davaux', *c*1782), no.1 as op.25 (1786), no.3 as op.27, no.4, B♭, as op.29 (1793, see *GerberL*); 4 syms., hp, fl, 2 hn, str, op.36

Duos: 2 hp/(hp, pf)/2 pf, op.7 (?1773); 2 hp (vn, bc, ad lib), op.31

Sonatas (hp, vn ad lib): 6 as op.1 (1769); 6 as op.3; 2 as op.4; 3me livre, op.9; 2 as 4me livre, op.10 (*c*1780); 1 as op.39; 4 as op.40 (1801)

Airs with variations (hp): 3 petits airs, op.2 (1774); 2me recueil, op.8 (1774); 3me recueil, with vn, ob (1774); 4me–5me recueil, with vn, ob, opp.12–13 (*c*1778); 6me recueil, with bn, vc, op.14 (1778); 7me recueil, op.15; op.16 (1779); op.17 (*c*1780–*c*1785); 3me recueil, ii, with fl, 2 vn, op.19 (1783); airs, ouvertures, sonata movements, pubd in *Delamanière at Delaplanque*, i/11 (*c*1790), in *GB-Lbl*; variations on Le réveil du peuple de Gaveaux, Vive Henri IV, Bataille du Wagram; several others pubd separately

Other works: 6 divertimentos, hp, fl, vn, bc (1772); 3 preludes, hp, bc

ALICE LAWSON ABER-COUNT

Petri Nylandensis, Theodoricus. *See* THEODORICUS PETRI NYLANDENSIS.

Petrobelli [Pietrobelli], **Francesco** (*b* Vicenza; *d* Padua, 31 March 1695). Italian composer and organist. He described the contents of his first published work (1643) as the 'products ... of my earliest youth'. He was a member of the clergy. On 9 June 1647 he competed unsuccessfully for the organist's position at Vicenza Cathedral, but on 22 August he was appointed *maestro di cappella* of Padua Cathedral at an annual salary that in 1659 reached 150 ducats. In November 1652 he was at the court of Innsbruck with several companions. Although pensioned on 8 November 1684, he may have played one of the organs at S Antonio in Padua after this date; he continued to publish to the end of his life. He was chiefly a composer of concerted church music; his one surviving opera, *Il Teseo in Creta*, is old-fashioned by Venetian standards, and its melodic writing is often rambling and dull.

WORKS

SACRED

published in Venice unless otherwise stated

Motetti, 1v (1643)

Motetti, 2–5vv, op.2 (1651)

Motetti, 2, 3vv, e Letanie della B.V., lib.2, op.5 (Antwerp, 1660, but perhaps originally pubd Venice, 1657; see Walther)

Psalmi, 2–4vv, 2 vn, org [?op.6] (1662)

Musiche sacre concertate con istromenti, 3vv, 2 vn, va, bn/str, bc, op.8 (Bologna, 1670); 1 psalm in *Seventeenth-Century Italian Sacred Music*, xi (New York, 1995)

Sacri concentus, 2 or more vv, 2 vn, va, bc (Bologna, 1670) [? = Musiche sacre]

Ave beata virgo, 1670[1]

Motetti, antifone, e letanie della B. Vergine, 2vv, org, op.11 (Bologna, 1677)

Psalmi breves, 8vv, op.16 (1684)

Salmi dominicali, 8vv, op.19 (1686), ?lost

Psalmi, 8vv, op.25 (1694) [also as op.17]

OPERAS

Angelica in India (P.P. Bissari), Vicenza, 1656; authorship doubtful, lib of Teseo in Creta attributes an 'Angelica' to Petrobelli, music lost

Il Teseo in Creta ('A.P.D.'), Padua, 1672, *I-Vnm*

OTHER SECULAR

printed works published in Venice unless otherwise stated

Scherzi amorosi, 2–3vv, op.4 (1652)

Scherzi amorosi, 2–3vv, vns ad lib, op.7 (1668)

Musiche da camera, 2–4vv, vns, op.9 (Bologna, 1673)

Cantate, 1, 2vv, bc, op.10 (Bologna, 1676)

Musiche da camera, op.15 (1682), according to Fétis

Scherzi musicali per fuggir l'ozio, 2–3vv, insts, op.24 (1693), ?lost

Cantata, 2vv, 2 ob, bc, *D-Bsb*; perhaps identical with a cantata from op.9

Aria, *I-Fn*

THOMAS WALKER/R

Petrobelli, Pierluigi (*b* Padua, 18 Oct 1932). Italian musicologist. He studied composition with Pedrollo at the Liceo Musicale of Padua and took an arts degree (1957) at the University of Rome, having completed a dissertation on Tartini under Luigi Ronga. After teaching liberal arts subjects in secondary schools for two years,

he continued his music studies at Princeton University under Lockwood, Mendel and Strunk with the aid of a Fulbright Grant (MFA 1961). He also spent some time at Harvard University and the University of California, Berkeley, where in 1963 he collaborated on a thematic catalogue of the university library holdings of 18th-century instrumental music. On his return to Italy he resumed secondary school teaching (1963–4) and was appointed librarian-archivist at the Istituto Nazionale di Studi Verdiani, Parma (1964–9), becoming director in 1980. From 1968 to 1972 he was lecturer and later reader in music history at the University of Parma; in 1970 he also assumed direction of the library of the Pesaro Conservatory. He took the *libera docenza* in 1972 and was appointed lecturer in music at King's College, London (1973–6), and reader in musicology there (1977–80). He was professor of music history at the universities of Perugia (1981–3) and Rome 'La Sapienza' (1983), and Visiting Professor of Italian culture and civilization at the universities of California, Berkeley (1988) and Harvard (1996). He was on the editorial board of *Rivista Italiana di Musicologia* (1968–72), and has been a member of the Advisory Board (1973–90) and the Commission Mixte (from 1990) of the Répertoire International des Sources Musicales (RISM). He is the editor of *Studi verdiani*, which he founded in 1982, and he has been a member of the Accademia Filarmonica Romana since 1994.

Petrobelli is one of the best trained of the postwar generation of Italian musicologists, and has played an active part in international musicological circles (he was a member of the Programme Committee of the 1972 IMS conference in Copenhagen). One of his main interests has been the life and works of Tartini: his earliest research, in his university dissertation *Contributi alla conoscenza della personalità e dell'opera di Giuseppe Tartini* (1957), was followed by a book and several articles. Other interests include Verdi (particularly his creative processes), Venetian opera of the early 17th century, the Italian Ars Nova and 20th-century music, particularly Dallapiccola.

CAROLYN GIANTURCO

Petrograd. *See* ST PETERSBURG.

Petros Bereketes. *See* BEREKETES, PETROS.

Petros Byzantios (*b* Neochorios, Bosphorus, mid-18th century; *d* Iaşi, 1808). Romaic (Greek) composer and scribe. First mentioned in the records of the Ecumenical Patriarchate as second *domestikos* (1771), he rose over the next three decades through the hierarchy of patriarchal cantors, serving as first *domestikos*, *lampadarios* (1789–1800) and, in succession to Jakobos Peloponnesios, *prōtopsaltēs* (1800–05). Dismissed from this last position by Patriarch Kallinikos IV for entering into a second marriage, he left Constantinople for Kherson in the Crimea (thereby acquiring the sobriquet *ho fugas*, 'the fugitive') and later travelled to Iaşi, Moldavia, where he died.

In 1791, together with JAKOBOS PELOPONNESIOS, Petros founded the Third Patriarchal School of Music. Wheareas the conservative Jakobos would teach only chants in traditional styles to be sung with considerable rhythmic

freedom, Petros, according to his student Chrysanthos of Madytos, supplemented the older repertories with the works of his own teacher PETROS PELOPONNESIOS and favoured a steady pulse. Numerous autograph manuscripts of the period 1773–1806 show how he significantly advanced Petros Peloponnesios's work, composing many chants to fill out the latter's hymnodic and psalmodic collections (including supplementary *katabasiai* for his Heirmologion). He also continued to produce florid realizations (*exēgēseis*) of older chants, not only by Petros Peloponnesios but also by composers such as Balasios, Daniel the Protopsaltes, Manuel Gazes, Joannes Kladas and Joannes Koukouzeles, by writing out orally transmitted melismas.

Although Petros Byzantios was fluent in the melismatic and neumatic papadikē and stichērarion styles, his syllabic setting of the entire Heirmologion for the Divine Office, which forms the basis of modern performances of Byzantine kanons, is probably his most influential work; it was edited and transcribed by CHOURMOUZIOS THE ARCHIVIST and published in 1825. His other chants for the Divine Office include several Great Doxologies, settings, in the 'new sticheraric style', of the opening verses of Lauds ('Hoi ainoi') at Orthros and the 'lamplighting' psalms at Hesperinos, and an *amomos* (Psalm cxviii). For the eucharistic liturgies he wrote communion verses for Sundays and feasts of the liturgical year and a modally ordered series of eight Cherubic hymns. A number of his major original and exegetical works were first published in Chrysanthine editions (see bibliography). Petros is also said to have written secular songs (see Romanou) and to have been an accomplished performer of Arabo-Persian music on the ney and tanbur (Papadopolous). (For a fuller list of works, including manuscripts featuring Petros's original notation, see Chatzēgiakoumēs, 1975, pp.364–7.)

ALEXANDER LINGAS

Petros Peloponnesios (*b c*1730; *d* Constantinople, 1778). Greek chanter, composer and teacher of Byzantine music. He received his first music lessons in monastic communities in Smyrna (Papadopoulos). In 1764 he travelled to Constantinople, where he became associated with the well-known *prōtopsaltēs* of Hagia Sophia, Joannes Trapezountios, with whom he chanted as second *domestikos* in the right choir. He held this office until his promotion to *lampadarios* (leader of the left choir) between 1769 and 1773. He was made an instructor in the second patriarchal school of music, founded in 1776, and from this time his reputation as an important teacher and composer was established. It is reported that he was also a specialist in Armenian and Turkish music and that he composed melodies based on the oriental *maqāmāt*.

Petros contributed a number of original compositions to the Offices and liturgies of the Greek Church, including complete sets of Cheroubic Hymns and communion chants in all eight modes, as well as music for funerals, ordinations, baptisms, weddings etc. In addition, he composed exercises and lessons for students of chant. Although his life as a composer was short (he died prematurely when a plague swept Constantinople in 1778), he proved to be the most prolific writer of the post-Byzantine period and his works are available in many musical anthologies from the 18th and 19th centuries.

Apart from original compositions, Petros produced many 'interpretations' of older chant melodies, writing a full realization (*exēgēsis*) of the ornamental signs in the neumatic line of the earlier manuscripts. This system was further developed by PETROS BYZANTIOS, his pupil, and subsequently employed by the three reformers of Byzantine notation, CHRYSANTHOS OF MADYTOS, GREGORIOS THE PROTOPSALTES and CHOURMOUZIOS THE ARCHIVIST. One manuscript in particular, *GR-AOk* ε 103 (late 18th-century), contains Petros's interpretations of works by the 14th-century musicians JOANNES GLYKYS and JOANNES KOUKOUZELES.

Petros Peloponnesios was the first to introduce the *syntomon* ('quick') melodies into the liturgical anthologies. These were designed for ordinary services requiring simple, unembellished chants. The revisions he made between 1765 and 1775 of virtually all the earlier music books (anastasimatarion, heirmologion and doxastarion) quickly gained a wide reputation; they gradually replaced the older editions and settings of PANAGIOTES THE NEW CHRYSAPHES, BALASIOS and GERMANOS OF NEW PATRAS, and are still predominant within the Greek chant repertory. Continuing the work of Joannes Trapezountios, Petros developed a simpler, more analytical system of musical writing which contributed to the formulation that took place in the early 19th century.

DIMITRI CONOMOS

Petrov, Andrey Pavlovich (*b* Leningrad, 2 Sept 1930). Russian composer. He studied composition first at the Rimsky-Korsakov Music College (1945–9), then at the Leningrad Conservatory (1949–54) in Yevlakhov's composition class. He served as chairman of the Leningrad Composers' Union from 1964, and in 1992 was appointed president of the St Petersburg Philharmonic Society. He was awarded the title of People's Artist of the USSR in 1990. He has also received two State Prizes of the USSR (1967, 1976) and the State Prize of Russia (1996), as well as awards for his film scores.

Petrov's first endeavours were in the fields of orchestral music (the symphonic poem *Radda i Loyko*) and ballet (*Bereg nadezhdï*, 'Shore of Hope'). Petrov continued to write for the theatre throughout the 1970s and early 80s. The subjects of these works, such as the operas *Pyotr Pervïy* ('Peter I') and *Mayakovsky nachinayetsya* ('Mayakovsky Begins'), and the ballet *Pushkin*, frequently have their roots in the cultural history of Russia and, in particular, St Petersburg. Petrov acknowledges history, literature and painting as the chief source of his creative impulses. In the 1980s he produced a series of concertos and the *Romanticheskiye variatsii* ('Romantic Variations'), which are notable for their orchestral resourcefulness; the 1990s saw the appearance of a series of symphonies based on Christian themes. His film music and songs have nonetheless been the mainstay of his output. In both genres he has successfully transformed both the familiar and occasionally banal idiom of old Russian romance and the styles of contemporary popular song, with results that are memorable in their melodic invention and, in the film scores, consistently suited to the dramatic context at hand. Though his style is usually diatonic and consonant, he has been resourceful in his exploitation of a wide range of stylistic influences, from Bach to jazz and from Russian traditional music to avant-garde sonoristic techniques. Petrov's aim to discover a unifying harmony between different spheres of creativity is epitomized by his opposition to the division between 'high' art and popular culture; in terms of his artistic ideals he remains essentially a Romantic. Performers who have championed his music include the baritone Sergey Leiferkus and the conductors Yevgeny Svetlanov and Yury Temirkanov.

WORKS
(selective list)

Stage: Bereg nadezhdï [Shore of Hope] (ballet, 3, Yu. Slonimsky), 1959; V ritme serdtsa: mï khotim tantsevat' [In the Rhythm of the Heart: We Want to Dance] (musical, 2, after V. Konstantinov and B. Ratser), 1967; Sotvoreniye mira [The Creation of the World] (ballet, 3, N. Kasatkina, V. Vasilyov), 1971; Pyotr Pervïy [Peter I] (op, 3, Kasatkina, Vasilyov), 1975; Pushkin: razmïshleniya o poète [Pushkin: Reflections on the Poet] (ballet, 2, Kasatkina, Vasilyov after A.S. Pushkin), spkr, Mez, chorus, orch, 1978; Mayakovsky nachinayetsya [Mayakovsky Begins] (op, 2, M. Rozovsky), 1985; Master i Margarita [The Master and Margarita] (ballet, 1, B. Ėyfman, after M. Bulgakov), 1987

Orch and vocal orch: Radda i Loyko [Radda and Loyko], sym. poem, after M. Gor'ky: *Makar Chudra*, 1954; Prazdnichnaya uvertyura [Festive Ov.], 1955; Pesni nashikh dney [Songs of our Time], 1964; Pamyati pogibshikh v godï blokadï Leningrada [To the Memory of those who Perished in the Blockade of Leningrad], poem, org, str, 4 tpt, 2 pf, perc, 1966; Sotvoreniye mira [Creation of the World], 3 suites from the ballet, 1968, 1969, 1975; Pyotr Pervïy [Peter I] (vocal-sym. frescoes, Kasalkina, Vasilyov) 1972; Puskin, sym., spkr, Mez, 2 hp, orch, 1977; Vn Conc., 1983; Master i Margarita: po prochtenii Bulgakova [The Master and Margarita: on Reading Bulgakov], fantastic sym., 1985; Concertino-buffo, chbr orch, 1987; Memoria, vn, chbr orch, 1987; Romanticheskiye variatsii [Romantic Variations], 1988; Pf Conc., 1989; Rus' kolokol'naya [The Bells of Old Russia], variations on a theme by Musorgsky, 1990; Sym. no.1 'na temï khristianskikh gimnov' [On Christian Anthems], 1992; Sym. no.2 'na temï khristianskikh gimnov', 1992; Vremya Khrista [The Time of Christ], choral sym., 1995

Vocal: Prostïye pesni [Simple Songs] (G. Rodari), S, B, pf, 1956; 5 vesyolïkh pesen [5 Cheerful Songs] (S. Marshak, S. Mikhalkov, Rodari, Ye. Serova), 1960; Pateticheskaya poėma [A Passionate Poem] (N. Aseyev, V. Bryusov, L. Martïnov, V. Mayakovsky, B. Pasternak, I. Sel'vinsky, A. Voznesensky), B/Bar, 2 pf, perc, 1969

Chbr: Str Qt, 1993

Film scores: Chelovek-Amfibiya [The Amphibious Man] (V. Chebotaryov, K. Kazanksy), 1961; Put' k prichalu [The Road to the Mooring Place] (G. Daneliya), 1962; Ya shagayu po Moskve [I Stroll through Moscow] (Daneliya), 1963–4; Beregis' avtomobilya [Beware of the Car] (E. Ryazanov), 1965–6; Stariki–razboyniki [The Old Brigands] (Ryazanov), 1971–2; Sluzhebnïy roman [An Office Affair] (Ryazanov), 1977–8; Garazh [The Garage] (Ryazanov), 1979; Osenniy marafon [An Autumn Marathon] (Daneliya), 1979; O bednom gusare zamolvitye slovo [Put in a Word for the poor Hussar] (Ryazanov), 1980–2; Vokzal dlya dvoikh [A Railway Station for Two] (Ryazanov), 1982; Zhestokiy romans [A Cruel Romance] (Ryazanov), 1984; Nebesa obetovannïye [The Promised Heaven] (Ryazanov), 1991; Peterburgskiye taynï [St Petersburg Secrets] (V. Orlov, D. Pchyolkin, V. Zobin), TV serial, 1994–6

OL'GA MANUL'KINA

Petrov, Nikolay (Arnol'dovich) (*b* Moscow, 14 April 1943). Russian pianist. He entered the Central School of Music in Moscow as a child and remained there for ten years, studying with the renowned pedagogue Tat'yana Kestner. In 1961 he became a pupil of Zak at the Moscow

Conservatory and the following year won second prize at the inaugural Van Cliburn Competition at Fort Worth, Texas. He was awarded the silver medal at the 1964 Queen Elisabeth Competition in Brussels. During the Cold War years Petrov held a virtually unique status among younger Soviet pianists, as he was permitted to tour widely and to display, at least superficially, some of the liberal Western attitudes of the 1960s. A pianist of seemingly limitless technical resource, Petrov commands a repertory encompassing the gamut of the piano literature. Besides acting as an ambassador for the music of such Soviet composers as Khachaturian, Khrennikov, Shchedrin and Eshpay earlier in his career, he has made a speciality of presenting larger-scale works from the 19th-century virtuoso piano literature. Notable is his dazzling recording of the 1838 version of Liszt's six *Etudes d'exécution transcendante d'après Paganini*, previously deemed to be unplayable. Although Petrov is not an interpreter of great originality, the authority and musical thoroughness of his readings are always impressive.

JAMES METHUEN-CAMPBELL

Petrov, Osip (Afanas'yevich) (*b* Yelizavetgrad [now Kirovograd], 3/15 Nov 1806; *d* St Petersburg, 28 Feb/12 March 1878). Russian bass. His date of death is often given incorrectly as 27 February/11 March or 2/14 March, the latter being the date of his burial. He first sang in a church choir, at the same time teaching himself the guitar; he was also taught the clarinet by a friend. In 1826 he was taken into Zhurakhovsky's travelling company, making his début in Yelizavetgrad in Cavos's *The Cossack Poet*, and shortly after joining the troupe of Ivan Fyodorovich Stein: here he was much influenced by working with the great actor Mikhail Shchepkin. Continuing his self-education, with help from Cavos in singing and Hunke for piano and theory, he made rapid progress, singing in various different operatic genres and acting in plays. In 1830 Petrov made his St Petersburg début, soon winning wide recognition for his talents. At the première of *A Life for the Tsar* (1836) he set a tradition for the interpretation of Ivan Susanin with a performance of overwhelming dramatic power (see illustration): Glinka himself recounted how the chorus of Poles set upon Petrov so violently that he had genuinely to defend himself. Other roles written for Petrov and created by him include Glinka's Ruslan (1842), the Miller in Dargomïzhsky's *Rusalka* (1856), Oziya in Serov's *Judith* (1863), Vladimir in Serov's *Rogneda* (1865), Leporello in Dargomïzhsky's *The Stone Guest* (1872), Ivan the Terrible in Rimsky-Korsakov's *The Maid of Pskov* (1873), Varlaam in Musorgsky's *Boris Godunov* (1874), Prince Gudal in Rubinstein's *The Demon* (1875) and the Mayor in Tchaikovsky's *Vakula the Smith* (1876). In April 1876 the Mariinsky Theatre held a celebration to mark his 50th anniversary on the stage: he was presented with a gold medal by the tsar and a diamond-studded gold wreath, on each leaf of which was engraved the name of one of the 100 operas in which he had sung. For Petrov's jubilee Tchaikovsky wrote his Nekrasov cantata *To Touch the Hearts of Men*.

Petrov's voice, which ranged from *B′* to *f*♯′, from a rich, profound bass to a flexible baritone in the high register, was greatly admired for its warmth, depth and evenness of delivery; and his vivid personality and generous perception made him especially successful as a character actor. His non-Russian roles included Rossini's Figaro, Bellini's Oroveso, Meyerbeer's Bertram, Herold's Zampa and Weber's Kaspar. But his embodiment of essential Russian types in a bass voice of peculiarly Russian character provided many different composers with an example and an inspiration: Stasov was not exaggerating when at the jubilee he declared that 'Petrov may be considered one of the founders of Russian opera as we know it'. Petrov married the contralto Anna Yakovlevna Vorob'yova, who sang thereafter under her married name.

Osip Petrov as Ivan Susanin in Glinka's 'A Life for the Tsar', Act 4 scene iii, St Petersburg, 1870s

JOHN WARRACK/R

Petrov, Stoyan (*b* Sofia, 19 Aug 1916; *d* Sofia, 18 Feb 1996). Bulgarian musicologist. After graduating in theory (1943) and performing (1944) at the Bulgarian State Music Academy in Sofia, he studied music history at the Moscow Conservatory under R.I. Gruber, V.M. Belyayev and Klyment Kvitka (1944–53). He held posts as music editor at Radio Sofia (1945–9), head of the art schools department at the Committee of Science, Art and Culture (1953–4), deputy rector of the Bulgarian State Conservatory (1954–6), and secretary of the musicologists'

section of the Union of Bulgarian Composers (1958–62). In 1955 he became reader in the history of Bulgarian music at the Bulgarian State Conservatory; in 1971 he was appointed head of the music history department there. Petrov made a special study of medieval Bulgarian music, Byzantine chant and ancient Bulgarian folk music.

LADA BRASHOVANOVA

Petrova, Anna Yakovlevna (Vorob'yova) (*b* St Petersburg, 2/14 Feb 1817; *d* St Petersburg, 13/26 April 1901). Russian contralto. Her mother, Avdot'ya Vorob'yova (*d* 1836), and her mother's former husband, Yakov Stepanovich Vorob'yov (1766–1809), were leading singers of their day. Trained originally for ballet, she studied singing with Glinka, among others, and identified closely with that composer's musical outlook. After her début as Pippo in Rossini's *La gazza ladra* in 1833, she created the part of Vanya in *A Life for the Tsar* (1836) and later Ratmir in *Ruslan and Lyudmila* (1842). She and her husband Osip Petrov were recognized as pioneers of the Russian nationalist school of music, notably by the critic and musicologist Stasov, who described her voice as 'one of the most exceptional and astonishing in all Europe: size, beauty, strength, gentleness'. Petrova also excelled in the bel canto operas of Rossini and Bellini, in which her singing was compared to that of Albani and Viardot. Her reminiscences were published in *Russkaya starina*, xxvii (1880), 611–17.

BORIS SEMEONOFF

Petrová, Elena (*b* Modrý Kameň, 9 Nov 1929). Czech composer. She studied the piano with Karel Hoffmeister, musicology at Charles University, Prague, and composition with Jan Kapr at the Janáček Academy of Musical Art, Brno. She has spent her whole career teaching music theory at Charles University. Her main creative interest is in vocal and dramatic music, for which she writes her own texts and scenarios. Her opera *Kdyby se slunce nevrátilo* ('Suppose the Sun did not Return') demonstrates her concise approach to musical utterance and a tendency towards modality in her harmonic language. Petrová's works have won several prizes, in her own country and abroad (Philadelphia, 1968; Czech National Competition, 1971 and 1972; Denver, 1975; Mannheim, 1976 and 1978).

WORKS

ANNA ŠERÝCH

Petrova, Mara (*b* Sliven, 15 May 1921; *d* 1997). Bulgarian composer. One of the earliest Bulgarian woman composers to be well documented, she graduated in 1945 from the Sofia Academy of Music, where her teachers were Stoyanov (composition), Vladigerov (piano) and Goleminov (orchestral conducting). Her talent revealed itself at an early age through her children's songs, instrumental pieces and a short operetta. She was an editor, a teacher at the Institute for Music and Choreography in Sofia (1972–83) and a critic. Her large output, embracing many genres, includes over 260 children's songs, as well as orchestral and chamber works. Her music, based on Bulgarian classical and folk traditions, exhibits clear formal structures and rich melodic invention; it has been performed and recorded in Bulgaria, Poland, Germany, the former Czechoslovakia, Switzerland and the former USSR.

MAGDALENA MANOLOVA

Petrović, Ankica (*b* Sarajevo, 5 May 1943). Bosnian-Hercegovinan musicologist. She studied music theory (BA 1968) and musicology and ethnomusicology (BA 1974) at the University of Sarajevo and took the PhD at Queen's University, Belfast in 1977 with a dissertation on *ganga*, a form of Bosnian traditional rural singing. She was a music producer at Radio Sarajevo (1967–79) and assistant professor (1979–86) and associate professor (1986–92) at the Sarajevo Academy of Music. Her research is focussed on Eastern-European traditional music, the aesthetics of rural Bosnian and Balkan music, Sephardi music traditions in Bosnia and the Balkans, and various styles of religious chant. She is the author and producer of numerous radio broadcasts on traditional music for the BBC, Kol Israel Jerusalem and Radio Brussels, and has been involved with the recordings *Traditional Music on the Soil of Bosnia and Hercegovina* (Diskoton, 1986) and *Bosnia: Echoes from an Endangered World* (Smithsonian Folkways, SF 40407, 1993).

ZDRAVKO BLAŽEKOVIĆ

Petrović, Danica S. (*b* Belgrade, 2 Dec 1945). Serbian musicologist. She graduated from the Belgrade Academy of Music in 1970 and became an assistant at the Institute of Musicology at the Serbian Academy of Sciences and Arts in Belgrade. She studied in Oxford with Egon Wellesz and gained the doctorate from the University of Ljubljana in 1980, with a dissertation on Oktōēchos in the musical tradition of southern Slavs. She was made professor of music history at the University of Arts, Novi Sad, in 1993.

Petrović's musicological interests include Slavonic music manuscripts of the 15th to the 19th centuries, Greek-Slavonic and Russian-Serbian cultural links in the 18th century, and links between Serbian music and European musical traditions of the 19th century. Her research has demonstrated the continuity of Serbian music from late medieval times to the present. She has contributed to the complete edition of Stevan Mokranjac's works and prepared facsimile editions of *Orthodox Church Singing of the Serbian People* by Kornelije Stanković (Belgrade, 1994).

DIMITRIJE STEFANOVIĆ

Petrovics, Emil (*b* Nagybecskerek [now Zrenjanin, Serbia], 9 Feb 1930). Hungarian composer. He studied with Farkas at the Liszt Academy of Music (1952–7). His first international success came when a string quartet won a prize in the 1959 Liège competition. From 1960 to 1964 he was musical director of the Petőfi Theatre, Budapest, and in 1964 he was appointed professor at the academy of dramatic art. He became professor at the Liszt Academy of Music in 1969, heading its composition department from 1978 to 1995, and president of the Hungarian Association for Copyright Protection in 1983. He was general director at the Hungarian State Opera (1986–90). His awards include the Erkel Prize (1960, 1963), the Kossuth Prize (1969) and the Bartók-Pásztory Prize (1993).

Petrovics's first instrumental pieces, notably the Flute Concerto and the String Quartet, show an absorption of influences from Falla, Prokofiev and Ravel as well as the Hungarian tradition. Although these pieces gained some attention, it was the one-act opera *C'est la guerre* that quickly established his reputation. Broadcast in 1961, the work was staged at the Hungarian State Opera in the following year and enthusiastically received; further productions were put on in Oberhausen, Nice and Sarajevo. The opera is Puccinian in its dramaturgy, but the declamatory style looks back to *Wozzeck*, and its free 12-note technique is a further link with Berg. Nonetheless the work has an individual musical character and a striking dramatic power. It was followed by a comic opera, *Lysistrate*, written in 1962 for concert performance but staged in Budapest (1971) and East Berlin (1972).

After developing his style in a series of instrumental works, Petrovics produced the large-scale oratorio *Jónás könyve* ('The Book of Jonah'), a work which displays his lyrical vein. He returned to composition for the stage with a full-length opera based on Dostoyevsky's *Crime and Punishment*, produced in Helsinki in 1970 and Wuppertal in 1971. Although much of the novel had to be abandoned, the opera is distinguished by Petrovics's gift for underlining dramatic situations and, above all, by his handling of Hungarian prose. Here again the music is freely atonal with more or less serial episodes; the polyphonic textures owe much to the Second Viennese School, but the vocal style is fully in accord with the Magyar language. Dramatic moments and sections of closed musical form are masterfully balanced. The weight of his later output lies in his cantatas on Hungarian texts and world literature. A confrontation with loneliness, the loss of values and death underlies these works, which are given distinction by different combinations of vocal forces. Petrovics has gradually returned to tonality, retaining a characteristic atmosphere through the use of elemental musical gestures and expressive lyricism.

Petrucci, Brizio (*b* Massalombarda, nr Ferrara, 12 Jan 1737; *d* Ferrara, 15 June 1828). Italian composer. He studied at the seminary in Imola and, from 1750, law at the University of Ferrara, receiving his doctorate in 1758. He also studied music with Pietro Berretta (1703–59), *maestro di cappella* at the cathedral in Ferrara. Turning to music as a profession, he became coadjutor to Pietro Marzola, *maestro di cappella* at the cathedral, and his successor in 1784. He held this post until the first decade of the 19th century.

Petrucci's early career reflects an interest in dramatic music, his first known work being choruses for a tragedy, *Giovanni di Giscala* (1760, Ferrara). In 1762 he helped found the Accademia dei Dilettanti di Musica, where in 1763 his oratorio *La madre de' Maccabei* was performed. Two *opere serie* were staged at Ferrara in 1765; in the

second, *Demofoonte*, his pupil, the celebrated Lucrezia Aguiari, made one of her early appearances. He also served as *maestro al cembalo* at the Bonacossi and Scroffa theatres and produced a comic opera in 1770. Later he concentrated on sacred music; according to Fétis, his psalms with large orchestra were famous throughout Italy. A Requiem of 1822 was also well known, perhaps partly because of the age at which he wrote it.

WORKS

STAGE

Choruses for Giovanni di Giscala (tragedia), Ferrara, 1760
Ciro riconosciuto (os, P. Metastasio), Ferrara, Bonacossi, carn. 1765, *I-FEd*
Demofoonte (os, Metastasio), Ferrara, Bonacossi, 26 Dec 1765, arias *Gl* (Lucca, 1765), *PAc*
Nitteti (dramma per musica Metastasio), Mantua, Vecchio, carn. 1766
I pazzi improvvisati (ob), Ferrara, Bonacossi, carn. 1770, *FEd*
Teseo in Creta (azione teatrale, G.F. Fattiboni), Cesena, for election of Cardinal Opizio Pallavicini as Protector of Cesena, 1771

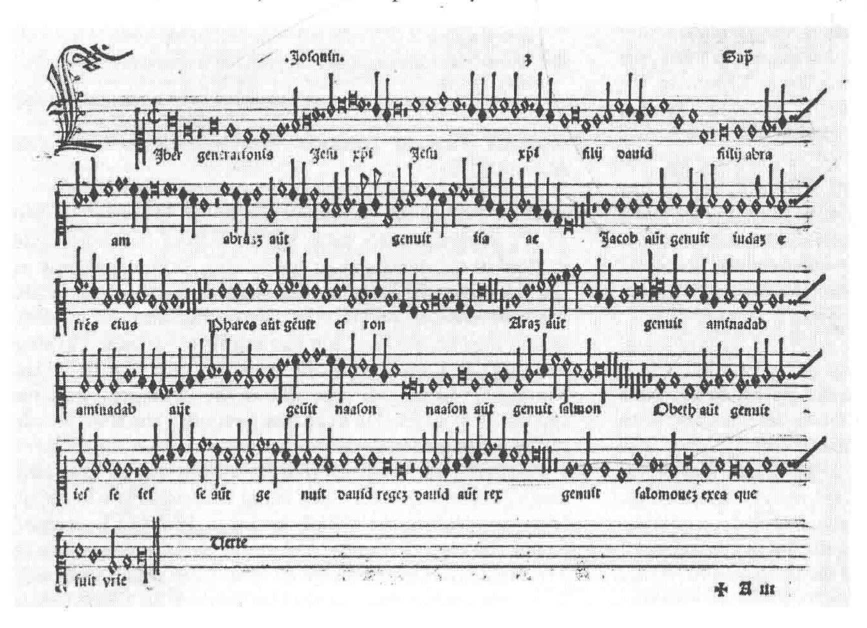
□



Petrucci, Ottaviano (dei) (*b* Fossombrone, 18 June 1466; *d* ?Venice, 7 May 1539). Italian publisher. He was the first significant publisher of polyphonic music.

1. Life. Apart from the evidence of his birth and his family's residence in Fossombrone for some generations, nothing certain is known of Petrucci's life before 1498. He is thought to have been among the young men whom Guidobaldo I, Duke of Urbino, allowed to be educated at court. On 25 May 1498 Petrucci was granted a Venetian privilege for 20 years. His petition stated that he had discovered what many had sought, a way to publish 'canto figurado'. He added that it would make the printing of chant much easier also; but this was probably no more than self-advertisement, given that he did not seek to include chant in his privilege, nor, probably, did he print any. His request was for the exclusive right to print both 'canto figurado' and 'intaboladure dorgano et de liuto'. The privilege also included a ban on the importation or sale of these repertories in the Venetian states by anyone else.

Petrucci's first book, the *Harmonice musices odhecaton A*, was backed by Amadio Scotto and Niccolo di Raffaele, both experienced in the publishing trade. It does not survive intact and lacks a publication date, but the dedication (to Girolamo Donato, a leading Venetian nobleman, diplomat and humanist) is dated 15 May 1501. The music of this volume, a collection of chansons and other secular pieces, was edited by the Dominican friar Petrus Castellanus. The success of the venture must have been quickly evident: several reprintings of parts of it were needed within two years, and two new editions appeared, in 1503 and 1504. The intervening years were devoted to books of masses by the most highly regarded composers, starting with Josquin Des Prez and Brumel, as well as two motet volumes (see illustration) and the two books, *Canti B* and *Canti C*, which continued the *Odhecaton* series.

In 1504, with his first volume of frottolas, Petrucci launched into a new and popular repertory. This was intended from the beginning to be part of a series, and both it and many of the subsequent ten volumes went through more than one edition. From 1504 until 1509 Petrucci seems to have been consistently successful: he published at least 27 new titles, reissuing a number of these and earlier volumes, often without changing the date in the colophon. Among them are volumes of music for lute, perhaps published in reaction to the privilege accorded to Marco Dall'Aquila in 1505.

Petrucci's last publication at Venice appeared on 27 March 1509. His next volume was published in Fossombrone on 10 May 1511. Petrucci had not lost contact with his home town during his Venetian years: in 1504 he had been a councillor representing Fossombrone in Urbino, and in 1505 and 1507 a city official. In 1508 he had revisited Fossombrone, and resettled there at some time

Opening of Josquin's motet 'Liber generationis Jesu Christi' from the superius partbook of 'Motetti C' (Venice: Petrucci, 1504)

in 1509 or 1510. The decision to leave Venice probably reflects his (and others') growing concern about the effects of the League of Cambrai war on Venetian business, a papal interdict on trade with the city and the spread of the plague.

Petrucci's output at Fossombrone began slowly. He acquired the patronage of the distinguished theologian and Bishop of Fossombrone, Paulus de Middelburgh, for whom he printed two non-musical works. One of these, Paulus's *Paulina de recta Paschae* of 1513 (a plea for reform of the liturgical calendar), was Petrucci's largest and most sumptuous volume. His only two musical volumes during these years, one each in 1511 and 1512, continued series begun earlier in Venice: in 1514 he printed a third volume of Josquin's masses.

This last was Petrucci's first volume printed under a new privilege, obtained from the pope in October 1513, protecting his books of polyphony and organ tablature in the papal states for 15 years. It was paralleled by a privilege granted to Andrea Antico, an ambitious woodcutter who appears deliberately to have set out to compete with Petrucci. In the same year, on 26 September, Jacomo Ungaro received a Venetian privilege, issued without prejudice to any earlier grant. Scotto and Raffaele petitioned on Petrucci's behalf in June 1514, pointing out that he was the inventor of music printing and that his partners had not yet recouped their investment. The second claim seems unlikely, given the continuous production for more than ten years; but the further point that Raffaele was too infirm to support his family without the benefit of Petrucci's privilege may well have been true. Their petition was no doubt a defence against not only Ungaro (who, as a type founder, may have been protecting technical modifications), but also Luc'Antonio Giunta (who had recently printed *Cantorinus*, a popular musical treatise) and perhaps also Antico. However, the renewal of Petrucci's privilege, coupled with the Roman one for the papal states, encouraged him to print a volume of motets in 1514 and two of masses, besides new editions of Josquin's first two books. He also continued to be a leading member of the ruling councils of Fossombrone.

The suspension of his activities between 1516 and 1519 is more apparent than real. Pope Leo X had ousted the ducal family of della Rovere from Urbino and placed Lorenzo de' Medici on the throne. Petrucci, as a leading citizen of a town loyal to the exiled rulers, played a significant role in the tension between the new duke and his cities. His printing output included a few concealed editions of earlier volumes and a small text by his bishop. He also planned to publish M. Fabio Calvo's translation of Hippocrates. An extant manuscript (in *I-Rvat*) suggests that it appeared on 1 January 1519, but the volume itself, which caused Petrucci some contractual problems and another visit to Rome, does not appear to have been printed.

After Lorenzo de' Medici's death in 1519, Petrucci began to print again. He produced three motet volumes in 1519, and apparently Pisano's *Musica* and a volume of which only fragments survive [*Musica XII*], both in 1520, as well as a number of reprintings of these and earlier volumes. In 1520 he opened a paper mill at Acqua Santa near Fossombrone, which seems to have been his principal source of income, for he ceased printing. (There is no evidence that Petrucci printed the *Prognosticon* of Paulus de Middelburgh dated 1523.) Some of his typographical material appears to surface in the volume of Eustachio Romano's duos printed by Dorico in Rome in 1523. Petrucci continued to be active in local politics for another decade. According to Schmid, he was recalled to Venice in 1536 to help print Latin and Italian classical texts. Neither his place of death nor site of burial is known.

2. Publications. Throughout his career Petrucci used multiple-impression type methods. The secret he averred he had discovered was that of printing both staves and music by setting and printing the two layers separately. In fact this was not new, for it had already been used by printers of liturgical music; but Petrucci did make the technique feasible for polyphony by developing much finer type material. His method produced work of an elegance hardly equalled since.

At first, Petrucci seems to have sent the sheet of paper through the press three times – once for the notes and other musical signs, once for the staves and once for the text. This permitted great freedom in arranging the material of each layer, while also requiring precise alignment. During 1503 he seems to have realized that staves and text could be printed together, reducing the number of passes through the press to two. From then onwards, the physical appearance of his book and the technical processes remained unchanged (until his last two books), although the quality of both materials and workmanship gradually declined.

At first, Petrucci seems to have acquired much of his music from the friar Petrus Castellanus. The two produced an international repertory, appealing and accessible to professional musicians. The first frottola volumes in 1504 mark a shift in Petrucci's intended market. These books (and the volumes of lute tablature and lute songs which began to appear in 1507) offer a simpler repertory and seem to be addressed as much to dilettantes as to professionals. At the same time, Petrucci must have acquired new suppliers of music: there is evidence suggesting contacts with the Ferrarese court and other sources.

When Petrucci moved back to Fossombrone, he seems to have intended merely to complete projects already begun in Venice. The hiatus caused by the political situation, or by his loss of contact with his purchasers, was partly filled by the three non-musical books, of which the *de recta Paschae* is outstanding, and is proof that Petrucci had not yet, in 1513, abandoned his artistic standards. A small collection of new titles in 1514–15 suggests a fresh start in music printing, drawing on new sources. However, with the change of power in the duchy of Urbino, the situation deteriorated, and subsequent publications consisted mostly of reprintings of earlier titles. Even the three new books of 1519 appear to be a political response rather than a continuation of earlier work, as they might at first seem.

In 1520 Petrucci undertook two volumes of a new Roman or Florentine repertory. Neither survives complete, though both show significant changes in his printing-house practice. Apart from these two volumes, the year 1520 (and perhaps 1521) was devoted to the last reissues of earlier volumes.

Petrucci's production represents a major portion of the surviving music in each of the genres he covered. His three volumes devoted primarily to chansons appeared at the beginning of his career, and, as a group, show the changing styles of around 1500. The many books of

frottolas, on the other hand, survey the field very thoroughly, and show the various forms in their different guises and changing popularity. Petrucci's books of masses, mass sections and motets, perhaps inherently more conservative, cover the transition from works of Josquin's generation to those of his immediate successors, and even their followers, including Willaert and Festa, who formed the Italian style of the next decades. Finally, the last two books are of particular interest for their early evidence of the transition from frottola to the new madrigalian forms. Petrucci, or his editor, seems always to have been sensitive to prevailing taste: among the few volumes that were not reprinted are those for lute, or voice and lute, perhaps because they seem to be aimed specifically at amateurs.

The readings preserved in Petrucci's editions have recently been criticized for being inaccurate and arbitrary. While there is no evidence that he regarded his editorial role differently from that of a manuscript scribe, there is much evidence of the care with which he transmitted the readings. This evidence includes stop-press and manuscript corrections, as well as cancel leaves.

Petrucci's legacy was seen as a major one by his contemporaries: the music he printed was widely disseminated and frequently copied into manuscripts. Various volumes (Josquin's masses and the *Motetti de la corona*) were reprinted by Pasoti and Dorico in 1526, and others were the basis of books published by Schoeffer and probably also by Giunta. To these men, scribes as well as printers, Petrucci's editions represented reliable usable copies of much of the most important music of the time, as trustworthy as any manuscript copy. They also presented music with an elegance which encouraged Antico, Dorico and Schoeffer (and through them many others) to continue to print music.

Petrus Capuanus. *See* PETRUS DE AMALFIA.

Petrus de Abano [Petrus Aponensis] (*b* ?Abano, nr Padua, 1257; *d* Padua, ?1315). Italian philosopher and doctor. He studied at Padua and spent some time at Paris; later he became a professor at Padua University. Music is discussed in two of his works, the *Conciliator differentiarum philosophorum et precipue medicorum* (Venice, 1476) and the *Expositio Problematum Aristotelis* (Mantua, 1475). They contain the traditional notion of music as a discipline of the Quadrivium, but also interesting references to musical practice. Rhythm is related to pulse beats, and mention is made of the instruments *rubeba* and *viella*, the forms of the *muteti* and *rote*, and the practice of 'bordonizare'.

F. ALBERTO GALLO

Petrus de Amalfia [Petrus Capuanus] (*b* ?Amalfi; *fl* 2nd half of the 14th century). Italian theorist. He was probably a member of the Amalfi nobility: in the 13th century a Petrus Capuanus de Amalfia was a cardinal, and an Andreas Capuanus was a canon in the choir of Amalfi Cathedral. Petrus's treatise, entitled *Compendium artis motectorum Marchecti* (ed. F.A. Gallo, Ant MI, *Scriptores*, i/1, 1966, pp.41–8), purports to be a summary of the mensural theory of Marchetto da Padova. In fact, however, it describes an Italian notation quite different from that of the early 14th century in that it is strongly influenced by the notation of 14th-century France. Petrus described a system containing three measures: *tempus perfectum* or *duodenarium* with each *brevis* divided into 12 *minime*, *tempus imperfectum* or *octonarium* with eight *minime*, and *tempus imperfectissimum* or *quaternarium* with four *minime*.

F. ALBERTO GALLO/ANDREAS BÜCKER

Petrus de Cruce [Pierre de la Croix] (*fl c*1290). Composer and theorist. One of the most important French musicians of the later 13th century, he won the praise of such commentators as Jacobus of Liège, for whom he was 'that worthy practical musician, who composed so many beautiful and good pieces of mensural polyphony and followed Franco's precepts' (CSM, iii, vol.7, 1973, p.36), and Guy de Saint-Denis, for whom he was 'Master Petrus de Cruce, who was the finest practical musician and particularly observed the custom of the church of Amiens' (*GB-Lbl* Harl.281, ff.92*r–v*).

Apparently a native and resident of Amiens, and a member of a family prominent in that city from the 12th century to the early 14th, Petrus is likely to have studied at the University of Paris as a member of the Picard nation, earning there the title Magister (see Johnson). His student years would have been between 1260 and 1290, as he was evidently a younger contemporary of Franco (see Franco's *Ars cantus mensurabilis* of *c*1280), and Franco experimented with his mensural innovations, as Jacobus of Liège reported (CSM, iii, vol.7, 1973, p.38). Two of Petrus's motets occupy a place of honour at the beginning of the seventh fascicle of the Montpellier Codex (*F-MOf* H196) and thus date from before *c*1290. In 1298 Petrus sojourned in the king's castle in Paris and participated in the composition of a monophonic rhymed office for St Louis, perhaps the well-known *Ludovicus decus regnancium*. In 1301–2 he resided in the palace of Bishop Guillaume de Maçon of Amiens, where he was probably a senior cleric and a participant in the liturgy of the episcopal chapel. If still alive, he was no longer at the cutting edge of innovation in the 1320s, when Robert de Handlo and Jacobus of Liège placed him among their older figures as opposed to the *moderni*. Petrus bequeathed a book of polyphony to Amiens Cathedral, a gift first recorded in the inventory of the cathedral treasury in 1347.

Petrus is cited several times by Guy de Saint-Denis for his expertise in the details of the liturgy and chant of Amiens. No major work on plainchant survives under his name, but he is the author of a brief tonary reflecting Amiens usage, the *Tractatus de tonis* (CSM, xxix, 1976). He may also have turned his hand to an essay on the notation of mensural music, but again no major work survives. Two treatises, the *Ars motettorum* of Petrus de Picardia (CSM, xv, 1971, pp.16–24) and an anonymous *Ars musicae mensurabilis secundum Franconem* (CSM, xv, 1971, pp.31–57), have been attributed to him by modern scholars, but neither contains the innovations for which he was famed.

Petrus's major achievement in the development of mensural music was to progress beyond Franco's subdivision of the breve, such that not only the traditional two (unequal, i.e. minor and major) or three (equal, i.e. minor), but up to seven semibreves could occupy the value of a breve. He therefore stipulated that any two successive

groups of semibreves (equivalent to two breves) must be separated by a *punctus*; this contrasts with the tradition codified by Franco, for whom such separation was necessary only for more than four successive semibreves, since four were inevitably recognized as two groups of two. Petrus de Cruce also seems to have been the first to introduce the dot as a symbol of *divisio*, or separation; Franco still used the *tractulus*, or small stroke, which he also referred to in the conventional manner as *divisio modi*. Jacobus of Liège well conveyed the sense of adventure that marked the experimentation Petrus carried on in his motets, describing how he 'sometimes put more than three semibreves for a perfect breve. At first he began to put four semibreves for a perfect *tempus*. . . . Thereafter he went further and put for one perfect *tempus* now five semibreves, now six, and now seven . . .' (CSM, iii, vol.7, 1973, pp.36–7).

The proliferation of semibreves naturally brought with it a corresponding deceleration in the speed of the breve. Petrus Le Viser, who knew no subdivision of the breve beyond that of Petrus de Cruce, held that this style required the slowest beat available (the *mos longus* in Le Viser's system). In contrast, for Jacobus of Liège the motets of Petrus de Cruce, though too advanced for the traditional fast beat (*cita mensuratio*), merely required a relatively moderate adjustment (*media mensuratio*) in the speed of the *tempus*. Jacobus further reported on the next step, when 'someone else, however, put for a perfect tempus not only five, six, or seven semibreves, but also eight and sometimes nine . . .' (CSM, iii, vol.7, 1973, p.38). According to Handlo this other musician was evidently Johannes de Garlandia (the Younger), who must have been active during the earliest years of the 14th century. In contrast to his comments on Petrus de Cruce, Jacobus expressed no approval here, presumably because the three *gradus* of Johannes de Muris's ternary mensural system (cf the *Notitia artis musice*), of which he disapproved, would in effect seem to have been brought about as soon as the figure nine was reached. To this most advanced style of notation Jacobus assigned his slowest beat (*morosa mensuratio*), in which the duration of the semibreve equalled that of the Franconian breve (CSM, iii, vol.7, 1973, p.36).

Petronian semibreves were generally restricted to tripla, whose increasing subdivision of the breves was more often syllabic than melismatic. Their performance was necessarily too rapid for each semibreve to be measured precisely. An analogous situation had existed in the decades around 1200 when a long (i.e. a *longa duorum temporum*) was divisible not only by two, but also by three or four breves, which were *ultra mensuram* (because of their speed they were not subject to precise measurement; cf the *Discantus positio vulgaris*). Similarly, around 1290 the semibreves in any group of four or more were simply shorter than short; and their delivery, as Jacobus of Liège testified (CSM, iii, vol.7, 1973, pp.38–9, 85–6), was equal, not yet requiring the conception of *semibrevis minorata* and *semibrevis minima*. (A variety of post-Petronian attempts at differentiations of value led eventually to the codifications of the French Ars Nova; for an early attempt *see* PETRUS LE VISER). The motetus generally continued to exhibit steady and perceptible modal rhythm – usually mode 1. It is these circumstances that must have caused Jacobus of Liège to approve of Petrus's motets as being still in accordance with Franconian tradition.

The two motets whose tripla Jacobus cited as examples are in *I-Tr* Vari 42 (nos.24 and 14), and in *F-MOf* H196, where they open the seventh fascicle (nos.236 and 237): *S'amours eust point de poer/Au renouveler du joli tans/Ecce* and *Aucun ont trouvé chant/Lonc tans me sui tenu/Annuntiantes*. The triplum of the latter is also cited in association with Petrus de Cruce by Robert de Handlo and the Faenza Anonymus (CSM, xv, 1971, 66–72), and it is quoted without attribution in two further anonymous late Ars Antiqua treatises, the *De cantu organico* (Anglès 1958, p.21) and the *Ars musicae mensurabilis secundum Franconem* (CSM, xv, 1971, p.42). In addition, Handlo and the *Ars musicae mensurabilis secundum Franconem* refer to an unattributed and otherwise unknown Latin triplum, *Novum melos promere*, in contexts suggesting Petrus de Cruce as author. Six other motets containing French tripla with Petronian characteristics and therefore possibly composed by Petrus are *Aucuns vont souvent-/Amor qui cor/Kyrie eleison* (*I-Tr* 42, no.13, *F-MOf* H196, no.247), *Amours qui se me maistrie/Solem iustitie/Solem* (*MOf*, nos.272, 321), *Lonc tans ai atendu/Tant ai souffert/Surrexit* (*MOf*, no.281), *Pour chou que j'aim/Li jolis tans/Kirieleison* (*MOf*, no.282), *Aucun qui ne sevent/Iure tuis/Maria* (*MOf*, no.300) and *Je cuidoie bien metre/Se j'ai folement/Solem* (*MOf*, no.315).

In Petronian motets the tenors as a rule move in longs, which are often unpatterned. In view of the retardation of the speed of the lower voices by the parlando in the triplum, the musical construction of the motetus often seems closer to the tenor than to the triplum (ex.1). The latter, by far the most rapid of the three voices, never hockets with the motetus, and its register is somewhat higher than that of the other two parts. Hence, Petronian

Ex.1
from *Aucun ont trouvé chant/Lonc tans me sui tenu/Annuntiantes, F-MOf H196 no.237*

motets tend to give the impression of a triplum supported by two lower and slower voices, one of which (motetus) has a text of its own. The highly irregular structure of the French verses with their precipitous rhythms and declamation seems quite capricious and often approaches rhymed prose. In a rather romantic way the music is primarily oriented toward the virtuoso of declamation. Generally, these motets with their shapeless tenors resist all analytical search for rational phrase structures; the same tendency is already in evidence in many motets of the Franconian period.

The post-Petronian evolution in France produced the system of four prolations with minim equivalence, a considerable departure from Petrus's notational practice. 14th-century English and Italian notations, however, were based on the Petronian principle of subdivision of the breve, accommodating varying numbers of semibreves between two *puncti* (or between ligatures, larger note values, rests, or any combination of these).

Petrus de Domarto. *See* DOMARTO, PETRUS DE.

Petrus de Picardia (*fl* 1250). French theorist. Hieronymus de Moravia included a short treatise by him in a compendium of treatises on various aspects of the music of his time. The work, the *Ars motettorum compilata breviter*, appears in two other sources as well, but is anonymous in both. The Parisian source, *F-Pn* lat.16663, has been printed twice in modern editions (*CoussemakerS*, i, 136*b*–139*b*; S.M. Cserba, ed.: *Hieronymus de Moravia O.P.: Tractatus de musica*, 259–63); an incomplete Swedish source, *S-Uu* C 453, is discussed by C.A. Moberg (*STMf*, x, 1928, pp.62–7). These two, together with *I-Nn* XVI A 15, were used for a critical edition by F.A. Gallo (CSM, xv 1971, pp.9–30).

Petrus based his treatise on Franco of Cologne and Johannes de Burgundia, a follower of Franco. It is an exposition of Franconian principles, illustrated by reference to various motet tenors, most of them mentioned or quoted in other contemporary sources. The work is in four short sections, discussing notation in simple figures, ligatures, rests and the rhythmic modes. It is designed as a condensation of its authorities addressed, as Petrus stated in the introduction, to 'novi auditores' who wish to be instructed briefly. Its importance lies in the large number of motet tenors mentioned, thus giving an idea of the distribution of certain pieces. Although it has been suggested that Petrus de Picardia is actually the composer PETRUS DE CRUCE, Hüschen's theory that they are two separate individuals is more plausible. Petrus de Cruce is cited by other theorists for his division of the breve into as many as seven semibreves – a practice adopted in his motets. In Petrus de Picardia's *Ars motettorum compilata breviter* the breve is divided into only two or three semibreves, following more closely the tradition of Franco of Cologne.

ALBERT SEAY/C. MATTHEW BALENSUELA

Petrus de Sancto Dionysio (*fl* 14th century). French theorist. He was from the abbey of St Denis on the outskirts of Paris and is known only as the compiler of the *Tractatus de musica*, which probably dates from shortly after 1321. The treatise is in two parts: the first, 'Musica theoretica', is largely derived from the *Notitia artis musice* of Jehan des Murs; the second, 'Musica practica', is a collection of rules on mensural notation drawn from at least two sources. Part of the *Tractatus* was published as Coussemaker's Anonymus 6 (*CoussemakerS*, iii, 398–403).

GORDON A. ANDERSON/C. MATTHEW BALENSUELA

Petrus frater dictus Palma ociosa (*b* Bernaville, Ponthieu; *fl* 1336). French theorist. According to his *Compendium de discantu mensurabili* (ed. Wolf) he was a Cistercian monk at Cercamp Abbey, near Frévent in the Pas-de-Calais. His name may indicate a deformed hand which, as the *Summa musice* implies (lines 692–6; ed. Page), would have interfered with his learning and teaching of the Guidonian scale, particularly if it was his left hand.

Petrus's treatise survives along with standard works by Guido and Johannes Cotto and a series of anonymous tracts in *D-EF* Ampl.8°94, ff.59*v*–68. Its three chapters treat *discantus simplex* (intervals and note-against-note counterpoint), *falsa musica* (*musica ficta*) and *flores musice mensurabilis* (decorated counterpoint). The first of these is treated conventionally. The second is mainly concerned with making 3rds and 6ths major when they resolve outwards; sharps and flats are to be understood as raising and lowering pitches; certain motets and rondelli chromatically alter plainchant tenors, though Petrus

avoids that in his examples; B♭ and D may be solmized as *ut*. The numerous examples suggest a striking tolerance of consecutive semitones, though it would seem in the light of the third chapter that these should be understood as underlying progressions which in practice would be elaborated.

The third chapter is remarkable for providing, at a very early date, an analytically conceived description of Ars Nova motet style. The 'flowers of measured music' (Petrus's equivalent of other theorists' *contrapunctus diminutus*) decorate note-against-note counterpoint; they are to be recognized by their being reducible to a single pitch; their character is determined by the mensuration in use, and since the potential decorations of possible progressions are innumerable, Petrus provides examples covering all combinations of modus, tempus and prolation. The 12 examples serve as models for composing over a chant: the composer may set out the decorated discantus line 'in whatever way seems most appropriate according to each group of notes', as shown in examples 'selected just as one might compose'.

The purpose of Petrus's treatise is indicated by its contents. The examples are strikingly similar to surviving Ars Nova motets in their melodic and rhythmic style. Nine of the 12 are based on Sanctus chants; they are all in two voices and could perhaps have been improvised. Cistercian houses did not normally favour decorated polyphony; Petrus therefore seems to have been providing a practical manual on polyphonic mass composition in a simple but up-to-date style for use outside his own order. His sophisticated understanding of Ars Nova music can only have been acquired from study of recent motets by Vitry and his immediate followers.

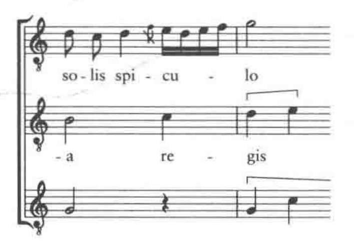
DANIEL LEECH-WILKINSON

Petrus Le Viser (*fl c*1290–1300). Theorist. He is known only through certain rules regarding mensural polyphony attributed to him in the *Regule* of Robert de Handlo (ed. Lefferts). Petrus Le Viser was the first to acknowledge the existence of different stylistic categories requiring different tempos for the beat. He posited three speeds at which the beat (*tempus* – i.e. the breve) could be taken: *mos* (i.e. manner) *longus*, *mos mediocris* and *mos lascivus*. The last of these, applying principally to the Franconian tradition, was equivalent to the modern 'allegro', in both senses of the word. It was now conceived as sufficiently fast for the characteristic unequal rhythm of the 3rd and 4th modes (*brevis recta – brevis altera*) to be equalized (two *breves recte*): 'But in the *mos lascivus* we reject any altered breve and any inequality of breves and affirm their equality; hence, two breves between two longs are equal in the *mos lascivus*, and both longs are imperfect'.

Whereas 12 to 15 years earlier Lambertus had still regarded this as a conceptual impossibility, Petrus Le Viser gave recognition to what came to be known as *modus imperfectus*. He added that the latter could not of course apply if three breves consistently intervened between two longs. The speed of the *tempus* was fast enough to accommodate no more than the conventional two or three semibreves per breve; these were performed in the Franconian manner. ('It was these semibreves in the *mos lascivus* that gave rise to a good many *hoketi lascivi* [merry hockets] ...') Examples of the *mos lascivus* with binary mensuration of the long occur in the Bamberg manuscript (*D-BAsp* Ed IV 6, no.86) and Montpellier manuscript (*F-MOf* H196, nos.153, 260, 261, 311), and also in a few English compositions, notably several in *US-Cum* 654 app.



The *mos mediocris* accommodates three, four or five semibreves in a *brevis recta* (e.g.: *F-MOf* no.281; *I-Tr* Vari 42, nos.4, 7, 12, 23; *GB-Onc* 362, no.9). 'But in this *mos* two semibreves are equal, three unequal, four equal and five unequal.' This passage doubtless reflects the evolutionary process that had apparently been set in motion, somewhat earlier, by Petrus de Cruce when he began to enlarge to four the number of semibreves set for a breve. These were necessarily performed too fast to be rhythmically differentiated. (In fact, Petrus Le Viser still stipulated that if four or five semibreves took the place of a breve, they could only be melismatic, i.e. turns or similar ornaments in which the first of five notes could hardly be more than an acciaccatura; see ex.1.) Four equal semibreves in one voice set against two semibreves in another (e.g. *I-Tr* no.7) could easily cause the latter to become equal, in effect producing *tempus imperfectum*. The contrapuntal evidence in applicable motets (three semibreves in one voice set against four or two in another) indicates that in a group of three semibreves the last was equivalent to the first two (the *via nature* of the early 14th century).

Petrus was thus the first to recognize at least special categories of imperfect mensuration on the two levels of *modus* and *tempus*. At the same time he unwittingly introduced what later came to be known as *prolatio minor*, since each of a group of four semibreves (in effect, minims) in *mos mediocris* has half the value of each of a group of two.

Petrus Le Viser's attempt at precise mensural definition of fractional semibreves was apparently not accepted by other musicians, among them Petrus de Cruce, whose more advanced motets, in which the breve could be

Ex.1 *GB-Onc* 362, no.9 (read in *mos mediocris*)

divided by up to seven semibreves, were performed in the *mos longus*. Here the customary reading of groups of two or three semibreves continued to obtain, probably because the large number of allowable semibreves per beat was conducive to the retention of the Franconian tradition.

The *mensurationes* of JACOBUS OF LIÈGE are similar to the *mores* of Petrus Le Viser, except that the conservative Jacques explained them as largely representing historical layers: (1) *citissima* for compositions written in longs and breves only, such as older hockets, in which 'the perfect breve has no more value than the present-day minim', e.g. Pérotin; (2) *cita* for Franconian motets; (3) *media* for Petronian motets; and (4) *morosa* for the 'moderns', e.g. Philippe de Vitry (*CoussemakerS*, ii, 400*b*–401). He reported no imperfect mensuration for either (2) or (3).

ERNEST H. SANDERS

Petrus optimus notator, Magister (*fl* mid-13th century). Musical scribe active in Paris. In the period following the generations of Perotinus and Robertus de Sabilone, he was involved, along with Johannes 'Primarius' and others, in copying the *Magnus liber* of Notre Dame, work that resulted in the transcription of the repertory from a modal to a mensural system of notation. He is mentioned only by the theorist Anonymus 4 (ed. Reckow, 1967, i, 46, 50). Anonymus 4's text implies that Petrus's activity preceded that of Franco of Cologne; it is possible, however, that Petrus 'the best notator' was actually a somewhat younger figure, PETRUS DE PICARDIA, on whose compendium *Ars motetorum compilata breviter* (ed. F.A. Gallo, CSM, xv, 1971) Anonymus 4 appears to have drawn. Identification with Petrus de Cruce (Coussemaker and others) is unlikely.

EDWARD H. ROESNER

Petrus Palma Ociosa. *See* PETRUS FRATER DICTUS PALMA OCIOSA.

Petrus Trothun Aurelianis, Magister (*fl* early or mid-13th century). Singer. He was active in Paris, about the time of Robertus de Sabilone, probably at Notre Dame. His singing of plainchant was praised by the theorist Anonymus 4 (ed. Reckow, 1967, i, 50), who also remarked that he knew little or nothing about the rhythm of measured music.

IAN D. BENT

Petrželka, Vilém (*b* Brno, 10 Sept 1889; *d* Brno, 10 Jan 1967). Czech composer and teacher. He studied at the Brno Organ School with Janáček (1905–8) and privately in Prague with Novák (1913–14). He lectured in composition and theory at the Brno Conservatory (1919–52) and at the academy (1947–60), where he became professor in 1957. From his Novák-like beginnings, he developed remarkably as a composer: his use of new methods of composition, daring for its time, aroused admiration, but later he inclined more towards the traditional school. Apart from the monumental cantata *Námořník Mikuláš* ('Mikuláš the Sailor'), the most valuable of his works are the chamber compositions. In them he made striking use of harmony, metre and rhythm and showed a refined technique in a style that was basically homophonic, though with frequent use of imitation. His works show no direct relation to folk music. Petrželka completed and orchestrated Janáček's Mass in E♭. He taught a number of composers, among them Zdeněk Blažek, Sokola, Kaprálová, Jan Novák, Josef Berg and Křivinka. He was also a critic for newspapers in Ostrava and Brno.

JAN TROJAN

Pets. *See* PAEZ.

Pet Shop Boys, the. English pop group. It was formed in 1981 by a pop music journalist, Neil Tennant (*b* North Shields, Northumberland, 10 July 1954), and Chris Lowe (*b* Blackpool, 4 Oct 1959). They had their first success with the song *West End Girls*, a number one hit in Britain and the USA in early 1986 which heralded a string of chart singles including four UK number one singles. Their sometimes excellent material is mostly original, although *Always on my Mind* (1987) was a cover version of the Elvis Presley standard. *Where the streets have no name/Can't keep my eyes off you* (1991) was a 'hi-energy' version of a U2 number and a Frankie Valli song segued together, while *Go West* (1993) was a remake of the Village People's 1979 gay anthem. They were probably at their peak in the late 1980s with their duet with Dusty Springfield, *What have I done to deserve this?* (1987), and *Heart* (1988), although their melodic touch never really left them. In 1999 they returned to the charts with their album *Nightlife*.

With Erasure, the Pet Shop Boys are the last in a long line of arty, camp synthesizer duos which stretches back to Sparks in the 1970s and continued into the 1980s with Yazoo, Blancmange and Soft Cell. However, the Pet Shop Boys' style is instantly recognizable: Tennant's dead-pan recitatives are combined with Lowe's disco and Balearic beats. The band have also shown a predilection for grandly operatic ballad styles, as on their 1991 hit *Jealousy*. Their work carries with it obvious camp overtones with songs such as *Shopping* (1987) and *Can you forgive her?* (1993), and a quintessentially English wry sense of humour and understatement, suggested in the titles of some of their albums: *Please* (1986), *Actually*

(1987) and *Very* (1993). Their melodramatic and highly theatrical performances on stage are reminiscent of a bygone pop age, when show and spectacle were applauded, not ridiculed.

DAVID BUCKLEY

Pettersson, (Gustaf) Allan (*b* Västra Ryd, Uppland, 19 Sept 1911; *d* Stockholm, 20 June 1980). Swedish composer. He was brought up, together with three older siblings, in crowded and basic conditions in a poor working-class area of southern Stockholm. His irascible blacksmith father and pious mother – who had an appealing singing voice and played the guitar – had bitter conflicts and eventually divorced. Pettersson played the violin in his youth at political meetings, funerals and silent films, though he received no formal training until his mid-teens. He applied to the Swedish Royal Academy of Music in Stockholm in 1926 but gained admission only later, studying the violin with Ruthström, the viola with Runnquist, harmony with Nordqvist and counterpoint with Melchers (1930–38). He played chamber works, theatre music and jazz, and was the viola player in the first Swedish perfomance of Schoenberg's *Pierrot lunaire* (1937). Although he won a position in 1939 as a section violist in the Concert Society (now the Royal Stockholm PO), a scholarship to study with Vieux in Paris postponed the start for a year. He kept the position until 1953 but stopped playing in the orchestra in 1950. He gained a reputation as a fine, sensitive musician and an irritable, difficult person.

Pettersson had intermittently written music since 1934. To further his goals as a composer, in the second half of the 1940s he studied privately: harmony with Herbert Rosenberg, counterpoint with Olsson, orchestration with Mann and composition with Blomdahl. He went back to Paris between 1951 and 1953, where his principal teacher was Leibowitz. On his return to Stockholm, he concentrated on composition; but worsening rheumatoid arthritis was eventually to turn him into an invalid, unable after 1968 even to attend concerts. Nevertheless in that year he finally achieved a public breakthrough with the première of his Seventh Symphony by the Royal Stockholm PO under Dorati.

In the 1970s Pettersson won various important Swedish prizes and awards. Frequent articles in the Swedish press centred on his chronic illness, colourful character and identification with the weak, poor and disadvantaged of society. In 1975, when the Stockholm PO decided not to take his music on tour, he became notorious by banning the orchestra from playing his music; the ban lasted a year, during which, unusually, Pettersson wrote little or no music. After his death, interest in his music increased internationally, especially in Germany. There an Allan Pettersson Gesellschaft issued six yearbooks, CPO began recording his complete works, and a series of concerts (in 1994–5) programmed almost all of them.

Pettersson's early compositions consist of chamber music and songs. The crucial work among these is the 24 *Barfotasånger* ('Barefoot Songs'), which he wrote in the 1940s to his own poetry. Some of the songs recall ballads or romances, folk tunes or church hymns; while others recall Schubert's *Winterreise*. They are mostly diatonic with simple accompaniments in structures of some sophistication. Poetic themes include loneliness and longing, poverty, sorrow and death, suffused with religious implication. His orchestral music, all of which came afterwards, may be an attempt to deal with the losses these songs project and to realize on a large scale the struggles which lie behind them. Melodies from the *Barfotasånger* reappear later, sometimes as fragments (e.g. in Symphony no.2), sometimes in longer quoted sections (e.g. in the Second Violin Concerto and Symphony no.14). They may supply intervallic material for the larger works or blossom as calmer areas in very turbulent music.

Around 1950 Pettersson wrote his last two chamber works, which technically were the most advanced music he ever composed. In the Concerto for violin and string quartet, hysterical repetition, cold vibratoless chorales, arco and pizzicato beyond the bridge, deliberate mistuning via quarter-tones, and a very wide variety of articulations for all the instruments advance an impression of irony and provocation, sometimes wild, sometimes harrowingly distant. Just as alarming technically and emotionally are the Seven Sonatas for two violins. Like the concerto, they use Hindemith and Bartók as models to create a different sound world. Pettersson asks for strict observance of 'the prescribed string designations, which are given for *timbral* reasons, and the bowing indications, which all aim for a particular expression'. Characteristically that expression is harsh, distorted and agitated; occasionally there is grim humour. Both concerto and sonatas reveal comprehensive mastery of composition for strings. So do Pettersson's three concertos for string orchestra, all completed in the 1950s. The first owes something to Bartók's Divertimento; better known is the Third, whose long *mesto* middle movement became Pettersson's first recorded work. All three concertos demand considerable virtuosity; they also reveal the extreme contrasts and musical fragmentation which mark his symphonies of the 1950s.

Pettersson wrote 17 symphonies, from about 1950 to 1980. No.1 exists in two substantial incomplete (but orchestrated) manuscripts. No.17 is also incomplete. Most are on a very large scale: only three last fewer than 30 minutes (nos.10, 11 and 16), and only two have more than one movement (nos.3 and 8). The single-movement 9th and 13th symphonies last over an hour. The completed symphonies may be grouped into nos.2–4, 5–9 and 10–16. The first group emphasizes struggle and conflict, typically through irregular, rapidly changing chromatic lines in complex textures sometimes approaching atonality, and the opposition of these lines to smoother, slower, diatonic melodies. Such serenity as occasionally emerges is either insecure or final, suggesting either unattainable peace, or resignation and death. The next group exhibits more expansive writing and more diatonic harmony, often paring down thematic and harmonic material to a minimum and proceeding by ostinato and other repetition. The ethereal coda to the 7th Symphony has a harmonic support almost exclusively of a repeated B minor triad which continues for about six minutes.

No.10 is the fiercest and most concentrated of the symphonies. All of them in the third group contain highly charged music. Many simultaneous ideas and their doublings, typically at high speed and loud volume, and in heavy orchestration and syncopated melodic planes, compete in extreme musical struggle. Adding to the tension may be lines at very high tessitura, especially in the high strings and high brass. For all these reasons,

these symphonies are the hardest to perform, although the last (no.16), together with the viola concerto, is more relaxed and transparent.

Thematic shapes and their individual developments, especially in the first and third groups of symphonies and the concertos (from the 1950s and 1970s), share procedures traceable to Pettersson's studies of serialism under Leibowitz. Although never genuinely serial, some of Pettersson's works have chromatic or 12-note themes which are developed in whole or in part in inversion, retrograde, or both. The music always retains tonality on a large scale, although achieved goals of diatonic triads are scarce in his purely orchestral music from the 1970s. Such goals are more common in his only orchestral music to include voices: Symphony no.12 and *Vox humana*. The former sets texts from Neruda's *Canto general*. It deals with oppression and strife, in a personal rather than political commentary. Both works identify with the oppressed and struggling outsider in grim, frequently tragic circumstances.

Although he completed 15 symphonies and several concertos, these works owe little to traditional formal patterns. Pettersson once observed that his symphonic form actually broke up symphonic structures. Although occasionally like the orchestral music of Mahler, Berg, Sibelius or Bartók, his is more extreme. The vigorous heterophony suggests struggle and defiance, while the more lyrical, often hauntingly beautiful passages could, in his words, 'calm a child's weeping'. He considered his own sufferings and blessings, especially from childhood, the source of his creativity. Through his music he felt himself 'a voice crying out . . . which is threatened with drowning in the noise of the times'.

PAUL RAPOPORT

Petti, Paolo (*b* Rome; *d* Rome, 1678). Italian composer and musician. He appears to have spent his whole life in Rome, where he was a pupil of Silvestro Durante and then *maestro di cappella* of S Maria Maggiore and a musician at the Castel S Angelo. According to Pitoni he died young. In his handling of both textures and learned contrapuntal techniques he was a skilful exponent of the polychoral style much cultivated in Rome.

□

Petty, Tom [Thomas] (*b* Gainesville, FL, 20 Oct 1952). American rock singer and songwriter. As a teenager he formed Mudcrutch, influenced by the 'British invasion', with Benmont Tench (keyboards) and Mike Campbell (guitar). The trio moved from Florida to California

(1976), renaming the group Tom Petty and The Heartbreakers and adding Ron Blair (bass guitar) and Stan Lynch (drums) to the line-up. Between 1976 and 1999 they recorded ten albums of Petty's songs. Among his most commercially successful compositions were 'American Girl' from the début album, 'Don't do me like that' (*Damn the Torpedoes*, 1979), 'Don't come around here no more' (*Southern Accents*, 1985) and 'Into the Great Wide Open' (*Into the Great Wide Open*, 1991). Petty also made two solo albums. Through his well-crafted songs and his work with such performers as Bob Dylan (with whom the group toured in the 1980s and 90s) and George Harrison, he has been one of the leading figures of mainstream rock for more than two decades. With Dylan and Harrison, Petty was also a member of the 'supergroup' the Traveling Wilburys.

DAVE LAING

Petyr [Petre, Peter], **Henry** (*b c*1470; *d* after 1516). English composer. He graduated BMus at Oxford in 1516, having spent 30 years in the study and practice of music. Only one of his works, a 'Playn Song' Mass in *GB-Lbl* Add.5665 (without Kyrie), has survived. The title refers to the fact that the notation is adapted from plainchant symbols. In fact only two note values are used: breve and semibreve, though other instances of the same convention also use the minim. This interpretation of the notational symbols is confirmed by their appearance from time to time in the cantus firmus voice only of ritual polyphonic items in the early 16th century. (Taverner's 'Plainsong' mass also uses a restricted range of values but does not employ plainchant symbols.) Petyr's mass has little merit besides its ingenuity.

JOHN CALDWELL

Petyrek, Felix (*b* Brno, 14 May 1892; *d* Vienna, 1 Dec 1951). Austrian pianist, composer and teacher. In Vienna he studied the piano with Godowsky and Sauer, musicology with Adler and composition with Schreker (1912–15, 1917–19). Several of Schreker's pupils at this time, such as Grosz, Hába, Krenek, Rathaus and Rosenstock became close friends: Petyrek was to be responsible for many first performances of their piano and chamber works. He used his first appointment to a teaching post in piano, at the Salzburg Mozarteum, as the opportunity to place his many talents, as solo pianist, teacher, composer and performer, at the service of contemporary music, and this he continued to do in Berlin (Musikhochschule, 1921–3), Abbazia, Slovenia (1923–6), Athens (Odeon, 1926–30), Stuttgart (Musikhochschule, succeeding Wilhelm Kempff, 1930–39), Leipzig (Musikhochschule and University, 1939–45). In 1949 he returned to Vienna, where he taught in several faculties at the Musikakademie, as it then was, and set up an archive of folksong.

While the core of his oeuvre is the vocal and piano music, his melodrama *Die arme Mutter und der Tod* (1922, operatic version 1929) (which employs Sprechgesang), the sextet and the Sinfonietta (both monothematic in conception) helped equally to establish his reputation as an original artist. The *Sechs groteske Klavierstücke* (1914–19), with their pregnant rhythms, staccato-martellato effects, disruptive changes of tempo, and bitonal tendencies, were much praised in progressive circles and frequently performed. He composed piano duos and duets in the 1930s, after marrying the pianist Renate Helene Lang, his second wife. Hindemith, among others, took an interest in Petyrek, and he was invited to Donaueschingen in 1923 and 1925, making him spiritually a co-founder of the ISCM. The Swiss poet and anthroposophist Hans Reinhart had a great influence on his stage works, including the three subtle settings of Reinhart's versions of Andersen. Mahler's influence has been overstated: at the start of his career Petyrek was very receptive to Schreker's sphere of expression but later became more critical of his musical language. As an acknowledged interpreter of contemporary music he was closer to Hindemith, Stravinsky (critics at one time often called him the 'Viennese Stravinsky') and Bartók, without renouncing the colourful melodic style and instumentation of his former teacher. He shared Bartók's interest in collecting the folksongs of eastern and central-southern Europe, and adapting them in his own compositions. Petyrek favoured formal originality, strong rhythms and inventive melodic language. But his particular strength probably lay in his independent efforts to secure emancipation from major–minor tonality without following Schoenberg and his circle into the 12-note technique. His path involved freely atonal structures, bitonal or polytonal combinations, extreme chromaticism, and then a return once more to tonal allegiances.

WORKS

CARMEN OTTNER

Petz. *See* PAEZ.

Petz, Johann Christoph. *See* PEZ, JOHANN CHRISTOPH.

Petzold, Christian. *See* PEZOLD, CHRISTIAN.

Petzold, Rudolf (*b* Liverpool, 17 July 1908; *d* Michaelshoven, Cologne, 17 Nov 1991). German composer and teacher of music. His interest in music was first aroused as a ten-year-old in Liverpool by the English conductor and Handel expert John Tobin. From 1930 to 1933 he studied at the Cologne Musikhochschule (composition with Jarnach, piano with Peter Dahn). He worked as a freelance composer (1933–41) and taught music theory at the Cologne Musikhochschule (1937–8). From 1941 to 1942 he again lectured on music theory, this time at the Frankfurt Musikhochschule. He returned to Cologne in 1946 to teach composition and stayed there until 1970, becoming successor to Jarnach in 1955 and later holding the appointment of deputy director (1960–69). After his retirement in 1970 Petzold devoted himself entirely to composing. He received the Robert Schumann Prize in 1958 and the Silver Medallion of the Cologne Musikhochschule in 1968.

His work falls into three periods. In the first, ending in about 1949 (opp.1–26), Petzold wrote mostly chamber music in a late Romantic style of broadened tonality. The middle period, up to about 1961 (Violin Concerto op.38), is characterized by increasingly free atonality. Of his work after 1962 the 'imaginary ballet' *Incarnatus est homo* is particularly important. In these later works tonality is suspended, making way, in many cases, for the application of serial techniques.

RUDOLF LÜCK/R

Peudargent [von Huy], **Martin** (*b* Huy, *c*1525–30; *d* after 1587). Flemish composer. He was for much of his career in the service of the Duke of Kleve as Kapellmeister. In his first work, published in 1555, he referred to himself as 'musicus' in the court of Duke Wilhelm V of Jülich-Kleve-Berg in Düsseldorf. Oridryus, in his treatise *Practicae musicae* (Düsseldorf, 1557), referred to him in friendly terms and described him as *praefectum* in the duke's chapel. Peudargent is known to have been present at Jülich in 1585 for the marriage of Duke Johann-Wilhelm and the Margravine Jakobe von Baden, and he was named by Graminäus as the principal musician there. It is clear that he remained for more than 30 years in the service of the Duke of Kleve; by 1587, when he petitioned his master for assistance, he had become blind and was no longer able to support his family.

Peudargent's style conforms to that current in the Low Countries and the Rhineland at the time. His motets are predominantly imitative and the texts are handled with a sure sense of balance. The underlay is notably syllabic and the harmonic idiom is markedly 'tonal' in feeling.

WORKS

Liber primus sacrarum cantionum, 5vv (Düsseldorf, 1555), ed. H. Kümmerling (Frankfurt, 1979)

Liber secundus sacrarum cantionum, 5, 6vv (Düsseldorf, 1555)

JOSÉ QUITIN/HENRI VANHULST

Peuerl [Bäuerl, Peyerl], **Paul** (*b* ?Stuttgart, bap. 13 June 1570; *d* after 1624). German composer, organist and organ builder. From 1602 onwards he was an organist at Horn, Lower Austria, and, from 1 November 1609 at the latest, at the church of the Protestant school at Steyr, Upper Austria, though he was not definitely appointed there until mid-February 1614. He built or renovated, among others, organs for churches at Steyr (1613), Enns (1615) and Horn (1606 and 1615) and a two-manual instrument for the church of the Cistercian Wilhering Abbey, Upper Austria (1619). None of these instruments has survived, though from our knowledge of the specification of the last-named we can conclude that his organs were of the *werkprinzip* type. In 1625 he had to flee from Steyr as a religious refugee, after which nothing more is heard of him.

Peuerl published four collections of his own compositions while he was at Steyr. His name is linked above all with the creation of the variation suite. There is still research to be done on the antecedents of this form, which possibly include early 16th-century Italian lute music and the variations of the English virginalists; the form was soon taken up by Schein, Posch and others. Peuerl's suites consist of four dances: paduana, intrada, 'dance' and galliard. The 'dance' ('Däntz') is the basic theme; the other three are variations of it, the paduana being the closest to it and the intrada and galliard more distant. Peuerl, like H.L. Hassler, Aichinger, Schein and others, was one of the few German composers of the early Baroque period to compose italianate instrumental canzonas. He was also the first German composer to write (in his 1625 volume) for the Italian texture of two melody instruments and continuo. To some extent his songs (1613) follow traditional German adaptations of Italian forms such as madrigal and balletto, but they also hark back to the court songs and *Bergreihen* of 16th-century Germany.

OTHMAR WESSELY/DOROTHEA SCHRÖDER

Peutinger, Conrad (*b* Augsburg, 14 Oct 1465; *d* Augsburg, 28 Dec 1547). German diplomat, humanist and patron of music. After studies in Basle and several Italian cities he returned to Augsburg in 1497 as secretary of the town council. He became a trusted adviser of Emperor Maximilian I (*d* 1519) and an important link between the artistic activities of Augsburg and the imperial court. In 1521, during the reign of Charles V, he met Luther and tried unsuccessfully to get the reformer to recant. Peutinger was bound to musicians by both friendship and correspondence. He aided the work of the music printer Erhard Oeglin and Petrus Tritonius, the composer of Horatian ode settings. He was closely associated with Veit Bild, the Benedictine theorist and composer, and Othmar Luscinius, the theorist and humanist. His correspondence with Nicolaus Ellenbog reveals their mutual interest in literature and music. He wrote the postscript to *Liber selectarum cantionum* (RISM, 1520[4]), a collection of motets by Josquin, Obrecht, Senfl, and others, that Senfl published in Augsburg in honour of Maximilian I.

CLEMENT A. MILLER

Peverara [Peperara], **Laura** (*b* Mantua, *c*1550; *d* Ferrara, 4 Jan 1601). Italian virtuosa singer. She was brought up in Mantuan courtly circles, the daughter of a respected Mantuan intellectual who was tutor to the princes of that city. She was clearly a singer of great excellence and charm, as well as a dancer and harpist of considerable skill. She appears to have been present as a singer in Verona in the late 1570s. She was the first and the dominant member of the famous Ferrarese group of singers (*concerto delle donne*, which also included Anna Guarini, Livia d'Arco and, in some role and for some period at least, Tarquinia Molza) from its foundation in 1580 until its dissolution in 1598. Peverara's singing was the subject of numerous laudatory poems by various authors including Tasso, who became acquainted with her in Mantua in 1563 or 1564 (Tasso's poems for her are listed in Maier; for others see Durante and Martellotti). Peverara's marriage, to the Ferrarese Count Annibale Turco on 22 February 1583, was an occasion for elaborate festivities, including the preparation under Tasso's supervision of the madrigal anthology, *Il Lauro verde* (Ferrara, 1583[10]). Two other anthologies were compiled in her honour: *Il Lauro secco* (Ferrara, 1582[5]) and a manuscript collection (*I-VEaf* 220), probably from very early in 1580.

ANTHONY NEWCOMB

Pevernage [Bevernage, Beveringen], **Andreas** [André, Andries] (*b* Harelbeke, nr Kortrijk, 1542/3; *d* Antwerp, 30 July 1591). Flemish composer. On 21 January 1563 he was appointed choirmaster of St Salvator, Bruges, and on 22 September of the same year he was named to a similar post at Onze Lieve Vrouwkerk, Kortrijk. He remained in Kortrijk until 1577 although he held a prebend at St Willibrordus in Hulst in 1564. In 1578 Kortrijk fell briefly to Calvinist rule. By the following year Pevernage had secured the position of choirmaster at St Jacob, Bruges. This city too fell to the Calvinists and Catholic services were suppressed there from May 1581 until 1584. On 1 October 1584 he was reappointed to his former position at Kortrijk and less than a year later became choirmaster at Antwerp Cathedral where he remained until his death. He was buried by the cathedral's altar of St Anne. Antwerp archives confirm that Pevernage rebuilt the music library destroyed by the Calvinist rebellion and that he was active in humanist circles surrounding the Plantin press.

Pevernage's sacred output includes *Laudes vespertinae* (Antwerp, 1604), a posthumous collection of 14 Marian antiphons and sacrament hymns intended for Antwerp confraternity services, and six masses, also published posthumously. The *Cantiones sacrae* (1578), a collection of sacred and secular motets, includes 25 occasional works written in honour of such notable contemporaries as Margaret of Parma, Louis de Berlaimont (Archbishop of Cambrai), and seven princes of Kortrijk's St Cecilia guild. A seven-voice hymn to the patroness of music, *O virgo generosa*, was reportedly sung at concerts held at the composer's home.

Pevernage's four books of chansons include over 100 works that appear to be planned according to the type of text set (whether spiritual or profane), voicing and mode. They are mostly for five voices and set texts by poets such as Clément Marot and Philippe Desportes. The first book (1589) includes an epitaph for Plantin, *Pleurez muses, attristez vos chansons*, while book 3 includes more madrigalistic chansons characterized by picturesque and dramatic text expression. Pevernage was awarded a stipend of £50 by the city of Antwerp for the publication of book 4 and the volume opens with a musical tribute to the city, *Clio, chantons*. In addition to his work as a composer, Pevernage also edited the popular and influential anthology *Harmonia celeste* (1583). The volume includes seven of his own madrigals. Four additional madrigals appear in other Italian music anthologies issued in Antwerp by Phalèse and Bellère.

Devotional print showing the six-voice motet 'Nata et grata polo' by Pevernage, supported by the figures of Harmonia, Musica and Mensura: engraving by A. and C. Collaert, after Joannes Stradanus, from 'Encomium musices' (Antwerp: Philip Galle, c1590)

Peyer, Gervase de. *See* DE PEYER, GERVASE.

Peyer [Bayer, Beyer], **Johann Baptist** (*b c*1680; *d* Vienna, 10 April 1733). Austrian organist and composer. He may have received his education at Heiligenkreuz monastery,

where another Johann Baptist Peyer (1651–1726) worked as *camerarius major* from 1693 to 1698; the younger (and possibly related) J.B. Peyer was active as organist and musical instructor there from 1698. He worked for the Empress Eleonora, widow of Leopold I, from about 1712 until her death in 1720, and thereafter at the central court chapel under the direction of J.J. Fux. The major extant source of keyboard works by Peyer (*D-Bsb* 1220, copied in Vienna, *c*1780) gives rise to considerable confusion over attributions. Riedel accepted the copyist's ascription of the prelude and fugues in the first fascicle to Andreas Bayer (1710–49), court organist at Würzburg, and of those in fascicles 2–3 to J.B. Peyer. Fascicle 4 contains a two-movement sonata in the newer Italian manner, ascribed simply to 'Sig^e Beÿer'.

The 100 pieces in fascicles 2–3 show signs of liturgical intentions (selections ed. R. Walter, Süddeutsche Orgelmeister des Barock xiii–xiv, Altötting, 1980–81); all but the last few are grouped according to the eight church tones, and titles such as 'Capriccio pro Elevatione' and 'Fuga post Dona nobis' occur. But in style they do not conform to the conventional Austro-German verset. Some pieces are in an old-fashioned ricercare style, like the fugue on the Easter Alleluia; more significant are those pieces written in a lively, modern instrumental manner, and showing strikingly progressive tendencies in texture, melodic style, rhythmic patterns and key structure. These create a simplified *galant* effect closer to the new keyboard sonata than to Baroque liturgical fugue.

If Andreas Bayer were the author of the whole manuscript, fascicles 2–3 would fit into a logical chain encompassing the sonata in fascicle 4. Andreas belonged to the generation of Alberti and Paradies; the sonata composer Platti, whose *Sonates pour le clavessin* op.1 appeared in Andreas's lifetime, was active at the Würzburg court. The alternative is to regard J.B. Peyer as a remarkably forward-looking individualist among his Viennese contemporaries. The Viennese origin of the manuscript can be explained by the close association between the courts of Vienna and Würzburg, while the ascription in fascicles 2–3 could be a copyist's error. But no firm conclusions can be drawn in the absence of corroborative evidence.

SUSAN WOLLENBERG

Peyerl, Paul. *See* PEUERL, PAUL.

Peyko, Nikolay Ivanovich (*b* Moscow, 12/25 March 1916; *d* Moscow, 1 July 1995). Russian composer. He studied at the Moscow Conservatory Music Academy (1933–7) with G.I. Litinsky (composition) and I.V. Sposobin (harmony), and at the conservatory itself (1937–40) with Myaskovsky (composition), Zukkerman (analysis) and Rakov (orchestration). In 1943 he joined the conservatory staff, becoming Shostakovich's assistant in 1944 and later taking his own composition class. He was also professor and head of the composition department at the Gnesin Institute. In 1964 he received the title Honoured Art Worker of the RSFSR. His music has deep links with the Russian tradition, and in particular with the epic Russian symphony; in this he was at first a close follower of Myaskovsky. Subsequently, however, he was influenced by Stravinsky, Prokofiev and Shostakovich, and in the 1960s he began working with 12-note methods, though still within a tonal framework. His orchestration is masterly, and his vocal works show a particular delicacy and poetic understanding.

GALINA GRIGOR′YEVA

Peyró [Peiró], José [Joseph] (*b* Aragon, ?*c*1670; *d* 1720). Spanish composer. He began his career as second musician (most likely harpist or guitarist) in the troupe of Joseph Andrés in 1701, and in 1703 he was performing in Mallorca. Peyró was the 'músico de Valencia' who arrived in Madrid between August 1710 and September 1711 to join the highly successful company of Joseph Garcés. He probably performed again in Madrid between March 1714 and April 1715, for at some time during this period he donated 60 reales de vellón in honour of the Virgin Mary to the actors' guild, the Congregación de Nuestra Señora de la Novena. In 1719 the officials organizing the performance of *autos sacramentales* for the Corpus Christi celebrations in Madrid made an urgent request that Peyró travel to Madrid as quickly as possible in order to participate in the *autos* that year. Peyró explained that he was unable to work because he was suffering the aches and pains of an illness 'of Gallic origin'. The harpist and

composer Juan de Lima Sequeiros took Peyró's place for the *autos* of 1719, while Peyró performed with the company of Joseph Garcés in Valencia and Granada for the 1719–20 season.

Peyró composed solos, *recitados* and ensemble songs for plays and *auto sacramentales*. His music attests to the co-existence of different styles in theatrical music of the early 18th century. In particular, his music for 18th-century revivals of Calderón's *autos El lírio y la azucena* and *Primer refugio del hombre* demonstrate Peyró's expertise with the italianate, pan-European style (with its da capo arias, greater vocal coloratura and busy obligato violin and oboe parts) fashionable in the first and second decades of the 18th century. The largest collection of Peyró's works is in the 'Manuscrito Novena', a large anthology compiled in the early years of the 18th century with music for some of the most often performed plays in the Spanish repertory of the late 17th and early 18th centuries. Housed for many years in the archive of the actors' guild in Madrid (in the parish church of S Sebastián), this extremely important manuscript is now on display in the Museo de Teatro in Almagro. In it Peyró is credited with the music for eight plays and two *autos sacramentales*, a total of 53 separate pieces. Another important manuscript compiled in the early years of the 18th century (*E-Mn* 13622) contains music by Peyró for a *comedia* by Lanhini y Sagredo and for *El jardín de Falerina* by Calderón. Peyró's music cannot be associated with 17th-century productions of *El jardín de Falerina*, but it may well have been used for revivals in 1715–20 in Madrid and elsewhere. Other theatrical songs by Peyró survive in manuscripts in Barcelona Cathedral and the Biblioteka Jagiellónska, Kraków (the latter originally compiled in Valencia).

LOUISE K. STEIN

Peyser [née Gilbert], **Joan** (*b* New York, 12 June 1931). American editor and writer on music. She studied at Smith College (1947–9), Barnard College (BA 1951), and with P.H. Lang at Columbia University (MA 1956, further study until 1958). She has written numerous articles for such periodicals as *Commentary*, *Vogue*, *Hi-Fi/Stereo Review* and *Opera News*, and is the author of many pieces for the Sunday *New York Times* which were based on interviews with European and American musicians. From 1977 to 1984 she was editor of the *Musical Quarterly*. Her books, *The New Music* (1971) and *Boulez* (1976), are intended as a history of music from 1880 to the present; the first discusses Schoenberg, Stravinsky, Webern and Varèse, and the second, Stockhausen, Cage, and Babbitt in addition to Boulez.

PAULA MORGAN

Pez [Petz], **Johann Christoph** (*b* Munich, 9 Sept 1664; *d* Stuttgart, 25 Sept 1716). German composer, instrumentalist and singer. His family had long been connected with music at the Peterskirche, Munich, whose choir school he attended, receiving a firm grounding in plainsong and polyphony. About 1675 he went to the Jesuit school at Munich, where he was an important member of the choir and orchestra (his main instruments were viol and lute) and took an important part in the annual school plays. He sang tenor at the Peterskirche for some time and in 1687 became choirmaster there. However, since he was forbidden to introduce a more modern style of church music there (the authorities wanted nothing but plainsong and polyphony), he moved in 1688 to the Munich court as a chamber musician. The Elector Max Emanuel believed in sending promising composers abroad to study, so Pez spent the years 1689–92 in Rome, absorbing the styles of Corelli and of Carissimi and his followers.

Musical life at the Munich court was at a low ebb in the early 1690s (Max Emanuel lived mainly in Brussels), and in 1694 Pez left for Bonn to reorganize the musical establishment of Joseph Clemens, Archbishop-Elector of Cologne, who was also Bishop of Liège. He was given the title of Kapellmeister in 1696. In 1701 the outbreak of the War of the Spanish Succession caused him to return to Munich, where, however, music was almost non-existent. For the next five years he kept church music going but in 1706 moved to Stuttgart as Kapellmeister at the Württemberg court. He remained there until his death.

Pez's music shows strong Italian influence, the result not only of his visit to Italy but also of his contacts with other Italian-trained musicians in Munich, especially Kerll, who was one of the first composers to bring the Italian concertato style of church music there. His published masses and psalms are very compact, with little repetition of words or division of long movements into self-contained sections. Unlike Kerll he made little use of counterpoint – his choral writing is largely homophonic but with great variety of texture and rhythmic liveliness – but Kerll's influence shows in the relationship between solo and tutti voices. There is much close interplay between the two groups: extended solo passages are rare except in Benedictus sections. His instrumental parts are simple – the strings usually double the voices or accompany a bass solo in a trio texture – and on the whole he rarely used recurrent themes for voices or instruments. Neither masses nor psalms contain much ornamental solo writing, which is, however, found in the solo cantatas of the *Corona stellarum*; these 12 works also display Pez's melodic gift and ability to write convincing accompanied recitative and arioso. The trio-sonata movements which

precede each cantata suggest that his instrumental style was strongly influenced by Corelli.

ELIZABETH ROCHE

Pezel [Pecelius, Petzel, Petzoldt, Bezel(d), Bezelius], **Johann Christoph** (*b* Glatz, Silesia, 1639; *d* Bautzen, 13 Oct 1694). German town bandsman and composer. He probably attended the Gymnasium in Bautzen, near Glatz, and possibly travelled widely before taking up a musical appointment. He spent his whole career as a member of various town bands. He was a *Ratsmusiker*, one of a humble yet privileged class of musicians that derived from the old tower watchmen-trumpeters and became increasingly important as musicians for civic functions during the 17th century. The *Ratsmusiken* corps had both brass and string instruments and it is as a string player that Pezel was first mentioned. In 1664 the Leipzig town council agreed to increase their town band from seven members to eight and Pezel was appointed fourth *Kunstgeiger*. In 1670 he was promoted to *Stadtpfeifer*, the equivalent to being named 'Master' of his particular craft. This was a life appointment. His first important musical publication, *Hora decima musicorum*, dates from that year. The confusion over his name also began at this time: the title-page carries the name Johanne Pezelio but the dedication is signed Johann Bezeld and other variants appeared later. One result is the confusion of the identities of Johann Pezel, town bandsman, with Johann or Jan Pecelius (some of whose works are in *CZ-KRa*; *ČSHS* mentions records, now lost, which show the Czech Pecelius to have been a member of the Augustinian order, and his surviving compositions are all for the church). It seems unlikely that the matter will ever be resolved.

Pezel was apparently dissatisfied with his musical position and made attempts to improve it, applying at one stage for the post of Kantor at the Thomaskirche, Leipzig, a position his experience as a *Stadtpfeifer* in no way qualified him to fill. He applied also to be a member of the Dresden *Ratsmusiken* corps. In 1681 plague broke out at Leipzig and he moved to Bautzen, where he remained until his death. Contemporary commentators, notably Printz in his *Phrynides Mytilenaei* of 1696, indicated that he was better educated than his musical position required. His ability to understand Italian was particularly unusual, and he seems to have written several literary commentaries during his years in Leipzig, although none has survived.

The works for which Pezel is remembered are contained in his two important collections for the five-part cornett and trombone ensembles that were characteristic of the *Ratsmusiken*. During his time at Leipzig, music for such a combination was performed twice daily from the *Rathaus* tower, a practice that was apparently widespread in Germany. The two collections are *Hora decima musicorum* (Leipzig, 1670) and *Fünff-stimmigte blasende Music* (Frankfurt, 1685). The first book contains 40 one-movement sonatas separately numbered. Although strings are given as an alternative to wind, the dedication and the musical figuration show clearly which was the intended instrumentation. The most interesting question concerning this book is the grouping of the pieces. The order of the sonatas falls into groupings of tonality, so Riemann (*SIMG*, v, 1904–5, p.501) proposed that the book was actually a set of 11 suites each of two to nine movements. This rather arbitrary and impracticable notion lacks historical proof and reason.

Downs put forward another possibility, noting that, apart from six sonatas (nos.1–5 and 40), the pieces alternate between duple and triple metre and fit together in key to make two-movement sonata pairs (e.g. no.6, duple, and no.7, triple, both in A minor). Sonatas nos.1 and 2 each have three sections instead of two, the first two sections in duple metre and the third in triple. They make a satisfactory sonata entity on their own. Sonatas nos.3, 4 and 5 have the sequence C, C, 3/2 all in F, which suggests their performance together as a three-movement work. There are no striking thematic relationships between the pairs but such pairing practice is mentioned in Praetorius and it is certainly a viable theory.

Fünff-stimmigte blasende Music is a collection of 76 pieces, mostly intradas but with examples of various dance forms such as saraband, courante, allemand and bal (balleta). There are some obvious pairings of dance movements denoted by recurring melodic motifs, but these are surprisingly few, and there appears to be no recognizable formal pattern in which to arrange the contents.

This music for tower musicians is most characteristic of Pezel. It was also an old, hardy and fairly stereotyped tradition. This is hardly progressive music; the musical opportunities are not great, the colour range is limited and the musical development in each piece rudimentary. The main variety in Pezel's music comes from his cunning exploitation of texture to utilize his limited palette to the

full. He wrote smoothly, with the outer voices predominating and the bass line moving more slowly and strongly to set up simple triadic harmony. There are seldom more than four real parts, since the tendency is to pair instruments – the second cornett moving parallel with the first, for instance. Climaxes are often achieved by increasing the complexity of the texture rather than by dynamic means, and all the works consist of rapidly alternating imitative and homophonic sections. Yet within this stereotyped style Pezel managed to produce music that is often lively and interesting, thereby proving his superiority over the many other contemporary *Ratsmusiker* composers.

ADRIENNE SIMPSON

Pezold [Petzold], **Christian** (*b* Königstein, 1677; *d* Dresden, ? by 2 June 1733). German organist and composer. Records describe him as organist at the Dresden court in 1697. From 1703 he was organist at the Sophienkirche in Dresden, and in 1720 he wrote a cantata for the consecration of the Silbermann organ recently built there; it was first performed by the Dresden Kreuzkirche choir. In 1709 he was appointed court chamber composer and organist. Concert journeys took him to Paris in 1714, and to Venice in 1716. He also wrote a piece for the consecration of the Silbermann organ in Rötha, near Leipzig. His death date is usually given as 2 July 1733, but Schaffrath's letter of application for his post is dated 2 June and the competition for the vacancy was held on 22 June.

Mattheson (*Der vollkommene Capellmeister*, 1739) described Pezold as one of the most famous organists, and Gerber reckoned him 'one of the most pleasant church composers of the time'. C.H. Graun was among his pupils. His few surviving instrumental works include three trios, two partitas for viola d'amore, 11 fugues for organ or harpsichord, a suite and single pieces for harpsichord, an *Orgeltabulatur* (two- and four-part chorales, 1704) and a *Recueil de 25 concerts pour le clavecin*, dating from 1729 (all in manuscript, *D-Dl*).

The works for harpsichord and organ have a distinctive virtuoso brilliance, with much use of scale and arpeggio figuration. A cantata, *Meine Seufzer, meine Klagen (Bsb)*, contains free forms, independent of the da capo scheme.

Pfaefferli, Christoph. *See* PIPERINUS, CHRISTOPH.

Pfannhauser, Karl (Robert) (*b* Vienna, 2 Feb 1911; *d* Vienna, 5 Oct 1984). Austrian musicologist. After taking the doctorate in classics and history, he established a reputation as an authority on Austrian church music. In 1945 he founded the series Österreichische Kirchenmusik: Publikationen für den praktischen und wissenschaftlichen Gebrauch (nine volumes to 1949), containing music from Haydn to Bruckner, with his own introductions and notes. He also wrote carefully researched programme notes for performances by the Vienna Hofmusikkapelle and other concerts, including many for the works of the Austrian composer Raimund Weissensteiner.

His most important writings are on Mozart: he proved that six works (KAnh.A 1–4, 22, 23), hitherto believed to be authentic, were copies of works by C.G. Reutter and J.E. Eberlin; he showed K139/47*a* to be the *Waisenhausmesse*; he found Mozart's copy of Michael Haydn's *Tres sunt*; he established the date of the first performance of the Mass K427/417*a*; and he showed that the 'Coronation' Mass K317 had nothing to do with the shrine at Maria Plain near Salzburg.

RUDOLF KLEIN

Pfannmüller [Phanmüller, Phanmulner], **Friedrich** (*b* Hirschau, Upper Palatinate, *c*1490; *d* Prague, before Whitsuntide 1562). German organ builder. He was based in Amberg in the Upper Palatinate (a district of eastern Bavaria), where he is mentioned as a citizen in 1547. He restored the organ of St Johann, Regensburg, in 1538, and that of St Martin, Amberg, in 1549. The so-called 'Yellow Organ' he built for St Mikuláš, Cheb, in 1549–52 (three manuals, 30 or 35 stops) led to the commission to build a large organ in the Renaissance gallery of Prague Cathedral (simultaneously the palatine church and the chapel of the Habsburg court). This work occupied him from 1553 until his death; it was completed after 1566 by Joachim and Albrecht Rudner (the organ was later played on by Carl Luython). Although the transition from double chests to slider-chests was happening in Pfannmüller's area during his career, he continued frequently to place more comprehensive mixtures on a separate chest controlled by a spring-valve. Besides his richly articulated Principal choruses (e.g. 16′, 8′, 4′, $2\frac{2}{3}$′, 2′, Zimbel, or 8′, 4′, $2\frac{2}{3}$′, 2′, $1\frac{1}{3}$′, 1′, Zimbel), he built stopped diapasons, flutes and regals; his organs also show a tendency towards wide-scale ranks of the Low Countries type, perhaps instigated by Flemish members of the royal chapel. His son Friedrich became organist of St Mikuláš, Cheb, where he played his father's instrument; he was succeeded there in 1562 by his brother Wolfgang Pfannmüller, who died in 1611.

HANS KLOTZ/JIŘÍ SEHNAL

Pfeffinger, Philippe-Jacques (*b* Strasbourg, 15 Dec 1765; *d* Paris, *c*1821). French composer and teacher. In 1790 he became *maître de musique* for the city of Strasbourg and for the Temple Neuf. He studied composition with Ignace Pleyel and composed several patriotic songs and cantatas. After obtaining a law degree from the University of Strasbourg in 1791 he accompanied Pleyel to London, where he met Haydn and developed a liking for Handel's oratorios. From 1794 he was active in Paris as a composer and teacher. His compositions include *romances*, light piano works and chamber music; Choron and Fayolle considered them conservative but showing a good knowledge of harmony.

Pfeiffer, Carl August (*b* Karlsruhe, before 1753; *d* after 1768). German composer. He was a choirboy at Karlsruhe in 1753 and studied the violin and composition at Mannheim in 1762 before entering the Karlsruhe court orchestra as a violinist in 1763; he became Konzertmeister in 1765 but apparently left Karlsruhe before 1768. His

music is typical of the third quarter of the 18th century, with relatively concise movements and stylistic features resembling those of the second generation of Mannheim composers. His fast movements are dominated by motivic and rhythmic material but also include passages of italianate lyricism; an interesting feature of the Clarinet Concerto is the operatic 'Recitativo – Andante' that precedes the slow movement proper. The Symphony in D has all three movements joined together without a break (and with no internal repeated sections), a format more typical of C.P.E. Bach; this, together with the location of this manuscript, suggests that Pfeiffer visited Berlin. His flute quartets, except for the three-movement one in E minor, each consist of a moderately paced first movement and a minuet. The Bassoon Concerto in B♭ attributed to Franz Anton Pfeiffer at Weimar (*D-WRl*) may also be by Carl August Pfeifer. He is not to be confused with a Carl Pfeifer who composed six Austro-Styrian ländler for fortepiano. (*EitnerQ*)

D.J. RHODES

Pfeiffer, Franz Anton (*b* Windischbuch, nr Boxberg, 16 June 1752; *d* Ludwigslust, 22 Oct 1787). German composer and bassoonist. He studied the double bass at Mannheim, where he later claimed to have played in the court orchestra. He also studied the bassoon, and in about 1772 he left for Munich to continue his studies of the instrument with Felix Rheiner. After playing in travelling theatre orchestras in the Frankfurt area, he was appointed bassoonist in the Mainz court orchestra in 1778. It was probably here that Pfeiffer began to compose for the bassoon, performing this music at court and on concert tours. In 1783 he entered the court orchestra of the Duke of Mecklenburg-Schwerin at Ludwigslust. His six Bassoon Quartets op.1 are dedicated to Prince Friedrich Wilhelm of Prussia, before whom he played and who offered him a position in Berlin. He married the contralto Maria Johanna Clara Lanius (1765–1856) in 1787. He was widely praised for his superb technique and musicality. The impression of his seal on his will depicts a bassoon in minute detail, including an octave key and a hand rest, the earliest evidence of the former in Germany.

As a composer, Pfeiffer was apparently influenced by Carl Stamitz. His collection of bassoon music was sold to the Mannheim court by his widow and may have included works by Stamitz and others in addition to unattributed music, arrangements and transcriptions, some possibly by Pfeiffer. His music shows a fine understanding of the bassoon's nature and idiom as a solo instrument and explores its range to the full. It is composed in an attractive, *galant* style, with rhythmic and motivic first subjects and lyrical, italianate second subjects. His finest music undoubtedly lies in the concertos and especially in the bassoon quartets. His *Engloise* and bassoon sonatas and trio are probably early works; several bassoon quartets exist in earlier manuscript versions, which Pfeiffer later revised, presumably for publication by J.J. Hummel.

Franz Anton Pfeiffer has frequently been confused with other (unrelated) bearers of the same surname, particularly JOHANN PFEIFFER, but also with the Austrian composer and bass Franz Pfeiffer (*b* ?1750s; *d* ?Vienna, ?1830s), who sang at the Theater in der Leopoldstadt, Vienna, and had a number of pieces, mainly for piano, published in Vienna. There was also a Viennese flautist named Anton Pfeiffer.

D.J. RHODES

Pfeiffer, Georges Jean (*b* Versailles, 12 Dec 1835; *d* Paris, 14 Feb 1908). French pianist and composer. His great-uncle, J. Pfeiffer, was a leading piano maker in Paris, and his father, Emile Pfeiffer, whom he later succeeded, was a partner in the piano firm of Pleyel, Wolff & Cie. He studied piano with his mother, Clara Pfeiffer, a former pupil of Kalkbrenner, and composition with Maleden and Damcke. A programme of his works, including the operetta *Le capitaine Roche* and the Piano Trio op.14, was well-received at the Salle Pleyel-Wolff in 1862. He made his London debut at St James's Hall, playing his Second Piano Concerto. His early compositions were praised by Pougin for their melodic variety and polished form. The Piano Quintet op.41 won the Chartier Prize and in 1877 his sonata for two pianos won the prize of the Société des Compositeurs de Musique. In later years he performed infrequently, devoting himself mainly to composition. *Le légataire universel* (1901), after the comedy by J.F. Regnard (1708), is considered his finest stage work. He was a music critic for *Voltaire*, a frequent judge of the piano *concours* at the Conservatoire, and president of the Société des Compositeurs de Musique.

A.J. HIPKINS/DAVID CHARLTON/CHARLES TIMBRELL

Pfeiffer, Johann (*b* Nuremberg, 1 Jan 1697; *d* Bayreuth, 7 Oct 1761). German composer and violinist. He learnt the violin with various teachers and later studied jurisprudence at the universities of Leipzig (from 1717) and Halle-Wittenberg (from 1719). He spent six months as director of music for Count Heinrich XI von Reuss at Schleiz before entering the Weimar court orchestra as a violinist in 1720. In 1726 he was made Konzertmeister, a post apparently left vacant since J.S. Bach's departure in 1717. Pfeiffer's *Trauermusik* for Duke Ernst August's late wife, Eleonore Wilhelmine, was performed later that year, and between August 1728 (or 1729) and January 1730 he accompanied the duke on a tour of the Low Countries and France.

In or about May 1732 Pfeiffer was in Berlin, and in December 1733 he was offered a post at Bayreuth as a court violinist and music tutor to the margrave's daughter-in-law, Friederike Wilhelmine (sister of the future King Frederick the Great). On 8 November 1734 he was appointed Kapellmeister at Bayreuth with a salary of 300 gulden (increased to 480 gulden by 1737). Friederike's husband succeeded as margrave in May 1735, and together they set about expanding the musical life at court, and thereby increasing Pfeiffer's opportunities as a composer. On 20 September 1752 he married the widowed Dorothea Hagin, by whom he had two sons, Friederich (1754–1816), a lawyer by profession and an able violinist, and Johann Heinrich, who died in infancy. In 1752 or 1753 Pfeiffer was awarded the honorary title of 'Hofrat' (privy councillor), and his salary was increased; by the time of his death it stood at 1375 Reichsthaler.

Much of Pfeiffer's music is lost, or remains unidentified or misattributed (he usually signed his manuscripts simply 'del Sign. Pfeiffer'). According to Schrickel, he distinguished himself at Weimar by composing charming Singspiels, but except for the Bayreuth serenata *Das unterthänigste Freudenopfer*, no such works by him are known, and only two vocal pieces (possibly from stage works) remain. Despite claims advanced by Gerber and Fétis, no sacred music by him has been found. Instrumental music forms the bulk of his output, most of it undoubtedly composed at Bayreuth. In style it is perhaps most closely comparable with that of Bach. Both Gerber and Schilling comment on the high regard in which his ouvertures (orchestral suites) were held. Five of these recall Bach's first suite in their scoring for two oboes, bassoon and strings; they consist typically of a French overture, a *forlana*-like Cantabile, a fugal Alla breve, a bourrée-like Allegro (or Presto) and a Menuet with a trio for the wind instruments alone. The scoring and structure of the other suites vary considerably. The surviving concertos show both three- and four-movement schemes; the layout slow–fast–slow–fast is one commonly found in the chamber works too. Some of the symphonies attributed to him may be by Johann Michael Pfeiffer.

DAVID J. RHODES

Pfeiffer, Johann Michael [Jean Michel] (*b* Franconia, *c*1750–60; *d* ?London, after 1800). German composer. The earliest record of him concerns the performance of his *Amore in puntiglio* in Venice in 1773; he undoubtedly lived in Venice for a time, since much of his music was published there under his own imprint. According to Fétis he lived in Mannheim around 1780 and later in London, and Eitner repeats Thayer's statement that he spent his

last years in London. Pfeiffer composed in a variety of genres, notably keyboard duets, and some of his works appeared under several different publishers' imprints; this fact, together with the large number of extant copies, reflects their popularity during his lifetime. The keyboard sonata *Il maestro e scolare* was especially successful, as was the children's keyboard tutor *La bambina al cembalo*, which includes a divertimento with accompanying solo voice in the first two movements and violin in the finale. Pfeiffer may have been the composer of a number of symphonies attributed to JOHANN PFEIFFER, while some of his works have been misattributed to the later composer Michael Traugott Pfeiffer.

WORKS

D.J. RHODES

Pfeiffer, (Johann) Michael Traugott (*b* Wilfershauzen, Bavaria, 5 Nov 1771; *d* Wettingen, Switzerland, 20 May 1849). Bavarian teacher. He was the first to apply Pestalozzian principles to school music teaching. Son of a Bavarian Kantor, he studied the violin and then went to Switzerland in 1792 to study languages and philosophy at Solothurn. Eight years later he had risen to the rank of secretary to the cantonal government of Aargau. Inspired by Pestalozzi's writings and a brief acquaintance with his experimental teaching at Burgdorf, Pfeiffer abruptly left the civil service to set up private schools at Solothurn in 1804 and Lenzburg in the following year. It was during his work in those schools, not (as Fétis claimed) as a member of Pestalozzi's staff, that Pfeiffer evolved the method of teaching music which was to secure approval from Pestalozzi himself.

The application of Pestalozzi's educational principles to separate subjects was often undertaken by specialist teachers, the master subsequently approving his disciples' work in appropriate cases. Following that pattern, Pfeiffer devised a 'Pestalozzian' syllabus which ensured that children were made familiar with particular phenomena before encountering the symbols which represented them, and that the complexities of notation were broken down into their simplest elements before children were required to study them. He thus divided the study of musical rudiments into separate parts: the rhythmic element was studied first, the melodic next and the dynamic third. Only after separate study were those sections reconciled, allowing the full significance of musical notation to be considered.

With Pestalozzi's approval, the results of Pfeiffer's work were published by H.G. Nägeli, the Zurich music publisher who was also an active educational reformer, under the following titles: *Die Pestalozzische Gesangbildungslehre nach Pfeiffers Erfindung* (1809), *Gesangbildungslehre nach Pestalozzischen Grundsätzen paedagogisch begrundet von Michael Traugott Pfeiffer, methodisch bearbeitet von Hans Georg Nägeli* (1810) and *Auszug der Gesangbildungslehre . . .* (1812). Pfeiffer later published jointly with Nägeli *Gesangbildungslehre für den Männerchor* (1817) and *Chorgesangschule* (1821).

BERNARR RAINBOW

Pfeiffer, Tobias Friedrich (*b* in or nr Weimar, ?1751; *d* ?Düsseldorf, ?1805). German tenor, pianist and composer. He worked as an actor-singer in Weimar and then in Gotha (1778). From 1779 to 1780 he performed at the Elector of Cologne's theatre in Bonn, where he became acquainted with Johann van Beethoven, a tenor in the elector's service. He lodged with the Beethoven family until his departure, and in return gave Johann's son, the young Ludwig, piano lessons. During the next ten years he continued to travel; in 1789 he became a member of Joseph Seconda's Leipzig theatrical company, which performed his musical interlude (or prelude) *Die Freuden der Redlichen* (to words by Schocher) with great success. He settled in Düsseldorf in 1794 or 1795, and worked as a music teacher, receiving regular payments from Beethoven through Nicolaus Simrock. His compositions, which also included a cantata, *Der Friede* (*c*1801), and possibly piano variations (perhaps composed by Franz Pfeiffer; *see* PFEIFFER, FRANZ ANTON), appear to be lost.

D.J. RHODES

Pfendner, Heinrich (*b* Hollfeld, Upper Franconia, *c*1590; *d* Würzburg, *c*1631). German composer and organist. He studied with Aichinger and Erbach at Augsburg and with Cifra in Italy. His first publication, in 1614, describes him as organist to the Bishop of Gurk, Austria; the dedication (which is dated 1611 – possibly a misprint) states that its contents had been performed in private at the bishop's house for some time before this, so one may assume that he had also been employed there for some time. In 1615 he moved to Graz as court organist to Archduke Ferdinand II, and from 1618 until his death he was organist and Kapellmeister to the Bishop of Würzburg.

Pfendner, a prolific composer of Latin church music, was one of an important group of south German and Austrian composers who in the early 17th century developed the form of the concertato motet for few voices originating with Viadana; in doing so he was no doubt inspired by his training in Italy and with Aichinger. His

1614 volume is important in that, apart from those of Aichinger himself, it was one of the earliest motet collections with continuo to be published by a German composer. Of the motets in this collection and in three further books (1623–30) a few include independent instrumental parts, and there is also a 'sonata a cappriccio' for three instruments and continuo which is clearly based on the canzona pattern much used by Italian composers, including Cifra. Pfendner's vocal writing shows other italianate influences, such as the use of dialogue and refrain or rondo form, where the refrain is usually in triple time and the intervening passages are in a typical duet style, with progressions in parallel 3rds. He set the texts imaginatively. He preferred a basically syllabic approach which he enhanced by a certain amount of ornate writing, rhythmic and textural variety, short contrasting phrases and a growing conception of the function of the continuo as a separate, important element of the whole. The two organ canzonas are sectional and employ frequent changes of metre; both display typical early 17th-century keyboard figuration and contain colourful harmonies.

WORKS

printed works except anthologies published in Würzburg unless otherwise stated

Pfeyl, Johann. German printer who succeeded to the firm of JOHANN SENSENSCHMIDT.

Pfister, Hugo (*b* Zürich, 7 Sept 1914; *d* Küsnacht, nr Zürich, 31 Oct 1969). Swiss composer and teacher. He trained as a schoolteacher, then studied the piano and music theory with Czeslaw Marek. He taught music in the Teachers' Training College in Küsnacht for most of his life. He composed in a light French manner until 1956–7 when he went to study in Paris with Nadia Boulanger; he then quickly developed an individual style integrating linear thinking, a widely enlarged tonality with polytonal characteristics, and polyrhythmic textures stemming from the music of Bartók, Schoenberg and Berg. In many of his works the main formal force is a rhythmic impulse, combined with astute melodic and timbral invention. Pfister wrote much incidental music for stage and radio plays performed primarily in Germany and Switzerland.

ANDRES BRINER/CHRIS WALTON

Pfitzner, Hans (Erich) (*b* Moscow, 5 May 1869; *d* Salzburg, 22 May 1949). German composer, conductor and musical polemicist.

1. LIFE. His father, an orchestral violinist who in 1872 moved from Moscow back to his native Germany, was leader of the Stadttheater orchestra in Frankfurt. Pfitzner claimed that he had some of his earliest musical experiences as a youthful spectator in the orchestra pit during opera performances in which his father was playing. He received his formal musical education at the Hoch Conservatory, Frankfurt, between 1886 and 1890, studying the piano with James Kwast and composition with Iwan Knorr. While he explored a wide range of contemporary musical, literary and philosophical preoccupations with his friends James Grun and Paul Cossmann (son of conservatory cello teacher Bernhard Cossmann), the Hoch Conservatory was closely associated with the outspoken hostility of its Brahmsian director, Bernhard Scholz, towards Wagner, Liszt and the New German school. A student cello concerto by Pfitzner was condemned by Scholz for harmonic irregularities and the inclusion of three trombones; these Scholz considered lamentable signs of Wagnerian influence. Pfitzner's music was henceforth to occupy an idiosyncratic stylistic position between New German Modernism and a more regressive allegiance to Schumann, Weber and the world of German Romantic opera.

Pfitzner's career as a teacher and conductor began in Mainz, where his Wagnerian, specifically *Tannhäuser-* and *Lohengrin*-orientated opera *Der arme Heinrich* was first performed in 1895. In the same year Ibsen's play *Gildet på Solhaug* was produced as *Das Fest auf Solhaug* with incidental music by Pfitzner. While those works began to shape his subsequent reputation as a theatre composer, he had already produced a considerable body of non-theatrical music, including some 30 songs, chamber music and the choral ballad *Der Blumen Rache*. It was the two early stage works, however, whose success carried him forward to a teaching post at the Stern Conservatory in Berlin (1897-1907). His ten years there saw the consolidation of his reputation, his elopement with Kwast's daughter Maria ('Mimi') to England in 1899 (they were married in Canterbury) and the first performance of his second opera *Die Rose vom Liebesgarten* (1901). This was an elaborate pageant, based on a painting by Hans Thoma, in which elements of *Parsifal* were reinterpreted in a spirit of Rosicrucian mysticism, its allegorical characters including ethereal Germanic nobles, woodland folk, fairies, the Star Maiden and Sun Child, a primitive bog-dweller, dwarfs and giants. The opera was given an important production in Vienna by Gustav Mahler and Alfred Roller in 1905, the year in which Kleist's *Das Kätchen von Heilbronn* was produced in

1. Hans Pfitzner: portrait by Willi Geiger, 1932 (Städtische Galerie im Lenbachhaus, Munich)

Berlin with music by Pfitzner. More incidental music followed in 1906, composed for the fairy tale play *Das Christ-Elflein* by his friend Ilse von Stach; he later (1917) turned this into a *Spieloper* with spoken dialogue, revising the text but retaining the original title. Here the complex fin-de-siècle symbolism of *Die Rose vom Liebesgarten* was replaced with the homespun sentimentality of a German Christmas morality play for children; it anticipated some of the preoccupations of the *Blut und Boden* school of the National Socialist period and occasioned a significant stylistic retreat into diatonic tunefulness.

In 1907 Pfitzner moved to Strassburg (now Strasbourg), where he was to run the conservatory, act as chief conductor of the city's symphony orchestra and, from 1910, direct the opera during a period when its short-term junior conductors included the young Furtwängler, Klemperer and Szell. Regarding his conservatory duties primarily as facilitating his conducting activities, Pfitzner was now able to indulge his enthusiasm for German Romantic opera, publishing E.T.A. Hoffmann's *Undine* for the first time in vocal score (1908), reviving Heinrich August Marschner's *Der Templar und die Jüdin* in a version of his own in 1912 and devising a new edition of Marschner's *Der Vampyr* (staged in Stuttgart in 1922). His central creative preoccupation during this period, however, was his opera *Palestrina* (designated 'a musical legend'), whose libretto he completed in 1911, using historical sources to elaborate the essentially fictitious story of Palestrina's 'rescue' of polyphonic music (by composing the *Missa Papae Marcelli*) from the reforming zeal of the Council of Trent. The completed opera was first performed in Munich in 1917, at the height of World War I (fig.2), and rapidly established itself as the most moving and coherent of all Pfitzner's expressions of idealistic, 'inspiration'-orientated musical conservatism. The work brought him into contact with the novelist Thomas Mann, who was fascinated by Pfitzner's characterization of the opera as marked by a valedictory 'sympathy with death' (by comparison with the lively optimism of *Die Meistersinger von Nürnberg*). Mann nevertheless found Pfitzner rather difficult ('not born to feel at ease') and the two men's later creative and intellectual divergence was symbolically marked by the inclusion of Pfitzner's signature on the public letter of April 1933 in the *Münchener Neuester Nachrichten* condemning Mann's supposedly un-German lecture on the 50th anniversary of Wagner's death ('Leiden und Grösse Richard Wagners').

By that time Pfitzner's creative idealism had been irrevocably scarred by his deep personal identification with Germany's defeat in 1918 and the country's ensuing humiliation. The return of Alsace-Lorraine to France had occasioned his removal from Strassburg to Munich in 1918. In his increasingly polemical expressions of anti-Modernist adherence to traditional German artistic values, as manifested in Classical and Romantic music, he created a public persona that seemed rather crudely to

2. Angels' scene from Act 1 of Pfitzner's 'Palestrina', Prinzregententheater, Munich, 1917, with Karl Erb as Palestrina; set design by Adolf Linnebach

underline his identification with the world-weary Palestrina in his 'Musical Legend'. His pamphlet *Futuristengefahr*, published in the year of *Palestrina*'s first performance (1917) was followed in 1920 by *Die neue Aesthetik der musikalischen Impotenz*, an extended diatribe against Paul Bekker's book on Beethoven, in which the critic developed the notion that a 'poetic idea' underlay the specifically musical structures and processes of Beethoven's major works. Pfitzner's attack stressed the uncontingent and self-sufficient nature of musical 'inspiration' ('*Einfall*') in a manner that occasioned heated debate in the German and Austrian musical press. Non-operatic works like the Eichendorff cantata *Von deutscher Seele* (1921) were increasingly interpreted as musical manifestos supporting his ostensibly proto-fascist rejection of foreign, Jewish and 'international bolshevik' influences on German culture. Regarding the wider intellectual life of Europe as decadent, Pfitzner became increasingly isolated from all but conservative sympathizers within the Weimar Republic.

His world-weary exasperation with jazz from America, as much as with the 'New Music' of Schoenberg and his school, led Pfitzner almost inevitably to entertain high hopes for a 'renewed' Germany under National Socialism; Hitler's 1923 visit to his hospital bedside, bizarrely engineered by his old Jewish friend Paul Cossmann (who supported and published Pfitzner in his *Süddeutsche Monatshefte*), marked the composer in a way that his subsequently confused and occasionally antagonistic relationship with the Nazis did not altogether warrant. The full complexity of his theoretically 'apolitical' artistic relations with the world of power and political reality were explored in his last opera, *Das Herz*, first performed simultaneously in Berlin and Munich in 1931. The prevailing darkness of the work owed much to the personal tragedy of his wife's death in 1926, but the concluding, dream-like escape by the early 18th-century black magician Dr Daniel Athanasius from the horror of public execution poignantly revealed artistic transcendence coinciding with political evasion: the doctor dies in his cell and his spirit is seen walking into Elysian fields to greet the wife for whose earlier death he had been responsible. In the first act of this often surprisingly dissonant and even experimental-sounding work, Athanasius's Faustian pact with temporal and daemonic powers (he uses the black arts to bring the Duke's son back to life) is nevertheless central to the dramatic action.

From 1933 Pfitzner's public life was marked by alternating phases of grudging public prominence and bitter and angry withdrawal. An unfolding sequence of personal tragedies included his ultimate failure to prevent Cossmann from perishing in Theresienstadt in 1942 (although he had successfully interceded on his behalf in 1933), the death of his eldest son Paul in 1936, his subsequent estrangement from two of his other children (Peter and Agnes) and the suicide of his daughter Agnes in the year of both his 70th birthday and his marriage to Mali Stoll (1939). Pfitzner suffered further disasters with the destruction of his Munich house in a 1943 air-raid and the loss of his son Peter in Russia in 1944; in 1945 he found himself interned opposite Richard Strauss's villa in Garmisch-Partenkirchen. He was already installed in an old-people's home when he began to undergo de-Nazification in 1947. The toll of these experiences on his health was ultimately fatal; he died in May 1949 in Salzburg, some two weeks after attending an 80th-birthday concert.

2. WORKS. In the light of Pfitzner's investment in the ideology of Romantic idealism, brought to a sharply coherent music-theoretical focus by Heinrich Schenker during the same period, it is striking that his most interesting works are characterized by disjunct and fractured surface features. Individual compositions, like his output as a whole, seem intent on avoiding conventional signs of structural and stylistic 'organic unity' that the aesthetic philosophy of 'inspiration', linked to a belief in 'purely musical' values and processes, entailed for thinkers as diverse as Schenker and Schoenberg. In stylistic terms Pfitzner's output embraced advanced post-Wagnerian chromatic harmony (occasionally tending towards atonality), an almost Impressionistic sound palette (whole-tone scales are used in the *fin-de-siècle* nature-music of his op.18 setting of Goethe's *An den Mond*), diatonic melodic writing that harks back to the Romantic operas of Weber and Lortzing, grandiose late-Romantic effects in the manner of Richard Strauss, a predilection for bony linear counterpoint and an occasional recourse to pastiche effects of deliberate archaism (as in *Palestrina*).

Pfitzner wrote in all the major genres available to him, apart from the large-scale orchestral symphony (his only works to bear the designation 'symphony' are the op.36a arrangement for orchestra of his second string quartet, the op.44 *Kleine Symphonie* and the one-movement Symphony in C, op.46). His four large-scale operas, excluding *Das Christ-Elflein*, represent major contributions to post-Wagnerian German musical theatre, their internal anomalies being eloquently summarized and even thematized in *Palestrina*. That work's epigraph from Schopenhauer ('... alongside the history of the world there goes, guiltless and unstained by blood, the history of philosophy, of science and the arts') is ostentatiously contradicted by the second act, in which a meeting of the Council of Trent fails to achieve democratic consensus and concludes with a street brawl that the German nobleman, Cardinal Madruscht, quells with a murderously cathartic volley of gunfire.

A comparable masterpiece to *Palestrina* is the similarly fractured cantata *Von deutscher Seele*, which represented a quintessence of Pfitzner's style in its marriage of the Romantic poetry of Eichendorff (he wrote numerous *Lieder* to Eichendorff texts) with patriotic German nationalism and nostalgia. The work was deemed appropriate to feature prominently in the first *Reichsmusiktage* festival in Düsseldorf in 1938, the year that saw the publication in Berlin of a collection of extracts from Pfitzner's writings ominously titled *Hört auf Hans Pfitzner!*. The first section of the cantata ('Mensch und Natur') is distinguished by a typically eclectic stylistic range, stage-managed in such a way as to lead from the advanced *Stimmungsmusik* of the orchestral 'Abend-Nacht' interlude into the highly original Protestant-sounding chorale which crowns it. The subsequent sections are less well-integrated. German Romantic soulfulness is finally turned into a nationalistic peroration of crudely rhetorical character in the setting of *Der Friedensbote*; the work became a fitting monument to the unresolved contradictions which made Pfitzner's conservatism so rich and revealing a contribution to German music in the first half of the 20th-century.

WORKS

STAGE

op.	
—	Das Fest auf Solhaug (incid music, H. Ibsen), 1889–90; Mainz, 28 Nov 1895
—	Der arme Heinrich (Musikdrama, 3, J. Grun and Pfitzner, after H. von Aue), 1891–3, Mainz, 2 April 1895
—	Die Rose vom Liebesgarten (romantische Oper, prol., 2, epilogue, Grun), 1897–1900, Elbergeld, 9 Nov 1901
17	Das Käthchen von Heilbronn (incid music, H. von Kleist), 1905, Berlin, 19 Oct 1905
20	Das Christ-Elflein (incid music, I. von Stach), Munich, 11 Dec 1906, rev. (Spieloper, 2, Pfitzner, after Stach), Dresden, 11 Dec 1917
—	Gesang der Barden für 'Die Hermannsschlacht' (incid music, Kleist), 1906
—	Palestrina (musikalische Legende, 3, Pfitzner), 1911–15, Munich, 12 June 1917
39	Das Herz (Drama für Musik, 3, H. Mahner-Mons), op.39, 1930–31, Berlin and Munich, 12 Nov 1931

CHORAL

—	Der Blumen Rache (Ballade, F. Freiligrath), A, female vv, orch, 1888
—	Rundgesang zum Neujahrsfest 1901 (E. von Wolzogen), B, mixed/male vv, pf, 1900
16	Columbus (F. von Schiller), chorus 8vv, 1905
25	2 deutsche Gesänge (A. Kopisch, J.F. von Eichendorff), Bar, male vv ad lib, 1915–16
28	Von deutscher Seele (cant., Eichendorff), 4 solo vv, chorus, orch, org, 1921
38	Das dunkle Reich (Chorphantasie, Michelangelo, J.W. von Goethe, C.F. Meyer, R. Dehmel), solo vv, orch, org, 1929
48	Fons salutifer (E.G. Kolbenheyer), chorus, orch, org, 1941
49	2 Male Choruses, 1941
53	3 Songs, male chorus, small orch, 1944
57	Kantate (Goethe: *Urworte orphisch*), 4 solo vv, chorus, orch, org, 1948–9, completed R. Rehan

OTHER VOCAL

PETER FRANKLIN

Pfleger, Augustin (*b* Schlackenwerth, nr Carlsbad [now Karlovy Vary], *c*1635; *d* ?Schlackenwerth, after 23 July 1686). German composer of Bohemian birth. Schlackenwerth was the Bohemian residence of the dukes of Saxe-Lauenburg, and Pfleger had found employment there as Kapellmeister to Duke Julius Heinrich by the time he published his op.1 in 1661. In 1662 he went to Güstrow as vice-Kapellmeister to Duke Gustav Adolph of Mecklenburg. He was kept very busy as a composer there and wrote 89 sacred concertos in 1664 alone. In 1665 he was appointed Kapellmeister to the Schleswig-Holstein court at Gottorf and was commissioned to compose the ceremonial music for the opening of the University of Kiel. He left there on 16 May 1673, but his destination is unknown; his successor was Johann Theile. By 23 July 1686 he had returned to Schlackenwerth and was once again Kapellmeister to the court of Saxe-Lauenburg.

Pfleger's op.1 is a collection of 18 small sacred concertos to Latin texts, primarily biblical. They are scored for a small ensemble of singers with little instrumental participation other than continuo and are based on Italian models, in both the choice and the treatment of the texts. The four Latin odes for the inauguration of Kiel University are in a stiff, ceremonial style, while the two with German texts are more forward-looking and show similarities to some of Buxtehude's aria cantatas. The individual works surviving in manuscript were most likely composed at Gottorf. Latin still predominates, but there are more non-biblical, devotional and mixed texts than in op.1. These works are moreover more richly scored, have much more prominent instrumental parts and include more contrapuntal writing. Pfleger dedicated his cycle of 72 cantatas for the church year to the Flensburg city council, so they too may date from his Gottorf years. Many are dramatic dialogues, with both allegorical and biblical characters. Their German texts, based on the appointed gospel for the day, skilfully combine biblical passages, strophic poetry and an occasional chorale, which are set in contrasting arioso, concerto or aria styles.

The French lexicographer Sébastien de Brossard owned a copy of Pfleger's op.1 and characterized it as 'one of the best of its time'. In their settings of composite texts, his later works figure significantly in the development of the German sacred cantata.

Phagotum. A kind of bagpipe invented about 1515 by Afranio degli Albonesi of Pavia, in an unsuccessful attempt to improve the popular bagpipe of Pannonia (where he was living, now in Serbia) with its double chanter and no drones. Later, in Italy, Afranio perfected the phagotum with the help of Giovanni Battista Ravilio of Ferrara, playing a solo on it at a feast given in Mantua by the Duke of Ferrara in 1532. In 1539 Afranio's nephew Teseo Ambrosio, professor of Syriac at the University of Bologna, described and illustrated the instrument in his book *Introductio in Chaldaicam linguam, Syriacam atque Armenaicam at decem alias linguas*. In 1565 Teseo gave a sheet of instructions for playing the instrument to a friend, to whom he had presented 'uno de suoi fagoti'. Apparently a number of examples of the phagotum were made. Mersenne briefly discussed the instrument in *Harmonicorum libri*, xii (1636) and *Harmonie universelle* (1636–7), but it is not mentioned by Agricola, Zacconi, Praetorius or other Renaissance writers.

As the illustration shows, the phagotum consisted of two connected pillars, about 45 to 55 cm in height, with a purely ornamental pillar on the front and a shorter pillar at the back through which the air from the bellows was conveyed to the instrument. The two main pillars

Rear view of Afranio's phagotum from Teseo Ambrosio's 'Introductio in Chaldaicam linguam...' (1539)

were each divided into an upper and a lower part: the upper part was bored with two parallel cylindrical tubes united at the top, forming one continuous doubled-back bore pierced with holes for the fingers and keys; the lower part contained a single metal reed. The left-hand pillar, with a reed of silver, provided a diatonic scale of ten notes from *c* upwards, while the right-hand pillar was fitted with a reed of brass and had a compass of ten notes from *G* to *b*. By cross-fingering, chromatic notes could be obtained, and either pillar could be silenced or sounded at will by a special key. From the back of the instrument, which was rested on the knees during performance, a flexible pipe passed to a bag held under the left arm; this formed an air reservoir, supplied with wind from bellows fastened under and actuated by the right arm, as in the Irish ('uilleann') and Northumbrian bagpipes.

The phagotum was used by Afranio not for 'vain and amatory melodies' but for 'divine songs and hymns'. The music could be played either in one or two parts, and Teseo in his instructions said that he had seen a phagotum with three large pillars or sets of tubes.

The name 'phagotum', like the Italian form '*fagoto*' in the description of the 1532 feast and the manuscript instructions, probably arose because the instrument resembled 'a bundle of sticks' (a faggot). However, although the name '*fagotto*' was subsequently applied to the bassoon (because its bore, like that of the phagotum, was doubled back within the instrument), the two instruments were not otherwise related. While essentially a curiosity of limited distribution, Afranio's phagotum is historically significant as the earliest known use of the doubled-back bore, and in its use of an elaborate key mechanism.

FRANCIS W. GALPIN/GUY OLDHAM/BARRA R. BOYDELL

Phairau, Luang Pradit (*b* Samut Songkhram, Thailand, 1881; *d* 1954). One of the two most highly-regarded central Thai musicians during the reigns of Rama V, VI and VII (*see also* PHATAYAKOSOL, CANGWANG THUA). Born as Sorn, the young musician was discovered by Prince Woradet (a member of the Thai royal family) during a music competition and was taken to the capital and made a royal page; he eventually attained the title 'Cangwang' (one of the highest ranks for the royal pages). He quickly became the best *ranāt ēk* (xylophone) player in the palace, which effectively made him the leader of the palace *pī phāt* ensemble. He served the prince for several decades, living in Burapha Palace and making the prince's household famous for its music. He accompanied the prince to Java in 1915 and King Rama VII to Cambodia in 1929–30, bringing back instruments as well Javanese and Khmer musical repertory that he adapted to Thai music. In 1925 King Rama VI recognized Sorn's talents and contributions by conferring on him the honorific name Luang (an aristocratic title) Pradit ('invent', 'make' or 'devise') Phairau ('beautiful sound') and giving his family the hereditary surname Silapabanleng ('the art of musical performance'). He is considered the originator of many musical techniques and concepts now central to the practice of central Thai court music, including the technique of sustaining pitches on the xylophone by trilling or rolling the mallets (*krǭ*) and developing the compositional practice known as *thao* that involves expanding or contracting pre-existing melodies. He is also considered the first composer to write in a programmatic fashion, imitating the sounds of nature, and he extended the most expansive metrical framework, three *chan*, to six *chan* (*see* THAILAND, §I, 2(ii)). Two of his children, Prasidh Silapabanleng (*b* 1915) and Chin Silapabanleng (1906–88), became famous in their own rights as musicians; Prasidh is a composer in the Western art music tradition and Chin was involved in bringing Thai classical music into the public school curriculum. The Luang Pradit Phairau Foundation, a school for traditional Thai music and dance, was established by his children and is now overseen by his grandchildren.

DEBORAH WONG

Phalèse. Flemish family of music publishers. They were active in Leuven and Antwerp from 1545 to 1674.

(1) Pierre Phalèse (i) (*b* Leuven, *c*1505–10; *d* Leuven, 1573–6). He was the son of Augustin vander Phaliesen, a brewer, and Marguerite van Poddeghem. He may have been related to Arnold vander Phaliesen, a painter in Leuven from 1499, and the organist Antoine vander Phalisen (*d* 17 March 1487). In 1541 Phalèse became a bookseller to the University of Leuven, where from 1545

to 1552 he published a number of scholarly books, some of them jointly with another Leuven publisher and printer, Martin de Raymaker (Rotarius). During these years Phalèse also published five books of chansons arranged for lute; they were printed for him by JACOB BAETHEN, S. Sassen and R. Velpen, as Phalèse was at that time only a bookseller, not a printer. The five books are, however, all printed with the same type that Phalèse used from 1553, for the second volume of *Hortus musarum* and his other lute books.

Phalèse applied for and on 29 January 1552 received a privilege to print music from movable type. After his early lute publications Phalèse published a number of chanson and motet books featuring composers of the Low Countries, especially Clemens non Papa and Crécquillon. Beginning in 1560, however, he showed a bolder and more international approach. In 1561 he published *Cantuale ... usum ... ecclesiae Amstelredamensis*, for use by the combined choirs of the Amsterdam churches, printed by single-impression type in Gothic neume notation, which he used again in 1563 for *Psalmi ... cum hymnis*. In 1563 Phalèse began to issue a new series of lute books entitled *Theatrum musicum*. The same year he published Francisco Guerrero's eight-part settings of the *Magnificat* using a large type (see illustration) similar to that used by Attaingnant and Du Chemin in Paris for their folio publications. Phalèse also published a number of books by Lassus and Rore, often reprints of volumes issued by Le Roy & Ballard.

In 1570 Phalèse began the association with the Antwerp printer JEAN BELLÈRE, a partnership continued by (2) Pierre Phalèse the younger until Bellère's death in 1595. Bellère was a bookseller with important international connections; he probably helped finance publications and ensured their better distribution, even in Antwerp. It was, however, still Phalèse who printed them. Bellère came from Liège and it may have been through this connection that the Liège musician Jean de Castro acted in 1574 and 1575 as musical adviser, supplying Phalèse with the latest French and Italian compositions for publication.

Apart from the Gothic and large choirbook types, Phalèse also owned a smaller, ordinary music type, used for chanson and motet publications, and lute tablature types. The smaller music type was also used by Jean Bogard in Douai. All the types are clear and well defined, although the tablature is not as elegant as those used by French publishers. Nevertheless, Phalèse's printing is of a high standard, with texts carefully underlaid, and he was the first printer in the Low Countries to print lute books in a format with the two parts so arranged that players seated around a table could perform from one copy. When Phalèse visited Antwerp in 1570 to be examined by King Philip's proto-typographer, Plantin declared that Phalèse was 'expert in the art of printing music, which he did exclusively, and well versed in Latin, French and Flemish'.

Opening of the superius voice of the 'Gloria Patri' from Francisco Guerrero's 'Canticum beatae Mariae, quod Magnificat nuncupatur' (Leuven: Phalèse, 1563), printed in large type

The date of Phalèse's death is unrecorded: various books were published 'chez Pierre Phalèse' from 1574 to 1576. However, in 1574 his eldest son Corneille also published a volume by Lassus, the first part of his *Patrocinium musices* (a reprint of the Munich edition of 1573) but he did not continue as a printer. Corneille's younger brother, (2) Pierre Phalèse (ii), published three further parts of the *Patrocinium musices* in 1577 and 1578, signing himself on the title-page 'apud Petrum Phalesium juniorem'. As the title-pages of the volumes published by the firm between 1574 and 1576 do not carry this signature, it is most likely that these were published by Pierre Phalèse the elder. He probably died, therefore, in about 1576.

(2) **Pierre Phalèse** (ii) [the younger] (*b* Leuven, *c*1545; *d* Antwerp, 13 March 1629). Son of (1) Pierre Phalèse (i). His name appears in 1563 in the matriculation register of the University of Leuven, but he does not seem to have completed his studies. He took over the firm after his father's death and three parts of *Patrocinium musices* (1577–8) were his first publications. He moved to Antwerp and registered in the Guild of St Luke in 1581, married Elisabeth Wisschavens in 1582 and in the same year set up his press in the Kammerstraat, at the sign of 'De rode leeuw'. He stayed there until 1608 when he moved to 'Den Coperen Pot' and shortly afterwards changed the name of the house to 'Koning David'. Phalèse continued the association with Jean Bellère until the latter's death in 1595. He used the same typographical material as his father, and continued to print chansons, motets and other religious music, as well as music for lute. Phalèse also published many volumes of Italian madrigals, including four celebrated collections: *Harmonia celeste* (1583, edited by Pevernage, reprinted five times between 1589 and 1628); *Musica divina* (1583, edited by Phalèse himself, reprinted seven times between 1588 and 1634), *Symphonia angelica* (1585, edited by Waelrant, reprinted four times between 1590 and 1629), and *Melodia olympica* (1591, edited by Philips, reprinted three times between 1594 and 1630). These and other collections reflect the popularity of Italian music in the Low Countries at this time. He also published a large number of madrigal books devoted to single Italian composers, including Agazzari, Anerio, Croce, Frescobaldi, Marenzio, Monteverdi, Mosto, Pallavicino, Rossi and Vecchi. Gastoldi's *Balletti a cinque voci* (1596), was reprinted seven times between 1601 and 1631, and sacred and secular music by the English composers living in Antwerp, Dering and Philips, was also published. Among Phalèse's lute publications, *Pratum musicum* by the Antwerp lutenist Emanuel Adriaenssen (1584), containing arrangements of madrigals and chansons as well as a few Flemish songs, holds an important place.

(3) Madeleine Phalèse (*b* Antwerp, bap. 25 July 1586; *d* Antwerp, 30 May 1652). Daughter of (2) Pierre Phalèse (ii). She and her sister, Marie (*b* Antwerp, bap. 10 Dec 1589; *d* Antwerp, *c*1674), enrolled in the Guild of St Luke as 'Filles Phalèse' in 1629 after their father's death, and for the next 45 years continued to run the family business, publishing some 180 volumes of madrigals, masses and motets. The proportion of madrigals to sacred music is not as high as in their father's time, but the composers are mostly Italians, and many volumes are reprints of collections originally issued by the Venetian firms of Gardano, Vincenti and Magni. After Madeleine Phalèse's death in 1652, a detailed list of the assets of the business was drawn up which gives some indication of its importance. The firm owned over 375 kg of music type and had a stock of music valued at over 3000 florins. Wages to journeymen printers and other expenses from June 1652 to July 1653 were more than 1000 florins. The document also lists the firm's outstanding debts, some of which were declared irrecoverable, and mentions its commercial ties with Italian music publishers. Although Marie Phalèse continued to manage the firm for another 20 years after her sister's death, the house of Phalèse did not recover its former stature. With the decline of Antwerp at the end of the 16th century, and the rise of Amsterdam during the 17th, music printing, like other aspects of trade and culture, became important in the northern Netherlands as it declined in the southern provinces.

PUBLICATIONS
(*selective list*)

P. PHALÈSE (i)
all published in Leuven

Des chansons reduictz en tablature de lut. . . livre premier [–V] (1545[21]/*R*, 1546[21], 1546[28], 1547[20]/*R*, 1547[23]/*R*); Hortus musarum (1552[29], 1553[33]/*R*); Premier [–VII] livre des chansons, 4vv (1552[12], 1552[13], 1552[14], 1552[15], 1554[22], 1560[6]) [livre I by De Latre]; Premier [–II] livre des chansons, 5–6vv (1553[24], 1553[25]); Liber I [–IX] cantionum sacrarum, 5–8vv (1554[1], 1554[2], 1554[3], 1554[4], 1555[4], 1555[5]) [liber V by Manchicourt, liber IX lost]; Clemens non Papa: Missae . . . tomus I [–X] (1556–60) ed. Bernet Kempers, CMM iv; Liber I [–VII] cantionum sacrarum, 4vv (1559) [books I–VI by Clemens non Papa, ed. Bernet Kempers, CMM iv, book VII by T. Crécquillon, ed. H.L. Marshall, *Musicological Studies*, xxi]; O. de Lassus: Tiers [–IV] livre des chansons (1560–64); Premier [–III] livre du recueil des fleurs de la divine musique (1560[7], 1569[10], 1569[11]); A. Willaert: Moteta, 4–6vv, liber primus [–II] (1561), ed. H. Zenck, CMM iii; Cantuale usum ecclesiae Amstelredamensis (1561); F. Phanmüller [Phanmulner], **Friedrich.** *See* PFANNMÜLLER, FRIEDRICH.

Phantasie (Fr., Ger.). *See* FANTASIA.

Phantasiestück. *See* FANTASIESTÜCK.

Phantasy. An old English spelling of FANTASIA, adopted in competitions established in 1905 by WALTER WILSON COBBETT and the Worshipful Company of Musicians as the name for a new type of chamber music piece. Cobbett saw phantasies as a 'modern analogue' to the viol fantasias of Tudor and Stuart times: his aim was to elicit works for specified ensembles, of modest length, and without breaks between the contrasting sections, in which the composer's imagination would be given free play. The first competition (1905) was for a phantasy for string quartet, the second (1907) was for one for piano trio. Entrants had to be British, and prizewinners included William Hurlstone (1905), Frank Bridge (1905, 1907), Joseph Holbrooke (1905) and John Ireland (1907). Awards for a string quartet phantasy based on British folk songs (1916) and dance phantasy for piano and strings (1919) were won respectively by Herbert Howells and Armstrong Gibbs. Cobbett also commissioned phantasies from Bridge (piano quartet, 1910), Benjamin Dale (viola and piano, 1911), John McEwen (string quintet, 1911), Thomas Dunhill (piano, violin and viola, 1911), Vaughan Williams (string quintet, 1912) and others. Britten's Phantasy for oboe and strings (1932), though not written for a Cobbett competition, belongs in the same tradition.

CHRISTOPHER D.S. FIELD

Phasing. The effect of a type of signal processing unit on electronically produced sound. The unit is often operated by means of a foot-pedal. *See* ELECTRIC GUITAR, §2.

Phatayakosol, Cangwang Thua (*b* Thonburi, Thailand, 1881; *d* 1938). One of the two most highly-regarded central Thai musicians during the reigns of Rama V, VI and VII (*see also* PHAIRAU, LUANG PRADIT). His parents and grandparents were musicians; their home near the bank of the Chao Phraya River in Thonburi was famous as a house of music. He directed the *pī phāt* ensemble at the Bang Khun Phrom Palace, home of Prince Boriphat, half-brother to King Rama V; this ensemble, known for its virtuosity, made some ten recordings (on 78 r.p.m. records). The title 'Cangwang' was conferred on him by Prince Boriphat. He was considered equally good on virtually all instruments and composed a large number of musical works; at least 15 are still played today. His performance style, as passed on to his students, is known as the Thonburi style; his descendants still live in his house and his grandchildren direct a *pī phāt* ensemble regarded as carrying on his style.

DEBORAH WONG

Phelippon. *See* BASIRON, PHILIPPE.

Pheloung, Barrington (*b* Sydney, 10 May 1954). Australian composer. He went to England in 1972 in order to study at the RCM, and received his first ballet score commission while still a student. He has subsequently composed for the concert platform, dance, theatre, film, television, radio and CD ROM. In 1979 he was appointed musical adviser to the London Contemporary Dance Theatre and has since toured with them in the UK and abroad as their principal conductor. Pheloung is best known for his music to the British television series *Inspector Morse*, recordings of which were awarded platinum, gold and silver discs in 1994. He was appointed visiting professor of film composition at the RCM in 1995.

Pheloung's film scores include the simple yet effective chamber music for *Truly, Madly, Deeply*, and the larger-scale work *Nostradamus*, notable for its references to early 16th-century music and the inclusion of period instruments within atmospheric orchestral and choral textures. In addition to his work for the media, he has composed a large number of chamber and orchestral pieces.

WORKS
(*selective list*)

Film scores: Friendship's Death (dir. P. Wollen), 1987; Truly, Madly, Deeply (dir. A. Minghella), 1991; Nostradamus (dir. R. Christian), 1993; The Mangler (dir. T. Hooper), 1994; Twin Dragons (dir. P. Janssens), 1996; Jackie (dir. A. Tucker), 1997

TV music: Boon, 1985; Inspector Morse, 1988–92; Portrait of a Marriage, 1990; Red Empire, 1990; Events at Drimaghleen, 1991; Briefest Encounter, 1992; The Secret Agent, 1992; Dancing

Queen, 1993; The Killing of Kennedy, 1993; 7 Wonders of the World, 1994; Dalziel and Pascoe, 1995–7; Cinder Path, 1996; Inside Out, 1996; The Gift, 1997

Radio music: 2 Planks and a Passion (A. Minghella), 1986; La bête humaine (E. Zola), 1993; Double Indemnity (J.M. Cain), 1993; Dead Perfect, 1994; Kind Hearts and Coronets (R. Hamer), 1995; The Merchant of Venice (W. Shakespeare), 1996; The Playboy of the Western World (J.M. Synge), 1997

Incid music (theatre): 2 Planks and a Passion (Minghella, dir. D. Boyle), 1985; Made in Bangkok (Minghella, dir M. Blakemore), 1986; The Foreigner (dir. J. Broadhurst), 1987; Bite of the Night (H. Barker, dir. D. Boyle), 1988; Epicoene (B. Jonson, dir. Boyle), 1989; After the Fall (A. Miller, dir. Blakemore), 1990; The Ride down Mount Morgan (Miller, dir. Blakemore), 1991

Ballets: Stone Figures, 1977; Fugue, 1979; Study, 1981; Run Like Thunder, 1983; Rite Electric (choreog. T. Jobe), 1985; The Phantasmagoria, 1987; Ace of Spades, 1989; A Midsummer Night's Dream (choreog. R. Cohan), 1993

Other: Mir-ah-Chashafti-Lehachsir, 2 pf, London, 1992; Gui Conc., Nottingham, 1994; Gui Qt, London, 1994; Str Qt no.6, London, 1994; Vc Conc., Glasgow, 1994; Double Gui Conc., Bath, 1995; Sinfonietta, Norwich, 1995; Double Bass Conc., Glasgow, 1996

DAVID BURNAND

Phelps, Lawrence Irving (*b* Somerville, MA, 10 May 1923; *d* Boston, 22 Feb 1999). American organ builder. He studied conducting, the organ and several orchestral instruments at the New England Conservatory of Music, Boston. He sought to design an organ which would restore the fundamental principles of the so-called 'classic organ', typified by the 17th century Schnitger school, yet which in its approach to technical problems and its greater versatility would be a genuinely modern instrument. He worked first with G. Donald Harrison at the Aeolian-Skinner Organ Co., Boston and from 1949 as an independent consultant. His most important design project of the period was the 235-rank (Aeolian-Skinner) organ for the First Church of Christ, Scientist, Boston. This was noted for tonal and technical innovations such as dissonant mutations and refinements to electrical and winding systems. Appointed tonal director in 1958 (and later President) of Casavant Frères, Quebec, then one of the world's largest organ companies, he was the first major builder in North America to return to the making of mechanical action (tracker) organs. Tonally, he successfully reconciled in these organs two of the main schools of organ building and composition (German Baroque and French Classical); technically, he introduced sophisticated improvements in the action, special low-pressure reeds, advanced playing aids, etc. During his 14 years at Casavant he produced some 650 organs, ranging from traditionally-based classic models to the technical challenge of a four-manual circular organ suspended from the roof (Lewis and Clark College, Portland, Oregon), its sound working entirely by reflection. From 1972 to 1981 he headed his own company in Erie, Pennsylvania, and in 1974 built England's first American-made organ, for the 1300th anniversary of Hexham Abbey, Northumberland. From 1981 Phelps directed the development of custom organs at the Allen Organ Co., Pennsylvania, returning to Boston in 1995 to oversee the major restoration of his instrument in the First Church of Christ, Scientist.

Phelps's organs are noted for their musically functional qualities; their tonal design is based firmly on the musical requirements of all periods while eschewing antiquarianism, and their exceptionally subtle key action further assists the musician. This rethinking of each principle of organ design was as a result of his perfect distillation of two art forms: the art of organ building and the art of musical performance, as the technical innovations he developed. Phelps was a Board Member of the International Society of Organ Builders and American Editor of its journal until 1980 and a visiting lecturer at Westminster Choir College, Princeton, from 1969–71. He wrote many articles on the organ's history, design and acoustical problems, and his influence as pioneer and reformer has been widespread.

DAVID TITTERINGTON

Phelyppis [Phillips, Phillipps], **Thomas** (*b* *c*1450). English composer. He wrote a carol for three voices, *I love, I love, and whom love ye* in the Fayrfax manuscript (*GB-Lbl* Add.5465; ed. in MB, xxxvi, 1975), an important collection of early Tudor partsongs. In the manuscript he is styled 'Syr', but at that time this term was frequently applied to priests as well as to knights and baronets. A Thomas Philips is recorded as a chorister and boy-bishop at Salisbury Cathedral in 1465 and vicar-choral there in 1473; he was also a vicar-choral at St George's Chapel, Windsor, from 1477 to 1490.

DAVID GREER

Pherecrates (*fl* 440–*c*420 BCE). Greek comic poet. He won victories at the City Dionysia and the Lenaea between 440 and 430 BCE. 19 titles and 250 fragments of his work are known. In a fragment of the *Cheiron* (preserved in Pseudo-Plutarch, *On Music*, 1141d–1142a = Edmonds, frag.144b), he presents Music (*mousikē*), personified as a woman, describing the various outrages she has endured at the hands of modern composers, all of whom were active in the 5th century. As the fragment begins, Justice asks how this came to pass, and Music replies:

MUSIC: My woes began with Melanippides. He was the first who took and lowered me, making me looser [*chalarōteran*] with his dozen strings [*chordais dōdeka*]. Yet after all I found him passable compared with the woes I suffer now. But Cinesias, cursed Athenian, producing exharmonious twists in every strophe has so undone me that in the poesy of his dithyrambs, like reflections in a shield, his dexterity appears to be left-handed. Yet still and all I could put up with him. But Phrynis inserted his own spinning-top [*strobilon*], bending and twisting me to total corruption, having twelve harmoniai [*dōdech' harmonias*] in his five strings [*pentachordois*]. Yet him too in the end I could accept, for if he slipped he got back on again. But Oh, my dear! Timotheus buried and crushed me most shamefully!
JUSTICE: And who is this Timotheus?
MUSIC: A redhead from Miletus. I say he's caused me more woes than all the others put together, doing those perverted ant-crawlings [*ektrapelous murmēkias*]. And when he finds me on a walk alone, he undoes me and pays me off with his twelve strings.

The precise meaning of each of Pherecrates' plays on words is not certain, but the irony of 'left-handed dexterity'; the deprecating epithet 'redhead', a slave's name; the general imagery of modern musicians raping

Music with various tools or implements; the expansion of the kithara to as many as 12 strings; and the winding chromaticism commonly associated with Timotheus are unmistakable. This lament of Music is a most valuable supplement to knowledge of the 'new music' at Athens.

A second, very short fragment appears just a few lines later in Pseudo-Plutarch's *On Music* (1142a). It may be an additional passage from the *Cheiron*; if so, it probably still refers to the style of Timotheus in describing 'exharmonious high-pitched whistlings; he filled me up with turns like a cabbage'.

THOMAS J. MATHIESEN

Phidil. *See* FIDDLE.

Philadelphia. City in Pennsylvania, USA. It is one of the country's principal musical centres; the Philadelphia Orchestra and Curtis Institute of Music are known throughout the world. The city is also recognized for the excellence of its other educational institutions and for the Fleisher Collection of Orchestral Music, housed at the Free Library of Philadelphia and the largest and most comprehensive collection of its type.

Philadelphia was founded in 1682 by William Penn of England on land granted to him by Charles II as a place of refuge for victims of religious persecution. The city prospered and soon became the largest in the colonies; it was the capital of the new nation (1776–1800) and its commercial and cultural centre until it yielded that position to New York about 1820. The original settlers were English Quakers who had little interest in music, but Penn's hospitality to other religious groups ensured the growth of musical activities. German immigrants who began arriving about 1700 brought musical instruments with them, built organs, composed hymns and published more than 20 editions of German hymnbooks. Philadelphia was a leading centre for music printing; of the colonial hymnbooks in English, the largest and most significant was *Urania, or A Choice Collection of Psalm-Tunes, Anthems, and Hymns*, compiled by James Lyon (Philadelphia, 1761).

1. CONCERTS. During the colonial period, music-making took place mainly in the church, the home and the social club. The earliest known private concert was given in 1734, the first known public concert in 1757. Subscription concerts featuring a chamber orchestra were initiated in that year, including music by contemporary English, Italian, German and Bohemian composers, largely through the efforts of Governor John Penn and Francis Hopkinson, a distinguished statesman and amateur composer and performer.

After the Revolutionary War, a substantial number of professional musicians from Europe arrived in Philadelphia. Rayner Taylor, Alexander Reinagle and Benjamin Carr were the leading figures in the city's musical life around the turn of the century. They had emigrated from England and were active as performers, composers, conductors, teachers and concert managers. About 1809, Frank Johnson settled in Philadelphia and soon gained recognition, despite prejudice against black American musicians, for the high quality and originality of his band's performance of military and dance music. After his band's visit to England in 1837, Johnson toured widely and introduced the 'promenade concert' to American audiences. With the inauguration of the Musical Fund Society in 1820 (see §4 below), musical activity in the city greatly increased. It was not until the second half of the 19th century, however, that the city had a resident orchestra of importance. Taking its name from an earlier group that had come from Germany in 1848, the Germania Orchestra, under the direction of Carl Lenschow, gave annual series of concerts from 1856 to 1895. The conductor and impresario Theodore Thomas also presented one or two concert series each season between 1864 and 1891. During the centennial celebration of American independence in 1876 the Thomas Orchestra gave concerts throughout the summer but, as the programmes were too weighty and the hall too far from the centre of the city to attract a large audience, Thomas suffered a great financial loss.

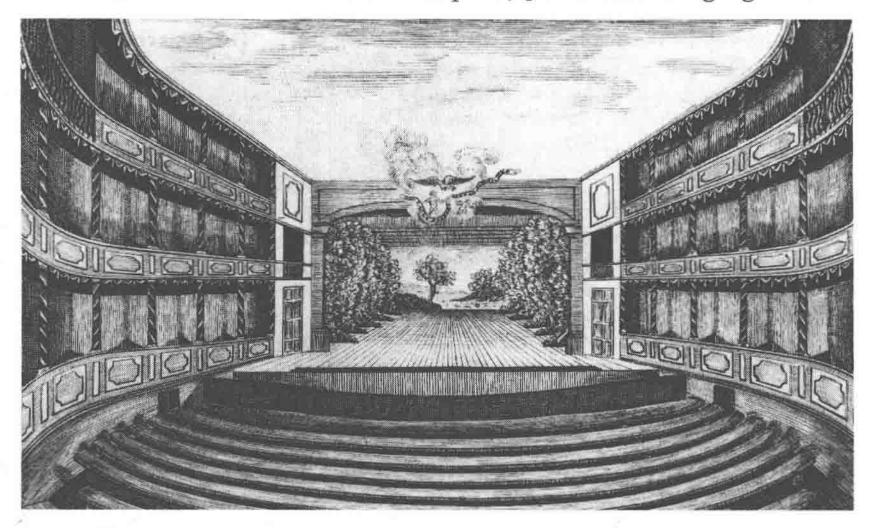
Concerts were given by visiting orchestras, including the Boston SO, the New York PO and the New York SO, from the 1890s to about 1926. The city's own orchestra had its beginnings in spring 1900 when two concerts, under the direction of Fritz Scheel, were held for the benefit of the families of soldiers killed in the war with Spain in the Philippines. A guarantee fund was raised so that the Philadelphia Orchestra, with 85 musicians, could be formed, and its first concert was given, under Scheel, on 16 November 1900. Scheel quickly strengthened the orchestra by engaging players trained in Europe; he gave American premières of works by major European composers and introduced concerts for children in 1902. After his death in 1907 he was succeeded by Karl Pohlig, who returned to Germany in 1912.

The appointment of Leopold Stokowski as conductor in 1912 helped seal the orchestra's eventual reputation as one of the world's finest ensembles. His dynamic direction was constantly in evidence in his introduction of contemporary works to a conservative audience; he presented American premières of works by Busoni, Mahler, Skryabin, Stravinsky, Schoenberg and Varèse. He also experimented with the seating of the players and with orchestral

sonorities. The orchestra gained national attention in 1916 with the first American performance of Mahler's Eighth Symphony; 1068 musicians participated in nine performances. Under Stokowski the orchestra's size was increased to 104 and it became widely known through its many recordings, beginning in 1917; through radio broadcasts, dating from 1929; and through three films, starting with *The Big Broadcast of 1937*. In 1933, with the assistance of telephone engineers, Stokowski pioneered stereophonic recording. In 1936 the Philadelphia Orchestra made the first of its many transcontinental tours, giving 36 concerts in 27 cities. Stokowski retained the title of conductor until he retired in 1941.

Eugene Ormandy was appointed music director in 1938, a post he held for an unparallelled 42 years, retiring in 1980 as conductor laureate. He was particularly admired for his development of the rich sonority for which the orchestra was celebrated. Beginning in 1949, he introduced the orchestra to audiences in South America, Europe and Asia; in 1973 the Philadelphia Orchestra became the first American orchestra to perform in mainland China. Riccardo Muti was music director from 1980 to 1992. His tenure was notable for its emphasis on contemporary music and for concert performances of complete operas. Wolfgang Sawallisch, music director from 1993, increased dwindling attendance by focussing on well-known composers. Many of the world's great conductors and performing artists have appeared with the orchestra, beginning with the pianist Ossip Gabrilovich, who was soloist at the opening concert, and including Richard Strauss in 1904 and Weingartner in 1905. Rachmaninoff, who lived in Philadelphia for a period, performed and recorded there and dedicated several of his works to the orchestra.

The orchestra performs regularly at the Academy of Music, but the hall's acoustics are inadequate for orchestral performances and unsuitable for recording; a new performing arts centre is scheduled to open in 2001. During the summer the orchestra plays for six weeks at the Mann Center for the Performing Arts, an outdoor auditorium built in 1976 in Fairmount Park as the Mann Music Center, and renamed in 1999. Charles Dutoit was appointed artistic director and principal conductor of the summer season in 1990. Between 1930 and 1975 the orchestra gave outdoor concerts at the Robin Hood Dell, also in Fairmount Park.



Outdoor concerts have long been popular with Philadelphia audiences; between 1896 and 1920, for example, a concert series given at the suburban Willow Grove amusement park attracted thousands of listeners. During a three-month season, Frederick Stock with the Theodore Thomas Orchestra, Walter Damrosch with the New York SO and Victor Herbert with his own group gave two concerts a day over two to five weeks. Band concerts were also given under the direction of John Philip Sousa, Arthur Pryor and Giuseppe Creatore. A summer festival with indoor concerts was held at the suburban Ambler campus of Temple University between 1967 and 1980, and the Pittsburgh SO was in residence for about ten years.

Chamber orchestras and small ensembles were established in Philadelphia as early as the 1750s, and since that time countless amateur and professional organizations have been formed. Among the most prominent of the professional groups was the Curtis String Quartet (1932–81). The members were graduates of the Curtis Institute, and the quartet travelled widely and made many recordings. The Philadelphia String Quartet, made up of members of the Philadelphia Orchestra, was formed in 1959 and in 1967 became the quartet-in-residence at the University of Washington. Members of the Philadelphia Orchestra frequently give chamber music concerts. The Philadelphia Chamber Music Society, established in 1986, brings prominent chamber groups and soloists to the city.

The Concerto Soloists, founded in 1965 by Marc Mostovoy, is the city's principal professional chamber orchestra. In addition to its own subscription series, it performs at music festivals and accompanies various vocal groups. The Bach Festival, the Amerita Chamber Players, 1807 and Friends and the Mozart Orchestra are among the more than 60 non-profit musical organizations that are active in the region. Several ensembles specialize in the performance of early music on period instruments: the American Society of Ancient Instruments, founded by Ben Stad (1925); Philomel, the area's foremost baroque ensemble (1976); Piffaro (formerly the Philadelphia Renaissance Wind Band, 1985); and the Philadelphia Classical Symphony, founded by Karl Middleman (1994). Groups specializing in contemporary music include Relâche (1977) and Orchestra 2001 (1988). The Network for New Music (1984) and the Composer's Forum sponsor performances of music by living composers. The Hildegard Players, founded by Sylvia Glickman (1991), specializes in the music of women composers, past and present.

2. Opera. The earliest known performance of a musical drama in Philadelphia was *Flora, or Hob in the Well*, a ballad opera given by an English company in 1754. In 1757 Francis Hopkinson mounted an elaborate production of Thomas Arne's masque *Alfred*. Both the Society Hall Theatre, built by David Douglass in 1759, and the Southwark Theatre, which opened in 1766 with Arne's *Thomas and Sally*, staged productions of plays and operas given by the American Company. Although the Quakers and other religious groups expressed their moral opposition to theatrical performances, comic operas by leading British composers were frequently performed, often soon after their premières in London. In 1767 the first American ballad opera was announced: *The Disappointment*, attributed to Andrew Barton. The performance was cancelled because of the highly satirical plot and the work was not performed until 1976, although two editions of the libretto were published in the 18th century. During the revolutionary period expensive theatrical entertainments were prohibited, except during the time of the British occupation, and the ban remained in effect until 1789.

After the ban was lifted, Philadelphia became one of the nation's main theatrical centres. The New Company, founded in 1792 by Reinagle and Thomas Wignell, recruited a large number of singers and composers from England. Although the principal repertory was from London, several composers who lived in Philadelphia wrote original operas; among the most successful were *The Archers* (1796) by Carr, *The Volunteers* (1795) by Reinagle and *The Aethiop* (1814) by Taylor. Of prime importance to the success of opera was the construction in 1793 of the New Theatre (later known as the Chestnut or Chesnut Street Theatre), the most splendid theatre in the USA; it seated nearly 2000 people, and its design was based on the Theatre Royal at Bath in England.

1. *Interior of the New (Chestnut Street) Theatre, Philadelphia, opened 1793: engraving from the 'New York Magazine' (1794)*

Exceptions to the English character of the repertory were the performances by a troupe of French refugees from Santo Domingo in 1796–7 and by John Davis's French Opera Company of New Orleans in 1827; the latter troupe enjoyed such success that it returned eight times over a 16-year period. Lorenzo da Ponte, a familiar figure in Philadelphia during his later years, was instrumental in bringing the first Italian companies to the city and in igniting an enthusiasm for Italian opera that has been maintained ever since. Rossini and Bellini were the most frequently performed composers by both the Montressor (1832–3) and the Rivafinoli (1834) opera companies. The immense popularity of Bellini's *La sonnambula* (1836, with 61 performances over the next three years) almost dealt a death-blow to English opera. One of the few exceptions was *The Enchantress* by Michael Balfe, which was given 32 times within a ten-week period in 1846. Philadelphia saw the première in 1845 of the first American grand opera, *Leonora* by William Henry Fry, which was written in the Italian style and admired so much that it was performed 16 times that season. The Havana Opera Company introduced the operas of Verdi to the city in 1847.

With the erection of the Academy of Music in 1857, the city acquired the finest opera house in the country. Built by the Philadelphia firm of Napoleon Le Brun and modelled after La Scala, the house has three balconies, an impressive interior and nearly 3000 seats. It is the oldest existing opera house in the USA and was declared a National Historic Landmark in 1963; it remains the principal opera and concert hall in the city. Many first American performances were given there, including *Faust* (in German, 1863), *Der fliegende Holländer* (in Italian, 1876) and Boito's *Mefistofele* (1880). In the second half of the 19th century, two additional opera houses were opened: the Chestnut Street Opera House (1885) and the Grand Opera House (1888). With three houses available, the city was able to attract touring companies that featured the finest European stars. A number of American premières were directed by Gustav Hinrichs at the Grand: *Cavalleria rusticana* (1891), *L'amico Fritz* (1892), *Les pêcheurs de perles* (1893), *Manon Lescaut* (1894) and Hinrich's own opera, *Onti-Ora* (1890).

The Metropolitan Opera of New York first appeared in Philadelphia in 1885, and in 1889 gave the first complete performance in the city of the *Ring* cycle, under Anton Seidl. From that time until 1968, when production costs became prohibitive, the company presented an annual season in Philadelphia, ranging from six to 25 performances a year. Oscar Hammerstein, challenging the supremacy of the Metropolitan, built an opulent 4000-seat theatre called the Philadelphia Opera House (1908). It was sold to the Metropolitan in 1910 and was renamed the Metropolitan Opera House. After 1931 it was seldom used and it was destroyed by fire in 1948.

Since the end of World War I many local opera companies have been formed; the Philadelphia Civic Opera Company (1924–30) gave the American premières of Strauss's *Ariadne auf Naxos* and *Feuersnot*, and the Philadelphia Grand Opera Company (1926–43) that of Berg's *Wozzeck* (1931) with the Philadelphia Orchestra conducted by Stokowski. The Pennsylvania Grand Opera Company (1927) was later re-formed as the Philadelphia-La Scala Company. After several mergers and name changes, the Civic Grand and the Lyric Grand emerged as the major opera companies in the city, performing primarily the popular Italian repertory. In 1976 they merged to form the Opera Company of Philadelphia, the only professional opera company in Philadelphia today. The local music schools regularly produce operas, and the American Music Theater Festival, founded in 1984 under Marjorie Samoff, occasionally presents contemporary operas.

3. Choral singing. Choral singing has flourished in Philadelphia since the end of the 18th century. In 1784 Andrew Adgate organized the Institution for the Encouragement of Church Music, renamed the Uranian Academy (1787–1800). The city's large German population supported several singing societies. The Männerchor (1835–1962), the Junger Männerchor (from 1850) and Arion (1854–1969) have been disbanded, but Harmonie (1855) and eight other German choral groups remain active. Other important early choruses were the Abt Male Chorus, led successively by Michael Cross and Hugh Archibald Clarke; the Philadelphia Choral Society, conducted by Henry Gordon Thunder from 1897 to 1946; the Treble Clef Club (1884–1934) and the Eurydice Chorus (1886–1918), both for women; the Fortnightly Club (1893); the Palestrina Choir (1915–48); and the Accademia dei Dilettanti di Musica (1928–60). Still

flourishing are the male-voice Orpheus Club (1872); the Mendelssohn Club (1874); Singing City (1947); the Philadelphia Singers (1971), the city's principal professional choir; the Pennsylvania Pro Musica (1972); and the Choral Arts Society (1982).

4. The Musical Fund Society. What is probably the oldest music society in the USA in continuous existence was founded in February 1820 by a group of professional and amateur musicians who had been playing quartets for their own enjoyment for several years. Among the founders were the musicians Benjamin Carr, Rayner Taylor, J. George Schetky and Benjamin Cross, and the painter Thomas Sully, who made portraits of his fellow members. Inspired by the Royal Society of Musicians of Great Britain, the society was dedicated to 'the relief of decayed musicians and the cultivation of skill and diffusion of taste in music'. Its initial public concert was presented on 22 April 1821 and featured Beethoven's Symphony no.2; in 1822 Haydn's *Creation* was given by more than 100 performers to an audience of nearly 2000. The society maintained its own orchestra and around 1900 was actively involved in the establishment of the Philadelphia Orchestra.

William Strickland, a distinguished architect and member of the society, designed the Musical Fund Hall (1824), which was used for the society's many concerts and for other musical and non-musical events. Noted for its fine acoustics, the hall attracted renowned artists such as Maria Malibran, Jenny Lind, Henriette Sontag, Adelina Patti, Henri Vieuxtemps and Louis Moreau Gottschalk. *Die Zauberflöte* had its first American performance there (1841, in English). The building fell into disrepair in the 20th century and was demolished in 1982 after repeated efforts to preserve it had failed; the façade remains but the hall itself has been replaced by a residential development. The society's large music and document collection, which includes early editions and manuscripts of European music as well as music by Pennsylvania composers, went to the library of the University of Pennsylvania.

In the late 20th century the society focussed its attention on fostering the careers of emerging young artists and ensembles through the awarding of grants, scholarships and a Musical Fund Society Award for career advancement. The society also supports musicians and music education in the Philadelphia area, offers free public concerts and sponsors occasional competitions for new music. Most notable was the world-wide competition in 1928 in which the first prize was shared by Bartók, for his String Quartet no.3, and Casella, for the original version of his Serenata. The international competition is now sponsored by the society's Edward Garett McCollin Fund; the 1994 prize was awarded to Judith Lang Zaimont for her Symphony no.1, performed by the Philadelphia Orchestra in January 1996.

5. Popular music and jazz. In the 19th century Philadelphia was an important centre for the composition, publication and performance of popular music, and by the second half of the century more than 100 composers were writing songs and dances for the theatre and salon. Minstrel shows were enthusiastically received, and in 1855 the first black minstrel theatre was opened. The local minstrel performer James Bland composed songs that attained phenomenal success, especially *Carry me back to old Virginny* (1878) and *Oh, dem golden slippers* (1879). The latter became the 'theme song' of the Mummers, who established clubs and formally inaugurated the annual tradition in 1901 of dressing in extravagant costumes and parading on New Year's Day while performing on banjos, guitars, saxophones and glockenspiels. In the first half of the 20th century, more conventional bands played for dancing at the Woodside and Willow Grove amusement parks and in large hotels and ballrooms. Visiting big bands such as those of Tommy Dorsey and Glenn Miller and vocal soloists such as Frank Sinatra performed to standing-room-only crowds at the Earle Theatre.

Gospel singing, which was encouraged in the many black American churches, strongly influenced the development of popular music, and gospel groups such as the Clara Ward Singers performed internationally. At the height of their fame their recordings sold in the millions. Starting in the 1940s, Philadelphia became a significant centre for jazz performance with such noted groups as the Miles Davis Quintet, Art Blakey's Jazz Messengers and the John Coltrane Quartet in residence. Coltrane's home is now a museum. A wealth of influential jazz musicians have had connections with Philadelphia, including the saxophonists Stan Getz, Gerry Mulligan, Odean Pope and Grover Washington jr; the trumpeters Dizzy Gillespie and Lee Morgan; the cornettist Rex Stewart; the guitarist Eddie Lang; the singers Ethel Waters, Eddie Jefferson and Pearl Bailey; and members of the Barron, Bryant, Heath and Massey families.

Dick Clark's 'American Bandstand' (fig.2), which began as a local television programme, was broadcast nationally from 1957 to 1964 and brought fame to many Philadelphia popular musicians including Frankie Avalon, Fabian and James Darren. Bill Haley and the Comets (from nearby Chester) were early pioneers of rock and roll in the 1950s, and Chubby Checker introduced the 'Twist' in the 1960s. By 1960 the city had become known for a distinctive brand of black American popular music often referred to as Philadelphia Soul. Among the best-known exponents of the style in the 1970s and 80s were Patti LaBelle and Teddy Pendergrass. Philadelphia Soul also influenced two local rock musicians who gained national fame, Daryl Hall and John Oates.

The city was an important recording centre. Philadelphia International Records, founded by Kenneth Gamble and Leon Huff in 1971, was responsible for many musicians who made hit recordings in the 1970s, and the expertise of Sigma Sound Studios led such well-known performers as Stevie Wonder to record in Philadelphia. In the early 1990s Boyz II Men, who formed their group at the Philadelphia High School for the Creative and Performing Arts, became successful recording artists.

Jazz clubs flourished in the city during the 1950s and 60s. Of particular importance was the Philadelphia Clef Club of Jazz and Performing Arts, initiated in 1966 by the Black Musicians' Union. It was a thriving organization with 700 members, but along with many other jazz clubs it fell into decline during the 1970s and 80s. In the 1990s, with a renewal of interest, a large number of city and suburban jazz clubs opened. The Clef Club received funding for a new building (1995) with a 200-seat auditorium and classrooms for students. Mellon PSFS Bank sponsors an annual jazz festival and popular music events are held regularly at the Spectrum (a sports stadium), the Keswick Theatre, the Electric Factory, the

2. *Dancers on 'American Bandstand', Philadelphia, late 1950s, with Dick Clark (rear, on the podium)*

waterfront and elsewhere. In the summer months, outdoor concerts are given at the Robin Hood Dell East and the Mann Center for the Performing Arts. The Philadelphia Folk Festival, held annually in a nearby suburb since 1962, continues to attract well-known performers.

6. EDUCATIONAL INSTITUTIONS. The first institution for general musical instruction was the American Conservatorio (1822–54), founded by Filippo Trajetta. The Musical Fund Society established an academy of music (1825–32) but it was financially unprofitable. The two most significant music conservatories at the end of the 19th century were the Philadelphia Musical Academy and the Philadelphia Conservatory of Music (both 1870); they merged in 1963 and the institution, with an expanded curriculum, was renamed the Philadelphia College of the Performing Arts (1976). After its merger with the Philadelphia College of Art in 1985, the school was called the University of the Arts; it awards both undergraduate and graduate degrees. The Settlement Music School opened in 1908; from a student body of 40 in its first year it grew to approximately 7000 students at its five branches. It is the largest community arts school in the country and provides high quality music instruction for its students regardless of age, background or ability to pay.

The Curtis Institute of Music is one of the foremost conservatories in the USA. Founded in 1924 by Mary Louise Curtis Bok (fig.3), president of the school until her death in 1970, it offers scholarships in performance and composition and attracts world-renowned musicians as

3. *Mary Louise Curtis Bok, founder and president of the Curtis Institute of Music*

teachers. Well-known alumni include Samuel Barber, Leonard Bernstein, Lukas Foss, Gary Graffman (director of the Institute in the 1990s), Eugene Istomin, Jaime Laredo, Gian Carlo Menotti, Anna Moffo, Ned Rorem and Peter Serkin. It offers both BM and MM degrees and a professional diploma. The Academy of Vocal Arts (1935) is another highly regarded institution that awards scholarships to most of its students.

Two large universities offer undergraduate and graduate degrees in music. In 1875 the University of Pennsylvania (founded in 1740) appointed Hugh Archibald Clarke professor of the science of music; this, one of the earliest chairs of music in an American university, was held by Clarke for 50 years. He concerned himself only with theory and composition; music history was later added to the curriculum but not performance, although the university maintains both choral and instrumental performing groups. In the 1960s the music department gained an international reputation in composition, musicology and music theory under the chairmanship of George Rochberg. The department continues to maintain a distinguished faculty and awards the BA, MA and PhD degrees in these fields as well as the PhD in ethnomusicology. The university's music library, named after the musicologist Otto E. Albrecht, is recognized as one of the finest on the eastern seaboard.

The Temple University school of music dates from 1913, although honorary degrees in music were granted as early as 1897. A department of music education was initiated in 1923 and a separate college of music was established in 1962. In 1986 the New School of Music, founded in 1943 by the members of the Curtis String Quartet, merged with Temple to form the New School Institute, and in the same year the college was renamed the Esther Boyer College of Music in recognition of its benefactor. Temple University awards BM, MM and MMT degrees, the DMA in composition and performance and the PhD in music education. It offers performing experience in some three dozen ensembles, and it sponsors a Music Preparatory Division, a Community Music Program and a Center for Gifted Young Musicians.

In the nearby suburbs, undergraduate and graduate music degrees are awarded at Immaculata College and West Chester University. Other colleges, such as Haverford and Swarthmore, offer music courses and support choral and orchestral ensembles.

7. Music publishing. Philadelphia was the pre-eminent music publishing centre in the USA until about 1850, when it was superseded by New York. The earliest music published was in a hymnbook printed by Christopher Sauer in 1752, and the first publication to contain full pages of music using movable type was *The Youth's Entertaining Amusement*, compiled in 1754 by William Dawson. Early music publishers were John Aitken (1787–1811), Thomas Dobson (1787–98), John Christopher Moller and Henri Capron (1793–4) and Filippo Trisobio (1796–8). Benjamin Carr, with his family and his associate J. George Schetky, published great quantities of music intermittently from 1793 until 1830. The firm of George Willig, established in 1794, was the leading publishing house in the first half of the 19th century; it was sold to Lee & Walker in 1856 and to Oliver Ditson in 1875. Other significant firms include George E. Blake (1803–*c*1850), Allyn Bacon, under various firm names (1816–80), John G. Klemm (1823–83), Fiot, Meignen & Co. (1835–63), G. André & Co. (1850–79) and W.H. Boner (1865–1900). J.W. Pepper (1876) moved to the suburb of Valley Forge in 1973 and within a few years became the largest retailer of instrumental ensemble sheet music in the USA. Theodore Presser's firm moved to Philadelphia in 1884 and to the suburb of Bryn Mawr in 1949, acquired Oliver Ditson (1931) and Elkan-Vogel (1970), and became one of the foremost music publishing firms in the country. Presser is also known for its publication of the monthly musical magazine *Etude* (1883–1957) and for its charitable work. In 1906 the firm established the Presser Home for Retired Music Teachers, operated by the Presser Foundation. The foundation also provides music scholarships and grants to colleges for the construction of music buildings.

8. Instrument makers. From its earliest history, the city has had capable instrument makers. The Swedish organ builder Gustavus Hesselius constructed harpsichords as early as 1742, and John Behrent produced the first piano made in the colonies in 1775. James Juhan advertised himself in 1783 as the manufacturer of a mysterious 'great North American fortepiano'. Charles Albrecht began manufacturing pianos in 1789, and Charles Taws shortly thereafter; his sons continued the business until the 1830s. John I. Hawkins took out the first patent for an upright piano ('portable grand') in 1800. Thomas Loud jr began to manufacture pianos in 1816, and the business was continued by members of his family until 1854. From 1828 until 1878 Conrad Meyer was one of the country's leading piano makers. The Prussian piano maker Johann Heinrich Schomacker settled in Philadelphia in 1837; his firm continued under later generations until about 1935.

Violin makers also have a long history in Philadelphia. John Albert, like many other Germans, came to the USA in 1848; his shop was continued by family members until about 1921. Other important violin makers include the shops of Carmen Primavera, established in 1888 and continued by the House of Primavera, and of William Moennig, established in 1909 and still active.

OTTO E. ALBRECHT (1–4, 6–8; 6 with NINA DAVIS-MILLIS), TOM DI NARDO (5)/EVE R. MEYER

Philbert [Rebillé, Philbert; Rebillé, Philibert] (*b* Thouars, 1639; *d* after March 1717). French flautist, singer, musette player and oboist. According to Michel de la Barre and Johann Joachim Quantz, Philbert was the first to distinguish himself on the one-keyed transverse flute in France. His name first appears in the accounts of the *Menus Plaisirs* in 1667, in which he was designated a 'joueur de flutte ordinaire' in the royal *cabinet*. On 18 August 1670 he was appointed to the Hautbois et Musettes de Poitou. Excelling in singing and comic mimicry as well as in playing the flute, musette and oboe, Philbert was celebrated in a poem by Alexandre Lainez and as Dracon in *Les caractères* by La Bruyère. He is reputed to have married the widow of Jean Brunet, at whose home he frequently played, after an unsavoury affair in which she had her husband poisoned so that she could marry Philbert. The flautist supposedly went to prison on account of this, but was later acquitted. Although he resigned his position in the royal chamber music at the end of 1689, he continued to appear in private performances at court, often with the flautist René Pignon Descoteaux and the guitarist and theorbo player Robert de Visée. There are no records of him after he left the Hautbois et Musettes de Poitou at the end of March 1717. His only existing works are two unaccompanied melodies, an *air* and a minuet, in two French manuscripts – *Airs propre pour le timpanon* (*F-Pc* Rés.F845, p.21) and André Danican Philidor's *Suite des dances pour les violons, et hautbois* of 1712 (*Pn* Vm⁷ 3555, p.112).

JANE M. BOWERS

Philharmonia Baroque Orchestra. American period-instrument orchestra. Based in Berkeley, it was founded by Nicholas McGegan in 1985 and is now acknowledged to be one of the leading Baroque ensembles in the USA. Its lively, well-turned playing can be heard in many recordings, including several Handel oratorios. Performances and recordings by its smaller offshoot ensemble, the Arcadian Academy, directed by McGegan at the keyboard, have attracted consistent critical approbation, especially in little-known Italian music of the 17th century.

JONATHAN FREEMAN-ATTWOOD

Philharmonic. A term widely used, along with such cognates as Philharmonia or Philarmonia, for musical organizations. Discussion of such organizations will be found under the name of the city or country where they are located. *See* especially LONDON, §VI, 2, §VIII, 3, and NEW YORK, §5. For Philharmonia miniature scores *see* WIENER PHILHARMONISCHER VERLAG.

Philibert. *See* PHILBERT.

Philidor [Filidor]. French family of musicians. The family name was originally Danican (possibly a corruption of 'Duncan'), and according to La Borde the name 'Philidor' derives from the family's earliest known musician, Michel Danican, whose oboe playing supposedly inspired in Louis XIII a comparison with the Italian oboist Filidori. It seems likely that the musician who pleased Louis XIII was the father of another Michel Danican (*b* Dauphiné, *c*1610; *d* ?Bordeaux, Aug 1659) and of Jean Danican (*b* ?Dauphiné, *c*1610; *d* Paris, 8 Sept 1679), the first member of the family whose name appears in documents as 'Danican dit Filidor'. By 1645 Jean was in the royal service as oboist in the musketeers, and both he and Michel (ii) were employed in the Grande Ecurie, the branch of the royal musical establishment that supported military and other outdoor performances, Michel by 1651 as a member of the Cromornes et Trompettes Marines, and Jean around 1654 in the same ensemble and by 1659, if not before, among the Fifres et Tambours. Jean may also have composed (it is unclear whether the designation 'Philidor *le père*' in the lost volume 25 of the Philidor Collection refers to him or to his son André). Two of Jean's many children became musicians, and were also known increasingly by the name Philidor: (1) André

Danican Philidor *l'aîné*; and (2) Jacques Danican Philidor (i) *le cadet*. The rest of the family stems directly from them (fig.1).

(1) **André Danican Philidor** [*l'aîné*; *le père* after 1709] (*b* ?Paris, *c*1652; *d* Dreux, 11 Aug 1730). Music librarian, composer and instrumentalist, son of Jean Danican. The date of his birth is unknown, but his death certificate gave his age as 'approximately 78'. In 1659 he was named to the position formerly held by Michel Danican in the Cromornes et Trompettes Marines and from 1667 to 1677 he served as *hautbois* in the royal musketeers. From 1670 his name appears in librettos of Lully's ballets and operas as a performer on a number of woodwind and percussion instruments (as of 1714 he owned 33 instruments including oboes, flutes, recorders, bassoons, musette and drums). In 1678 he was named a drummer in the Fifres et Tambours and he was appointed to the prestigious 12 Grands Hautbois du Roi in 1681; from 1682 he served as *ordinaire de la musique de la chapelle* and in 1690 he and three other wind players officially joined the Petits Violons. As a member of these ensembles Philidor played for military ceremonies, balls, theatrical works and services in the royal chapel, and also took part in military campaigns.

Although Philidor *l'aîné* probably composed occasional pieces (marches, signal airs, dances etc.) throughout his career, he did not begin to compose for the stage until after Lully's death in 1687. A flurry of compositional activity in 1687–8 suggests that he may have been trying to position himself as a candidate for Lully's post of *surintendant* of the king's music, but in 1689 the position went to Michel-Richard de Lalande. During the carnival season of 1700, Philidor, his nephew Pierre and his son Anne composed a number of divertissements for performance at Marly, largely for the entertainment of the Duchess of Burgundy, wife of the king's eldest grandson.

2. *André Danican Philidor: portrait, c1710 (private collection); the music is his 'Marche royalle à 3 dessus de hautbois pour la marche françoise', 1678*

Philidor *l'aîné* married twice; by his first marriage in 1672 to Marguerite Mouginot he had 17 children, among whom were Alexandre Danican Philidor (*b* Paris, July 1676; *d* Versailles, 6 Jan 1684), who despite his tender age held a post among the Cromornes et Trompettes Marines from 1679–83; (3) Anne Danican Philidor; Michel Danican Philidor (*b* Versailles, 12 Sept 1683; *d* Paris, 19 May 1723), a timpanist to the king and godson of Michel-Richard de Lalande; and François Danican Philidor (i) (*b* Versailles, 17 March 1689; *d* Paris, 13 March 1717), a flautist who composed two volumes of

1. *Philidor family tree*

Pièces pour la flûte traversière (Paris, 1716 and 1718) and who is often confused with his cousin of the same name. By his second marriage in 1719 to Elisabeth Leroy he had six children, including (5) François-André Danican Philidor.

Philidor *l'aîné* is best remembered for his work as the king's music librarian, in which capacity he presided over an enormous effort to collect and preserve music not only from Louis XIV's reign, but as far back as that of Henri IV. 1684 is often cited (without documentation) as the year of his appointment, but in 1694 Philidor himself claimed that he had been working as music librarian for 30 years. (The earliest known score he copied for the royal library is dated 1681.) Philidor shared the post with the violinist François Fossard until the latter's death in 1702 and thereafter occupied it alone. Although Philidor had a number of assistants, he himself copied dozens of volumes. The dedications to the king in the series of Lully ballets he prepared reveal his consciousness of the historical value of his work. In addition to his work for the king, Philidor copied music for other aristocratic and royal patrons. In 1694 he and Fossard were granted a privilege to print some of the music from the king's collection, but they published only a single anthology of *Airs italiens* (Paris, 1695). Philidor had intended that his son Anne succeed him as music librarian, but it was his son-in-law Jean-Louis Schwartzenberg, known as Le Noble, who took up the post.

Manuscripts emanating from Philidor's workshop are found in many libraries and private collections. The so-called Philidor Collection, formerly in the Bibliothèque du Conservatoire, included 59 volumes when it was inventoried by Nicolas Roze in the early 19th century; almost half have since disappeared. (Some of the lost volumes contained music by members of the Philidor family.) This collection is now housed in the Bibliothèque Nationale, which also holds a significant number of other volumes copied by Philidor's workshop. Another substantial collection is located in the Bibliothèque Municipale, Versailles, and a large body of manuscripts that Philidor prepared for the Count of Toulouse (the illegitimate son of Louis XIV) belonged to St Michael's College, Tenbury, until 1978, when the collection was sold; at that time a number of volumes returned to Paris and Versailles.

(2) Jacques Danican Philidor (i) [*le cadet*] (*b* Paris, 5 May 1657; *d* Versailles, 29 May 1708). Instrumentalist and composer, son of Jean Danican and younger brother of (1) André Danican Philidor *l'aîné*. In 1667 he joined his father in the Fifres et Tambours, a position which took him on several military campaigns. When his father died in 1679 he took over his post among the Cromornes et Trompettes Marines and in 1682 he joined the Grands Hautbois. In 1690 he became an official member of the Petits Violons as a bassoonist and he also performed in the royal chapel. He appears also to have been an instrument maker; when he died he owned 'tools serving to make musical instruments' in addition to 44 instruments, most of them woodwinds. Only a few of his marches and dances survive in manuscript anthologies; the volumes of the Philidor Collection containing more of his works have been lost.

Philidor *le cadet* had 12 children, among whom four were musicians: (4) Pierre Danican Philidor; Jacques Danican Philidor (ii) (*b* Paris, 7 Sept 1686; *d* Pamplona, 25 June 1709), who was to have inherited his father's position in the Fifres et Tambours but was killed in Spain while serving as a drummer in the guards of the Duke of Orléans; François Danican Philidor (ii) (*b* Versailles, 12 Jan 1695; *d* Paris, 27 Oct 1726), who joined the Grands Hautbois in 1716 after also having served as a drummer to the Duke of Orléans, and who at the time of his death had the title of timpanist to the Queen of Spain; and Nicolas Danican Philidor (*b* Versailles, 1 Nov 1699; *d* Versailles, 8 Sept 1769), who succeeded his brother Pierre as a *grand hautbois* (1726) and as a viol player in the king's chamber (1731) and later played serpent in the royal chapel.

(3) Anne Danican Philidor (*b* Paris, 11 April 1681; *d* Paris, 8 Oct 1728). Composer, instrumentalist and entrepreneur, son of (1) André Danican Philidor *l'aîné*. He was named after his godfather, the Duke of Noailles. He was granted the *survivance* of his father's post in the Grands Hautbois in 1698 and joined the royal chapel in 1704 and the Petits Violons by 1712. He composed sacred and instrumental music, and by the age of 20 had at least five stage works produced. He also collaborated with his father in his duties as a royal music librarian. He was apparently well regarded at court: the king and two other members of the royal family signed his wedding contract in 1706. In 1725 he founded the Concert Spirituel to provide musical entertainment on days when, for religious considerations, the Académie Royale de Musique (the Opéra) was closed. The first concert was on 18 March in the Salle des Suisses of the Tuileries palace, and the series, which lasted until 1790, promoted instrumental and

sacred vocal music. In December 1727 Philidor expanded his enterprise by initiating the Concerts Français, a series primarily of secular concerts featuring French cantatas. He resigned from the directorship of both series a few months before his death in 1728 and was replaced by J.-J. Mouret. The Concerts Français lasted only until 1730 on a regular basis, though annual concerts were given during the next three years. Philidor also directed concerts for the Duchess of Maine and was superintendent of music for the Prince of Conti.

WORKS

Stage: L'amour vainqueur (pastorale), Marly, 9 Aug 1697 (Amsterdam, 1698), *F-Pn* (olim *Pc*) Collection Philidor, vol.xlv, lost; Diane et Endymion (pastorale-héroïque), Marly, 1698, *Pa*, *Pn* (olim *Pc*); Les amazones (mascarade), Marly, 21 Jan 1700, *US-BEm*; Le lendemain de la noce de village (mascarade), Marly, 5 Feb 1700, *BEm*; Danaé (op, 5, E. Le Noble), Marly, 16 Dec 1701, *F-Pn*; Le jugement de Pâris, before 1712, lost, except ov. in *V* Ms. Mus.139–43

Sacred: motets, lost; TeD, 4vv, *Pn*

Inst: Premier livre de pièces, fl/rec/vn/ob, bc (1712/*R*); Second livre de pièces, fl/rec/vn/ob, bc (1714/*R*); marches, dances, *Pn*, *V* Mus.139–43

(4) Pierre Danican Philidor (*b* Paris, 22 Aug 1681; *d* Versailles, 30 Aug 1731). Composer and instrumentalist, son of (2) Jacques Danican Philidor (i) *le cadet*. He began composing at an early age; a pastorale of his composition was performed at court in 1697. He was granted the inheritance of his father's post among the Grands Hautbois the same year and by 1708 when his father died was also playing for the royal chapel and among the Petits Violons. In 1716 he became a member of the *chambre du roi* as a viol player, where his colleagues included François Couperin and Marin Marais. In 1717 and 1718 he published three books of suites, half of them intended for two unaccompanied flutes, the others for two treble instruments and continuo. In 1726 he resigned his post in the Grands Hautbois in favour of his younger brother Nicolas, but remained as a viol player until shortly before his death, when he gave that post as well to Nicolas.

WORKS

Stage: Pastorale, Marly, 3 Aug 1697 and Versailles, 3 Sept 1697, *F-V*; La mascarade du jeu d'échecs, Marly, 19 Feb 1700, *US-BEm* [attrib. Philidor *l'aîné* in lib, to Pierre Philidor in score copied by Philidor *l'aîné*]; L'églogue de Marly (divertissement), Marly, 4 Jan 1702 and Versailles, 8 Jan 1702, lib pubd, music lost; Apollon et Daphné (pastorale-héroïque), Marly, 1703, lib pubd, music lost

Inst: 6 suites, 2 fl, and 6 suites, ob/fl/vn, bc (Paris, 1717 and 1718; 2/1718); 6 suites, 3 fl/ob/vn and La marche du régiment de la Calotte (Paris, *c*1722/*R*); marches, dances, *F-V*

(5) François-André Danican Philidor (*b* Dreux, 7 Sept 1726; *d* London, 31 Aug 1795). Composer, youngest son of (1) André Danican Philidor *l'aîné*, and half-brother of (3) Anne Danican Philidor. Although he was best known to his contemporaries as a chess player, his stage works show him to be one of the most gifted French composers of his generation.

1. Life. As a page-boy in the royal chapel at Versailles, he received a good musical education with André Campra, the *maître de chapelle*; he also learnt the favourite pastime of the musicians, chess. In 1738 he had a motet performed and favourably received in the chapel, and though he left Versailles for Paris in 1740, his works continued to be performed there. Another motet was heard at the Concert Spirituel in 1743. Philidor's early music is lost, but was presumably modelled on that of his master.

From 1740 Philidor lived in Paris, performing, teaching and, in the family tradition, copying music. He also assisted Rousseau, in an unknown manner, with *Les muses galantes*. His skill at chess marked him out earlier than his musical gifts. At the Café de la Régence he came into contact with many of the brightest minds of the time, including Diderot who was to call him, in *Le neveu de Rameau*, 'Philidor le subtil'. He met, studied with and defeated France's leading player, Légal. In 1745 he left Paris on a concert tour of the Netherlands with Geminiani and Lanza; when Lanza's daughter died, however, the tour was cancelled and Philidor, stranded, supported himself by chess. Some British officers helped him to travel to London, thus beginning his lifelong connection with England. He established himself as the strongest player of central and northern Europe (though he never played the leading Italian masters), and particularly impressed by simultaneous blindfold play. In 1748, at Aachen, he wrote his *L'analyze des échecs* (later revised as *Analyse du jeu des échecs*). With the help of the Duke of Cumberland, whom he met at Eindhoven, the book was published in London (1749); it was later translated into several languages and had numerous editions into the 20th century. Philidor remained in England until 1754, returning in 1771 and 1773, then annually for a season from 1775 until 1792, giving lectures and demonstrations subscribed by the St James Club and moving in the same circles as Dr Johnson and Dr Burney.

Philidor's return to Paris in 1754 was encouraged by friends such as Diderot, but his efforts to establish himself as a composer met with mixed fortunes. A trial motet, *Lauda Jerusalem*, for a post at Versailles was deemed too Italian (unfortunately none of Philidor's sacred music survives). During his travels he had encountered the newest Italian music, including the Neapolitan style which had made such an impression in France during his absence abroad. Appearing in the aftermath of the Querelle des Bouffons, Philidor's early operas show the unmistakable imprint of Pergolesi.

After writing his one instrumental work, a set of quartets inappositely named *L'art de la modulation*, he began his successful career as a theatre composer in 1756. His italianate style, rejected by Rebel (the director of the Opéra) as unsuitable for that institution, was no obstacle in *opéra comique*, and from 1759 to 1765 Philidor produced 11 *opéras comiques* of which eight were decidedly successful; after *Le sorcier* (1764) he became the first composer to be called on the stage at the Comédie-Italienne. *Tom Jones* (1765) was at first a failure, and, as later with *Ernelinde*, Sedaine was called in to revise the libretto. *Ernelinde* (1767) was performed 18 times at the Opéra (fig.3), briefly revived in 1769 under the title *Sandomir, prince de Dannemarck* and presented in Brussels in 1772. The version played at Versailles in 1773 and the Opéra in 1777 was completely revised, in five acts; with public taste modified by Gluck, real success replaced the earlier *succès d'estime* and it was paid the compliment of parody.

3. *Costume design by Louis-René Boquet for Nicolas Gélin as Rodoald in 'Ernelinde, princesse de Norvège', 1767 (Bibliothèque et Musée de l'Opéra, Paris)*

Philidor's later musical production was more sporadic. He produced his major choral work, the *Carmen saeculare* (1779), in London at the suggestion of Giuseppe Baretti, who adapted the libretto from several odes of Horace including the one which gives the work its title. Masonic symbolism graces the title-page of the finely engraved score. *Carmen saeculare* was admired, published and performed in London and Paris. Philidor's career was now divided between the two capitals, but he continued to teach music and to write for the French theatre and the Concert Spirituel. His later tragedies, *Persée* and *Thémistocle*, had scant success; he was accepted neither by the Gluckists nor by the Italian devotees, while in comedy he suffered from the competition of Grétry.

At the outbreak of war between England and France, Philidor was in London, and was unjustly put on the list of émigrés. He died, separated from his family, at 10 Little Ryder Street, and was buried from St James's, Piccadilly; the exact location of his grave is not known. There is a bust of Philidor by Augustin Pajou and a portrait by Cochin, engraved by Saint-Aubin in 1772 (fig.4).

2. Works. Educated in both French and Italian styles, and undoubtedly acquainted with contemporary German music, Philidor is usually acknowledged to have possessed the greatest technical ability of the early composers of *opéra comique*. He probably intended no affront to ingrained French traditions, but he was undoubtedly of use to those who did, such as the *philosophes* and his librettist A.A.H. Poinsinet. As a composer he was not lacking in self-criticism, as the four versions of *Ernelinde* testify; but he allowed free rein to a natural fluency supported by too good a memory, of obvious value in chess but dangerous for a composer. The problem of what Burney called Philidor's 'Italian plunder', which led to charges of deliberate plagiarism, is especially acute in *Ernelinde*. The likeliest explanation is that he read, heard and subconsciously assimilated to such effect that he was unaware of the extended near-quotations that appear in some of his scores.

Besides occasional collaboration with such leading authors as Favart and Sedaine, Philidor worked with Louis Anseaume in *Le soldat magicien*, and with A.F. Quétant in the brilliantly successful *Le maréchal ferrant*. But Philidor's literary sense was relatively undeveloped. His chief collaborator was Poinsinet, whom the memoirs of Jean Monnet and Grimm's *Correspondance littéraire* present as possessed of little poetic ability, but of a monumental conceit and gullibility which made him the butt of innumerable practical jokes. Nevertheless, after *Sancho Pança* Poinsinet wrote the three works with which Philidor's career reached its apogee, *Le sorcier*, *Tom Jones* and *Ernelinde*.

Philidor was the first French composer successfully to use a modern Italian style in the major theatres. He was

4. *François-André Danican Philidor: engraving by Augustin de Saint-Aubin after Charles-Nicolas Cochin II, 1772*

preceded by Duni in *opéra comique*, but *Ernelinde* was a pioneering attempt to modernize the dramatic and musical character of the Paris Opéra. He soon developed a more ornate melodic style than was usual in *comédie mêlée d'ariettes*, and applied the Italian style to French forms at the Opéra well before Gluck. As noted by Garcin (*Traité du mélo-drame*, 1772), he was superior to his early rivals in his instrumentation, which though seldom elaborate is always telling. His work benefits from the solid but undeniable virtues of his harmony, and from melodic invention which, if not strikingly individual, is effectively used in characterization.

Philidor's early comedies subject the mixture of social classes and human foibles, like gullibility and greed, to scrutiny under the guise of farce. *Blaise le savetier* deals with such mundane matters as evading the rent by compromising the landlord. Simple domestic farce (*Blaise* and *Le soldat magicien*) developed into sophisticated comedy (*Tom Jones* and *Les femmes vengées*); rustic dramas in which the dialogue is spiced with *patois* (*Le maréchal ferrant* and *Le bûcheron*) culminate in *Le sorcier*.

Parody of serious genres appears in the simile aria 'Je suis comme une pauvre boule', which marks the height of Sancho Panza's difficulties in governing his 'island'. In *Le bûcheron* the aria for the woodcutter, its chopping motif already heard in the overture, breaks off for the draught of wine that gives him enough strength for a roulade. Mercury then offers him three wishes, singing accompanied recitative ('sostenuto' in the score). The reference to *tragédie lyrique* was doubtless appreciated at Versailles, where it was given two weeks after its première. Another such parody is Julien's conjuration in *Le sorcier*.

Philidor's inventive use of onomatopoeia often marks an *air* dealing with a *métier*: the woodcutter, blacksmith and coachman (*Le maréchal ferrant*); Blaise the winemaker (*Le sorcier*); and hunters (*Tom Jones*). It is part of an affection for making the commonplace musical; the first number in *Le soldat magicien* is a game of backgammon. *Le bûcheron* and *Le sorcier* demand male singers capable of grotesque falsetto to *d''*. Another favourite comic genre is the sung invoice, in *Le soldat magicien*, *Le bûcheron* and *Le maréchal ferrant*.

In ensemble writing Philidor pioneered the simultaneous use of compound and simple metres in *Le maréchal ferrant*, *Tom Jones* and the battle music of *Ernelinde*. In the quartets and quintets of *Blaise le savetier* and *Le soldat magicien* Philidor manages to convey the utmost confusion while remaining musically transparent; among the best of these ensembles is the septet in *Le bûcheron*. Poinsinet did not take full advantage of Philidor's abilities in *Sancho Pança* and *Le sorcier*, but another masterly septet ends the second act of *Tom Jones*.

Philidor's occasional and possibly unintended plagiarism damaged his reputation and contributed to a controversy, dwarfed by the subsequent Gluck–Piccinni quarrel, over *Ernelinde*. Even the clear echo of Gluck's *Orfeo ed Euridice* in *Le sorcier* ('Nous étions dans cet âge') is inexact, and forms part of a well-constructed opera in which the music is otherwise all new; it dispenses with the traditional timbres.

The success of Monsigny and Grétry in *opéra comique* ended Philidor's supremacy, which he never regained, although several of his works continued in the repertory of the Comédie-Italienne (which by then had merged with the Opéra-Comique). Given a good libretto like *Les femmes vengées* (1775), he could still write a successful comedy. *Carmen saeculare* (1779), an extended cantata in four parts and over 20 separate movements, sets texts from several of Horace's *Odes*; only the fourth part is based on *Carmen saeculare* itself. With solo (recitative and aria) and choral sections including an ingenious double fugue, it is a remarkable compendium of late 18th-century affects.

Neither of the serious operas that followed achieved a *succès d'estime* comparable to that of *Ernelinde*, and neither is as dramatically effective. *Persée* was one of the few *tragédies lyriques* of this period not to be published; but there is distinguished solo and choral music in this resetting of Quinault, especially when Philidor evokes an older French style (as in the opening chorus and the sleep scene). The reconciliation scene in *Thémistocle*, using a melody from the overture, is touching, its surroundings comparatively uninspired.

Philidor pursued two careers for much of his working life, yet his operatic output is considerable, with a high proportion of effective works, and even his failures include fine numbers. But his musical productivity declined with his popularity, and he did little to maintain the impetus he gave to stylistic change in comic and serious genres.

WORKS

all printed works published in Paris

STAGE

opéras comiques and first performed in Paris, unless otherwise stated

OC – *Opéra-Comique*
PCI – *Comédie-Italienne*
PSL – *Théâtre de la Foire St Laurent*

Le diable à quatre, ou La double métamorphose (3, M.-J. Sedaine), OC (PSL), 19 Aug 1756; pastiche with some new music by Baurans, J.-L. Laruette and Philidor (1757)

Blaise le savetier (1, Sedaine, after La Fontaine), OC (Foire St Germain), 9 March 1759 (1759), excerpts pubd separately

L'huître et les plaideurs, ou Le tribunal de la chicane (1, Sedaine), OC (PSL), 17 Sept 1759

Le quiproquo, ou Le volage fixé (1, Moustou), PCI (Bourgogne), 6 March 1760, excerpts (n.d.)

Le soldat magicien (1, L. Anseaume), OC (PSL), 14 Aug 1760 (?1760)

Le jardinier et son seigneur (1, Sedaine), OC (Foire St Germain), 18 Feb 1761 (1761)

Le maréchal ferrant (2, A.F. Quétant), OC (PSL), 22 Aug 1761 (1761), excerpts pubd separately

Sancho Pança dans son isle (1, A.A.H. Poinsinet, after M. de Cervantes: *Don Quixote*), PCI (Bourgogne), 8 July 1762 (?1762), excerpts pubd separately

Le bûcheron, ou Les trois souhaits (1, Guichard and N. Castet), PCI (Bourgogne), 28 Feb 1763 (?1763), excerpts pubd separately

Les fêtes de la paix (1, C.-S. Favart), PCI (Bourgogne), 4 July 1763, excerpts pubd with lib

Le sorcier (2, Poinsinet), PCI (Bourgogne), 2 Jan 1764 (?1764)

Tom Jones (3, Poinsinet, after H. Fielding), PCI (Bourgogne), 27 Feb 1765; rev. (3, Sedaine), 30 Jan 1766 (1766); vs ed. N. McGegan (London, 1978)

Le tonnelier (oc, 1, N.-M. Audinot and A.-F. Quétant, after La Fontaine: *Le cuvier*), PCI (Bourgogne), 16 March 1765 (*c*1765); collab. Alexandre, Ciapalanti, Gossec, Kohaut, J. Schobert and J.-C. Trial

Ernelinde, princesse de Norvège (tragédie lyrique, 3, Poinsinet, after F. Silvani: *La fede tradita, e vendicata*), Opéra, 24 Nov 1767; rev. as Sandomir, prince de Dannemarck, Opéra, 24 Jan 1769 (1769/*R*1992 in FO, lvi); rev. as Ernelinde (5, Sedaine), Versailles, 11 Dec 1773; rev., Opéra, 8 July 1777; vs (5 acts) ed. A. Pougin and C. Franck (1883), excerpts pubd separately

Le jardinier de Sidon (2, R.T.R. de Pleinchesne, after P. Metastasio: *Il re pastore*), PCI (Bourgogne), 18 July 1768 (?1768), excerpts pubd separately

L'amant déguisé, ou Le jardinier supposé (1, Favart and C.-H. de Voisenen), PCI (Bourgogne), 2 Sept 1769 (1770)
La rosière de Salency (3, Favart), Fontainebleau, 25 Oct 1769, excerpts with lib (1769), collab. Blaise, Duni, Monsigny, van Swieten
La nouvelle école des femmes (3, A. Mouslier de Moissy), PCI (Bourgogne), 22 Jan 1770, *F-Pn*
Le bon fils (1, F.A. Devaux [G.A. Lemonnier]), PCI (Bourgogne), 11 Jan 1773, excerpts (n.d.)
Zémire et Mélide (Mélide, ou Le navigateur) (2, C.G. Fenouillet de Falbaire), Fontainebleau, 30 Oct 1773 (1774), MS in 3 acts, intended for Opéra, *Po*
Berthe (3, Pleinchesne), Brussels, Monnaie, 18 Jan 1775, collab. H. Botson, Gossec, I. Vitzthumb
Les femmes vengées, ou Les feintes infidélités (1, Sedaine), PCI (Bourgogne), 20 March 1775 (1775)
Persée (tragédie lyrique, 3, J.F. Marmontel, after P. Quinault), Opéra, 27 Oct 1780, *Po*, excerpts pubd separately
Thémistocle (tragédie lyrique, 3, E. Morel de Chédeville), Fontainebleau, 13 Oct 1785 (1786)
L'amitié au village (3, Desforges [P.-J.-B. Choudard]), Fontainebleau, 18 Oct 1785, excerpts *Pn*
La belle esclave, ou Valcour et Zéïla (1, A.J. Dumaniant), Théâtre du Comte de Beaujolais, 18 Sept 1787 (?1787)
Le mari comme il les faudrait tous, ou La nouvelle école des maris (1, de Senne), Théâtre du Comte de Beaujolais, 12 Nov 1788
Bélisaire [Acts 1 and 2] (3, A.-L. Bertin d'Antilly, after Marmontel), OC (Favart), 3 Oct 1796 [Act 3 by H.-M. Berton]

Philipp, Adolf (*b* Hamburg, 29 Jan 1864; *d* New York, 30 July 1936). German composer, librettist, singer, actor and theatre manager, active in the United States. He began a career as a tenor with operetta companies in Germany and Austria. In 1890 Gustav Amberg brought him to New York to sing operetta roles, though he also sang in opera, most notably in the role of Turridu in *Cavalleria rusticana* (November 1891). In 1893 Philipp opened the Germania Theater (formerly Aberle's Theatre), where he produced musical comedies modelled after Harrigan's

stage works, until 1902. He composed, wrote the librettos for, and appeared in such portrayals of German-American immigrant life on New York's East Side as *Der Corner Grocer aus der Avenue A* (1893), *Arme Maedchen* (1893), *Ein New Yorker Brauer* (1894) and *New York bei Nacht* (1897). *Ein New Yorker Brauer* was performed more than 700 times in New York up to 1909. Revised as *Über'n grossen Teich*, it received more than 1300 performances in Germany, and was given on Broadway as *From Across the Pond* (1907). Others of Philipp's German works were also adapted for the Broadway stage, the most successful being *Alma, wo wohnst du?* (*Alma, Where do you Live?*, 1909). *Adele* (1913), *Two Is Company* (1915) and *The Girl who Smiles* (1915) are apparently the only original English-language operettas that he composed, written under his pseudonyms Jean Briquet and Paul Hervé. Philipp's activities were greatly reduced because of World War I, though he wrote and appeared in an anti-German play, *Tell That to the Marines* (1918). He also produced and appeared in films, his Adolf Philipp Film Corporation issuing *The Midnight Girl*, *Oh! Louise*, and *My Girl Suzanne* in 1919. His last musical comedy was *Mimi* (1920). Philipp's compositions exhibit an assimilation of many musical styles, from Viennese waltz operettas and French comic opera to the American musical theatre of Harrigan and David Braham. (*GänzlEMT*; *GroveA*)

JOHN KOEGEL

Philipp, Franz (*b* Freiburg, 24 Aug 1890; *d* Freiburg, 2 June 1972). German organist and composer. He studied the organ with Adolf Hamm in Basle and read literature and philosophy at Freiburg University. In spite of partial deafness incurred during World War I, he took the post of organist and choirmaster at St Martin, Freiburg (1914), where he developed a reputation as an improviser and prolific church composer in the Brucknerian style. In 1924 he became director of the Karlsruhe Conservatory, which he quickly raised to the status of Musikhochschule. After attempting to conform with the National Socialist ideology by composing 'Volkskantaten', works he later sought to withdraw, and facing political difficulties because of his dedication to Catholic church music, he resigned from his post in 1941, citing reasons of poor health. He retired to Freiburg where he continued to compose songs and choral music in a retrospective, often contrapuntal style. The Franz-Philipp-Gesellschaft published the periodical *Vox* from 1960 to 1972.

WORKS
(*selective list*)

Choral-orch: Friedensmesse, op.12, 1920; Sancta Elisabeth, op.24, 1932; Hymne zum Lob der Arbeit (H. Lersch), op.33, 1934; Zwischen Zeit und Ewigkeit (H. Thoma), op.65, 1950; De profundis, op.83, 1956; Missa symphonica: Credo in unum Deum, op.85, 1960

Choral: Missa laudate Dominum, op.28, 1932; Heiliges Vaterland (G. Stammler), op.32, 1935; Ewiges Volk (G. Schumann), op.45, 1939; Freiburger Psalter, op.57, 1951; Mater Dei (Ein Marienleben), op.60, 1954; numerous sacred and secular works

Other: Sym. 'Eine Gedächtnisfeier für meinen lieben Sohn Johannes', d, op.97, orch, 1960; chbr music; songs

FRIEDRICH BASER/WOLFGANG RUF

Philipp, Isidore [Isidor] (*b* Pest [now Budapest], 2 Sept 1863; *d* Paris, 20 Feb 1958). French pianist and teacher of Hungarian birth. At the Paris Conservatoire he received a *premier prix* in 1883 in the class of Georges Mathias, one of Chopin's former students. He also studied with Saint-Saëns and Théodore Ritter. In the 1880s he met Liszt, made his Paris début with Chopin's Concerto in E minor and played for Rubinstein and Tchaikovsky. In 1890 he performed Widor's Fantasy for piano and orchestra in London, receiving praise for his beautiful touch and perfect technique. He was an ardent champion of the music of Saint-Saëns, Widor and Fauré, performing often as a chamber musician.

Philipp was a renowned teacher, at the Paris Conservatoire (1903–34), the American Conservatory at Fontainebleau (1921–33) and privately in Paris (until 1940) and New York (1941–56); among his students were Jeanne-Marie Darré, Nikita Magaloff, Guiomar Novaës and Phyllis Sellick. He published more than 100 volumes of technical exercises, including *Exercices pratiques* (Paris, 1897), *Exercises for the Independence of the Fingers* (New York, 1898), *Etudes techniques* (Paris, 1904) and *Complete School of Technique* (Bryn Mawr, 1908), edited many works of the standard piano literature and composed a number of short piano pieces. His recordings include elegant accounts of two works of Saint-Saëns, the Violin Sonata in D minor, with André Pascal, and the Cello Sonata in C minor, with Paul Bazelaire.

CHARLES TIMBRELL

Philippe, Pierre [Philippi, Pietro]. *See* PHILIPS, PETER.

Philippe de Bourbon (*b* St Cloud, 2 Aug 1674; *d* Versailles, 2 Dec 1723). French patron and musician. He was Duke of Chartres and (after the death of his father in 1701) Duke of Orléans, and from 1715 Regent of France. A nephew of Louis XIV, he grew up in Paris and played the flute, guitar, harpsichord and viol. He studied music with Etienne Loulié and composition with Marc-Antoine Charpentier, Nicolas Bernier and Charles-Hubert Gervais, his lifelong valet whom he appointed *intendant* of his music in 1700. He was keenly interested in Italian music and employed both French and Italian musicians. His earliest known work was an opera, *Philomèle*, written in collaboration with Charpentier in 1694 and played three times in his residence, the Palais Royal. The duke forbade its publication and it is lost. Helped by Gervais, he composed *Penthée*, an opera which was probably rehearsed on 21 October 1703 at Fontainebleau and

performed on 16 July 1705 and 15 March 1709 at the Palais Royal; the libretto was by Marquis de la Fare, his captain of the guard, and was published in the marquis's *Poésies* (1755). The *Suite d'Armide, ou Jerusalem délivrée*, also written in collaboration with Gervais, was rehearsed on 2 October 1704 at Fontainebleau, sung at the Palais Royal in February 1705, and perhaps again at Fontainebleau on 17 October 1712. The libretto, based on Tasso's epic, was by the duke's former tutor Bernard Requeleyne, Baron de Longepierre; it was printed, without the prologue, in 1812 by Nicolas Moreau. The duke again forbade publication of these two operas, but they survive in manuscript (in *F-Pa*). Philippe is said to have assisted also in the composition of Gervais's *Hypermnestre* (1716): the two *tambourins* of Act 2 are indeed heard in *Penthée* (Act 2). He also composed motets (lost), two *airs* (*Je suis né pour le plaisir* and *Insensés, nous ne voyons pas*), four cantatas (lost; texts in J. Bachelier, *Recueil de cantates*, The Hague, 1728) and two instrumental pieces (in *F-Pn*, *V*). Philippe's operatic music is italianate in style, brilliantly orchestrated and includes some fine *airs*.

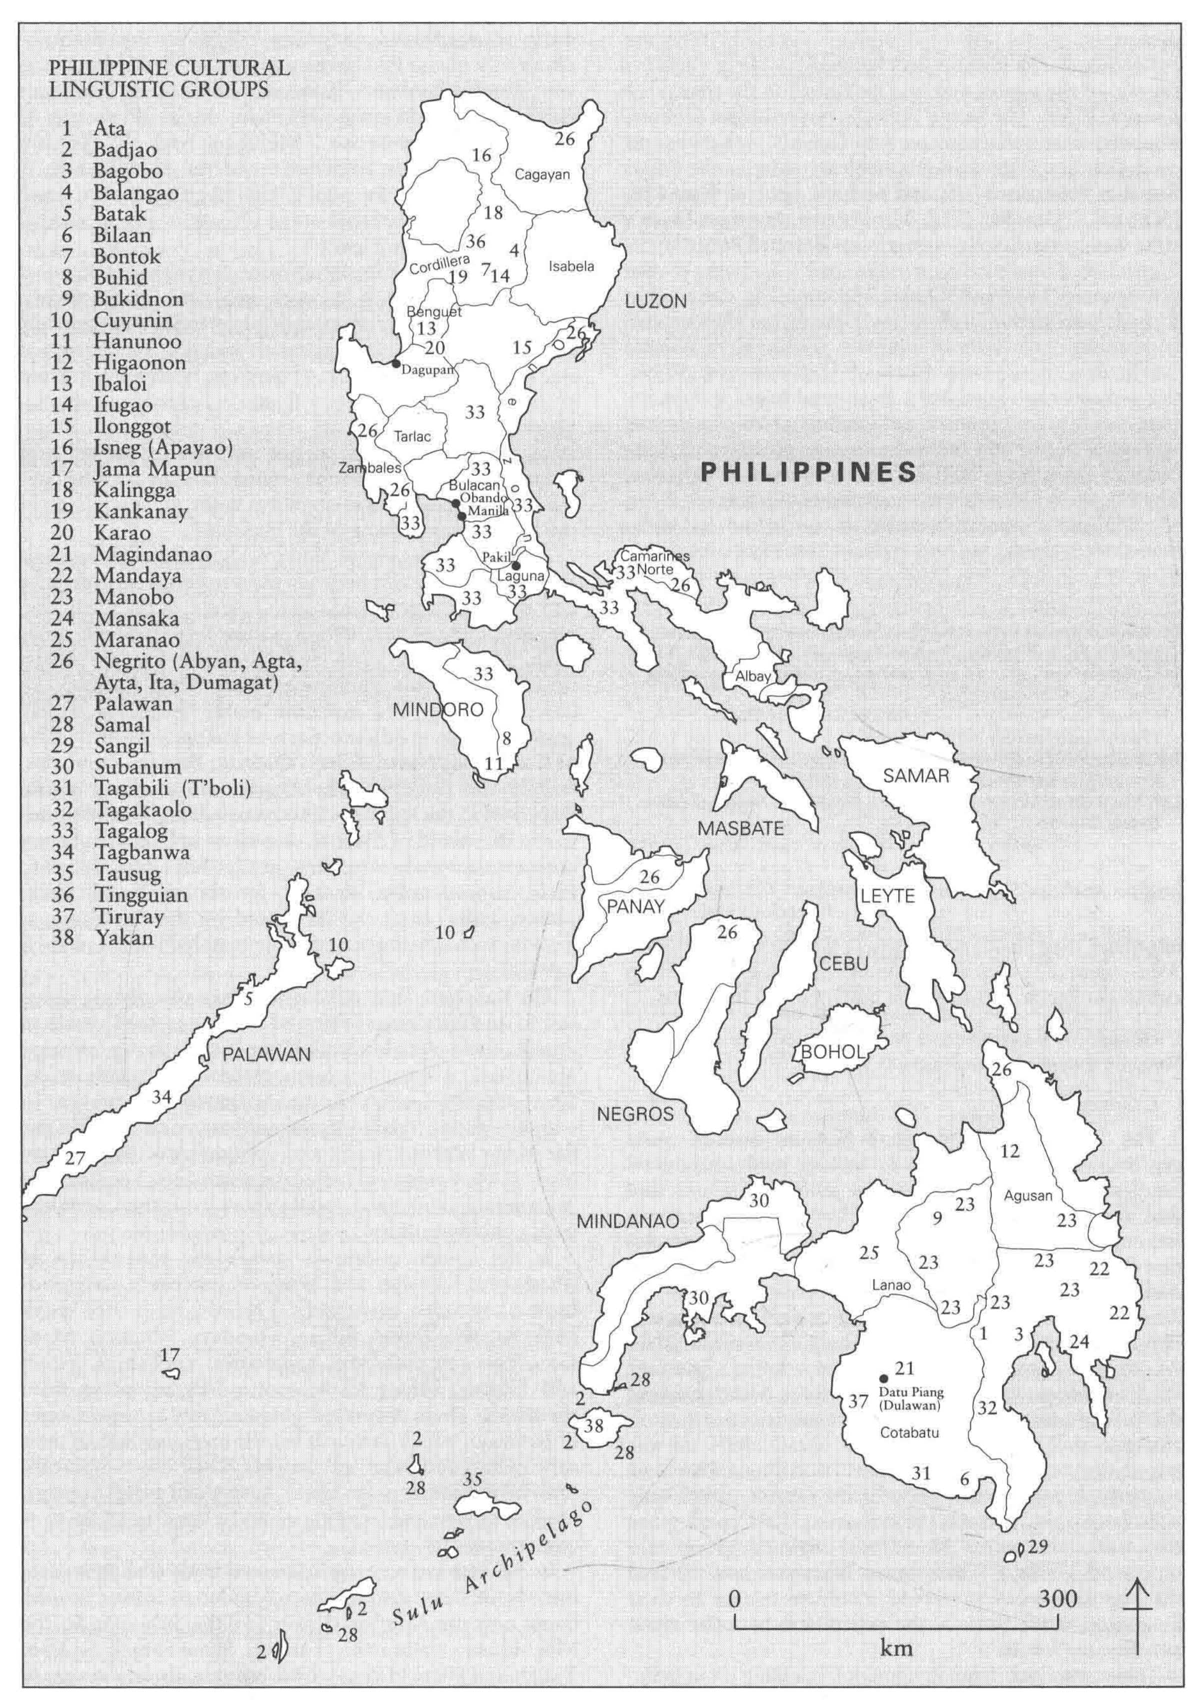
Philippines (Republika ng Pilipinas). Country in South-east Asia comprising a complex archipelago on the western rim of the Pacific Ocean to the north-east of Indonesia.

I. General

The Philippine islands have become isolated from centres of cultural change in insular and continental South-east Asia. A strong Hindu influence in Java and Bali and a Buddhist mission in Thailand made scarcely any impression on the Philippines: there are no temples like those of Borobudur or Angkor Wat, stories of the *Mahābhārata* and the *Rāmāyaṇa* (popular in South-east Asian countries) are not represented in shadow plays, and Hindu gods are much less known than in Indonesia. Islam was the only great Asian tradition that left a significant mark among powerful groups in southern Mindanao and the Sulu islands, while Spanish and American institutions changed the cultural patterns of about 90% of the population, now totalling about 70 million. This vast majority, living in most parts of the islands, speak only eight languages, whereas the remaining 10% speak more than 100. The major 38 cultural-linguistic groups are represented in fig.1. The contrast illustrates how 10% of the population has preserved a culture related to their languages, while 90% of the population brought about new literary forms.

Three principal minority groups (including those influenced by Islam) live in two separate areas, the north and the south. Altogether, these three cultural groups comprise about 8% of the Philippine population, divided more or less evenly between those settled in the Cordillera mountain range in northern Luzon, the inland peoples of Mindanao, Palawan and Mindoro, and the Muslim groups in southern Mindanao and the Sulu islands. A fourth group may be added: the Negrito, a very small group living in scattered areas of Luzon and in remote southern mountain areas.



The traditions of these minorites are related to those of other cultural groups in continental and insular South-east Asia. There are common elements in their settlements, house structure, tattooing, basket weaving, cultivation of rice and root crops, habit of chewing betel-nuts, kinship systems, communication with spirits, practice of divination and shamanism. Some aspects of indigenous culture, such as the cultivation of rice and use of pottery and bamboo, may have ancient origins. Former land bridges with continental Asia relate flora, fauna and early man in the Philippines to those of the mainland.

In spite of the above similarities, cultural differences do exist, in particular between the northern Luzon peoples and the Mindanao groups in the south. In the north, the Negrito, a Spanish term for a culture with the local names Aeta, Ita, Abyan, Agta and Dumagat, are the oldest inhabitants of the Philippines. They were formerly an itinerant group and are now partly settled in widely scattered areas in different parts of Luzon, in the provinces of Camarines Norte, Albay, Quezon, Bataan, Zambales, Isabela and Cagayan. The Negrito are similarly widely dispersed in the southern Philippines, living in communities in the island of Negros, as well as in Palawan, Panay and eastern Mindanao. These groups have persisted with their cultural ways, perhaps for thousands of years, although they are now influenced by their neighbours. Several anthropologists and linguists have studied their culture through the years.

The Kalingga, Ifuago, Bontok, Tingguian, Ibaloi, Isneg, Karao and Kankanay, referred to here as the Cordillera groups, are a completely different culture with a complex agricultural system; they formerly practised headhunting. They appoint 'priests' or specialists to lead prayers in complex rituals related to the cultivation of rice and use flat gongs without bosses and derivatives of the bamboo plant as their principal musical instruments. The Ilonggot in eastern Luzon are a people apart from the Cordillera with a similar culture.

In the south, mountain peoples in the islands of Mindanao, Palawan and Mindoro practise a slash-and-burn or swidden agriculture. The languages they speak (Ata, Bagobo, Bukid, Bilaan, Mandaya, Manobo, Mansaka, Palawan, Subanen, Tagakaolo, Tagbanwa, Tiboli and Tiruray) belong to those of a different group from the north. These mountain peoples grow a large species of bamboo, which accounts for the increased size of their tube zithers and other instruments. Their most important musical instruments are heavy, suspended gongs (*agung*), used as dowry and inheritance and played in all sorts of community activities.

In the 14th century, seafarers and trade with Indonesia introduced Islam into southern Mindanao among peoples living near the Mindanao river and the Sulu islands (the Magindanao, Maranao, Tausug, Sama-Samal, Badjao, Yakan and Jama Mapun). This brought about changes in political systems, education, dress and food taboos and

1. *Map of Philippine cultural-linguistic groups*

introduced the practice of polygamy. These peoples became skilled in woodwork, brassware and especially in the performance of the gong-chime (*kulintang*), which was added to the existing ensembles of suspended gongs (*agung*).

Two centuries later, the Spanish introduced Christianity, Spanish law and feudal land tenure; in 1898, the United States brought an American way of life, leaving a democratic political system that distinguishes the Philippines from its neighbours. The 'Westernized' peoples of the Philippines may be divided geographically north to south according to the eight languages they speak: Ilokano, Pangasinan, Kapangpangan, Tagalog, Bikol, Waray, Sebuano and Hiligaynon. Stone churches, which exist in almost every town in the Philippines, in a courtyard surrounded by the houses of the landed gentry, symbolize the foundation of a Westernized culture that has produced folksongs (*kundiman*) and, since the early 20th century, renowned performers and composers of European classical music.

Under the influence of technology and mass media, musical interest has come to centre on popular music, transmitted mostly through radio, television and recordings. Popular songs are sung in the vernacular by local celebrities with large followings and played by groups in indigenous styles.

II. Indigenous and Muslim-influenced traditions

In the northern Philippines, indigenous music is represented by the Negrito, a very small minority mostly from Luzon, and the people of the Cordillera mountain range, a larger population. In the south, the indigenous and Muslim-influenced peoples live separately. There, the influence of Islam is discernible in many singing styles and in some flute and reedpipe music, but there is no apparent Muslim influence in the music of the gong ensemble *kulintang* or in terms of other musical instruments.

1. Northern Philippines: (i) Negrito music in Luzon (ii) Cordillera music in Luzon (iii) Vocal music. 2. Southern Philippines: (i) General (ii) Gongs and gong ensembles (iii) Solo instruments and other ensembles (iv) Vocal music.

1. Northern Philippines.

(i) Negrito music in Luzon. Among the Negrito in Bataan, marriage rituals and those for honouring the dead or curing the sick still exist. In a marriage ceremony (*ambahan*), ritual singing, dancing and jumping around a fire are essential elements. The singing style consists of a few lines of melismatic melodies sung by a leader and repeated responsorially by the crowd of men and women. The Negrito often speak of a need for gongs, but when provided with one they do not seem to have a traditional musical structure for its performance. The *bansi* (flute) is used as a courting instrument; the *kuryapi* (two-string lute) is still remembered, though it has long since disappeared from this region. The Negrito in Zambales have instruments similar to the *kimbal* (conical drum) used by the Ibaloi. They make a bamboo zither with two parallel strings connected by a bridge, as well as a flute with a chip on its ledge similar to that of Mindanao (see fig.14*a* below). In Zambales, the Negrito's five-string guitar resembles that of their Westernized neighbours.

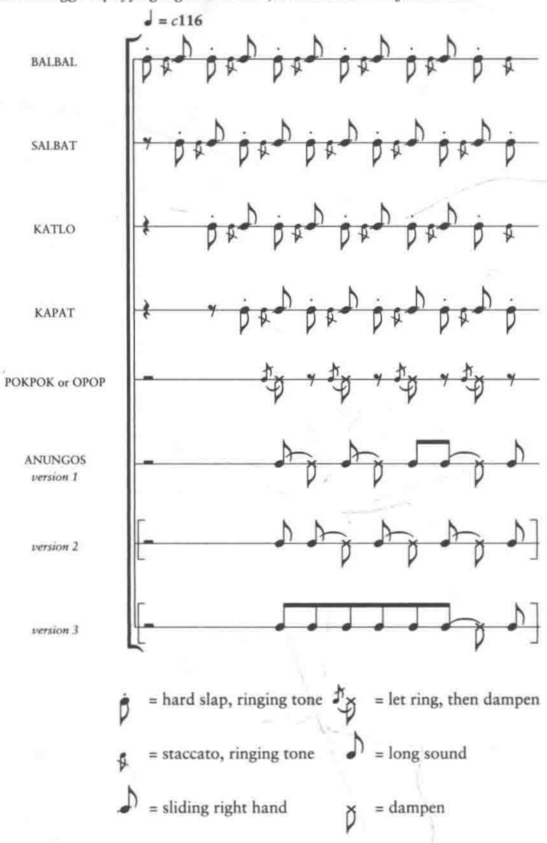
In the northern part of Quezon province, among the Dumagat of eastern Luzon, the musical bow, a rare instrument in the Philippines, is most probably an original Negrito musical instrument and is the single instrument that is found only among the Dumagat, being unknown to other indigenous groups. It is made from the midrib of a palm, with two strings of thin vine connecting the two ends of the midrib. To increase the strings' resonance the performer places the convex side of the palm midrib in his open mouth, between his teeth. A simple, three-note melody is repeated many times (two notes a 3rd apart, played on two strings, and one note at the interval of a 4th). Other possible resonators include a tin can, on which the palm midrib is placed, and the performer's own chest, on which the tin can in turn may be set. The other musical instruments played by the Dumagat have been borrowed from adjacent cultures, just as song texts contain words from their neighbours.

(ii) Cordillera music in Luzon.

(a) Gongs and gong ensembles. Gangsa, flat gongs of bronze or brass (*see* GANGSA (i)), are found only in the north, principally in the Cordillera mountain range of Luzon (fig.2). There are some similarities between Luzon gongs and gongs found among the mountain peoples in central Vietnam (similarities in name, performance context and playing technique), which may indicate musical and even prehistoric relationships between the two mountain peoples. The gongs have a diameter of approximately 30 cm, and their perpendicular rims are about 5 cm high, producing diffused sounds of an unfocussed pitch. The Bontok play gongs with sticks in an ensemble of six or more players as they dance in circular patterns. On occasion, one or a pair of dancers improvise beats with several dance postures while resting in place. The Kalingga play gongs with sticks as well as the hands. The Ibaloi use only two gongs together with two conical drums, while the Karao play with several gongs as they dance in rows.

Gangsa are played in such ceremonies as peace pacts between two communities, the inauguration of a new house or rice field, life-cycle celebrations given by the rich, or weddings. Gongs are stored by families inside their houses; they are lent only for special occasions, with the borrower taking full responsibility for their care and

2. Kalingga gangsa (flat gong) ensemble, early 1900s



safe return: if a gong was dropped and broken it would be the duty of the borrower to replace it, which might mean crossing mountains to obtain a gong of similar tonal quality from a neighbouring tribe.

The value of a gong is measured in different ways: it may be offered as a dowry, sold or exchanged for animals, land and property. During ceremonies, a succession of community leaders perform on the *gangsa* or dance to its music. *Gangsa* music itself enjoys a certain preference among the Kalingga: during recreation and other secular occasions when *gangsa* playing is not allowed, young boys and girls continue to play its music using other instruments (zithers, tubes, buzzers, xylophones, panpipes). Whether plucked, struck or blown, the *gangsa* rhythm is accompanied by recognizable *gangsa* sounds; there is such an interest in *gangsa* music that the original solo music for bamboo instruments has been neglected and almost forgotten.

Gong ensembles of the north vary in their instrumentation: some consist entirely of gongs, others are combined with drums. The *topayya* ensemble, found among the Kalingga and Tingguian, consists of six flat gongs played with the palms of both hands as if the gongs were drums. Each performer carries his own gong suspended from his belt. He sits on his heels, laying the instrument on his lap with the open side facing down. Four performers with the biggest gongs of diminishing size use hand techniques consisting of a two-part repetition of movements, each part lasting about a quaver (at crotchet = *c*116). The first part is a stroke of the left palm on the centre of the gong, which makes a ringing sound. The second part consists of the same stroke, staccato, followed by a strong slap and a slide of the right hand from the centre to the outer edge of the gong away from the performer, the effect being an abrupt sound, followed by a swishing noise. The two parts are repeated continually. The four gongs have staggered entrances: the first gong, called *balbal*, begins the rhythm with the movements just described; the second, *salbat*, plays the same rhythm, but its first beat starts on the second beat of the *balbal*; the first beat of the third gong, *katlo*, will coincide with the second beat of the *salbat*, and similarly, the first beat of the fourth, *kapat*, will coincide with the second beat of the *katlo*. The overall effect is a mixture of faintly rising melody and harmony produced by the first left-hand beat of each gong and the combination of tapping and sliding sounds in the second beat of all four gongs. On top of this vibrating medley, the fifth gong, *pokpok* or *opop*, sounds a two-tone ostinato. The sixth gong, *anungos*, has a freer pattern, which may also turn into an ostinato (ex.1).

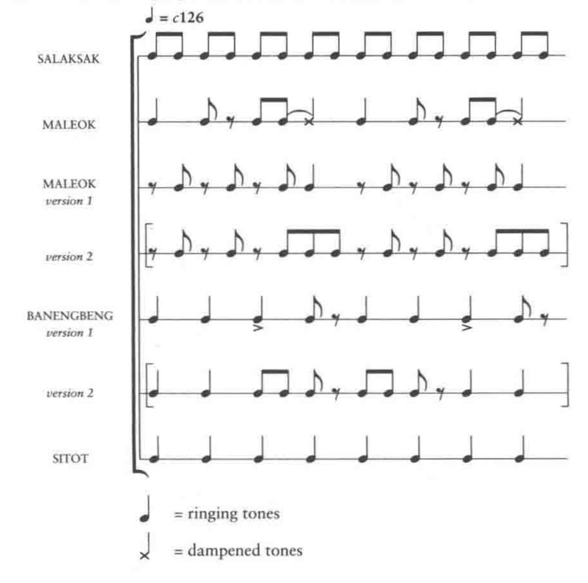
The *itundak* or *tinebtebak*, an ensemble of seven gongs with different rhythms used by the Karao, accompanies dances with music played by beating sticks on the centres of the gongs instead of playing them with the hands. Here, the *gangsa* has a V-shaped wooden handle from which the gong is suspended by a string. The left hand holds the handle while the right strikes the gong with a cloth-headed stick. Among the Karao, the inner (ventral) side of the gong is struck, while among the Kalingga the dorsal side is struck. The Karao's ensemble has seven performers, each playing a rhythm on his own gong, each of which has a distinct timbre.

The rhythms of five principal gongs in the *itundak* ensemble are shown in ex.2. Gongs are played during big

Ex.1 Kalingga *topayya gangsa* ensemble; rec. and transcr. J. Maceda

feasts, especially in the *babeng*, traditionally given by rich men of the community. While men play the gongs, women dance in rows, either advancing and retreating in slow dance steps with discreetly lifted legs, or making clockwise and anticlockwise formations. The right leg is raised and swings sideways from the knee in time with the music; then the woman hops forward on her left foot, with her arms raised straight in front of her. The *tinebtebak* dance has a different rhythm and dance position: as the left foot steps forward, the body's full weight is put on it; after this the body leans backwards, transferring its weight to the heel of the right foot.

In the *palook*, an ensemble of gongs struck with sticks, played by the Kalingga and Bontok, the back sides of seven gongs are beaten in one or two rhythms by seven men who assume various body movements and dancing postures (fig.3). In single file they advance sideways in short steps, first led by one end of the line then by the other; occasionally they move forward making a serpentine line. Sometimes they scarcely lift their feet and at other times they raise them high. The gongs are held in different positions: swinging, rocking raised above the shoulder or lowered to the ground. Body positions include crouching, standing upright, stooping or swaying. The women enter later: they appear suddenly, encircle the men and thus end the dance.



The *kulimbet* ensemble of the Ibaloi, consisting of two long, narrow barrel drums (one high-pitched and one low) and one gong, plays in a curing ceremony in which a couple dance anticlockwise around a sacrificial pig. The woman, as celebrant and principal dancer, wields a knife in her right hand; suddenly, the knife drips blood. The sick person revives and the knife is handed to the owner of the house for safe-keeping.

In the *inila-ud*, an ensemble of three gongs and one cylindrical drum found among the northern Kalingga and Tingguian, the first gong is called *patpat*, the second *kebang*, the third *sapul* and the drum *tambul*. Each gong is laid (dorsal side up) on the lap of a performer, who strikes it with the left hand using a stick, while tapping it with the palm of the right hand. In the *pinala-iyan* ensemble (four gongs and one drum) of the same two groups, the first and third gongs (*talagutok* and *saliksik*) are laid on the ground with the rims down and are each struck with two sticks. The second gong, *pawwok*, is held upright, in a slanting position with its base touching the ground. The fourth gong, *pattong*, is laid with its open side up; the stick beats on this ventral side of the gong. The *tambul* is played with two sticks. In a third ensemble, the *pinalandok* (six gongs), the *gangsa* are suspended from the belts of the six players, who slap them with both hands. The musical form used is the same as that of the *topayya*.

In the Ifugao *gangha* (three gongs), one gong (*tobop*), higher-pitched with more brilliant overtones, is played with the hands: the left hand taps while the right fist slides on the instrument. The other two gongs (*hibat*, *ahot*) are played with sticks beating on their inner (ventral) side. The *gangha* are played during harvest ceremonies or the inauguration of a new house, and accompany line dances (*tayao*) by men in semi-crouching positions with their arms stretched forward, and with open palms turned up. In another position the left hand stretches forward with the right arm bent at the elbow.

The Isneg have an ensemble consisting of *hansa* (two gongs) and *ludag* (one conical drum). The gongs are played by women while the long drum, which needs more force to produce loud sounds, is played by men. The ensemble accompanies two kinds of dances: *tabok* and *talip*. In the Ibaloi *sulibao* ensemble (two gongs, two conical drums and a pair of iron clappers), one deep-toned drum (*kimbal*) starts a rhythmic ostinato, immediately followed by the higher-pitched drum (*sulibao*) in another rhythm (fig.4). One gong (*pinsak*) is held in the

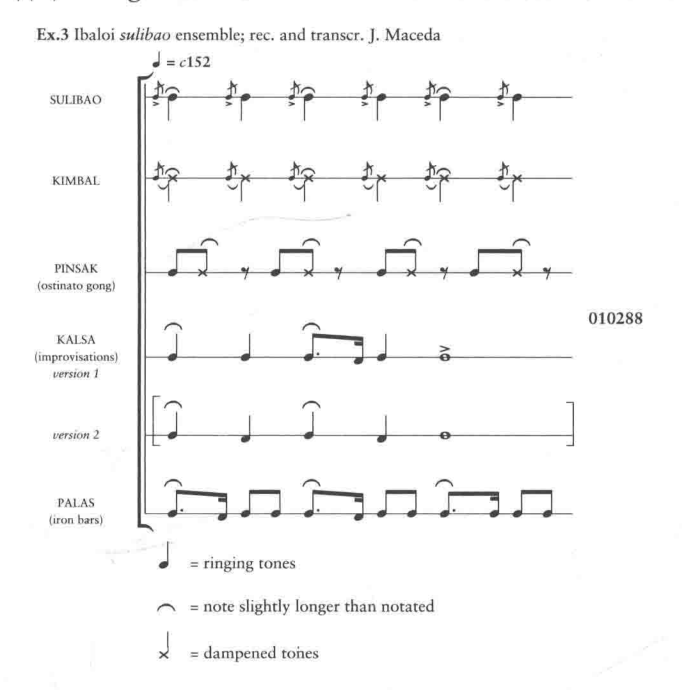
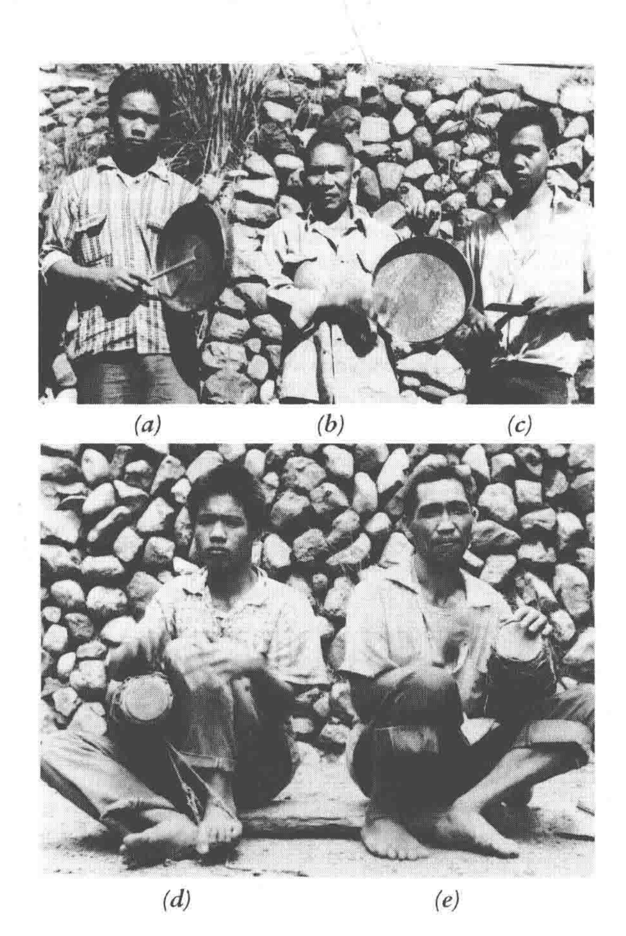
3. Palook ensemble of struck gongs played by the Bontok-Sagada people

left hand by its V-shaped handle, its dorsal side touching the forearm; the ventral side of the gong is struck with a soft stick held in the right hand. The second gong (*kalsa*) is played similarly, but has a freer part. The clappers (*palas*) provide another rhythmic improvisational part of the *kalsa* (ex.3). A Negrito ensemble composed of *talibeng* (bamboo drum) and *palayi* (gong) is played in an *anito* (spirit) ceremony to cure the sick. Among the Negrito of Zambales a cooking-pan is used instead of a gong, as the proper gong is no longer available.



(b) Solo instruments and other ensembles. Instruments made from bamboo, wood and other tropical materials do not enjoy the same prestige as gongs. However, they have important uses in rituals and secular activities. Timbres vary with the materials used (bamboo predominates), the shapes of the instruments and the manner in which they are played; often these timbral qualities are more important than rhythm and melody.



Idiophones. Most of the idiophones in the north are made of bamboo. Bamboo percussion tubes (Kalingga *tongatong*; Isneg *tungtung*; Negrito *talibengan*) are played by holding the body of the tube, open end up, in the right hand. The tube's closed lower end is then struck against a hard block of stone or wood while its open end is covered and uncovered by the palm of the left hand. Among Kalingga boys and girls, seven tubes are played during hours of recreation to imitate *topayya* (gong) music. Originally the tubes were used to accompany dances done by a *dawak* (medium) to drive away bad spirits from a person's body. The Isneg play these percussion tubes as solo instruments. The Negrito percussion tube, comprising three bamboo segments, is longer than the Kalingga variety. A second type of bamboo percussion tube, the quill-shaped *patang-ug* (Kalingga) or *patanggo* (Isneg), is held near its base by the right hand and is struck against a hard object (e.g. another tube, a stone or the handle of a large knife). A second tone is produced by stopping a hole at the tube's base with the third finger. Among the Kalingga, this instrument is played on the way to a peace pact or an important celebration; it is believed to prevent ill-omens from befalling the celebration. An ensemble of six such tubes may also be played to imitate *topayya* music.

The *patatag* (Kalingga), an instrument comprised of six separate bamboo xylophone staves, is played with one segment laid on the lap of each performer. The ensemble uses the techniques of *topayya* music: the left hand, which strikes the blade with a stick, corresponds to the left hand's motions on the *topayya*, while strokes and slides by the right-hand stick correspond to the right hand's motions in *topayya* playing.

The bamboo buzzer (Kalingga *balingbing*, fig.5; Isneg *pahinghing*, *paginggeng*; Ibaloi *pakkung*) has a slit

Ex.3 Ibaloi *sulibao* ensemble; rec. and transcr. J. Maceda

4. Instruments of the Ibaloi sulibao ensemble: (a), (b), Kalsa and pinsak (gongs), (c) palas (iron clappers), (d), (e) sulibao and kimbal (conical drums)

dividing the bamboo tube in half, allowing the halves to vibrate and buzz when one half is struck against the heel of the left hand. The instrument is played by young girls in the evening for recreation, or along paths to drive away evil spirits lurking there. The Kalingga use six of the instruments together as in *topayya* music.

For the bamboo clapper *hangar* (Ifugao), two halves of a bamboo tube are shaped and narrowed towards the middle of the tube, making them flexible enough to flap against each other. In one ritual, men singers rhythmically strike the carcass of a sacrificed pig with this instrument to produce the clapping sounds.

The jew's harp (Kalingga *ulibao*, *giwong*, *onnat*; Ibaloi *ko-ding*; Bontok *alibaw*, *abafiw*, *afiw*, *olat*, *ulibaw*; Isneg *oribao*; Negrito *kulibao*; Ifugao *biqqung*, *guyud*) in the north may be of brass, bronze or bamboo, with or without a string. Most jew's harps in the Cordillera are made of a copper alloy but have the same names as those of bamboo. Among the Ifugao, the jew's harp with a string to pull and make the blade vibrate is called *guyud*, while that without a string is the *biqqung*. There are various rhythms associated with the jew's harp, but none is characteristic of any one region. Among the Kalingga the *giwong* is used to imitate gong sounds and vocal music.

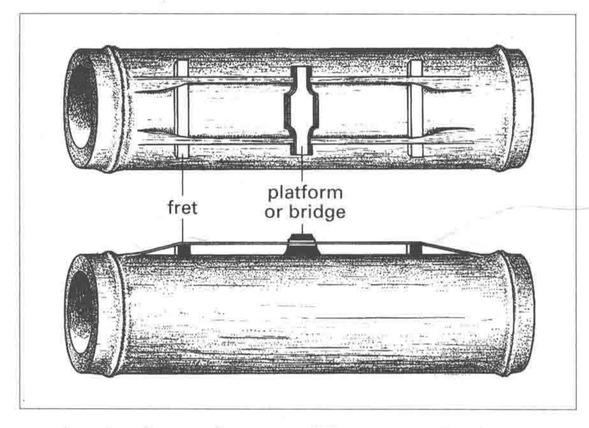
Two wooden instruments are the percussion yoke-bar (Ifugao *bangibang*, *pattung*; fig.6) and percussion beams (Ilonggot *pamagekan*). The first is a yoke-shaped bar with a small handle at its middle, which is held by the left hand as the right hand strikes one side of the bar, producing a ringing tone. A set consists of three such bars each played with a different rhythm. Hundreds of sets of *bangibang* may be played together by men from several villages when a violent death has occurred, or as part of other ceremonies. The percussion beams are played in pairs, one long and one short. The long beam is laid on the ground, and rhythms are played on it by five people, each with two sticks. At the same time, a drone is played on the shorter beam by one person. The music is used in an *anito* (spirit) ceremony to drive away malevolent spirits

5. Kalingga balingbing (bamboo buzzer)

from the sick. Percussion beams of another type are used by the Tiruray. They are played, suspended, by two men; one beats an ostinato on a single beam, while the other plays the melody on two or three beams.

Chordophones. Zithers form an important class of chordophone in the north. The bamboo polychordal tube zither (Kalingga *kolitong*, *kulibit*; Ilonggot *kolesing*; Isneg *kuritao*, *uritang*) has from 5 to 11 strings, which are plucked by fingers of both hands (thumb plus the two or three fingers next to it). The tones are distributed between the right- and left-hand fingers to form a melodic ostinato through the alternate use of left and right hands. The parallel-string tube zither (Kalingga *dungadung*; Isneg *pasing*; Negrito *tabengbeng*) has two strings joined in the middle by a bridge or platform that is beaten with a stick, producing deep sounds (fig.7). The board zither (Ifugao *taddeng*; Ibaloi *kaltsang*) among the Ifugao has three strings of bamboo or wire, or three iron strands, which are tapped to imitate gong sounds, while among the Ibaloi it has four wire strings that are plucked.

The musical bow of the Agta Negrito of eastern Luzon can have as its resonator the performer's mouth. Alternate plucking on the two strings by fingers of the right and left hands produces a simple rhythmic pattern of three tones. Other types of musical bow use different resonators: a tin can pressed against the chest or a pig's bladder resting on the two bow-strings.



The Ilonggot have a three-string fiddle (called *kulibao*, *gisada* or *litlit*) that is similar to but larger than the three-string fiddle (*gitgit*) of a southern Philippines group, the Hanunoo.

In addition to the above chordophones, some northern groups have adopted European-type instruments. The violin (Kalingga *biyolin*) is used to play song melodies; the guitar (Negrito *gitara*) is used to play one or two chords in a fast rhythm to accompany dances that imitate animal movements.

Aerophones. In addition to various types of flute, northern aerophones include panpipes, a stopped-flute ensemble and reedpipes. In the lip-valley or deep-notched flute (Kalingga *tongali*, *paldong*), the shape of the rim and the number (three plus one), size and placement of stops correspond exactly with those of lip-valley Mindanao flutes; the northern flute is shorter, however. The duct flute with an internal plug is found among the Ifugao (*ongiyong*), Ibaloi (*kulasing*), Kalingga (*olimong*) and Balangao (*kaleleng*). The *kulasing* and *olimong* have three plus one stops. The 'chip on tube' flute with external duct (Ilonggot *tolali*; Negrito *bulungudyung*) is arranged so

6. Set of three bangibang (percussion yoke-bars) of the Ifugao

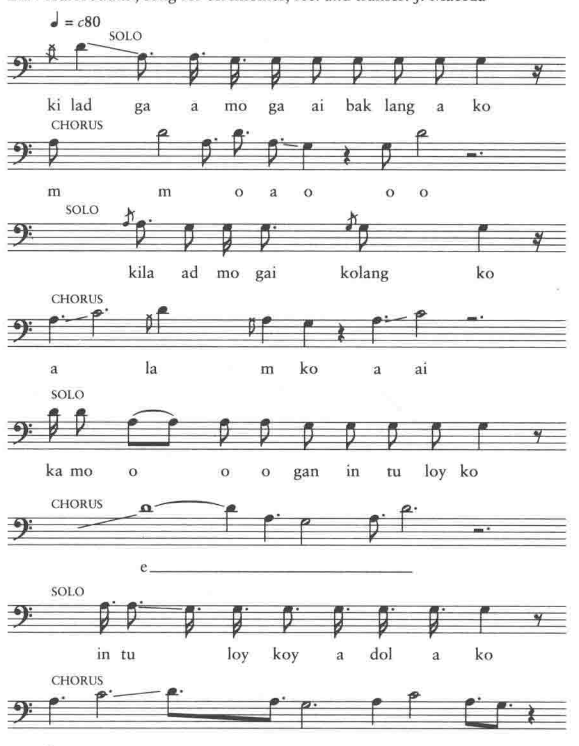
7. Tube zither showing the two parallel strings joined in the middle by a bridge or platform

that between the chip and the tube a small passage allows the flow of air against the edge of a hole into the tube chamber (see fig.15*b* below). The *tolali* and *bulungudyung* have three plus one stops.

The main characteristic of the bamboo nose flute (Bontok *kaleleng*; Isneg *bali-ing*; Kalingga *tongali*, *enongol*) is that its blowing-hole is bored through a bamboo node (fig.8). It has three plus one stops, and melodies played on it usually have a descending pattern. This type of flute is found almost nowhere else in the Philippines (though one has been seen in Palawan), a limited distribution that invites comparison with nose flutes elsewhere in South-east Asia.

The panpipes (Bontok *diwdiw-as*, *diwas*), a raft of five tubes, are no longer played in the Cordillera. The stopped-pipe ensemble (Kalingga *saggeypo*), comprising a set of five pipes, one for each player, may occasionally be played; its music simulates that of the *topayya* gong ensemble. The *hupep* of the Ifugao is an idioglot single-reed pipe about 7 mm in diameter and 24 cm long.

(iii) Vocal music. Among peoples of the Cordillera in Luzon there are no generic terms for song, only names for particular song forms. Among the Ibaloi, the *badiw* (leader-chorus singing) is the principal vocal form. It is used in ceremonies for the dead (*du-udyeng*, *ta-tamiya*) as well as on such occasions as weddings, *peshit* (anniversary feasts celebrated by rich couples) and thanksgiving rituals. In a *du-udyeng*, which may last for several nights, the *badiw* singers may speak in riddles, invite spirit-relatives to drink rice wine with the living or talk of properties left by the deceased, of humorous conversations between a song character and the evening's host and of plants and animals related to the deceased's entourage. At a *peshit*, the lines of verse in the *badiw* extol the virtues of the man being honoured. Leading members of each village take turns in these praise songs. The leader's verses are extemporized, but his melody follows a traditional pattern. The chorus repeats the last syllables of his lines in slower rhythm, and as it finishes its own melody, the leader must be ready with his next line (ex.4). This continuous opposition between leader and chorus lasts a long time, testing the soloist's creative ability and imagination.



8. Tongali (bamboo nose flute) of the Kalingga people

Among the Bontok, one of the most important feasts is the *chuno*, the last of three ceremonies to commemorate the wedding of rich citizens. Another is the *ap-apoy*, held after the planting season to prevent calamities befalling the community. The *kay-aya* celebrates a war victory, and the *siyenga* is a curing ritual. The leader-chorus song form is used for all these occasions; specific songs include the Bontok *churwassay*, a funeral song for an older person who has just died, which uses a characteristic singing technique in which meaningless vowels are repeated many times before a word is formed (ex.5).

With the Kalingga, the *dango* and *ading* song forms are traditional in important ceremonies such as peace pacts, weddings and discussions, and are used to express a declaration, greeting or statement related to the occasion. The restrained manner of singing, the economy in the use of notes and the formality of the event indicate these songs' importance in the society. In the *ading* (ex. 6) slides, uncertain pitches, trills, stops and speech-like sounds are particularly characteristic. After the initial

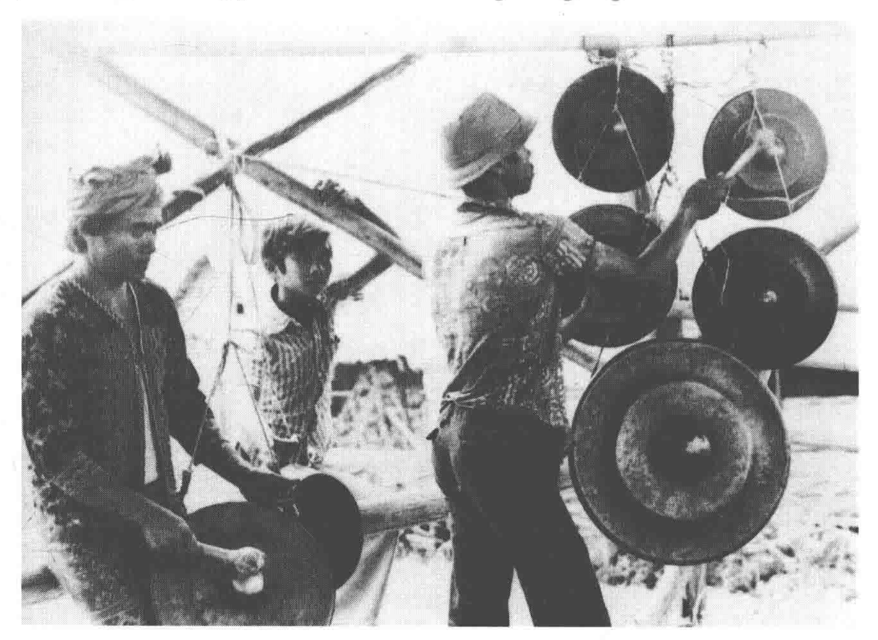
song declarations and discussions, other types of song follow, including the *ullalim* (epic), *ogayam* (ballad), *balaguyos* and *salidomay* (popular songs). Other occasions for singing occur in curing ceremonies (*dawak*), laments for dead relatives (*ibil*, *alba-ab*), lullabies (*owawi*) and others.

2. Southern Philippines.

(i) General. Pre-Western traditions in the southern Philippines exist in the large island Mindanao, the Sulu archipelago and two smaller western islands, Palawan and Mindoro. In addition, in the islands of Panay and Negros, there are isolated minority groups who have retained their pre-Hispanic musical heritage though surrounded for four centuries by peoples who have become musically Westernized. Indigenous peoples are more widely scattered in these islands, while Muslims are centralized in western Mindanao and the Sulu archipelago.



Instruments found only among Islamic groups are principally the *kulintang* (gong-chime), *gabbang* (xylophone), *saunay* (single-reed aerophone), *biola* (violin) and *gandang* (two-headed drum). Not all these instruments may have been brought to the islands by a Muslim culture; their presence may be the result of trade relations that the coastal people of Mindanao and island dwellers of Sulu had with several islands in Indonesia and Malaysia. The most common instrument among the Muslim groups is the *kulintang*, generally played in a group with other instruments. The *saunay* is a solo instrument, and the *gabbang*, though sometimes treated as a solo instrument, generally accompanies the *suling* (ring flute), the *biola* (violin) or a secular song (fig.9).

Instruments found among both indigenous peoples and Muslim groups are the *agung* (suspended bossed gong with wide rim), *palendag* (lip-valley flute), *suling* (ring flute), duct flute with a chip on its ledge, *kudyapi* (two-string lute), *kubing* (jew's harp), *kagul* (percussion beams) and the tube zither with parallel strings. The Agung with a wide, turned-in rim and high boss has the widest distribution among bronze instruments, found among practically all groups in Mindanao, Sulu and Palawan (fig.10). The indigenous groups do not generally use the *kulintang* except as an instrument borrowed from the Muslims. The most developed *agung* ensembles are those of the Tiruray, Tiboli and Bagobo; they are also played in pairs or in simple ensembles among the Manobo, Mansaka, Bukidnon, Mandaya, Subanen, Palawan and Tagbanwa. An interesting *agung* ensemble without a melody is found among groups in Palawan and Mindoro; its musical interest lies in timbral qualities and rhythmic counterpoint.

The polychordal tube zither is played only by the indigenous groups of Mindanao, while the parallel-string tube zither is used by the Maranao and Magindanao. Among the Tiruray, the polychordal tube zither is played by two women: one, holding one end of the tube, plays a melody on three strings, while the other, grasping the other end of the tube, plays a drone on two strings. Among the Tiboli and the Palawan the zither may also be played in unison with a *kudyapi*. Other instruments that appear only among indigenous groups are the single-string spike fiddle, stamping-tube, stamping-stick, log drums and board drums. A single-string spike fiddle is found among the Bilaan, Higaonon, Bukidnon and the Manobo. The stamping-tube was reported among the Manobo of Agusan; the stamping-stick among the Bukidnon is used agriculturally, to bore holes in which to drop seeds. The log drum of the Tagakaolo is similar to the board drum with jar resonators of the Yakan, which is suspended from a frame with the board lying a few centimetres above the ground. Two inverted jars, one big and one small, are suspended from the frame, their mouths barely touching the board. Two performers beat a steady rhythm in unison on one end of the board, while a third

9. Gabbang (bamboo-keyed xylophone) and biola (violin) of the Samal people, Zamboanga

10. Agung (bossed gong) ensemble of the Tagakaolo people, Mindanao Island

performer improvises another rhythm with changing patterns at the other end of the board.

(ii) Gongs and gong ensembles. As in the north, bronze or brass gongs are the most important instruments, but in the south they are all bossed (with a protrusion in the centre). The presence of the boss and the structure of the gongs themselves both account for a difference in musical aesthetics between the north and the south: gongs in the south make round, full sounds in contrast to the diffused, unfocussed tone qualities of gongs in the north. Suspended bossed gongs are older instruments than the smaller gongs laid in a row (KULINTANG) that were introduced in Sulu and in a limited area in southern Mindanao, probably through trade and commerce with the outside world. The arrival of *kulintang* in the Philippines, after hanging gongs, means that the musical concepts of 'melody-producing' gongs-in-a-row and 'punctuating' suspended gongs were initially separate entities, becoming fused over time. The music of the *kulintang* in the south is built on scales with identifiable pitches in contrast to the indefinite pitches of the northern flat gongs. Sound on bossed gongs (*agung*) may be cut off quickly by damping the boss with the left hand to produce short, drum-like effects. The lighter gongs of the Tiruray, with high-pitched sounds, are allowed to vibrate freely, while the heavy, suspended gongs of the Magindanao (*gandingan*) vibrate in long, low sounds.

While men are assigned to play the heavy gongs, adolescent or young boys and girls play the melody on the *kulintang*. In the town of Dulawan, boys practise it as a sport, competing with each other in virtuosity and musical skill; they make rhythmic permutations on three or four suspended gongs as a test of speed and endurance. In other towns adept women display their individual improvisational styles. Some *kulintang* are made in Lanao and Cotabato, but the older hanging gongs (*agung*) may have come from Kalimantan, Sarawak or Sabah, while the *Kulintang* gongs in a row probably came from the Moluccas, with whose chiefs the Magindanao Sultanates were associated politically. The *agung* (with a high boss and a wide rim) are the most valuable gongs; different types are widely distributed among Islamic and other groups in Mindanao, Sulu and Palawan.

Gong-chime ensembles, known as *kulintang* among the Badjao, Magindanao, Maranao, Samal, Tausug and Yakan, vary from group to group in their exact composition, the common element being the presence of the gong-chime, *kulintang*, itself (fig.11). The five instruments in the Magindanao *kulintang* ensemble are the *kulintang* (a gong-chime of eight gongs), *babendil* (gong with turned-in rim), *agung* (one or a pair of larger gongs with wide turned-in rims), *gandingan* (two pairs of gongs with narrow rims) and the *debakan* (cylindrical drum). The *babendil* is played with one or a pair of sticks striking its rim to produce thin, metallic sounds. The *agung* gives off short, dampened sounds, in contrast to the *gandingan*, which produces long, low vibrations. The *debakan* adds the sharp sounds of a struck membrane. (For melody of the *kulintang* and ostinatos of the other four instruments, see ex.7). In the Maranao *kulintang* ensemble the *gandingan* is absent. With the Yakan, not only is the *gandingan* absent, but the *babendil* is replaced by a lone bamboo pole laid on the ground and struck with two sticks as a percussion instrument. Among the Tausug and Samal the *kulintang* is accompanied by a double-headed drum (*gandang*) and suspended gongs *tunggalan* and *duahan*. The *duahan* consists of two gongs, one of which (*buhugan* or *buahan*) has a narrow rim similar to that of the Magindanao *gandingan*; the other is a wide-rimmed *pulakan* similar to that of the Magindanao and Maranao *agung*. The Badjao *kulintang* is accompanied by two *agung* and a cylindrical drum.

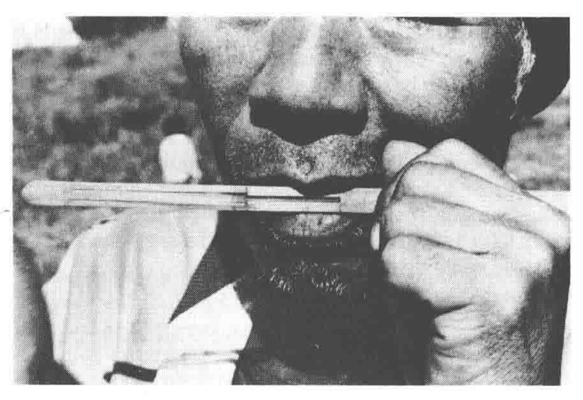
In all these ensembles it is the *kulintang* that carries the melody. Compositions for the *kulintang* are based on rhythmic modes. Three modes (*duyug*, *sinulug*, *tidtu*) used by the Magindanao are sometimes similar to those used by other groups in name, structure or both. The Magindanao mode name *sinulug* is similar to *sinug*, a term used by the Tausug, but the rhythms of the two are not identical. The Magindanao *tidtu*, an iambic rhythm

11. Kulintang ensemble of the Magindanao people, Mindanao Island, with (from left to right) gandingan and babendil (gongs), debakan (cylindrical drum), agung (bossed gong) and kulintang (gong-chime, front)

with beats in the ratio 2:3, appears not only in the Sulu and Mindanao areas, but also in other areas among non-Muslims as a rhythm without a particular name. Among the Magindanao, melodic development on the *kulintang* is based on nuclear tones; permutations and variations on two or three tones are the performer's main concern. Yakan *kulintang* music includes the continuous, extremely fast repetition of a simple melodic pattern. In Tausug *kulintang* compositions the *kuriri* pattern is used; it consists of descending melodic passages and fast repeating rhythms, while among the Maranao, loudness, virtuosity in handling of the mallets and a kind of dialogue between instrumental parts are important characteristics of *kulintang* pieces.

Gong ensembles with only suspended gongs consist of *agung*-type gongs with wide turned-in rims. Among the Tiruray the *agung* ensemble is made up of five small light gongs with delicate sounds, played by five men or women. The smallest, *segarun*, leads the group with a steady beat, and the others follow with their respective rhythms (ex.8). This ensemble is played at weddings, big gatherings and meetings to entertain visitors. The Bagobo and Tagakaolo *agung* ensemble usually consists of eight wide-rimmed gongs suspended from a beam in vertical rows and played by two people. A standing man plays the melody, while another man or woman, kneeling, taps an ostinato on the lowest-hung, lowest-sounding gong. After a certain time, the melody performer stops playing, but the ostinato player continues. The melody performer starts to dance in small steps away from the gongs, following the ostinato rhythm of the remaining gong player. Eventually the dancer returns to his original position and again plays his gongs, this time in a faster tempo. Among the Palawan and Tagbanwa the *agung* ensemble includes two small

Ex.7 *Duyug* mode, *kulintang* ensemble, Magindanao; rec. and transcr. J. Maceda (Maceda, 1964)

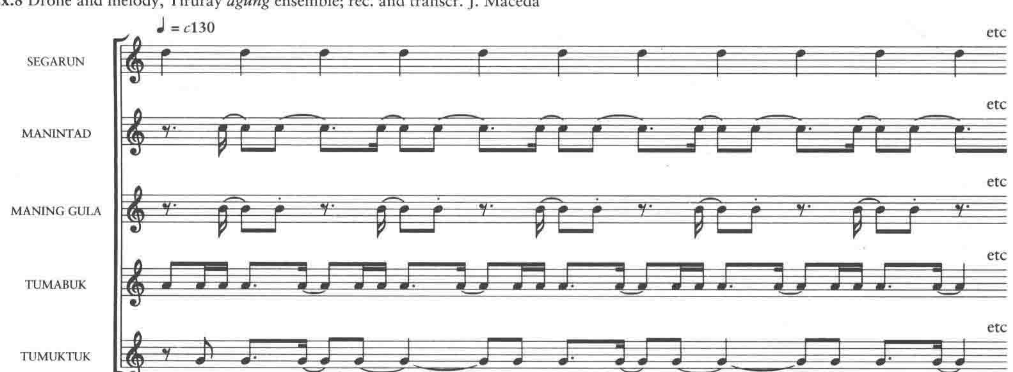


suspended gongs (*sagung* among the Tagbanwa), one, two or three big suspended gongs (*agung*) and one small cylindrical drum. In the Palawan ensemble there is another pair of smaller gongs (*sanang*), each played by a performer with two sticks. There is an alternation of emphasis between the two performers: while one plays his rhythmic permutations loudly, the other plays his beats softly and without permutations. Together with the other instruments in the ensemble they create complex cross-rhythms. The Tagbanwa *agung* ensemble is similar to that of the Palawan, except that the music of the smaller pair of gongs (*babendil*) is not so developed. Among the Subanun an *agung* 'ensemble' is one gong (with wide turned-in rim) played by two performers: one player beats the boss with a padded stick and damps it with his knee; the other taps the rim of the gong with two sticks, producing a thin, contrasting sound.

The Hanunoo *agung* ensemble consists of two light gongs played by two men squatting on the floor: one man beats with a lightly padded stick on the bosses of the two gongs, the other strikes with a stick on the rim of one of the gongs. Both performers play in simple duple rhythms. The Magindanao *agung* ensemble consists of one *agung* (gong with turned-in rim) and a *tambul* (cylindrical drum). The *tambul* maintains a fast, steady, rhythmic pattern while the *agung* provides a counterpoint with its mixture of slow and fast patterns.

(iii) Solo instruments and other ensembles. Most instruments in the south are made of bamboo and are blown, plucked or struck; with bamboo flutes, the shape of the mouthpiece, number of holes and size of the bamboo may be clues to their distribution in South-east Asia generally (Maceda, 1990). Instruments whose sounds are produced by other materials (e.g. wood, skin, vine, bean pod, wire, seashell) extend the range of sound qualities. Ensembles without gongs comprise a combination of two instruments (e.g. tube zither and two-string lute), or two persons sharing different parts of the same instrument (e.g. bamboo zither), or a song with instrumental accompaniment (e.g. xylophone and voice), or two instruments of the same type (e.g. a pair of two-headed drums) or a variety of instruments.

(a) Idiophones. The jew's harp, *kubing*, is widespread among groups in the southern Philippines and is known by this name among the Bagobo, Bilaan, Bukidnon, Magindanao, Mansaka, Palawan, Subanun, Tiruray and Yakan (fig.12). Its bamboo filament is vibrated by plucking. It is made from various kinds of bamboo in many sizes and shapes, producing various sounds and dynamics. Some jew's harps are barely audible, with quick sound-decay; others twang loudly and vibrate for a long time, like a reed. Colour and timbre can also vary according to the tongue placements of the performer. Plucking the jew's harp with the tongue placed near the alveolar ridge produces vibrations similar to the vowel 'i'; other vowels can be suggested as well, using other tongue placements. The jew's harp can thus simulate words, phrases, simple conversations and speeches. Using this instrument young boys and girls 'converse' in front of their elders without being understood by them.



12. *Kubing (jew's harp) of southern Mindanao*

The Bukidnon *talupak* or stamping-stick is a chordophone used as an idiophone. It is a bamboo tube zither having many parallel strings with a common fret attached at the upper end of the tube. A slit that almost divides the bamboo in half allows one side of the tube to flap against the other each time the instrument is struck on the ground to bore holes in which to plant rice seeds. Another instrument connected with rice growing is the *tagutok*, used by the Maranao. It is a bamboo scraper consisting of two sticks rubbed back and forth across a serrated bamboo tube to drive away animals from a field where rice is almost ready for harvest.

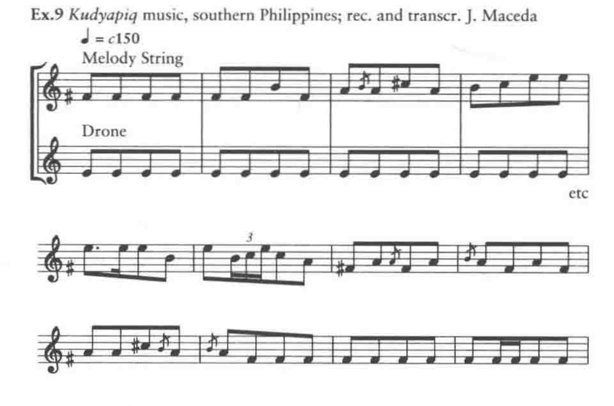
Other bamboo instruments of the south are the bamboo slit-drum (Maranao *agong a bentong*) and the trough xylophone (Tausug *gabbang*). The Maranao play two *agong a bentong* like *agung* in an ensemble with bamboo xylophone and cylindrical drum. The Tausug *gabbang* has about 16 to 19 bamboo keys tuned to a heptatonic scale with equal intervals. The melody is divided between the leading line (*ina*, 'mother') and a following line in the

Ex.8 Drone and melody, Tiruray *agung* ensemble; rec. and transcr. J. Maceda

lower register (*anak*, 'child'). As a solo instrument it is used for preludes to songs; it is also an important accompanying instrument for all secular songs and for the *biola*.

Two additional idiophones are the Hanunoo *buray dipay*, a bean-pod rattle used for merrymaking in ensemble with other kinds of instrument, and the *kalutang*, also found among the Hanunoo, percussion sticks played in pairs to produce harmonies of 2nds, 3rds or 4ths.

(b) Chordophones. The types of chordophone used in the south include lutes, zithers and fiddles. On the two-string lute, known as the *kudyapiq*, *kusyapiq* or *kutyapiq* among the Bukidnon, Magindanao, Maranao and Tagbanwa, one string provides a rhythmic drone (fig.13); the other has movable frets allowing melodies to be played in two different pentatonic scales, one containing semitones, the other anhemitonic (ex.9). Excellent soloists among the Magindanao of Cotabato play melodic patterns resembling those of *kulintang* melodies. Among these groups a *kudyapiq* may also be played with a *saluray* (bamboo tube zither), *kutet* (one-string fiddle) or *tumpung* (duct flute). A four-part ensemble consists of the *kudyapiq*, jew's harp, fiddle and flute.



Zithers include the polychordal tube zither (Tiruray *togo*; Bukidnon *tangkol*; Bilaan *sluday*, *sloray*; Mansaka *takol*; Ata *saluray*; Mangguangan *tangko*), which has an anhemitonic pentatonic tuning and on which melodic patterns are repeated over long periods (fig.14), and the parallel-string bamboo tube zither (Maranao *serongagandi*; Hanunoo *kudlung*; Mandaya *takumbo*; Subanun *tabobok*; Tagakaolo *katimbok*), which, like the northern Philippines *dungadung*, is also played by striking the bridge that connects the two strings. Among the Tiruray, two pairs of parallel strings are played with one stick. The Maranao instrument has a half-open lid on one end of the tube, struck to provide a sound quality contrasting with that of the resonating tube chamber.

The one-string fiddle (Mandaya and Manobo *duwagey*, *kogut*; Bukidnon *dayuray*, *dayuday*) is used to play melodies with quick triplet patterns. Some groups, such as the Tausug, have adopted a European-type violin, which they call *biola* or *biyula*.

13. *Kudyapiq (two-string lute) of the Maranao people, Mindanao, with (left to right) kubing (jew's harp), tumpung (duct flute) and saluray (tube zither)*

Ex.9 *Kudyapiq* music, southern Philippines; rec. and transcr. J. Maceda

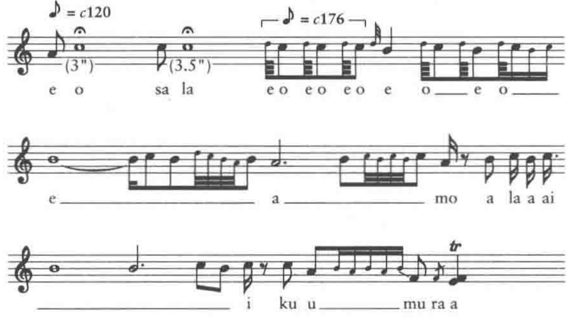
(c) Aerophones. Flutes are the most important class of aerophone in the south. The transverse flute (Hanunoo *lantuy*; Buhid *palawta*; Cuyunin, Batak and Tagbanwa *tipanu*) has six stops (five among the Hanunoo) and is tuned diatonically. End-blown flutes include notched flutes and various types of duct flute. The most widespread notched flute is the lip-valley or deep-notched type (Magindanao and Bagobo *palendag*; Tiruray *falendag*; Mansaka *parundag*), which generally has three plus one stops. The lips control and affect the air flow through minute changes and create a degree of tonal control and sensitivity not possible in flutes with differently shaped blowing-holes (e.g. the ring flute, *suling*). In addition, the Tagbanwa have a short notched flute with no stops (an example is held by the National Museum of the Philippines), whose native name has not been recorded.

The ring flute (Magindanao, Tiruray, Manobo, Bukidnon and Tausug *suling*; Maranao *inse*) is a type of duct flute whose sound is produced by adjusting the ring on the mouthpiece in relation to the blowing-hole. Among the Tausug the *suling* may be played in ensemble with the *biola*. With the Maranao, an ensemble consists of the *suling*, *kudyapiq*, jew's harp, bamboo zither and metal dish.

The duct flute (Hanunoo *pituh*) is diatonically tuned and has finger-holes but no thumb-hole. Transverse flutes among the Tagbanwa and Hanunoo (*palawta*) are diatonically tuned and have five or six holes. The other duct flutes in the south are defined by the position of the attached plug or chip which forms the duct. In the external-duct flute with a chip tied on to its rim ledge (Bukidnon *pulala*; Manobo *lantoy*), a narrow passage between the chip and the ledge allows air to be blown into the tube itself, producing a sound much like that of a whistle (fig.15*a*). A third type is the external-duct flute with a chip tied on to the tube of the flute (Hanunoo *bangsiq*; Magindanao *tumpung*; fig.15*b*). The *tumpung* here has three plus one stops.

Other types of aerophone in the south include trumpets and a single-reed instrument. The *budyung* is a bamboo trumpet found among the Hanunoo and Mandaya; among the Bukidnon the same word denotes a shell trumpet that is used as a signalling or call device. The single-reed pipe (Tausug *saunay*, *sahunay*) has six finger-holes and no thumb-hole. Its melody line is a continuous flow of changing pitches produced by circular breathing interspersed with mordents.

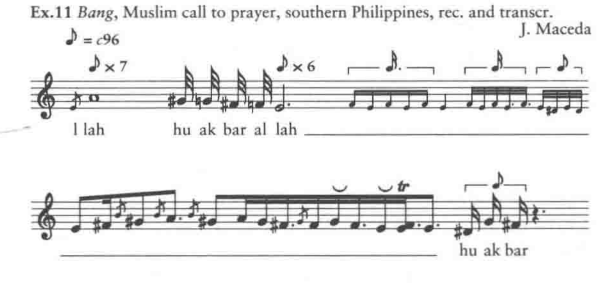
(d) Membranophones. Cylindrical drums with one or two heads are known in the southern Philippines. The *gimbal* of the Mandaya, Tagbanwa and Palawan is a



single-headed cylindrical drum played with two sticks, used as part of a gong ensemble or with other instruments.

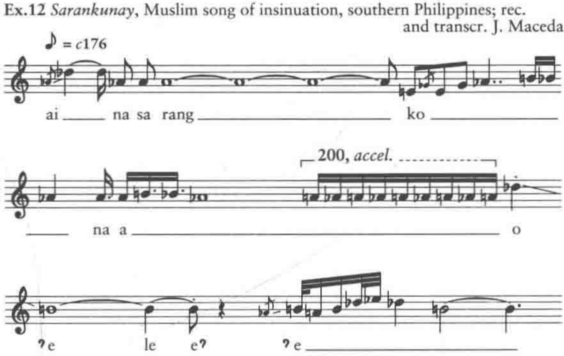
(iv) Vocal music. Indigenous and Muslim-influenced cultures in the south differ in the types of songs they sing and in the singing styles they use. The latter use both a tense, high-pitched style with complex melismas, as well as a relaxed style in the natural speaking range with less melisma. Indigenous groups prefer the relaxed style, and have in addition other techniques such as responsorial singing and songs imitating the sounds of musical instruments.

The Islamic musical tradition is represented by various song types. Among the Tausug, the melismatic style is exemplified in the *lugu*, highly melismatic solo songs sung in Arabic, mostly by women, for Islamic ceremonies (e.g. Ramadan and the birthday of Muḥammad) and local rituals such as weddings and funerals. Five songs of the *lugu* tradition are the *jikil*, *sail*, *tarasul*, *baat* and *langan bataq-bataq*. The *jikil* serves as a vehicle for virtuoso singing in competitions and entertainments; *sail* is used sometimes to mean the *lugu* song style used at weddings and wakes; *tarasul* are commentaries on verses from the Qur'an; *baat* are highly refined allusions to love; and *langan bataq-bataq* are lullabies with texts about love, nature and life. *Lugu* songs are sung in free tempo with weak or no metric beats; the melodic phrases seem slow because of the long held notes separating melismas from each other. Although few of the people understand Arabic, they value highly the refinements of *lugu* singing: women who study this tradition undergo personal training with a leading guru of the community. The Tausug use the second, more relaxed style for secular affairs such as entertainment at weddings and social gatherings. A male or female singer is generally accompanied by a *gabbang* and a *biola*. Texts are in Tausug rather than Arabic, and melodies are metrical. The *liyangkit* (ballad) is a metrical song sung in the lower register using two or three notes.



Among the Magindanao in Cotabato, a Muslim group, four characteristic types of song are the *tutol* (epic), *bang* (call to prayer), *sindil* (song of insinuation) and *bayok* (love-song). The *tutol* tells of the exploits of heroes like Rajah Indara Patra, a man of noble birth who makes fantastic flights to the palace of the clouds and fights with legendary monsters to save his people from destruction (see ex.10, the beginning of the epic in which a greeting to Allah is expressed in melisma, showing the use of long notes, trills, mordents, fast notes and a long descending melodic line). The *bang* is sung on Fridays and has the same function as bellringing in Christian communities of

Ex.10 Magindanao epic *Raja Indara Patra;* rec. and transcr. J. Maceda



the Philippines (see ex.11, in which another form of melisma with a long vocalise on a vowel is sung in a

Ex.11 *Bang*, Muslim call to prayer, southern Philippines, rec. and transcr. J. Maceda

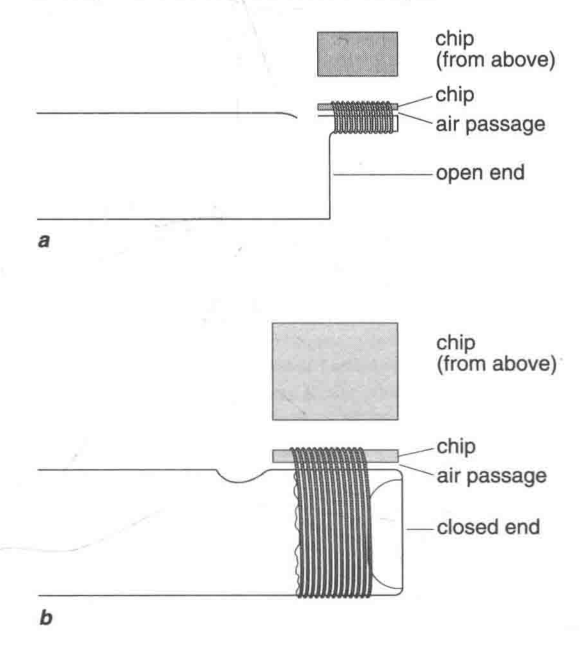
Ex.12 *Sarankunay*, Muslim song of insinuation, southern Philippines; rec. and transcr. J. Maceda

relaxed voice). The *bang* contrasts greatly with the strained technique used for the *sindil* (ex.12), in which vowel changes, microtonal variation and the bell-like quality of the voice give a sensual effect to the performance. In a performance recorded in 1954, one singer who had been trained by a visiting musician from the Near East sang the *bang* in a relaxed low voice, while another, trained in the local style, sang it in the same melismatic, high-pitched, strained manner used for secular songs such as the *sindil*. The *bayok* (ex.13), usually sung in the more

Ex.13 *Isaden*, Muslim *bayok*, love-song; rec. and transcr. J. Maceda

relaxed style by the women of the village, has a simple melodic line and more use of repeated tones, with a syllabically set text. Among the Maranao, however, *bayok* are more complex songs. Along with the *darangan* (a type of epic), they are the most popular song for weddings and festivities in Lanao; the singers are specialists who become centres of attraction at social gatherings where, as protagonists, they vie with each other in extemporizing allusions and double meanings, much to the delight of their audience.

Indigenous peoples make less use of the melismatic style; their songs are in a more syllabic style, centring on a few notes as in Western psalm singing (see ex.14, a Tiruray courting-song from western Mindanao). Among the Manobo, songs are metrical and imitate the plucking sounds of a bamboo zither. Leader-chorus singing prevails among the Tagbanwa: in one ceremony a woman leader sings and dances around jars of rice wine prepared for the



14. Saluray (polychordal tube zither) and kudlung (two-string lute) played by the Ata, eastern Mindanao

occasion and placed at the centre of the house; she tries to communicate with deities and invites them to join the festivity. As she dances a group of young girls follow her, and as she sings the chorus repeats the last syllables of her lines (ex.15). The Tagbanwa believe that when she falls into a trance spirits enter her body and through her suck the first wine from the bamboo tubes placed in the jars.

In a wine-drinking festivity, participants sing verses whose lines must rhyme and have certain numbers of syllables. Other songs use traditional prose texts. In both the verse and prose forms there are many metaphors and allusions; archaic words often provoke long discussions, even among older speakers, regarding the real meaning of certain words.

There are two types of courting-song among the Hanunoo: the *urukay* in eight-syllable verses accompanied by the *kudyapi*, a six-string guitar, and the *ambahan* in seven-syllable verses accompanied by the *gitgit*, a three-string fiddle.

Epic songs may be sung at a wedding, in gatherings to entertain guests or simply as evening entertainment for the villagers themselves. Epics are common in Mindanao, and Palawan, among the Manobo, Agusan and Bukidnon, and among the Mandaya, Mansaka and Bagobo groups whose tales describe the lives of the heroes Agyu, Tuwaang and Ulahingan. Epics may last one or more nights and are attended with keen interest. The singer performs either sitting or lying down. In the *manggob*, an epic among the Mansaka, the singing style requires extra vowels and syllables to be added to the words. These additions obscure the words themselves so that even a native speaker of the language who is unfamiliar with the epic will not be able to follow the story. Among the Palawan, epic melodies are long lines with the text sung syllabically and enunciated clearly; changes of tonal structure and pitch identify the various characters in the epic.

15. External duct flutes with (a) chip tied to the rim ledge, and (b) chip tied to the tube

Ex.14 *Lingung ṛasak*, Tiruray courting song; rec. and transcr. J. Maceda

Among indigenous peoples in Mindanao, some songs are accompanied by instruments such as the *kudlung* (two-string lute), *saluray* (tube zither; see fig.15 above) or *palendag* (lip-valley or deep-notched flute). Other song forms include debates, narrative solo songs, dance-songs and speech-like songs. Among the Magindanao some skilful whistlers using only tongue and lips can simulate difficult passages of flute melodies.

III. Western art music

1. Spanish period, 1521–1896. 2. American period, 1898–1946. 3. Independence, after 1946.

1. Spanish period, 1521–1896. With close to four centuries of rule over the Philippine archipelago, Spain left an indelible musical imprint and caused an almost complete obliteration of Asian musical traditions in some areas. The first Spanish soldiers brought priests, who taught Filipinos how to sing plainchant for Mass and other Christian services and how to play various instruments. These priests received musical training in Spain before coming to the Philippines; a few were composers of religious music. One of the first teachers known was the Franciscan Geronimo Aguilar, an excellent musician who started teaching in 1586. He was succeeded in 1606 by Juan de Santa Marta (formerly a tenor at Zaragoza Cathedral), who gathered 400 boys from different provinces and trained them in singing, playing and instrument-making at Lumbang (near Manila). After their training, these boys were sent back to their respective home towns, where they taught others.

In 1742 the Archbishop of Manila, Juan Rodriguez Angel, founded a singing school at Manila Cathedral. In the 19th century the school was known as Colegio de Niños Tiples (School of Boy Sopranos); it admitted boys of over six who could pass the entrance requirements. The curriculum was patterned after that of the Madrid Conservatory; singing teachers used the solfège book by Hilarion Eslava, and courses in harmony, composition, piano, organ and strings were given by a staff of clergy and laymen. Two other churches in Manila that taught music to young boys were the convents of S Agustin and S Domingo.

These and similar institutions elsewhere in the Philippines provided a large base of amateur and professional musicians who evolved a syncretic style using Philippine and Western elements. Musicians trained at these schools included the pianists Antonio Garcia (1865–1919), Hipolito Rivera (1866–1900) and Ramon Valdes (*d* 1902); the violinists Andres Dancel (1870–98), Cayetano Jacobe (*fl* 1893), Bibiano Morales (*b* 1872) and Manuel Luna y Novicio (1858–83); and the composers José Canseco jr (1843–1912), Simplicio Solis (1864–1903), Fulgencio Tolentino (*fl* 1887), Julio Nakpil (1867–1960) and Julian Felipe (*fl* 1898).

The church schools taught mainly religious music. The most famous composer of church music was Marcelo Adonay (1848–1928), whose works show the variety of common musical forms used by friar musicians at that time. Besides liturgical settings, Adonay's works include a descriptive fantasy, *The Tarumba of Pakil*, for chorus and brass band, using a native Philippine setting to honour the Virgin Mary, and *Rizal Glorified*, a hymn with orchestral accompaniment in praise of a national hero.

In Philippine provinces new musical forms developed around the new religious and secular activities. The *pasyon* is a chanted story of the Passion, sung in the vernacular during Lent; the *santa-cruzan* and *flores de mayo* are annual celebrations with special songs for the Blessed Virgin Mary, and the *dalit* is a mournful plaint in her honour. Secular songs include the *tagulaylay*, a recitative lament; the *awit*, a chanted story based on the crusades; and the *kumintang*, a war song, now known as

a love song. Stage plays that developed are the *moro-moro*, with a stereotyped theme depicting encounters between Muslims and Christians; the *duplo*, a form usually performed during the ninth day of a series of prayers; the *cenaculo*, a drama on the Passion and death of Christ; and the *carillo*, a shadow play with suspended cardboard figures.

In Manila and nearby provinces, literary musical organizations that appeared in the late 19th century presented a wide range of light musical programmes, concerts, operas, literary and brass band contests. Operas found special favour among a cosmopolitan audience; Italian opera companies that toured the orient made long visits to Manila and exerted such a strong influence that airs from *La traviata*, *Rigoletto*, *William Tell* and *Poet and Peasant* became popular household tunes.

As Spain ruled the islands through Mexico, there were some Mexican as well as Spanish and European influences on Philippine folk music. The *cariñosa*, *pandango*, *polka*, *dansa*, *rigodon* and other dance forms of the Philippines show traces of the Spanish habanera, jota, tango and fandango, and even of the French *valse* and rigaudon. The *kundiman*(love song) and the *balitao* (serenade or dance) are native Philippine versions of 19th-century European musical genres. The instruments used in the *rondalla* (plucked string orchestra) – the *banduria*, *laud*, *octavina*, *guitara* and *bajo* – are adaptations of European and Mexican string instruments. One of the few bamboo organs constructed in the 19th century exists in Las Piñas (near Manila), built in 1818 by the Augustinian Diego Cera.

The Revolution of 1896 against Spain incited a sense of nationalism among composers, who collaborated with Tagalog playwrights to write zarzuelas depicting Philippine life and culture. The libretto for the first operetta, *Sandugong panaginip* ('The Dream Pact'), was written by Pedro A. Paterno (1858–1911) with music by Ladislao Bonus (1854–1908). Other zarzuela composers included Francisco Buencamino (1883–1972), Juan de S. Hernandez (1881–1945) and José A. Estella (1870–1943), who wrote music for *El diablo mundo* to a libretto by Rafael del Val. Another well-known play, *Walang sugat* ('Unhurt'), was written by Severino Reyes (1861–1942), with music by Fulgencio Tolentino.

2. American period, 1898–1946. The public co-educational system introduced by the Americans facilitated the teaching not only of Philippine but also of foreign folksongs, which quickly spread throughout the whole country. American jazz and film music gained favour among the younger generation of the upper middle class. As regards European classical music, new methods of piano teaching were introduced by Baptista Battig, a German Benedictine missionary who had studied with Ludwig Deppe. She taught the piano at the music school (founded 1908) of St Scholastica's College for women, where her influence was lasting. The Conservatory of Music (founded 1916) at the University of the Philippines helped to raise standards of performance and to increase public appreciation for European classical music. The first two directors of the school, Wallace W. George and Robert L. Schofield, were succeeded in 1926 by Alexander Lippay, a Viennese conductor and composer who introduced changes in the curricula and appointed European artists as members of staff. He resigned in 1931 to found a new school, the Manila Academy of Music. He also helped to organize and develop the Manila SO, which became disciplined and highly proficient under his direction. The conservatory continued under Francisco Santiago (1889–1947), its first Filipino director, who together with Nicanor Abelardo (1893–1934) and Antonio Jesus Molina (1894–1980) formed a triumvirate of composers well known for their nationalism, teaching and creative work. The works of other composers, Bonifacio Abdon (1876–1944), Buencamino, Estella and Hernandez, showed the prevailing musical taste of that time.

In 1903 the Philippine Constabulary Band, which continued a long tradition of brass bands, was founded under the direction of Walter H. Loving (*fl* 1903–15; *d* during the Japanese Occupation, 1942–5). It won an international band contest at the St Louis Exposition (1904), participated at the inauguration of President William H. Taft (1909), the first governor-general of the Philippines and, in 1915, performed at the Panama Canal Exposition, under the baton of Pedro B. Navarro (1879–1951).

The first Filipino artists to gain recognition abroad were the singers Jovita Fuentes (1905–78), Isang Tapales, Mercedes Matias and José Mossegeld Santiago-Font, and the violinists Ramón Tapales (1906–95), Ernesto Vallejo (*d* 1945) and Luis Valencia (1912–82). A new interest in native Philippine music was encouraged by Jorge Bocobo, president of the University of the Philippines, who in 1924 created a research committee consisting of Francisca Reyes-Tolentino (1899–1933), Francisco Santiago and Molina and Antonino Buenaventura (*b* 1904), which travelled over the main islands and collected folksongs and dances.

The occupying Japanese discouraged jazz and the music of the allied nations, favouring the performance of Philippine and other Eastern musical forms. Prizes were given for compositions using native themes; Filipino soloists were encouraged to give concerts. Alfredo Lozano (*b* 1912) organized the New Philippine SO, composed entirely of Filipino musicians. Various Filipino conductors gave concerts, including Francisco Santiago, who presented an all-Philippine programme. One of the few music schools that remained open during the war was the Philippine Conservatory of Music (affiliated with the Philippine Women's University), which was directed by the singing teacher Felicing Tirona (*d* 1952).

Although Japanese music was played almost daily on the radio, and the works of the Japanese composer Koszak Yamada were performed in a special concert, Japanese music had no effect on the style and content of Philippine music.

3. Independence, after 1946. Philippine music showed a growth of cultural consciousness and nationalism after independence. The number of music schools increased greatly, offering BMus courses in the piano and organ, string and wind instruments, singing, theory, composition and music education; some offer an MMus.

Several organizations were founded to foster the development of music. The National Music Council, an agency of the UNESCO National Commission of the Philippines, organized the Regional Music Conference of South-east Asia in 1955. This meeting was followed in 1966 by a symposium on the musics of Asia, in which musicians from India, Indonesia, Ceylon, China, Japan,

Vietnam, Thailand and the Philippines, as well as from the West, participated. Founded by Jovita Fuentes, the Music Promotion Foundation of the Philippines was created in 1956 to promote the development of music and musicians in the country through grants, commission awards and scholarships. Its functions were taken over by the Cultural Center of the Philippines in 1986. The Manila Symphony Society continued to support its orchestra, which amplified its concert activities under the direction of Herbert Zipper; subsequent music directors were Oscar Yatco (from 1970) and Sergio Esmilla (until the mid-1980s, when the orchestra disbanded owing to financial difficulties). Among many other active performing groups are the National PO, the Filipino PO, the Philippine Choral Society, the Philippine Madrigal Singers, the Opera Guild of the Philippines and the Pangkat Kawayan (bamboo orchestra). The Philippine PO, established in 1982 and subsidized by the Cultural Center of the Philippines and the Philippine Philharmonic Society, originated as the CCP PO, founded in 1973 out of the Filipino Youth SO, which was formed in 1946. The Philippine Youth Orchestra was created by the University of the Philippines in 1974, and is subsidized by the Cultural Center.

The League of Filipino Composers was established in 1955, with 11 charter members: Antonino Buenaventura (*b* 1904), Rodolfo Cornejo (1909–91), Bernardino Custodio (*b* 1911), Felipe de Leon (1912–92), Lucrecia Kasilag (*b* 1918), Antonio Molina, Eliseo Pajaro (1915–84), Hilarion Rubio (1902–85), Lucino Sacramento (1908–84), Lucio San Pedro (*b* 1913) and Ramón Tapales (1906–95). The league holds annual music festivals that feature new works. A younger generation of composers includes Laverne dela Peña (*b* 1959), Jonas Baes (*b* 1961), Conrad del Rosario (*b* 1958), Kristina Benitez (*b* 1945), Arlene Chongson (*b* 1959) and Virgina Laico-Villanueva (*b* 1952). Popular composers and film music arrangers include Francisco Buencamino jr (*b* 1916), Miguel Velarde jr (*b* 1913), Ariston Avelino (*b* 1911), Restituto Umali (*b* 1916) and Tito Arevalo (*b* 1911). The ethnomusicologist José Maceda (*b* 1917) has collected and studied the musics of many ethnic groups throughout the Philippines and in parts of south-east Asia; he has also composed a number of avant-garde compositions using native materials.

The Philippine Women's University sponsored the Bayanihan Folk Arts Centre's extensive collection (founded 1957) of indigenous instruments and tape recordings of various ethnic musics of the Philippines for use by the faculty in lecture recitals. From 1958 the Bayanihan Dance Company, through its many international tours, has made Philippine culture known abroad.

The Cultural Center of the Philippines (inaugurated 1969) was designed to serve as a showcase for works by Philippine artists. Music, dance, drama and visual art of various styles have been presented in the centre's national and international festivals. The National Music Competition for Young Artists was established in 1973 to develop and promote Philippine music and discover young musical talent through regional and national competitions and festivals. The Filipino Society of Composers, Authors and Publishers was founded in 1965. For music teachers there are the Philippine Society for Music Education (1971) and the Piano Teachers Guild of the Philippines (1973).

The music colleges of the University of the Philippines, the Philippine Women's University, the Silliman University and the Asian Institute for Liturgy and Music all have staff trained in Western techniques and native music, and conduct courses in Philippine and Asian music. The Philippine Music Ensemble was established in 1983 by teachers and students of the PWU College of Music, to preserve and disseminate Filipino music of all kinds. Its four sections consist of a Muslim gamelan, a chorale, an *angklung* ensemble and a guitar quartet.

IV. Popular music

1. Early sources. 2. The emergence of Filipino pop. 3. The contemporary situation.

1. EARLY SOURCES. Filipino popular music may be traced to songs sung in the course of everyday living: work, war and drinking songs, lullabies and ballads. Western contact in 1521 brought Spanish colonization and Christianization to the islands; this produced musicians trained in the performance of Western music and resulted in new forms of music adapting Western idioms (e.g. jota, habanera and valse), which became the accompaniment to indigenous dances at town fiestas and celebrations.

After three centuries, Spanish occupation gave way to the American period (1898–1946), the influence of which is still strongly felt. Early in American colonial rule the *kundiman* or Filipino love song reigned supreme. Also prevailing were songs from the *sarswela*, an adaptation of the Spanish zarzuela. These musical plays, depicting love of country in time of revolution or espousing traditional values over encroaching foreign customs, waned with the establishment of dance-hall cabarets, musical reviews and vaudeville.

Radio, cinema and the American recording industry all aggressively promoted American popular music; by the 1920s Filipino bands were playing foxtrots, charlestons and tangos. Nicanor Abelardo, revered as one of the composers who raised the *kundiman* to the level of art song, led one such group, playing at the cabaret at night and teaching at the University of the Philippines College of Music by day. Traditional folksongs arranged in dance rhythms were in the repertory, as were movie themes popularized through radio and variety shows. At this same time, recording companies such as Victor and Columbia recorded *kundiman* and *sarswela* songs by Francisco Santiago, Constancio de Guzman and Abelardo.

American music was banned during the Japanese occupation, but when the Americans returned in 1945 the euphoria of liberation reinforced further the Filipino fascination with Americana. In the 1950s and 60s American popular culture was so strong that performers were often gauged on how well they could copy US singers, with contests for the Filipino counterparts of US pop stars. Philippine pop music by then meant Western pop, and it eventually incorporated the whole range of Western styles.

2. THE EMERGENCE OF FILIPINO POP. Despite the seemingly absolute reign of Western pop music, small pockets resisted the trend. Villar Records, founded in the early 1950s, recorded over 500 albums and 300 singles of *kundimans*, folksongs and local pop songs, including the well-known *Dahil sa iyo* ('Because of you'), written by Mike Velarde, the composer Antonio Maiquez's *Sapagkat kami ay tao lamang* ('For we are only human')

and Manuel Villar's *Diyos lamang ang nakakaalam* ('Only God knows').

In the 1960s pop idols who had begun by singing foreign songs (exemplified by Nora Aunor and Eddie Peregrina) began recording original compositions with English lyrics and forms. Foreign songs were also translated into Pilipino: Celeste Legaspi's highly acclaimed 1975 concert at the Cultural Centre of the Philippines, for example, featured Cole Porter, Burt Bacharach and Jim Webb songs translated by the poet Rolando Tinio.

By the 1970s the desire of composers to produce truly Filipino music that would find acceptance among the young found expression in *Ang himig natin* ('Our music') by Joey Smith and the Juan de la Cruz Band. Considered the first *Pinoy* (slang for Filipino) rock piece, it spoke of the lonely struggle of Filipino musicians for acceptance by an audience addicted to foreign music, arguing that Filipinos would only achieve true unity when they could appreciate and sing their own songs.

In 1974 the band Hotdog achieved success with *Ikaw ang Miss Universe ng buhay ko* ('You are the Miss Universe of my life') and *Pers lab* ('First love'), the first songs in the style that later became known as the Manila Sound, characterized by sentimental subjects and lyrics in Taglish, the urban student argot that combines English and Tagalog.

This new movement was facilitated by a Broadcast Media Council memorandum requiring all radio stations to play at least one Filipino composition per hour (this later became two and, in 1977, three per hour). The first Metro Manila Popular Music Festival was also organized in 1974; Ryan Cayabyab's *Kay ganda ng ating musika* ('How beautiful is our music') won the top prize, but the most record sales were generated by *Anak* ('Child') by Freddie Aguilar, and Heber Bartolome's *Tayo'y mga Pinoy* ('We are Filipinos'). *Anak*, based on the familiar Filipino theme of children risking pitfalls by not heeding their parents' advice, enjoyed unprecedented success and was translated into several foreign languages. The humorous *Tayo'y mga Pinoy* criticized Filipinos aping American ways; also decrying American influence on Philippine culture was a song contributed by one of the country's most enduring singing groups, the Apo Hiking Society, graphically called *American Junk*.

3. THE CONTEMPORARY SITUATION. Though Philippine popular musical forms are predominantly derived from or inspired by the West, in language and spirit they are now Filipino. Traditional views on undying love and a resignation to heartbreak, carry-overs from the *kundiman*, still prevail in local ballads as sung by figures such as Celeste Legaspi, Basil Valdes and Sharon Cuneta. Protest songs, born in time of revolt (against Spain, the US and the Marcos regime) have begotten what is now called 'alternative music', which focusses on social conditions, environmental issues and human rights. Prominent exponents are Susan Fernandez Magno, Jess Santiago, Gary Granada and the duo Inang Laya.

Francis Magalona pioneered rap with his famous *Mga kababayan ko* ('My countrymen'), a call for patriotism. Rock and folk music exhibits the influence of the musical patterns, rhythms and instruments of indigenous musics. Joey Ayala and his group Bagong Lumad ('New natives') were the front-runners of this trend, using a *hegalong* (two-string lute) and *kubing* (jew's harp) together with electric guitar, bass and drums. Such combinations of instruments have blurred the distinctions between rock, folk and alternative music, evolving what could be best described as ethnic rock (or pop). Among its exponents are the groups Ang Grupong Pendong, Waling-Waling, Pinikpikan, and singers Grace Nono and Bayang Barrios. Full-length musicals and rock operas are also being written in increasing numbers, by composers such as Ryan Cayabyab.

At the end of the 20th century all-Filipino recordings stood at 60% of the industry's total output against 40% for foreign artists, reversing the conditions of the 1980s. The bestselling artists are rock bands that play mostly original music, and the major label is OPM (Original Pilipino Music); the same acronym is consciously used for the association of pop singers called Organisasyon ng Pilipinong Mangaawit. After years of imitating Western pop, indigenization has taken over, with a strong consciousness of Filipino identity that has inspired creators and performers of popular music to look back to their roots.

V. Dance

1. Cultural and historical background. 2. Indigenous traditions. 3. Muslim traditions. 4. Christian and lowland Filipino traditions.

1. CULTURAL AND HISTORICAL BACKGROUND. The many indigenous dances of the Philippine archipelago have varied origins. Dances derived from South-east Asia are related to social life and/or religious rites, wine-drinking festivities, fighting, celebrations of pacts, victories, weddings, births, deaths and funerals. Certain dances are performed to conciliate gods or spirits, or to beg them to drive away human illness or crop disease, increase the rice harvest or mark certain occasions (e.g. tilling the soil or harvesting sugar cane and rice). Philippine dances are remarkable for their wide diversity: they include dances during rain-calling ceremonies (among the Bontok), fish dances (Badjao and Tausug), a ritual dance for a good fish catch (Badjao), princess and slave dances (Maranao), dances for royalty, nobility and commoners (Davao), a torture dance, a comic honey-gathering dance and a potato-thief dance (Negrito), a spider-game dance (Tagbanwa), various animal and bird dances, dances associated with weddings, funerals and sacrifices, as well as hunting, mock duel and mock fight dances.

Early Spanish writers on Philippine dances include Antonio Pigafetta (1491–*c*1535) and the Jesuits Pedro Chirino (1557–1635) and Francisco Colin (*d* 1660). Chirino related that the people in Mindanao made offerings to idols in their homes; the Tagalog-speakers called their priests or priestesses *katalonan*, and the Visayans, *babailan*. These priests danced to the sound of a bell in sacrificial offerings in private houses, especially where there was sickness. Colin described dances he saw:

> The banquet was interrupted with local music, in which one or two persons sing and the rest respond. Their dances generally go with the beating of the bells, which seem of hollow metal sound. The beating is shrill and rapid in a war dance, but with measured variations which verily elevates one or puts him in suspense. The hands generally hold a towel or a spear or shield, and with the one or the other make their rhythmic movements, which are full of meaning. At other times, with empty hands, movements are made corresponding with those of the feet – now slow, now fast, now forward, now backwards, now together, now separately, but always with such grace and vivacity that they have not been judged as undignified to add solemnity to our Christian festivities. The children dance and sing with no less ability than the grown-ups.

2. INDIGENOUS TRADITIONS. Dances of isolated groups, having been least subject to change, are among the most interesting in the Philippines. The vigorous and mimetic dances of groups such as the Negrito and the Batak require agility and endurance. Negrito dances are accompanied by the drum or guitar, Batak dances by gongs and drums, or by rhythms beaten out on a long percussion log. In trance dances, performed mostly by women among the Tagbanwa and other groups, the shaman claims communication with spirits and possession by one or more of them.

The colourful dances of the Bontok, Ifugao, Benguet, Apayao and Kalingga tribes of the mountain province of Luzon are performed during large celebrations called *peshit* and *kañao*. A leader and several other men dancing in rhythmic unison form twisting lines, spirals, circles and serpentine patterns, each man beating a gong. Dance steps are usually earth-bound and include shuffling feet, flexing toes, light skips, mincing, cutting steps and low hops and jumps. Hands are held either with closed fists, or with the

thumb out and fingers held together, or loosely. Some dances are accompanied by song and speech. The tempo usually gets faster and faster as the dance proceeds.

Dances of the Ifugao include the *dinnyya* (festival dance), wedding dance and the *bangibang* (war or funeral dance); of the Bontok, the *takik* (flirtation or wedding dance) and the *pattong* (war dance); of the Kalingga, the pot dance, where women pile seven pots on their heads, and a wedding dance; of the Benguet region, the *tayaw*, the offering of sacrificial pigs by a priestess to the god Kabuniyan, and the *tchungas*, a victory dance over ghosts of slain enemies. With the advance of westernization, some of these dances, especially the trance dances of the shamans, are increasingly difficult to view.

Instruments of the various tribes include gongs of varying timbres, drums, metal sticks beaten together, and the *takik*, a piece of iron hit with stone.

3. MUSLIM TRADITIONS. Muslim Filipinos, possessed of legendary courage, withstood repeated Spanish attempts at conquest and subjugation, and the arts of attack and self-defence (*silat*, *bersilat*) are celebrated in some of their men's dances. Although their culture has been receptive to Arab influence as well as Chinese, Hindu and Javanese, it has retained its individuality. The women's dances are characterized by inner intensity and absorption, mysticism, a languid grace, much use of the upper torso, nuance of facial expression, flowing arm movements (the fingers sometimes held close and stiff, sometimes circling), the flexed elbow, the shifting of body weight from one bent and turned-out knee to the other, the use of *singuel* (metal anklets/bells) and the expert manipulation of fans. In Moroland dances improvisation is allowed, and the dancers perform according to their mood. Contrapuntal movements are sometimes used; the feet may follow a vigorous rhythm while head, arm and hand movements are languid, leisurely and smooth.

Among Muslim Filipinos the better-known dances are the Tausug *pangalay* (wedding dance), the *sua–sua* ('orange tree', a courtship dance) and the *kandiñgan* (a wedding dance whose name may derive from *gandangan*, the two-headed cylindrical drum used to accompany it), the fish dances of the Yakan and the *sagayan* (war dance) and *kazaduratan* (women's dance) of the Maranao. The *ka-singkil* (royal fan dance) of the Maranao is performed between four or more criss-crossed bamboo poles.

Instruments for such dances include *agung* (gongs), *kulintangan* (gong-chimes), bamboo xylophones and drums.

4. CHRISTIAN AND LOWLAND FILIPINO TRADITIONS. In their zeal to promote Christianity the Spaniards destroyed indigenous and Hindu images and forbade native ceremonies and rituals. Dances such as the jota and habanera were introduced and adapted; gradually a new style evolved, which was softer, more rounded and gracious in the new Castilian manner. The costumes took on elements of Spanish dress, and the fan was used to attract attention subtly, or to hide a modest blush. Percussion no longer dominated the music, and the native *kudyapiq* (two-string lute) gave way to the Spanish guitar. Sentimentality was introduced in sad interludes between lively moments, as in the *jota moncadeña* and the *purpuri* (potpourri). Modified versions of balancing dances of Asian origin and of indigenous wine-offering dances appeared in the *pandango sa ilaw* ('dance with oil lamps' from Mindoro), *binasuan* and *abaruray*. Such 'bird dances' as the *sinalampati* (dove), *pabo* (turkey) and *itik* (duck) evolved. Waltz, polka, mazurka, *paso doble* and other ballroom steps were paraphrased and sometimes used at random, as in *bailes de ayer* ('dances of yesteryear', a quadrille from Tarlac Province), *polkabal* (polka-waltz), *polka sala* (ballroom polka) and *jotabal* (jota-waltz).

The bamboo-pole dance (also found in Thailand, Laos and India) came to be danced in slow triple time. Mock war dances (*maglalatik, magbabao*) and mock duel dances (*palo-palo*) between Moors and Christians developed. Coconut shells were held instead of shields and swords, clicked together and against shells held by strings close to the body.

Dances arising among the Catholic Filipinos included the *subli*, or dance in honour of the Holy Cross, in which men danced in a bent-over position; the *bulaklakan*, a garland dance, performed in May; and the *putong*, in which an honoured person, sitting between two girls dressed as angels, was crowned. Childless women danced and sang at midnight in the Maytime procession of the *turumba* (in Pakil, Laguna) and at the fiesta of St Pascual Bailon (in Obando, Bulacan). The *salubong* involved the re-enactment of the meeting of the risen Christ and his mother. Dances of drunkenness (*binadyong*), quarrelling (*bakya, pukol*) and embarrassed bridegrooms (*pandang-pandang*) emerged.

In 1924 Jorge Bocobo, president of the University of the Philippines, created the University Committee on Philippine Folk Songs and Dances. A member of the committee, Francisca Reyes-Tolentino, wrote several books describing dances found during their fieldwork and initiated the teaching of these folkdances in Philippine schools. Further research into and recording of traditional dances has been continued by scholars and organizations, including the Philippine Folk Dance Society.

The pioneer Filipino choreographer Leonor Orosa (*b* 1917) produced the first Philippine folkloric ballet in 1941, *Trend: Return to Native*, followed by others such as *Vinta!* and *Filipinescas: Philippine Life, Legend and Lore in Dance*. Traditional dances are performed by travelling groups such as the Bayanihan Dance Company; they also continue to serve as a resource and inspiration for contemporary Philippine dance-theatre.

Philippot, Michel Paul (*b* Verzy, 2 Feb 1925; *d* Vincennes, 28 July 1996). French composer. Attracted at first to the study of science, he enrolled in Dandelot's harmony class at the Paris Conservatoire (1945–8) and discovered the composers of the Second Viennese School as a student of Leibowitz (1946–50). He joined ORTF in 1949, where he was successively a music producer (to 1959), assistant to Pierre Schaeffer in the Groupe de Recherches Musicales, then to Henri Barraud at France-Culture. Soon in charge of music programmes (1964–72), he became technical adviser to Radio France 1972–5, and later the Institut National de l'Audiovisual (1983–9). He taught musicology and aesthetics at the Universities of Paris I and Paris IV (1969–76), and composition at the Paris Conservatoire (1970–90). His pupils included Philippe Manoury, Francois Nicolas, Denis Cohen, Yves-Marie Pasquet and Nicolas Bacri. In 1976 he set up the music department at the Brazilian State University of São Paolo, which he directed until 1982.

Philippot's music was born of a controlling passion for rigour. Marked from the first by the discipline of dodecaphony (his First Piano Sonata is indebted to Schoenberg's Suite op.25), renouncing literary titles and even the resources of the human voice, Philippot's music is nonetheless not ungrateful to the ear. The austerity of his work in the 1950s yielded steadily to a fluidity which harks back to Debussy and to Schoenberg's Variations op.31. The limpidity of his orchestration is always at the service of an essentially contrapuntal way of thinking. His scores resemble a subtle play with mirrors, where the elements reflect one another, neglecting the notion of theme and development in favour of the principle of continuous variation and a balance of musical planes, lines and colours.

Philips (i). Dutch recording company. Taking advantage of the invention of the LP and of technological developments pioneered by its parent company Philips Gloeilampenfabrieken (especially the invention of the Musicassette and the CD), the Philips label gained a reputation for the high technical quality of its recordings of classical Western music. Its espousal of hitherto little-known repertories and commitment to ambitious multi-volume series and cycles had a profound impact on the tastes and listening habits of a broad public.

Philips Gloeilampenfabrieken, the electrical company based in Eindhoven, entered the record industry in 1929, when it started producing hardware for shellac (78 r.p.m.) discs. In 1946 Philips took over the Dutch arm of Decca and signed an agreement allowing it to distribute Decca material in Europe. It was not until 1950 that Philips entered the record business in its own right, when mainly at the instigation of the president, Frits Philips, Philips Phonographische Industrie (PPI) was established in Baarn, a village about 50 km from Amsterdam. This move was well-timed to take advantage of the recent invention of the LP. The pressing of LPs, which had started in a test factory at Doetinchem, continued in a newly built factory in Baarn, and before long the technical superiority of the pressings attracted a world-wide clientèle. In 1964 Philips consolidated its technical leadership by introducing the Musicassette, which replaced the open-reel tape for domestic use. The convenience and low price of the new format contributed to a massive growth in the recording industry which lasted until the recession of the late 1970s.

The first Philips recording – Tchaikovsky's Symphony no.4 and Grieg's *Peer Gynt*, with Willem van Otterloo conducting the Hague Residentie Orchestra – was made in 1950. Recording activities followed in other European countries and distribution deals were signed with companies in Europe and the USA: between 1951 and 1960, Philips issued recordings from the US-based CBS under licence in Europe, and from 1955 to 1968 Columbia Records distributed Philips material in the USA on the Epic label. Philips then found a new US partner in Mercury (ii), whose 'Living Presence' recording technology was introduced into Philips recordings.

Despite being in the technical vanguard and its advances in distribution, Philips had to establish its own identity by acquiring its own artists and repertory. An important step was taken in 1953, when a contract was signed with the Amsterdam Concertgebouw Orchestra, then conducted by Eduard van Beinum. The relationship with this orchestra continued after van Beinum's death in 1959 with Eugen Jochum and Bernard Haitink. Also important was the decision to engage Vittorio Negri to conduct series of neglected works by Vivaldi and Albinoni. The phenomenal success of I Musici's Vivaldi recordings, especially of *The Four Seasons*, not only boosted the company's prestige and commercial fortunes but also helped launch the Baroque revival. Another composer whose fortunes Philips helped to restore was Paganini, with the first recordings of the violin concertos nos.4 (Arthur Grumiaux, 1954) and 3 (Henryk Szeryng, 1969).

Throughout the late 1950s and the 60s Philips continued to build its classical music catalogue. Recordings were made with pianists Clara Haskil, Claudio Arrau and Ingrid Haebler, the singer Elly Ameling, the Quartetto Italiano and the Beaux Arts Trio, Raymond Leppard (with the English Chamber Orchestra) and the Concertgebouw (the complete symphonies of Bruckner and Mahler conducted by Haitink). A relationship with the Bayreuth Festival was established leading to Karl Böhm's live recording of the *Ring* (released 1966–7) and bearing its finest fruit in Pierre Boulez's recording of the same work (released on CD audio and video).

The expansion of the Philips label depended on light and popular as well as classical repertory, including film music. The first LP to sell over one million copies was the original cast recording of Lerner and Loewe's *My Fair Lady* (1956). In the 1960s the label established itself in the teenage market by signing contracts with several acts, including Pretty Things, Merseybeats, Walker Brothers, the Four Seasons, Wayne Fontana and the Mindbenders and (through a production agreement with the Island label) the Spencer Davis Group and Millie. In France, the Philips roster included the Swingle Singers, Jacques Brel, Nana Mouskouri and Johnny Hallyday, in the Netherlands, the Dutch Swing College Band, and in Germany, Caterina Valente and Esther and Abi Ofarim. In the UK, Philips also issued popular recordings on the Fontana and Phonogram labels from Winifred Attwell, Dusty Springfield, Shirley Bassey and others. In addition, Philips entered into marketing or distribution deals with labels such as Immediate, Planet, Page One, and established the label Vertigo as an outlet for progressive groups such as Black Sabbath and Status Quo. Although Philips ceased to issue popular music in the late 1980s, film was an important and continued source of revenue from 1959, when the soundtrack of the film of *Porgy and Bess* was released. Other successes have included *Saturday Night Fever* (1977), *Grease* (1978) and *Shine* (1997).

Alongside its classical and popular activities, Philips took account of the commercial potential of the broader international market. In Nigeria in the mid-1950s, for example, Philips issued modern dance music, including *Highlife* (later Afrobeat), *jújú* and other Muslim styles for the local market, while the Spanish offices issued much flamenco, such as the 1966 recordings of Manitas de Plata. The company's work in ethnographic recordings, if overshadowed by its other activities, provided an important resource for the study and enjoyment of folk and traditional musics from around the world. One significant contribution was its participation in the UNESCO Collection of Traditional Music, devoted to documenting the musics of the world. Begun by Alain Daniélou and Paul Collaer in 1961 in collaboration with the International Music Council, this scholarly collection was published in several series through the 1970s and 80s by Bärenreiter Musicaphon, Odeon-EMI and Phonogram on the Philips label. Of a less scholarly nature was the series 'Song and Sound the World Around', issued in the 1960s and 70s.

In 1972 Polygram was formed as a holding company for Philips (PPI) and Deutsche Grammophon; in 1962 Philips Gloeilampenfabrieken had acquired a 50% stake in Deutsche Grammophon and Siemens a 50% stake in Philips (PPI). At the same time, PPI changed its name to Phonogram International but continued to trade under the Philips label. The new Polygram company acquired the American labels Mercury and Casablanca and later purchased A&M, Island and Motown. In 1979 Polygram acquired Decca, so becoming the most powerful music group in the world. Within the Polygram umbrella the three classical-music labels, Decca, Deutsche Grammophon and Philips, retained their independence with regard to artists and repertory.

In the 1970s, after Erik Smith took over as head of A&R, the Philips label embarked on an ambitious programme to record operas, a repertory that until then it had neglected. In 1971 Jessye Norman made her recording début as the Countess in *Le nozze di Figaro*, the start of a long association with the label. Apart from Mozart, operas by Verdi (early operas), Rossini, Haydn (with Antal Dorati conducting) and Tippett were recorded; Tippett was championed by Colin Davis, who also recorded a series of operas and large-scale works by Berlioz. Other artists recruited in the 1970s included Neville Marriner (with the Academy of St Martin-in-the Fields), Alfred Brendel and José Carreras.

In 1979 the economic slow-down caught up with the Philips label and sales dropped. However, the invention by Philips Gloeilampenfabrieken of the CD, developed in collaboration with Sony and launched in 1982–3, revived the company's fortunes. On the crest of the CD boom of the 1980s, the Philips label (from 1983 under a new name, Philips Classics Productions) continued to recruit artists, including Mitsuko Uchida, Viktoria Mullova, Gidon Kremer, Riccardo Muti, Frans Brüggen and John Eliot Gardiner. The relationship with Gardiner and Brüggen signalled a new interest in early music and the use of period instruments, confirmed when Philips engaged Philip Pickett to make recordings of English stage music and acquired (in 1996) the Gimmell label, the vehicle for Peter Phillips's recordings of Renaissance choral music with the Tallis Scholars. Further, Valery Gergiev was contracted to conduct the Kirov company in Russian opera. There was a move towards 20th-century music, possibly motivated by falling sales of the standard 18th- and 19th-century favourites. The early 1990s also saw an interest in 'crossover' (fusing classical with jazz, pop or light music), represented most clearly by the joint venture with Philip Glass's label Point Music and by several recordings of 'cult', new age and world music. This diversification was increasingly adopted as a survival strategy at a time, in the mid-1990s, when sales of CDs continued to fall. CD Video had not proved commercially viable and attempts to develop a Digital Compact Cassette (DCC) came to nothing.

The Philips label attempted to adapt to these new realities, but in 1998 it sold its majority share in Polygram to Seagram, breaking the link with Philips Gloeilampenfabrieken. A new company, Universal Classics, was formed from Philips, Decca and Deutsche Grammophon. In 1999 Philips and Decca merged their operations, bringing Philips's location in the Netherlands to an end.

Along with other CD companies, Philips benefited commercially from reissues of earlier analogue recordings in digital form. What distinguished the Philips label was the scale and ambition of these reissues, many of them multi-volume box sets. These include the Wagner Edition, an edition of recordings of the pianist Sviatoslav Richter and, most importantly, the Complete Mozart Edition (master-minded by Erik Smith), issued in 1990–91 to

commemorate Mozart's bicentenary. In 1998 an even larger project, Great Pianists of the 20th Century, was begun, involving an unprecedented collaboration with recording companies both within and outside the Polygram group.

JAMES CHATER (with DAVE LAING and JANET TOPP FARGION)

Philips [Philippes, Phillips], **Mr (ii)**. Name under which PHILIP VAN WILDER is often found in English manuscripts.

Philips [Phillipps, Phillips], **Peter** [Philippe, Pierre; Philippi, Pietro; Philippus, Petrus] (*b* ?London, 1560–61; *d* Brussels, 1628). English composer and organist. He spent his maturity in the Spanish Netherlands, and for this reason has often been regarded as a member of the Flemish school; yet on the title-pages of all his publications he was at pains to describe himself as 'Inglese' or 'Anglo'. Apart from Byrd he was the most published English composer of his time.

1. LIFE. His date of birth is inferred solely from his certificate of residence in Brussels, dated 4 August 1597, which gives his age as 36. The first known reference to him is as a choirboy at St Paul's Cathedral, London, in 1574. There is evidence that he was later a pupil of Byrd. His earliest known composition, a keyboard pavan in the Fitzwilliam Virginal Book (*GB-Cfm* Mus.32.G.29), is dated 1580, with the superscription 'The first [that] ever Phi[lips] mad[e]'. The piece was later extremely popular and was arranged and transformed by other musicians. In 1582 Philips was mentioned in the will of Sebastian Westcote, almoner of St Paul's. Westcote had been in charge of the music and choirboys, being appointed during the reign of Queen Mary. A stubborn adherent to Roman Catholicism and frequently in trouble with the authorities, Westcote seems to have enjoyed a measure of royal protection. He left in his will £5 each to four boys 'now remayninge in my howse' and 'to Peter Phillipps likewise remayninge withe me five poundes thirtene shillings fower pence'. Early in August 1582, shortly after his master's death, Philips fled England 'pour la foy Catholique' as the Brussels certificate attests. He stopped on 18 August for a few days at the English College in Douai. On 20 October he arrived in Rome and was received at the English College there. The entry in the Pilgrims' Book at the college reads: 'Petrus Philippus Anglus diocesis [blank space] receptus fuit hospitio 20 Octob: 1582.ad.12.dies'.

The college at this time received many such refugees and was in hard straits financially. But it had a powerful protector in Cardinal Alessandro Farnese, who became Philips's patron for the next three years. Philips continued at the same time to act as organist for the college, and in 1585 the appointment of Felice Anerio as *maestro di cappella* seems to have confirmed the direction of the young man's studies. He later included music by Anerio and Palestrina in his own publications, and his style always remained deeply indebted to the conservative Roman tradition.

On 22 February 1585 Lord Thomas Paget, a prominent English Roman Catholic refugee, arrived at the college accompanied by two servants. Philips entered his service and departed with him on 19 March. They travelled together for the next five years, visiting Genoa (September 1585), Madrid (October 1585) and France (September 1586). 1587 and the first half of 1588 were spent in Paris, except for a brief journey to Brussels in March 1588. In June they went to Antwerp shortly before the sailing of the Spanish Armada, and in February 1589 settled in Brussels. Early in 1590 Paget died, and Philips may have written the Pavan and Galliard Pagget in his memory, though this pair is undated in the Fitzwilliam Virginal Book; a much later and peripheral source (*S-Uu* Mus.408), however, suggests that the dedication may have been to Lord Thomas's younger brother Charles, a notorious double agent.

Philips settled in Antwerp in 1591 and 'mainteyned him self by teaching of children of the virginals, being very cunning thereon'. On 26 May of the same year he married Cornelia de Mompere in the cathedral. His wife died in July 1592, two months after the birth of their daughter, Leonora, who was baptized on 7 June of that year. Leonora's godfather was Cornelis Pruym, a notable patron of music who had links with Hubert Waelrant, Emanuel Adriaensen and Cornelis Verdonck, whom he employed for 20 years. Through such connections Philips was assured of an entrée into the musical and artistic life of Antwerp, witnessed by the selection of the Flemish composers represented in his first publication, *Melodia olympica*, issued by Phalèse in 1591. It is a large anthology of Italian madrigals edited by Philips, and including four of his own madrigals. The selection is conservative, suitable for cultivated amateurs, and reflects the styles that most influenced Philips: Marenzio is represented by five madrigals, G.M. Nanino by four and Palestrina and Verdonck by three each. Philips dedicated the work to Giulio Balbani, a prominent Italian banker.

In 1593 Philips visited Amsterdam 'to sie and heare an excellent man of his faculties'. This was no doubt Sweelinck, who composed a complimentary set of variations on Philips's pavan of 1580 and was held in high regard by Philips. On his return journey in September, Philips fell ill, and stayed for three weeks at Middelburg 'conversant with such as delighted in musicq'. An Englishman, Roger Walton, denounced him to the Dutch authorities as having been involved in a plot against the life of Queen Elizabeth. Philips, Walton and another accused, Robert Pooley, were all arrested and taken to The Hague for interrogation and to await reports from London. Inquiries were made with the help of the acting English ambassador, George Gilpin. While in prison Philips composed the *Pavan and Galliard Dolorosa* (the manuscript, *D-Bsb*, Mus.40316, bears the inscription 'composta in prigione'). The version in the Fitzwilliam Virginal Book is dedicated to 'Treg.', i.e. a member of the Tregian family: Francis Tregian the younger was the compiler of this collection and copied much of Philips's other music (e.g. in *GB-Lbl* Eg.3665). The inquiries exonerated Philips; he was released and able to return to Antwerp before Christmas.

Philips's first book of six-part madrigals was published in 1596. The dedication, dated 8 January, was to Alessandro di Giunta, a member of the Florentine family of printers and booksellers, resident in Antwerp. The texts he chose, like those for his other two collections, are almost all of the most frivolously amorous type of *poesia*

per musica. The most notable poet represented is Guarini, and the anonymous verse *Amor di propria man*, a scarcely concealed description of love-making, is one of the many imitations of Guarini's *Tirsi morir volea*. Marenzio's setting of *Tirsi* had become famous; Philips made a keyboard version of it and followed its general design in his own madrigal. By now Philips was becoming increasingly well known, and single works of his appeared in many printed collections over the next 40 years or so.

In 1597 the Archduke Albert admitted Philips as a member of his household, as attested in the certificate of residence in Brussels, dated 4 August. Philips's signature, 'Pier Philippe', on this document is the only surviving authentic one (see facsimile in MB, xxix, p.xxii). In 1598 Phalèse published Philips's sole collection of eight-part madrigals. The title-page designates him as 'Organista del Serenissimo Alberto'; he retained his position as one of the three organists of the vice-regal chapel until his death. The dedicatee of the madrigals was the English Roman Catholic freebooter, Colonel William Stanley, and they had an immediate success, being reprinted in the following year.

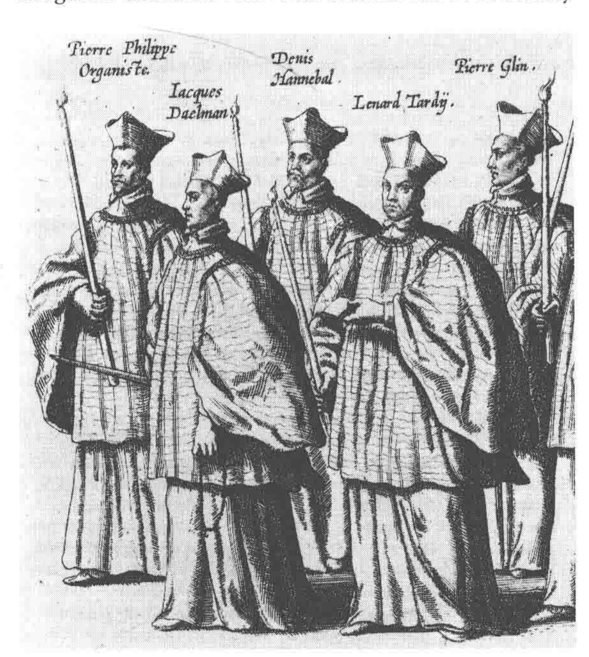
According to his marriage contract, after the death of his wife and then his only child (Leonora died in December 1599) Philips had agreed to share his wife's inheritance with her brothers and sisters. The contract itself does not survive, but an orphan-master's document (*weesmeesters-document*) of 1601 describes its administration (see Spiessens). Philips was obliged to account for all receipts and expenditures from the date of his wife's death until the reading of the will, and to prepare an inventory and valuation of his house and its contents, including his music books. In the event, the debts owing proved to be greater than the value of the property, so the inheritance was refused. Philips still owed money to Anthony Chambers, an English cornett player at the Brussels court, to 'Sr. Junta' (probably Alessandro di Giunta) and to 'Sr. Orsuch' (probably Jean Orsucchi Bernardszoon, a merchant from Lucca who lived in Antwerp from 1597 to 1610).

Archduke Albert married Isabella of Spain on 18 April 1599 and thereafter they ruled as joint regents. The poor economic state of the Spanish Netherlands was exacerbated by the archduke's extravagance and the salaries of minor court employees, often in arrears, were constantly augmented by the practice of simony. Philips, however, was ordained a priest on 24 March 1609, and the entry in the Archief Aartsbisdom Mechelen (reg. 60, f. 142*v*) describing him as 'Petrus Philippi, beneficiatus nostrae diocesis' suggests that he had taken minor orders at some time beforehand. His subsequent series of prebendaries at Soignies, Tirlemont and Béthune were thus technically legitimate, though there is no evidence that he was ever resident at any of these places, nor that he even functioned as a priest.

Philips's first printed sacred compositions were three motets in the second and third parts of Herrer's anthology *Hortus musicalis* (RISM 1609[14-15]). One of these, *Vulnera manuum*, is a contrafactum of his madrigal, *Ditemi, O diva mia*, first published in *Melodia olympica*. In the following year Phalèse printed Philips's first major collection of sacred music, the 69 *Cantiones sacrae* for five voices, 'for the principal feasts of the whole year and the common of the saints'. The dedication was to the Virgin Mary, 'for the consolation and salvation of Christian people, the confirmation and amplification of the Catholic, Apostolic and Roman faith, and the extirpation and confusion of Heresy and Heretics'. The motets are organized according to the liturgical calendar, unlike those of the later sets. In all his sacred collections Philips showed a marked propensity for strictly liturgical texts (particularly antiphons, Marian antiphons and responds). Most of these appear to be drawn from the breviary rather than direct from scripture, and he seldom set freely chosen texts such as psalm verses as earlier Renaissance composers did. Nothing could make his post-Tridentine, Counter-Reformation attitude more plain.

In 1613 two further sets were published, the 30 *Cantiones sacrae* for eight voices and a set of 31 two- and three-part motets with organ continuo, the *Gemmulae sacrae*. He dedicated the eight-voice motets to St Peter, and the *Gemmulae* to Pierre de Campis, a chaplain and singer of the Brussels royal chapel. Another set of two- and three-voice motets with continuo followed in 1616, the *Deliciae sacrae*, dedicated to Albert and Isabella. In the meantime his services as an organ player had been in demand. He had travelled to Malines in 1611 with others of the royal chapel to inspect the new organ there and to perform at the Easter services; he later personally approved Langhedul's restoration of the royal chapel organ in Brussels (30 December 1624). Philips's salary for four months in 1613, including travelling and living expenses, was about 305 florins. His fame was at its height in this second decade of the 17th century. His madrigal sets went through reprintings, the hydraulic engineer Salomon de Caus included some of his instrumental music in two treatises, and in 1615 the Valenciennes publisher Jean Vervliet (or perhaps the Jesuit, Guillaume Marci) invited him to contribute to a book called *Les rossignols spirituels* (RISM 1616[7]). This was a collection of adaptations of popular tunes with simple bass parts added by Philips, set to verses in French for the religious instruction of children. A counterblast to similar Protestant compilations, it also contains three four-part Latin pieces, one of which is an otherwise unknown *Hodie Maria virgo caelos ascendit* for three sopranos and tenor by Palestrina; perhaps Philips obtained it personally from the composer in his Roman days. *Les rossignols* went through four editions, the last appearing in 1647 without Philips's name.

During this period Philips enjoyed the presence of some illustrious colleagues in the royal chapel. In 1611, for instance, the chapel director was Géry Ghersem; other notables included Jan van Turnhout, and Philips's fellow organists Joachim Zacharias and Peeter Cornet. In 1613 an even more famous figure arrived – John Bull, who had fled England to avoid prosecution for adultery. Philips may possibly have met him on an earlier visit in 1601. The meeting of the two most internationally renowned English keyboard players of the day, both of the same generation, gives rise to fascinating speculation, but nothing is known of their mutual reactions.



Economic conditions at the court continued to be hard. Salaries were still often in arrears, and employees were sustained by irregular *ex gratia* payments; in August 1617, for instance, Philips received a gift of 250 florins, and on 13 October 1620 another of 300. On 25 January 1621 Philips exchanged his prebend of St Vincent for a perpetual chaplaincy in St Germain, Tirlemont. According to the title-page of his next publication, the *Litaniae*

Beatae Mariae Virginis (Antwerp, 1623), he also became canon of Béthune.

The Archduke Albert died in 1621, and on 12 March Philips headed the procession of chaplains of the royal chapel in the funeral cortège. An engraving of the procession by Corneille Galle appears in Jacques Francart's *Pompa funebris ... Albertii Pii* (Brussels, 1623). Allegedly drawn from life, Philips appears as a tall, straight-backed figure with a lean face and a pointed beard, but so unfortunately do at least two of the other chaplains. This is his only known portrait (see illustration). His last publication came out in the year of his death, a monumental collection which includes his first published monodies, *Paradisus sacris cantionibus* (Antwerp, 1628). This comprises 106 motets for one, two and three voices, all with continuo. Like the *Gemmulae* and *Deliciae* they were among his most successful compositions, since each set was reprinted no fewer than three times.

The only record of Philips's death is in the contemporary diary of Dr John Southcote. Under a list of 'Dead Friends and Acquaintance' for the year 1628, Southcote entered: 'Peeter Philips Pr. Bruxelles'. No further information has come to light, and doubts regarding Southcote's testimony have been based solely on a misunderstanding of the publication dates of the *Paradisus*.

The *Paradisus* was printed for the third time in 1641, the last time any of Philips's music was printed until Hawkins's *General History* (London, 1776). He had been famous enough in his lifetime and his music spread as far afield as Lisbon and Stockholm. But it never penetrated south of the Alps, despite Henry Peacham's encomium in *The Compleat Gentleman* (London, 1622): 'Nor must I here forget our rare countryman, Peter Philips, organist to their *altezzas* at Brussels and now one of the greatest masters of music in Europe. He hath sent us over many excellent songs, as well motets as madrigals. He affecteth altogether the Italian vein'. Not until the late 19th century was there a real awakening of interest in his music. The publication of the Fitzwilliam Virginal Book established him as a major figure in the English keyboard school, and one of its editors, W.B. Squire, also published a few of the madrigals and motets. The work of R.R. Terry, who performed many of the motets at Westminster Cathedral in the early part of this century and published several of them, was also crucial in the re-establishment of Philips's music; since then a handful of his motets have remained in both Roman Catholic and Anglican repertories.

Peter Philips leading the procession of chaplains at the funeral of Archduke Albert: engraving by Corneille Galle from Jacques Francart's 'Pompa funebris ... Albertii Pii' (Brussels, 1623)

2. Works. Like Byrd, Philips distinguished himself at whatever branch of music he tried his hand. No northern continental composer could compete in terms of versatility in keyboard, instrumental ensemble, secular and sacred vocal music, and in this Philips held to the English tradition. As Peacham said, however, his vocal music 'affecteth altogether the Italian vein', and few English traits are to be found in it.

His keyboard music is another matter. Much of it is fairly early, most of it was copied by Francis Tregian into the Fitzwilliam Virginal Book (1609–19) and many of the pieces have precise dates. The first piece, the pavan of 1580, has already been mentioned in view of its extraordinary popularity. Its cantus firmus-like last strain was imitated by many other composers, including Morley and Dowland, and a Dutch composer, Willem Swart, even turned it into a carol, *Wy engelen gret* (in *Den lusthof der nieuwe mysycke*, Amsterdam, 1603). The next dated piece, a 'fantasia' of 1582, is clearly an ornamented intabulation of an unidentified polyphonic vocal composition. The genre is rather un-English (only Farnaby appears to have cultivated it to any degree) so the piece may date from after Philips's arrival in Rome. It is the first of a series of such compositions in which he wove fantastic keyboard figuration around madrigals and chansons by Marenzio, Lassus and Striggio, one of his own madrigals (*Fece da voi*) and even (in 1603) Giulio Caccini's famous monody, *Amarilli*. His latest example seems to be the setting of Lassus's *Margott laborez* (dated 1605) where, typically, the original all but disappears in a welter of ornamentation, and the vivacious rhythm of the chanson is completely destroyed. Such pieces, immensely popular with continental keyboard players and lutenists, hold little appeal for modern musicians no longer familiar with the originals from which they stem. Much more immediately attractive are the idealized dance pieces in the English tradition, of which there are unfortunately only seven by Philips. Four of them, the Pavan and Galliard Dolorosa and the Pavan and Galliard Pagget, are masterpieces. In both pairs pavan and galliard use the same musical material and the Dolorosa is Philips's only extended essay in chromaticism; it was later recast as a lute piece (but not by Philips, who was no lutenist; see D. Lumsden: *Anthology of English Lute Music*, London, 1954, nos.9–10). So fine is the polyphonic balance within these two sets that they also exist in arrangements as splendid five-part ensemble pieces, probably by Philips himself.

Considering Philips's 30 years as a professional organist, his legacy in this genre is disappointing. Only one liturgical organ piece survives, a setting of the Pentecost sequence, *Veni Sancte Spiritus* (in *GB-Och* 89, where it is wrongly titled *Veni creator Spiritus*). The chant, in a strong triple rhythm, is in the bass, with Philips's usual virtuoso figuration above, but with a cadence and a pause

at the end of every line. Curiously, Philips set all the verses; there is no provision for *alternatim* performance. One important 'abstract' fantasia has been preserved: that in the Fitzwilliam Virginal Book (no.84; no.88 in the same collection is evidently an intabulation of an as yet unidentified vocal model) is notable for its 39 numbered entries of a single subject (also used by Byrd and Cornet).

Of the ensemble music, a few pieces were published, but most remains in scattered manuscript sources, some of doubtful authenticity. The most important group is probably that in the Tregian anthologies (*GB-Lbl* Egerton 3665 and *US-NYp* Drexel 4302). The repertory divides into two main types: 'idealized' and 'practical' dance music. Especially fine in their polyphonic balance are the five-part arrangements of the Dolorosa and Pagget pavan and galliard pairs; indeed it is hard to say whether the ensemble or keyboard version came first. The rich six-part Passamezzo Pavan, on the other hand, is independent of Philips's 1592 setting for keyboard (Fitzwilliam Virginal Book no.76). Some of both types of dance pieces are arrangements of other composers' music, principally Cavalieri (*Aria del Gran Duca*), Augustine Bassano, Morley and Tregian himself. Peter Holman has plausibly suggested that most of this repertory was for violin rather than viol consort.

The heart of Philips's music undoubtedly lies in his madrigals and motets. The madrigals demonstrate his adherence to the Roman tradition. They show his complete mastery of this chosen style within its characteristic limits: an easy command of contrapuntal technique, a liking for suave harmonic progressions and a restrained attitude towards word-painting. *Nero manto vi cinge*, with its black notation, is an isolated instance of eye music. None of his later music suggests that he showed much interest in or understanding of the harmonic and declamatory experiments taking place in Ferrara, Mantua, Venice and Florence.

In the motets, Philips achieved a surprisingly wide range within the restrictions of his language. Some of the five-voice *Cantiones sacrae* may apparently date back to before 1591, since *Gaude Maria Virgo* is found in a slightly different version, ascribed to Thomas Morley, in an English manuscript of that date (see Pike, *ML*, 1969). So it is natural that some seem more old-fashioned than others. Some, like *Pater noster*, are set in a severe, archaic polyphonic style complete with a plainchant cantus firmus; *Viae Syon lugent* maintains a strict canon. Others are madrigalian in style, with vivid word-painting (sometimes more vivid than in the actual madrigals) and much use of purely chordal harmony (e.g. *O beatum et sacrosanctum*, *Tibi laus*). Philips seems particularly to have favoured respond texts, perhaps because they aided him in constructing a satisfactory musical design with the return of earlier material. Variation, in these circumstances, is usually restricted to the exchange of the two upper voice parts.

The eight-voice *Cantiones sacrae* of 1613 are nearly all for two choirs of equal voices. Again the Roman rather than the Venetian tradition asserts itself. More homophonically conceived than the five-part motets, they occasionally reach the heights of brilliant figuration (*Hodie nobis de caelo*) and sometimes even polyphonic intricacy (*Caecilia virgo*). The *Litaniae* of 1623, however, as far as one can tell from the incomplete state of the surviving partbooks, are of an austere, one-note-per-syllable character.

Composition of the huge collection of 'few-voice' motets printed as the *Gemmulae*, *Deliciae* and *Paradisus* may possibly have been influenced by the diminishing number of capable singers available in the archducal chapel, or may be simply following an Italian fashion. The first two contain duets and trios, the third solos as well, all with basso continuo. Pike argued convincingly that some may be adaptations of fully choral works for four, or even as many as eight, voices. The continuo part consists of a left- and right-hand staff, which, while it is not in itself harmonically complete, often suggests imitative entries not in the voice parts. The style varies from writing that could have been taken straight out of a 16th-century motet (*O bone Jesu*, from the *Gemmulae*) to extravagantly florid passages (e.g. *Veni sponsa Christi* from *Deliciae* and *O fons vitae* from the *Paradisus*). Such *fioriture*, however, sometimes seem stiff and contrived by comparison with the better Italian composers and do not integrate well with the essentially simple harmonic idiom. Only once did Philips revert to the chromaticism of his youthful Pavan Dolorosa, and that was at the words 'tu humilitasti' in *Dominus Deus virtutum* (1616).

JOHN STEELE

Philips, Thomas. *See* PHELYPPIS, THOMAS.

Philip the Chancellor (*b* Paris, *c*1160–70; *d* Paris, ?26 Dec 1236). French theologian and Latin lyric poet. He was the illegitimate son of Philippe, Archdeacon of Paris (*d* 1184–5), and part of an aristocratic family from Nemours whose members included chamberlains to Louis VII and Philippe II Auguste, and bishops of Paris, Meaux, Noyon and Châlons. He studied theology and possibly canon law in Paris, became Archdeacon of Noyon between 1202 and 1211 and was made chancellor of Notre Dame in the early months of 1217, retaining both posts until his death. As chief overseer of education in Paris, Philip was active during a time of crisis and evolution within the city's schools, and his authority dwindled steadily as a result of conflicts with the university. He vigorously protested the election of William of Auvergne as Bishop of Paris, and defied him on the accumulation of ecclesiastical benefices in 1235. Although Philip is often portrayed as an enemy of the newly established mendicant orders, such claims have been exaggerated; he was even buried in a Franciscan house, and possibly donned the habit just before his death. He was afterwards vilified by the Dominican chronicler Thomas of Cantimpré in his *Bonum universale de apibus*, and lauded by the poet Henri d'Andeli, whose *Dit du Chancelier Philippe* fantastically recounts his last moments.

In addition to his influential *Summa de Bono* (1230s) and an unedited corpus of over 700 sermons (catalogued by Schneyer), Philip remains one of the most prolific of medieval lyric poets, with 83 texts ascribed to him in medieval sources and dozens of others suggested by modern scholars. His poetic style had been described as vitriolic in its rhetoric, virtuosic in its rhyming, word play and use of images, learned in its classical and biblical references, and prophetic in its appropriation of the voices of Christ, the Church, and other allegorical personae to admonish and condemn (see Dronke). Philip particularly favoured apostrophes to mankind (*Homo*), and the *altercatio*, or debate poem, where two or more personified contenders argue theological, moral or ethical controversies in the manner of the jeu parti and the *disputationes* of the Paris schools.

Although no conclusive evidence proves he was a composer, and though many of his songs are contrafacta or prosulas of pre-existent works, Philip was nonetheless closely attuned to the music of his day. Nearly all his poems include musical settings and these exploit the entire gamut of genres and styles available to Notre Dame composers. His conductus range from simple strophic songs to melismatic through-composed works which use the latest rhythmic and constructive devices. Several

poems reveal contact with the composer Perotinus; indeed Philip texted his organa, conductus and discant clausula, thus furnishing some of the earliest examples of the medieval MOTET. The organum prosulas survive with single voices which can be recognized as parts of Perotinian organa; it is unclear whether they were intended to be performed monophonically, with all the voices of the organum, or with the tenor alone. Philip deserves consideration as one of the principal forces behind Notre Dame music. He is often confused with Philippe de Grève, a dean of Sens (*d* 1220), who left no known writings.

Veni sancte spiritus spes, A.N19, F.363; ND (French contrafacta also employed as refrains in motets; Latin rondeau)
Venit Jhesus in propria, A.K42, F.365; ND (on the fall of Jerusalem, 1187)
Veritas equitas largitas, A.K62, F.375; ND (Latin lai; French and Provençal contrafacta; possible references to the reign of Louis IX under the regency of Blanche of Castile, 1226–36)
Veritas veritatum, A.K19, F.376; ND
Vide quo fastu rumperis, A.K11, F.381; ND
Vitia virtutibus, A.L4, F.388; SM

modern attributions

Adulari nesciens, A.K35, F.10; ND
Aque vive dat fluenta, A.K65, F.18; ND (part of a group with 'Terit Bernardus' and 'In paupertatis predio' in *I-Fl* Plut.29.1, fasc.10, after the central collection of Philip's works)
Aurelianis civitas, A.K60, F.25; ND (on the massacre of students in Orléans, 1236; found within a series of Philip's works in *Fl* Plut.29.1, fasc.10; textual correspondences with a sermon of his from 1230)
Clavus clavo retunditur, A.K51, F.64; ND (on the loss of the holy nail of St Denis, 1233)
Cum omne quod componitur, A.K59, F.74; ND
Dic homo cur abuteris (text only; also attrib. Bernard of Clairvaux)
Dogmatum falsas species, A.K55, F.97; ND
Homo cur degeneras, A.K68, F.157; ND
Homo cur properas, A.K69, F.158; ND
In paupertatis predio, A.K64, F.179; ND (part of a group with 'Terit Bernardus' and 'Aque vive dat fluenta' in *Fl* Plut.29.1, fasc.10, after the central collection of Philip's works)
In superna civitate (sequence; associated with 'Ceciderunt in preclaris')
Lignum vite querimus (sequence; text only)
O Christi longanimitas, A.Q99 (text only; also attrib. Bernard of Clairvaux; also found with incipit 'O mira Christi pietas')
O curas hominum, A.K21, F.231; ND
Post peccatum hominis (text only; goliardic stanzas)
Quod Iude murmuracio, A.L22, F.294; ND (*F-Pn* lat.15139, with Philip's 'Inter membra' and 'Agmina milicie')
Quomodo sunt oculi (text only)
Tuum Syon exilium (text only)
Terit Bernardus, A.K63, F.347; ND (part of a group with 'Aque vive dat fluenta' and 'In paupertatis predio' in *I-Fl* Plut.29.1, fasc.10, after the central collection of Philip's works)

POLYPHONIC CONDUCTUS

medieval attributions

Ave virgo virginum verbi, 3vv, A.F16, A.P44; F.39; ND
Centrum capit circulus, 2vv, A.J38, F.57; ND
Dic Christi veritas, 3vv, A.C3, F.94; ND (used for Philip's conductus prosulas 'Bulla fulminante' and 'Vesti nuptiali'; on the conflict between Innocent III and King Philippe II Auguste over Ingeborg of Denmark, 1198)
Gedeonis area, 3vv, A.15, F.143; ND
Luto carens et latere, 3vv, A.F1, A.M6; F.200; ND (also 1v version; Latin rondeau)
Mundus a mundicia, 3vv, A.F17, F.212; ND (possible Provençal contrafactum)
O Maria virginei flos, 3vv, A.E14, F.239; ND
Regis decus et regine, 2vv, A.J47, F.301; ND

modern attributions

Caput in caudam vertitur, 2vv, A.J3, F.54; ND (immediately before 2 works by Philip in *I-Fl* Plut.29.1, fasc.7)
Clavus pungens acumine, 2vv, A.J39, F.65; ND (on the loss of the holy nail of St Denis, 1233)
Consequens antecedente, 2vv, A.H2, F.68; ND
Deduc Syon uberrimas, 2vv, A.68, F.85; ND
Heu quo pregreditur, 2vv, A.J26, F.155; ND
Inflexu causuali verbum, A.P18; ND
Luget Rachel iterum, 2vv, A.J40, F.199; ND

Non livoris ex rancore, 3vv, A.F14, F.222; ND (between works by Philip in *Fl* Plut.29.1, fasc.6)
Quod promisit ab eterno, 2vv, A.G6, F.295; ND (cauda is texted)
Regnum dei vim patitur, 2vv, A.H33, F.302; ND
Relegentur ab area, 3vv, A.C6, F.304; ND (music possibly by Perotinus; cauda is texted)

ORGANUM PROSULAS

medieval attributions

Adesse festina/Adiuva me domine, 1v, A.A12, G.58; ND (music from the verse of Perotinus's organum Sederunt principes, 4vv; paired with 'De Stephani')
Associa tecum in patria/Sancte [Eligi], 1v, A.K80, F.22; ND (music from the organum Sancte Germane, 3vv, which has modern attrib. Perotinus; text indicates the prosula was intended for St Eligius, not Germanus; on the transfer of a relic of Eligius from Noyon to Paris, 1212)
De Stephani roseo sanguine/Sederunt, 1v, A.A11, G.57; ND (music from Perotinus's organum Sederunt principes, 4vv; paired with 'Adesse festina')
Homo cum mandato dato/Omnes, 1v, A.A10, G.3; ND (music from Perotinus's organum Viderunt omnes, 4vv; paired with 'Vide prophecie')
Vide prophecie/Viderunt, 1v, A.A9, G.2; ND (music from Perotinus's organum Viderunt omnes, 4vv; paired with 'Homo cum mandato')

CONDUCTUS PROSULAS

medieval attributions

Bulla fulminante, 1v, A.L5, F.53; SM (from Philip's conductus: 'Dic Christi veritas', music possibly by Perotinus; Latin contrafactum, 'Veste nuptiali')
Minor natu filius, 1v, A.K82, F.208; ND
Veste nuptiali, 1v, A.K81, F.377; ND (see 'Bulla fulminante')

modern attributions

Anima iuge lacrimas, 1v, A.K45, F.15; ND (strophes successively notated; can be combined to form 3-voice piece)
Crucifigat omnes, 3vv, A.D3, F.70; ND (call to the fifth Crusade, 1219–20; Latin contrafacta)

MOTETS

medieval attributions

Agmina milicie/Agmina, 3vv, G.532; EM (conductus motet; music possibly by Perotinus; French and Provençal contrafacta)
Homo quam sit pura/Latus, 3vv, G.231; EM (strophic conductus motet; Latin contrafactum 'Stupeat natura')
In omni fratre tuo/In seculum, 2vv, G.197; MC
In veritate comperi/Veritatem, 3vv, G.451; EM (conductus motet; questionable lost medieval attrib. Bishop William of Auvergne)
Lacqueus conteritur/Lacqueus contritus, 2vv, G.95; MC
Venditores labiorum/Eius [or Domino], 2vv, G.760; EM (double motet, combined with triplum 'O quam necessarium', G.759, probably by a different author)

modern attributions

Doce nos hodie/Docebit, 3vv, G.345; EM (conductus motet; possibly the work intended for *CZ-Pak* N.VIII, instead of the probably spurious 'Doce nos optime')
Et exaltavi plebis humilem/Et exaltavi, 3vv, G.517; EM (conductus motet; found before 'Agmina milicie' in *I-Fl* Plut.29.1, fasc.8; music has modern attrib. Perotinus)
Ex semine rose prodit spina/Ex semine Abrahe divino/Ex semine, 3vv, G.483/484; EM (double motet, both texts by Philip; music by Perotinus; French contrafacta)
Flos de spina rumpitur/Regnat, 3vv, G.437; EM (conductus motet; music has modern attrib. Perotinus)
Homo qui vigeas/Et gaudebit, 3vv, G.313; EM (conductus motet; music has modern attrib. Perotinus; French contrafacta)
Latex silice/Latus, 4vv, A.A2, F.190, G.228; EM (strophic conductus motet)
Manere vivere/Manere, 2vv, G.70; EM (Latin contrafactum; music has modern attrib. Perotinus)
Mens fidem seminat/In odorem, 2vv, G.495; EM (music has modern attrib. Perotinus; textual correspondences with Philip's *Summa de Bono*; French contrafacta)
Mors que stimulo/Mors morsu nata venenato/Mors, 3vv, G.255/254, MC (double motet; see 'Mors a primi'; Latin contrafactum)
Non orphanum te deseram/Et gaudebit, 2vv, G.322; EM (music has modern attrib. Perotinus; French contrafactum)
Nostrum est impletum/Nostrum, 3vv, G.216; EM (conductus motet; music has modern attrib. Perotinus; French contrafactum)
Velut stelle firmamenti/Et gaudebit, 3vv, G.315; EM (double motet with 'Ypocrite pseudopontifices'; the music has modern attrib. Perotinus; French and Latin contrafacta)
Ypocrite pseudopontifices (1v), G.316; EM (triplum of double motet, 3vv; surviving moteti include the modern attrib. 'Velut stelle'; music of the source clausula has modern attrib. Perotinus; French contrafactum)

DOUBTFUL, SPURIOUS OR TENTATIVE ATTRIBUTIONS

monophonic conductus: medieval attributions

Angelus ad virginum, A.O15 (later polyphonic versions; English contrafacta)
Ave dei genetrix et immaculata (text only; conflicting attrib. Robert Grosseteste)
Dum medium silentium tenerent, A.K15, F.99; ND (medieval ascription to Walter of Châtillon more probable since part of a sermon Walter gave at the University of Bologna, *c*1174)
Inter natos mulierum ut testatur (sequence)
J'ai un cuer mout lait ma ioie m'annour, L.253.1, R.202b ('Thibaut', perhaps Thibaut d'Amiens, identifies himself as poet in text)
Missus Gabriel de celis (*I-Fl* Plut.25.3; sequence; also attrib. 'prior Montis Acuti')
O amor deus deitas, A.L56 (*CH-Bu* B XI 8)
Pange lingua (or Collaudemus) Magdalene (hymn; often associated with 'Aestimavit hortulanum' and 'O Maria noli'; modern attrib. Alexander Neckham, 1157–1217, more likely)
Quo me vertam nescio, A.K28, F.292; ND (modern attrib. Peter of Blois)
Venite exultemus regnante, A.Q1 (*CH-Bu* B XI 8; text only)
Virgo templum trinitatis (*I-Fl* Plut.25.3; text only; gloss on 'Ave Maria')

monophonic conductus: modern attributions

Aestimavit hortulanum (hymn; associated with 'Pange lingua Magdalene' and 'O Maria noli'; see 'Pange lingua' for discussion)
Alabaustrum frangitur, A.K50, F.12; ND (found prior to central collection of Philip's works in *I-Fl* Plut.29.1, fasc.10)
Dum medium silentium componit, A.K16, F.98; ND (apparently confused with Walter of Châtillon's 'Dum medium silentium tenerent' in *D-DS* 2777: latter poem was entered, but former intended)
Fons (or Flos) preclusus, A.L145, A.K72, F.129; ND (modern attrib. to Peter of Blois; French and Provençal contrafacta)
In nova fert animus via gressus, A.K29, F.176 (modern attrib. Peter of Blois)
Nec mare flumini (text only; attrib. Peter of Blois and Bernard of Clairvaux)
Non te lusisse pudeat, A.K47, F.223; ND (also attrib. Peter of Blois and Stephen Langton)
O Maria noli flere (hymn: often associated with 'Pange lingua Magdalene' and 'Aestimavit hortulanum'; see 'Pange lingua' for discussion)
O Maria O felix puerpura, A.K58, F.237; ND (found in a group of Philip's works in *I-Fl* Plut.29.1, fasc.10; French contrafactum)
Post dubiam post nugatorium (text only; modern attrib. Peter of Blois)
Regis et pontificis (sequence)
Veri solis radius lucerna, A.K66, F.371; ND

polyphonic conductus: modern attributions

Austro terris influente, 2vv, A.G1, F.26; ND (cauda is texted)
Dum sigillum summi patris, 2vv, A.J24, F.100; ND (music by Perotinus)
Gratuletur populus, 2vv, A.H6, F.147; ND
O levis aurula, 2vv, A.J34, F.235; ND
Veni creator spiritus recreator, 3vv, A.E13, F.361; ND

motets: medieval attributions

Doce nos optime/Docebit, 3vv, G.346; EM (conductus motet; possibly confused with 'Doce nos hodie')
In salvatoris nomine, 1v, G.452; MC (triplum of double motet; probably included among Philip's works only because of connection with 'In veritate comperi')

motets: modern attributions

Memor tui creatoris/Et gaudebit, 2vv, G.320; EM (contrafactum of 'Velut stelle firmamenti'; music has modern attrib. Perotinus)

Mors a primi patris (1v), G.256; MC (quadruplum to be combined with 'Mors morsu' and 'Mors que stimulo' to form triple motet, 3vv; music has modern attrib. Perotinus; this text probably not by Philip on stylistic grounds)
Mors vite vivificatio/Mors, 2vv, G.257; EM (contrafactum of 'Mors morsu'; music has modern attrib. Perotinus)
O quam necessarium (1v), G.759; EM (triplum of double motet, 3vv; motetus 'Venditores labiorum' attrib. Philip)
Serena virginum/Manere, 4vv, A.A1, F.323, G.69; EM (strophic conductus motet; music has modern attrib. Perotinus; contrafactum of 'Manere vivere')
Stupeat natura/Latus, 2vv, G.232; EM (strophic; contrafactum of 'Homo quam sit pura')

JEFFREY DEAN

Philistines, music of the. *See* JEWISH MUSIC, §II, 3.

Phillipps, Peter. *See* PHILIPS, PETER.

Phillips, Anna Maria. *See* CROUCH, ANNA MARIA.

Phillips, Arthur (*b* Winchester, 1605; *d* Harting, Sussex, 27 March 1695). English organist and composer. He became a clerk of New College, Oxford, in 1622, and organist of Bristol Cathedral in 1638. In 1639 he succeeded Richard Nicholson as organist of Magdalen College, Oxford, and as professor of music in that university; he graduated BMus on 9 July 1640. He left England for France as organist to Queen Henrietta Maria and returned after the Restoration, when he 'was entertained in the family of [John] Caryl, a gentleman of the Romish persuasion in Sussex' (Hawkins).

An imaginative set of variations for keyboard on a four-bar ground (in *GB-Lbl*) is in Thomas Tomkins's hand and is assigned to Tomkins in the index of the manuscript (which is in the hand of Nathaniel Tomkins). Although it is known, from a note in the manuscript *F-Pc* Rés.1122, that Tomkins did write a set of variations on this same ground, the music itself bears an ascription to Phillips (in Thomas Tomkins's hand) and in style the ground resembles the other keyboard variations attributed to Phillips. The consort pieces are notable for their active bass parts.

WORKS

Hear O thou shepherd, anthem, *GB-WO* (inc.)
10 airs, tr, b, *Ob*
2 pavans, 2 [airs], corant, 2 tr, b, *Ob*
Almaine, corrante, serrabrand, *Och* (inc.) [b only]

JOHN CALDWELL/ALAN BROWN

Phillips, Burrill (*b* Omaha, NE, 9 Nov 1907; *d* Berkeley, 22 June 1988). American composer and pianist. His theory and composition teachers were Edwin Stringham at the Denver College of Music (1928–31) and Howard Hanson and Bernard Rogers at the Eastman School (BM 1932, MM 1933). He has been a faculty member at Eastman (1933–49, 1965–6), the University of Illinois (professor, 1949–64), the Juilliard School (1968–9) and Cornell University (1972–3), as well as visiting composer at the universities of Texas, Kansas, Southern California and Hawaii. Among his awards are two Guggenheim Fellowships (1942–3, 1961–2) and an award from the American Academy of Arts and Letters (1944). He was a Fulbright Lecturer at the University of Barcelona (1960–61). He received commissions from the League of Composers (Scherzo for orchestra, 1944), the Koussevitzky Foundation (*Tom Paine*, overture for orchestra, 1946), the Fromm Foundation (*The Return of Odysseus*, 1956) and the Elizabeth Sprague Coolidge Foundation (String Quartet no.2, 1958).

Phillips's first important orchestral work, *Selections from McGuffey's Reader* (1933), was an immediate success and established his reputation as a composer with a consciously American style – a reputation that has tended to overshadow the subsequent development of his musical language. The elements of his early style – an emphasis on melodic line, a rich harmonic texture, and rhythmic associations with jazz – had evolved by the late

1930s and early 1940s into a drier, more acerbic idiom, with asymmetrical rhythms and broadened expressiveness. Many of the works written in the 1940s and 1950s reveal a new intensity and compression; imitative counterpoint is characteristic of the piano writing. In the early 1960s Phillips began to work with free serial techniques, less sharply accented rhythms, and an increasing sense of fantasy. Although he can in no sense be considered an imitator of earlier models, his works show a clarity of line and texture that reflects his great admiration for the music of Domenico Scarlatti and Purcell.

WORKS

STAGE

Katmanusha (ballet), 1932–3; Play Ball (ballet), 1937; Step into my Parlor (ballet), 1942; Don't We All (op buffa, 1, A. Phillips), 1947; Dr. Faustus (incid music, C. Marlowe), org, brass qt, timp, 1957; Nine from Little Rock (film score), 1964; La piñata (ballet, choreog. J. Limón), chbr orch, 1969; The Unforgiven (op, 3, A. Phillips), 1981; other incid music

ANN P. BASART

Phillips, Harvey (Gene) (*b* Aurora, MO, 2 Dec 1929). American tuba player and teacher. After studying at the Juilliard School (1950–54) and the Manhattan School (1956–8), he played with numerous ensembles and orchestras, and was a founder member of the New York Brass Quintet. From 1971 to 1994 he was professor at the Indiana University School of Music where in 1973 he financed the First International Tuba Symposium-Workshop and sponsored his first 'Octubafest' of student recitals. Phillips also co-founded several organizations, including the Tubists Universal Brotherhood Association (1972) and the International Brass Society (1975). In 1975 he gave a series of five recitals at Carnegie Hall in which he played 39 pieces, including many composed for him. Phillips's technique was prodigious and flexible, his tone smooth and perfectly focussed, even in the lowest register. He commissioned works from such composers as David Baker, Morton Gould, Wilder, Heiden and Schuller, many of which he recorded.

DENNIS K. McINTIRE

Phillips, Henry (*b* Bristol, 13 Aug 1801; *d* London, 8 Nov 1876). English baritone. Born to theatrical parents, he made his first appearance as a boy soprano at the Harrowgate theatre about 1807; he afterwards went to London. As a student and young professional Phillips worked with musicians who traced their artistic lineage from Handel, whose works, together with those of Purcell, supplied much of his repertory. In 1824 he sang the role of Caspar in the first performance in English of Weber's *Der Freischütz* (much adapted for the English Opera House); from 1825 he performed regularly at the Concert of Ancient Music; and in 1826 he sang under Weber. This rapid advance owed much to the guidance of Sir George Smart. In the 1830s he created roles in operas by Loder, Barnett and Balfe. Phillips insisted on having a ballad in his operatic roles, whether or not written by the original composer, for such songs could be highly lucrative. In addition to performing in London, he regularly toured provincial centres.

In the 1840s Phillips's career suffered from changes in theatre managements and from his own actions. In 1841 he was publicly criticized by Balfe for undermining the latter's managerial aspirations. His musical lectures, to which he frequently had recourse, were financially unsuccessful, as was a trip to the USA in 1844–5; nonetheless the songs that resulted from his American experiences are his best. On return to London he was unable to regain his former position. After appearing in Wallace's *Maritana* (1845) his operatic career was virtually at an end. He sang in the première of *Elijah* (1846, Birmingham), but Mendelssohn, who directed the performance, entrusted the major role to Staudigl. *On Lena's Gloomy Heath*, a scena Mendelssohn wrote for Phillips the same year, proved disappointing. In 1847 he sang in *Elijah* under the composer's direction in London; thereafter his vocal powers seem to have waned, and increasingly he turned to glee-singing and then to teaching. His farewell concert took place in 1863.

Phillips composed several songs, and his writings include *The True Enjoyment of Angling* (1843), an angler's manual that extols the charms of countryside in florid prose and mediocre song, *Hints on Musical Declamation* (1848) and *Musical and Personal Recollections during Half a Century* (1864).

GEORGE BIDDLECOMBE

Phillips, John (*d* London, *c*1765). Welsh music engraver, active in England. He and his wife Sarah kept a music shop in London from about 1740 to about 1765, and engraved many works for composers who published their own compositions. Among these were Geminiani (*The Art of Playing on the Violin*, 1751), Arne (*Thomas and Sally*, 1761) and E.T. Warren (*A Collection of Catches, Canons and Glees*, 1763). They also worked for other publishers, including JOHN JOHNSON (ii) and James Oswald. The quality of their engraving was excellent; Hawkins stated that John Phillips adopted and improved upon the ideas of Fortier, and devised his own set of punches after many experiments. On Phillips's death in about 1765, his widow continued the business until 1775. (*HawkinsH*; *Humphries-SmithMP*; *KidsonBMP*)

FRANK KIDSON/PETER WARD JONES

Phillips, Montague F(awcett) (*b* London, 13 Nov 1885; *d* Esher, 4 Jan 1969). English composer. He was educated at the RAM, where he won the Henry Smart and Macfarren scholarships and other awards. He first made a name with popular ballads composed for his wife, the soprano Clara Butterworth (1888–1997), who also starred in the work to which his fame was due above all, the light opera *The Rebel Maid* (1921). For the centenary of the RAM in 1922 he composed *The Song of Rosamund* and he was for many years professor of harmony and composition there. He composed many works for orchestra, but only the lighter pieces, which showed off his talents to greater advantage, made any real mark.

WORKS
(*selective list*)

Stage: The Rebel Maid (light op, 3, A.M. Thompson, G. Dodson), London, Empire, 12 March 1921 [incl. Fishermen of England]; The Golden Triangle (light op), unperf., unpubd.

Orch: Boadicea, ov., 1907; 2 pf concs., 1907, 1919; Sym., c, 1911; Phantasy, vn, orch, 1912; Heroic Ov., 1914; In Maytime, 1923; A Hillside Melody, 1924, rev. 1946; Dance Revels, 1927; A Forest Melody, 1929; 3 Country Pictures, 1930; Village Sketches, 1932; The World in the Open Air, 1933; A Surrey Suite, 1936; A Moorland Idyll, 1936; Revelry, ov., 1937; Empire March, 1941; Sinfonietta, C, 1943; Festival Ov., 1944; Hampton Court, ov., 1954

Many pieces for pf, incl. Berceuse (1910); Nocturne (1910); Violetta, air de ballet, op.43 no.1 (1926); Arabesque, op.43 no.2 (1927); Jacotte (1928); arrs. of orch works

Voice and orch: The Death of Admiral Blake, Bar, chorus, orch (1913); The Song of Rosamund, scena, S, orch (1922)

Song cycles: Dream Songs (E. Teschmacher) (1912); Sea echoes (N.B. Marsland) (1912); Calendar of Song (H. Simpson) (1913); The Fairy Garden (H. Simpson), op.21 (1914); Flowering Trees (N.B. Marsland), op.31 (1919); From a Lattice Window (E. Lockton), op.33 (1920); Old-World Dance Songs (K.M. Luck) (1923)

Many other songs for 1v, pf; partsongs; many arrs. of own songs and songs of others

Principal publishers: Ascherberg, Hopwood & Crew, Chappell, Novello & Co

ANDREW LAMB

Phillips, Peter (i). *See* PHILIPS, PETER.

Phillips, Peter (ii) (*b* Southampton, 15 Oct 1953). English choral director. He was awarded an organ scholarship at St John's College, Oxford, in 1972 and read music under David Wulstan. During this time he gained experience in directing vocal ensembles, and founded the Tallis Scholars in 1973. Besides giving concerts and making recordings with the Scholars (including the complete English anthems of Tallis), he is a frequent guest conductor with other vocal ensembles. Phillips' research has focussed on sacred music of the Tudor and early Stuart periods (published as *English Sacred Music 1549–1649*, London, 1991), and he is also active as a journalist, writing a weekly column for *The Spectator*. In 1995 he became publisher of the *Musical Times*. In addition to his activities in the field of Renaissance music, he has maintained a long-standing association with John Tavener, conducting the Tallis Scholars in first performances of several of his works.

FABRICE FITCH

Phillips, Sid [Simon] (*b* London, 14 June 1907; *d* Chertsey, 23 May 1973). English jazz clarinettist, bandleader and arranger. He studied the violin and piano as a child and taught himself theory and harmony. In his late teens he began playing the saxophone and the clarinet and performed with his brothers' band in Europe. He worked as a staff arranger for a music publisher and as a music director for the Edison-Bell Gramophone Co. From 1930 he wrote arrangements for Bert Ambrose and led his own quintet. Later he joined Ambrose's band (1933), with which he recorded on clarinet and alto and baritone saxophones (1933–7). In 1937 Phillips visited the USA, where he broadcast and recorded with American musicians. After serving in the RAF he formed another quintet (1946) and composed several symphonic works for the BBC SO (as Simon Phillips). From 1949 until his death he led his own dixieland band; among his sidemen were George Shearing, Colin Bailey, Tommy Whittle and Kenny Ball. Phillips made several recordings as a leader from 1928 into the 1970s.

NEVIL SKRIMSHIRE/ALYN SHIPTON

Phillips, Theophilus K. Ekundayo (*b* Nigeria, 1884; *d* 1969). Nigerian composer. After a time as organist at the church of St Paul, Breadfruit, Lagos, he studied the piano, organ and violin at Trinity College of Music (1911–14). On his return he was appointed organist at Christ Church, Lagos, remaining in this post until 1962. Most of his compositions are sacred choral works. As an exponent of the cultural and musical importance of Yoruba music and language, his works, many of which set Yoruba texts, show a predilection for speech rhythm, pentatonic scales and simple harmonic progressions. A major contributor to the growth and popularity of church and art music in Nigeria, Phillips provided compositional inspiration for such prominent Nigerian composers as Fela Sowande and Ayo Bankole. He was awarded the honorary doctorate by the University of Nsukka in 1964. His book *Yoruba Music* (Johannesburg, 1953) is an early study of theoretical aspects of indigenous African musical practices.

WORKS
(*selective list*)

Org: Prelude
Choral with acc.: Choral Suite, solo vv, chorus, pf; Yoruba Cant., SATB, org; Emi ogbe oju mi soke wonni (I will lift up mine eyes), S, org
Unacc. choral: Nigerian National Anthem; Magnificat in Yoruba, C

DANIEL AVORGBEDOR

Phillips [Phillipps], **Thomas.** *See* PHELYPPIS, THOMAS.

Philodemus (*b* Gadara, 110–100 BCE; *d* ?Herculaneum, 40–35 BCE). Epicurean philosopher, poet and critic of music. Philodemus went to Italy in about 65 BCEand remained there until his death. He was the author of a treatise *On Music*, extensive parts of which have survived in a series of fragments discovered in the Herculaneum papyri, buried by the eruption of Mount Vesuvius in 79 CE. Excavations beginning in the mid-18th century brought the first of the papyri to light, and attempts at a reconstruction of the treatise have been published since the end of the 18th century. In 1884 Johann Kemke established a text including additional material that had been discovered; he proposed that Philodemus's treatise was comprised of four books, the first of which was a doxography of the music theory of the Academy, the Peripatetics and the Stoics (including Diogenes of Babylon); the second (essentially lost) and third provided a fuller explanation of the theory of the Academy and the Peripatetics; and the fourth presented Philodemus's polemic against Diogenes and other Stoics. Until the 1980s Kemke's text was the basis for most modern scholarship, despite objections to his arrangement that were periodically raised on various grounds. With the later work of Rispoli, Neubecker and Delattre, however, Kemke's interpretation (and much of his text) has been largely supplanted. Delattre has proposed on papyrological and contextual grounds that all the fragments belong to the fourth book of Philodemus's *On Music* and that the treatise was not necessarily restricted to four books. In Delattre's reconstruction, the first 47 columns provide a summary of the theory of Diogenes of Babylon and the balance of the treatise is devoted to Philodemus's refutation of the arguments of the Stoics.

For Philodemus, music was irrational and so could not influence the soul in any choice or avoidance of action. When it accompanied a text, it added nothing but listening pleasure. In Philodemus's view, reports of the powerful effects of music are simple nonsense: music has never in itself manifested ethos, and it cannot be considered among things of serious worth.

Despite the dogmatism and excessive vehemence with which Philodemus sometimes pursues such arguments, his treatise has value, especially as a reflection of late stages in the development of ethos theory. Several passages add significantly to the ancient evidence regarding Damon. Existing scholarship evaluating the treatise, its arguments and the place of Philodemus will certainly be reviewed and most probably revised in light of Delattre's new complete critical edition (forthcoming).

THOMAS J. MATHIESEN

Philolaus [Philolaos] (*fl c*450–400 BCE). Pythagorean philosopher. A contemporary of Socrates and teacher of Democritus, he came from Croton (southern Italy), famous for its religious community associated with Pythagoras. After the destruction of the community in about 450 BCE, he escaped to Thebes, a leading musical centre, where he taught some of the Pythagoreans whom Plato knew. He was the first to commit the precepts of Pythagoras to writing. Fragments from two of his works survive: the *Bacchae* (Diels, 44b17–19), and *On Nature* (*Peri physios*; Diels, 44b1–16), originally a multi-volume work, according to Nicomachus of Gerasa who quoted from it (Diels, 44b6). The authenticity of these fragments (written in the Doric dialect) has been disputed, but most scholars now regard them as genuine.

The fragments, together with the accounts of Aëtius (Diels, 44a9–13, 15–21) and Boethius (44a26), embrace a variety of subjects. In the fragment on music (44b6), Philolaus begins as a traditional Pythagorean philosopher with an explanation of *harmonia*, whose function is to bring into accord all the principles of opposition of which the cosmos is composed; but his own concluding analysis of the structural components of *harmonia* suggests a stronger link with musical practice (Philolaus himself was active as an aulos player; Diels, 44a7) than with Pythagorean doctrine.

Philolaus's nomenclature in effect adumbrates the tuning techniques of musicians: thus, *harmonia*, his term for octave (*diapasōn*: the concord running 'through all the notes'), denotes the harmonic framework or 'fitting together' of the octave's components; the 5th (*diapente*: the concord running 'through five notes'), he called *dioxeian* – 'through the high-pitched notes'; and the 4th (*diatesserōn*: 'through four notes') is *syllaba* – the first 'grab' of the fingers on the strings of the tilted lyre. What the Pythagoreans and Plato called *leimma* (limma) – the semitone 'left over' after the subtraction of two whole tones from the 4th – Philolaus named *diesis* ('passing through'), a term reserved by later theorists for the quarter-tone.

In his analysis of intervals smaller than a whole tone, Philolaus departed radically from Pythagorean doctrine,

the hallmark of which is the treatment of musical intervals as numerical ratios. Using the numbers constituting these ratios as addable, not correlated, entities, Philolaus (as reported by Boethius) posited an array of micro-intervals, computed in units of 14 – *apotomē* (large semitone), 13 – *diesis* (small semitone), 1 – *komma* (comma; the difference between the large and small semitones) and ½ – *schisma* (half of a comma). This process of bisecting musical intervals is so mathematically unsound (the proper method being the multiplication and division of ratios) that scholars have judged Philolaus's analysis unworthy of a Pythagorean thinker. It is possible, however, that he was treating musical intervals not as mathematically expressible proportions but, after the practice of musicians, as units in a tonal continuum governed solely by the capacities of the human voice and ear.

FLORA R. LEVIN

Philomathes [Philomates], **Venceslaus** [Václav] (*b* Neuhaus [now Jindřichův Hradec], *c*1480; *d* after 1532). Bohemian theorist. His textbook *Musicorum libri quatuor, compendiose carmine elucubrati* (Vienna, 1512) arose out of his studies and lecturing at the University of Vienna in the years immediately preceding its publication. The whole of music theory is set forth in elegant Latin hexameters, showing a humanistic influence that is also demonstrated by the dedicatory verses, for instance the one by Joachim Vadian. The mnemonic value of writing in verse had been invoked by Guido of Arezzo, but was almost unique in the Renaissance. The structure of the book was also original: the first two sections are on the conventional *cantus planus* and *cantus figuratus* (pitch and rhythm respectively), but before turning to counterpoint and composition in the last section Philomathes inserted a section on 'direction' (*regimen*) and voice-production. The textbook had a wide resonance. It was reprinted not only in Vienna in 1523, but twice by Georg Rhau (Leipzig, 1518, as *Liber musicorum quatuor*; Wittenberg, 1534) and also (with alterations) in Strasbourg in 1543; Fétis referred to another Vienna edition of 1548. Rhau quoted many of Philomathes's verses as mnemonics in his own *Enchiridion utriusque musicae* (1517), as did (through Rhau's influence) Johannes Galliculus in his *Isagoge de compositione cantus* (1520) and Martin Agricola throughout his writings (1528–39). Agricola went so far as to publish a commentary, *Scholia in Musicam planam Venceslai Philomatis* (1538), for the use of his schoolboys in Magdeburg. Through these and other writers Philomathes exercised an indirect influence on 16th-century central-European music pedagogy second only to that of Gaffurius.

Several of Philomathes's statements have received particular attention. He was the first to point out the octave relationship between the ranges of the discantus and tenor parts and between those of the altus and bassus. He considered that the copious use of imitative passages, in parallel with the versification of the words, would result in a 'subtile poema'. He emphasized beating time regularly with the hand or with a staff. After publishing his textbook Philomathes seems to have returned as a priest to southern Moravia. He wrote a Latin *Institutio grammatica* (Kraków, 1525), and in the early 1530s he collaborated with Beneš Optát and Petr Gzel: he advised them on their Czech translation of the New Testament (1533), and his section 'Etymologia' was combined with their 'Orthographia' to form the oldest Czech grammar, *Grammatyka czeská* (Naměšť nad Oslavou, 1533). This is the last that is known of him.

Philosophy of music.

I. Introduction. II. Historical survey, antiquity–1750. III. Aesthetics, 1750–2000. IV. Anglo-American philosophy of music, 1960–2000. V. Contemporary challenges.

I. Introduction

1. A sceptical beginning. 2. Entries in *Grove's Dictionary*.

1. A SCEPTICAL BEGINNING. Short and long discussions of music saturate the history of Western philosophy. Similar discussions of philosophy saturate the history of Western music. Yet referring to 'the philosophy of music' often surprises academics and laypersons alike. Some declare they did not know there was such a subject; perhaps that is because there have been few devoted philosophers of music. If one were to list known philosophers solely devoted to music, or known musicians devoted to philosophy (a devotion that in much earlier times would still have kept them in the class of musicians), one might not come up with a single name. However, were one to name philosophers and musicians who have contributed to the subject, one could produce a seemingly unending list and a list of the greatest names: Pythagoras, Plato, Aristotle, Boethius and so on through to the present. Most philosophical engagement with music has taken place in the context of (*a*) philosophers developing cosmological and metaphysical systems in which each subject and type of phenomenon, including music, is assigned its proper place; (*b*) philosophers treating music

as one of the arts within their different philosophical systems of aesthetics; and (*c*) musicians – composers, performers, theorists, and critics – drawing on, and thus contributing to, philosophy to explain the foundations, rationale and more esoteric aspects of their theories, practices and products. Even so, scepticism about the subject remains.

Typically, the Western philosophy of music has been treated as a history of competing philosophical theories about the music most approved of at any given time – sacred music, serious music, classical music – hence generating a canonic discipline of the best that has been said about the best music produced. Yet even on this canonic level fluctuation in theory type, methodological commitment and chosen phenomena has been broad. Sometimes the fluctuation has produced scepticism as to whether there is a distinct field that is the philosophy of music and a belief that any such field is a hotchpotch of more or less connected theories produced by philosophers and musicians of the Western tradition. Others have admired this same tradition, seeing the connections between the different philosophical explorations of music as interestingly sustaining and interacting with the explorations that constitute Western philosophy as a whole. Between the extremes of scepticism and admiration have laboured the theorists, troubled in their different periods by all that has been left out of, or included in, the canon: types of argument, types of philosopher, types of music, types of musician. Sometimes their resulting theories have been absorbed into the canon, sometimes as central, sometimes as marginal. Often they have helped generate new fields – musicology (and 'new musicology'), music theory and analysis, ethnomusicology and anthropology, the physics of sound (acoustics), the sociology of, psychology of and social history of music – fields that have contributed to, or competed with what, at any given time, has constituted the canonic line of the philosophy of music. If, now, one still wants to grant that there is something approaching a sustained discipline of the philosophy of music, probably it is best understood, like the history and practice of music itself, as a family (or families) of theories, objects and practices happily and unhappily connected in relations of continuity and rupture, benevolent and malevolent debate, competition, influence, admiration and affection.

From another methodological point of view, whether one should speak of the philosophy of music on a particular species level, as one does, say, of the philosophy of biology or of law, or, as many have, only on the genus level, as part of a general aesthetics or philosophy of art, depends on how particularistic or unique one takes music (and each of the other arts) to be. 'The aesthetics of one art is that of the others; only the material is different', declared Robert Schumann. But just as one may argue that philosophical questions raised by biological phenomena are sufficiently particular for questions appropriate to 'the philosophy of science' as a genus discipline to fail to cover them, or that questions raised about law are inadequately covered by the general questions of ethics, so one may argue that music is too particular to be exhausted by the general questions of aesthetics. Certainly, from a historical point of view, music deserves to be treated as a particular if only by virtue of the extraordinary and distinctive breadth of use and significance it has sustained. For music has been treated not only as one of the major arts but also as a significant science and, for an extraordinarily long time, as a mainstay of a liberal arts education. In its different roles, music has been treated as theoretical speculation and idea, as practice, production and performance, as expression and craft, as natural phenomenon and cosmological force.

Nevertheless, for all this breadth, does the same assertion of particularity hold true when music is made the subject of philosophy? The difficulty inherent in that question has most interestingly lain in the 'of' in 'the philosophy of music'. It has not lain in the obvious and pervasive truth that philosophers have used music, often with great depth, in their thinking, or that musicians have used philosophy with similar depth in theirs; it has lain in the less obvious thought that the practice and theory of music has historically represented a deep resistance to its being made the object of a systematic philosophical theory. There is a problem in making any particular subject the object of a general philosophical theory, but the claim here is more specific to music's peculiar historical engagement with philosophy. Allied repeatedly with human emotion, with purely sensuous expression, with cosmology, mystery and mathematical abstraction, with useless and unnatural (artificial) function, with purely transient or temporal existence, with non-conceptual communication and, finally, with the often underestimated channel of the human ear (the ear is merely 'the channel of the heart', the eye 'the channel of the mind'), theorists and practitioners have been remarkably successful in making the 'art of tone' resist the philosophical bid to provide for music an exhaustive rational, logical or conceptual account.

The long history of music's being described negatively, in terms of what it is not, does not have, or cannot and should not do, has often been used to prove either music's impoverishment because music fails of philosophical account or philosophy's impoverishment because philosophy fails to control music. In the ruling dualistic terms of Western thought, some theorists have suggested that music's history is just the history of human passion, and that since philosophy's demand for reason has so often opposed itself to what passion offers, music has symbolized philosophy's antidote. One way to counter the resistance has been to make music's 'art of tone' subservient to poetry's 'art of word', or to render music rational, conceptual or logical in conformity with philosophical law. In the 19th century, Nietzsche spoke of the resistance and of the related struggle between music and philosophy when, in *The Birth of Tragedy*, he suggested that 'perhaps music represents a realm of wisdom from which the logician is exiled. Perhaps art is . . . a necessary correlative of, and supplement for, science?' He had the long history of Western philosophy and music explicitly in mind. It was a history going back to ancient, Athenian quarrels between reason and feeling, mind and body, truth and illusion, desire and obligation, freedom and constraint, and to at least one of music's origins, namely, in *mousikē*: the desired contribution of the passionate muses to the project of educating the soul and to the distrust of some philosophers that the muse of music could in fact educate the soul. Regarding contemporary debate, a comparable struggle is articulated as a conflict between authoritarian and non-authoritarian social and cultural forms, or in gendered terms, between patriarchal and matriarchal discourses (see §V below). In order to

accommodate music's endless resistance or philosophy's endless self-reflection, perhaps the headword 'philosophy of music' should be rejected, since it tends to embody an assumption that music can be, or historically has been, captured by and controlled within the constraints of philosophical method. 'Philosophy and/or music' may better capture their suggestive history of interactive equality and tension and leave dialectically open the issue of their relation. The headword may not only indicate what the entry will contain but also how the subject will be approached, as a necessary excursus into one specific history of music's complex relations with philosophy will now demonstrate.

2. ENTRIES IN 'GROVE'S DICTIONARY'. We now examine changing attitudes in the English-speaking musical world by a consideration of the treatment of the topic in the *Grove* dictionaries from the earliest discussion (in 1927) to the present day (2000). *Grove's Dictionary*, historically, has epitomized a mainstream if not always subtle position of extreme scepticism towards the existence of, and interest in, the philosophy of music, perhaps typifying attitudes prevalent among musicians in Great Britain. In its third edition (1927) – the earliest to have an entry even approaching a direct discussion of philosophy and music – the author, Sir Percy Buck, introduced readers to the subject under the headword 'Aesthetics'. This choice of rubric justified Buck's beginning his account 'about the year 1750' when the term 'aesthetics' first came explicitly into use for the 'science which investigates the Beautiful'. Though he provided no more historical information, and concerned as he was to expound his favoured aesthetic theory, he still explained something about a tradition of the philosophers' engagement with music whose temporal and conceptual scale extended far beyond that mid-18th-century year. Yet what he wrote was quite disparaging:

> 'Aesthetics' has come to mean two different things to two different groups of thinkers. To the pure metaphysician it still stands for the investigation of Beauty as a thing in itself – a speculation which attracted even the earliest Egyptian and Greek thinkers – and to him Beauty is an absolute, outside of us, independent of its effect on mind and of human reaction to it. To the psychologist, however, Aesthetics has, by common consent, been narrowed down to the consideration of the Fine Arts: *i.e.* the arts concerned with sight and hearing (Architecture, Sculpture, Poetry, Painting and Music).

The connection between aesthetics and the modern classification of the fine arts has been sustained by more than the psychologists' common consent. It was, and remains, the standard starting account among many metaphysicians and historians of the arts (Kristeller, 1951). Yet Buck, preferring the psychologists' method, was determined to get metaphysics out of the way:
